West Virginia filled one out of the regular order because of the death of Democratic Sen. Harley M. Kilgore. Of the total of 35, Democrats had held 18 seats and the Republicans 17. Demo-

*One seat contested.

cratic nominees were unopposed in the general election in five states in the south.

Despite the Eisenhower avalanche that rolled over 41 states, Democrats increased their strength in the house of representatives. In the preceding congress the house had been divided 230 Democrats, 201 Republicans and 4 vacancies, of which each party had held two. In the November balloting, Democrats elected 234 members, one of whom died immediately after the election. The Republicans elected 201 members, one of whose seat was being contested at the end of the year in Maine. This gave the Democrats a slightly greater working majority, with some shift in their strength from the big industrial states, where they lost some seats to the Republicans, toward the agricultural midwest and the natural-resources-conscious far west.

The division of strength in the new house is shown in Table II.

Table III.—Governors Elected by States, 1956

Arizona	Democrat	*Ernest W. McFarland
Arkansas	Democrat	*Orval Faubus
Colorado	Democrat	Stephen L. R. McNichols
Delaware	Republican	*J. Caleb Boggs
Florida	Democrat	*LeRoy Collins
Illinois	Republican	*William G. Stratton

Utah	Republican	George D. Clyde
Vermont	Republican	*Joseph B. Johnson
Washington	Democrat	Albert D. Rosellini
West Virginia	Republican	Cecil H. Underwood
Wisconsin	Republican	Vernon W. Thomson

*Incumbent.

In the gubernatorial contests, the Democrats increased from 27 to 29 their dominance of the statehouses. Republicans, who had held 21 governor's posts, wound up with 19.

Democrats replaced Republican governors in Iowa, Kansas, Massachusetts, Oregon and Washington. Republicans ousted Democrats in New Mexico, Ohio and West Virginia. In the other states, either governors were re-elected or members of their own party succeeded them.

Although there were a number of tickets entered, the outcome

of the presidential race was unexpected only in the extent of President Eisenhower's margin over Stevenson. Only in South Carolina did a third-party ticket have any measurable effect on the outcome. In that state, an independent slate which endorsed Democratic Sen. Harry F. Byrd of Virginia polled sufficient votes so that Stevenson won the state by a plurality rather than by a majority of the votes cast.

In all, there were eight presidential and vice-presidential tickets on the ballot in various states. In addition, the Greenback party depended on write-in votes, and independent groups endorsed Byrd in Kentucky and Mississippi, as well as in South Carolina.

The presidential and vice-presidential tickets were these:

Republican—Dwight D. Eisenhower of Pennsylvania and Richard M. Nixon of California.

Democratic—Adlai E. Stevenson of Illinois and Sen. Estes Kefauver of Tennessee.

States' Rights—T. Coleman Andrews of Virginia and Thomas H. Werdell of California.

Prohibition—Enoch A. Holtwick of Illinois and Herbert C. Holdridge of California.

Socialist—Darlington Hoopes of Pennsylvania and Samuel H. Friedman of New York.

Socialist Labor—Eric Hass of New York and Georgia Cozzini of Wisconsin.

Socialist Workers—Farrell Dobbs of New York and Myra Tanner Weiss of New York.

Poor Man's—Henry Krajewski of New Jersey and Ann Marie Yezo of New Jersey.

Greenback—Fred C. Proehl of Washington and Edward Kirby Meador of Massachusetts.

Democrats built their presidential campaign primarily on two assumptions: that they could hold what once was the solidly Democratic south, and that local Democratic strength elsewhere would be sufficient to overcome the admitted popularity of Eisenhower. They felt that the U.S. voter would give much more weight than he evidently did to the fact that Eisenhower had suffered a heart attack on Sept. 24, 1955, and had undergone a serious abdominal operation on June 9, 1956.

Instead of solidifying behind Stevenson, the south broke wider apart for Eisenhower than it had done in 1952. As he had four years previously, the president carried Florida, Tennessee, Virginia and Texas. In the November balloting he added Louisiana to his list of southern conquests. In the political border states, Eisenhower added Kentucky and West Virginia to Oklahoma, which he had won in 1952.

Stevenson was able to reverse the results of 1952 in only one state, Missouri. There former Pres. Harry S. Truman, who fought Stevenson's nomination at the party's Chicago convention, said that despite the adverse results his party's nominee had made "a good campaign, much better in every way than in 1952." Truman saw the Democrats' retention of congressional control as a sign that the nation was still Democratic.

There was no serious dispute of this contention from the Republican strategists, despite the president's far-reaching victory. They conceded that Eisenhower had won re-election primarily on personal popularity, plus the impetus given his candidacy by the explosive events in the middle east in the week before the election.

Sen. Lyndon B. Johnson of Texas, the senate Democratic leader, said that "the people rallied around the president in a time of crisis, as they always do." On the other hand, Johnson said that "the record of the Democratic congress is popular and the people don't want to change parties in congress." Clayton Fritchey, Stevenson's press secretary, said that there was a "prevailing belief that this [presidential contest] was a horse race until this [middle east] foreign policy crisis arose." The net effect seemed to be that, while Stevenson had charged the Eisenhower administration had blundered its way into a bad mess in the middle east, when the crisis arose the voters turned to Eisenhower rather than to Stevenson.

Eisenhower said in an election-night victory statement that the results represented a victory for the principles for which his administration stood, rather than for himself as an individual. He said the vote proved that the people approved of what he called "modern Republicanism"—a view that few politicians seemed to share.

Although he had set out to refashion his party and to elect Republicans who shared his "moderate progressive" views, Eisenhower had no signal success in attaining this objective in a 13,614-mi. campaign that took him into 13 pivotal states. He campaigned in California, Colorado, Florida, Illinois, Iowa, Kentucky, Minnesota, New York, Ohio, Oregon, Pennsylvania, Virginia and Washington. Because he thought "barnstorming" and "whistle-stopping" beneath the dignity of a president, Eisenhower cut his campaign far short of the 51,000-mi. range in which he visited 45 states in 1952.

Everywhere he went the president drew large crowds which cheered his famous grin and his upraised arms. But, as in the experience of some presidents before him, Eisenhower found that his popularity did not rub off on other Republican candidates.

Despite his efforts in their behalf, the Republican senators George H. Bender of Ohio, Herman Welker of Idaho and James H. Duff of Pennsylvania met defeat. A frequent presidential golfing partner, former Gov. Dan Thornton of Colorado, was beaten in his try for a senate seat. Two of the president's hand-picked senatorial candidates also were rejected by the voters. They were former Secretary of the Interior Douglas McKay, beaten in Oregon by Democratic Sen. Wayne Morse; and Gov. Arthur B. Langlie, who failed to beat Democratic Sen. Warren G. Magnuson in Washington.

Eisenhower had some success in this field, however. His 1,500,000-vote margin in New York state helped elect the state attorney general, Jacob K. Javits, to the senate over his Democratic rival, Mayor Robert F. Wagner, Jr., of New York city. In Kentucky Eisenhower's margin over Stevenson helped bring into the senate two Republicans—John Sherman Cooper, former ambassador to India and a former senator, and Thruston B. Morton, former assistant secretary of state and a former member of the house of representatives.

Stevenson, who travelled 37,619 mi. through 32 states in the campaign, carried the attack to Eisenhower on the "part-time president" issue. The Democratic nominee also was extremely critical of the G.O.P. administration's foreign policies. At the close of the campaign, he summed up the presidential health issue with the declaration that Eisenhower "has never had the inclination and now lacks the energy for full-time work at the world's toughest job."

Stevenson's two principal proposals in the campaign—both criticized severely by Eisenhower—were that the United States move toward the abolition of hydrogen bomb tests and that it reassess its military manpower needs with the idea of eliminating the draft. Neither appeared to have caught on as an issue among voters likely to consider the five-star general president the top authority on such questions.

Early in the campaign, Stevenson appealed for the Democratic vote with a program for what he called the "new America." He attacked the tight money policies of the Eisenhower administration and said that small businessmen were being squeezed and the farmer betrayed while the G.O.P. was pampering big business. He criticized what he called Eisenhower's failure to provide leadership in the fields of civil rights, school construction and social security advances.

But Stevenson's primary contention was that there was no real peace in the world. He said that the prestige of the United States abroad had dropped to a low point, that Eisenhower and Secretary of State John Foster Dulles either did not know what

was going on in the world or were withholding the truth from the American people.

Eisenhower generally maintained a restrained attitude toward his rival's charges. The president never mentioned Stevenson by

*One of Alabama's 11 electors cast his vote for Walter B. Jones, of Montgomery, Ala. †Ticket splitting caused much confusion. Many voters marked some individual elector candidates and not others on the same slate, and the secretary of state's office certified only consolidated county returns. These showed Stevenson 441,094, Eisenhower 416,652. However, using the highest vote for individual electors in five counties listing no total vote for Stevenson or Eisenhower, the figures show Stevenson 445,925, Eisenhower 222,874. The complicated ballot in Georgia lists names of presidential nominees plus those of 12 electors for each party.

‡Republican figure of 56,372 was for Mississippi Republican party or "Lily White" electors for Eisenhower. A separate Eisenhower slate under the Grand Old Party or "Black and Tan" label polled 4,313. Since the two cannot be combined, the latter figure is placed in the "Other" column along with 42,966 States' Rights ticket votes.

§Democratic vote includes 292,557 Liberal party votes for Stevenson.

Source: Associated Press.

name during the campaign. A few times he lashed out in reply to accusations that had been made against him, once calling Stevenson's charges "wicked nonsense." If he was supremely confident of his own re-election throughout the campaign, as he appeared to be, Eisenhower seemed to have been justified by the results. Likewise, his confident running mate, Vice-President Nixon, shared in the overwhelming verdict that returned both to second terms.

Nixon had been designated by the Republican national chairman, Leonard W. Hall, as the work horse of the G.O.P. campaign. The vice-president, more restrained and consequently less controversial than he had been in the 1952 and 1954 campaigns, topped the 34,000-mi. mark in his travels. His principal thesis was that "the people are happy because they are getting the kind of government they want." He added that what the people really wanted was a "government that can keep the peace."

Senator Kefauver shook uncounted thousands of hands in a campaign tour that took him, by his own calculation, the equivalent of 2½ times around the world. Although it had many variations, Kefauver's main theme was that the Democratic party was more interested in the individual than was the Republican party.

Whether all of the appeals, by television or in person, altered many votes remained a matter of conjecture. But the fact was that, no matter how he did it, Eisenhower's vote was very large in many states where such a result had not been expected. The final Associated Press tabulation of the official vote by states is shown in Table IV.

(See also DEMOCRACY; POLITICAL PARTIES, U.S.; UNITED STATES CONGRESS; and under various states.) (J. L. BE.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Political Parties* (1952); *Presidential Elections* (1952); *Pressure Groups* (1952); *Public Opinion* (1946).

Electrical Industries. Sales of energy by electric utilities in the United States rose 10.0% during 1956 to a total of 529,600,000,000 kw.hr. Industry was the largest user, consuming 355,400,000,000 kw.hr. Of this amount, 274,900,000,000 kw.hr. was purchased from utilities and 80,500,000,000 kw.hr. was generated by industrial plants for their own use. The 274,900,000,000 kw.hr. purchased by industry was 51.9% of all the energy sold by utilities.

During 1956 the use of electric energy in manufacturing reached 228,400,000,000 kw.hr., a 4.5% increase over the previous year. Added to manufacturing consumption was the purchase of 58,500,000,000 kw.hr. for use by Atomic Energy commission installations. This was more than four times the amount purchased by the AEC in 1953. Other industries, including aluminum and magnesium, used 68,500,000,000 kw.hr. The 228,400,000,000 kw.hr. used by manufacturing, 58,500,000,000 kw.hr. by the AEC and 68,500,000,000 kw.hr. by other industries made up the total industrial use of 355,400,000,000 kw.hr.

Sales to Residential Customers.—During 1956 the use of energy by the average residential customer showed a record increase of 244 kw.hr. This brought consumption by the average customer to 2,995 kw.hr. per year. Electric utilities also added 1,200,000 new residential customers during the year, bringing the total number of customers to 45,600,000. These 45,600,000 customers purchased 134,800,000,000 kw.hr., an increase of 12.0% over 1955 and representing 25.5% of all the energy sold by the electric utilities. The customers paid an average of 2.60 cents per kilowatt-hour for this energy, and at this price the average customer's use of 2,995 kw.hr. cost him \$77.87. The total cost of the energy used by all residential customers amounted to \$3,504,000,000.

Sales to Commerce.—Sales of energy to customers classified as small light and power showed a 10.0% gain during 1956. This again brought the total use by commercial establishments to 88,400,000,000 kw.hr., or 16.7% of the total sold by utilities. Air conditioning of office buildings and commercial establishments was a prime cause of the increase, although other factors such as lighting and commercial cooking also contributed to it.

Sales to other less important classifications, 5.9% of the total, rose 3.3% to 31,400,000,000 kw.hr. during 1956. The increase of 10.2% in industrial sales, 12.0% in residential, 10.0% in commercial and 3.3% to other classifications brought total sales to 29,600,000,000 kw.hr., and the total gain over 1955 sales to 10.0%. To meet this demand for energy the nation's major electric utilities (classified as class I electric systems) made available 600,300,000,000 kw.hr. To do this they used 122,000,000 kw. of generating capacity. This equipment experienced a non-coincident peak load of 106,700,000 kw. As a result these systems showed a gross margin (generating capability over peak load) of 15,300,000 kw., or 14.4% of peak load.

Private companies owned approximately 80% of the nation's generating capacity. Ownership of the remaining capacity was divided among rural electric co-operatives, municipalities, public power districts, state agencies and the federal government.

Electrical Manufacturing.—Manufacture of heavy electric

power equipment continued at a high rate during 1956. Although deliveries of steel, particularly heavy plate, lengthened, no serious problems were created. Copper, on the other hand, was in short supply earlier in the year and as a result its price rose drastically. Later in the year price declined as supplies improved. Production manpower was ample but a shortage of technical and engineering talent threatened to become a bottleneck.

The production of electric generating equipment both thermal and hydraulic scheduled for shipment during 1956 was about 9,100,000 kw. A lengthy strike at one of the major manufacturers delayed production of many units. Of the equipment produced, 7,800,000 kw. was scheduled for shipment to U.S. electric power systems. The remainder was scheduled for export or for U.S. industrial plants. Of the 9,100,000 kw. scheduled for shipment nearly 8,000,000 kw. was thermal. The remaining 1,100,000 kw. were hydraulic turbine generators.

Steam generators (450 lb. per square inch pressure and higher) capable of delivering almost 91,000,000 lb. of steam per hour, were scheduled for shipment in 1956.

Late in 1956, nine nuclear power plants of 10,000 kw. or larger were moving forward beyond the development stage. These had an aggregate capacity of more than 1,000,000 kw. All of these projects were of a developmental character and it was not expected that these first installations would produce power at a cost less than the cost of production in modern thermal plants. It was expected that these projects would, however, contribute materially to the technology of atomic reactor design. Experience gained would permit ultimate development of nuclear power plants which would be competitive with conventional plants.

The production of nearly 60,000,000 kva. of power transformer capacity in 1954 was the highest on record. Production for 1955 was only 44,000,000 kva. During 1956 scheduled shipments rose to 58,000,000 kva.

Appliance Sales.—Sales of electrical appliances during 1956 were generally slightly below those of 1955. During the first eight months of 1956 manufacturers of electric refrigerators sold nearly 2,600,000 units. Sales during the same period in 1955 totalled 2,900,000 units.

During the first eight months of 1956 about 4,400,000 television sets were sold. Total sales during the same period in 1955 amounted to 4,800,000 units.

Sales of electric ranges during the first eight months of 1956 were 970,000 units. Of these 190,000 were "built-in's." Sales during the first eight months of 1955 were 977,000. Of these, only 98,000 were "built-in's." Washing machine sales during the first nine months of 1956 totalled 2,469,000, an increase of 8.8% over the same period in 1955, and sales of electric clothes dryers during the first nine months of 1956 were 776,000 units, a 16.2% increase over the same period in 1955 when manufacturers sold 688,000.

During 1956 retail sales of air conditioners amounted to 1,600,000 units as compared with 1,290,000 units during 1955.

(See also FEDERAL POWER COMMISSION; PUBLIC UTILITIES; RURAL ELECTRIFICATION ADMINISTRATION; TENNESSEE VALLEY AUTHORITY.) (AR. Mo.)

Canada.—During 1955, 804,000 kw. of new generating capacity was brought into operation in Canada, raising the total to 13,905,000 kw. Hydro generation accounted for 12,150,000 kw. and thermal generation for 1,753,000 kw. The steady growth of thermal capacity had been a significant development of recent years. In 1950 thermal generation accounted for only 641,000 kw. or 7% of the total, while in 1955 it accounted for 12.6% of the total. Of a total generating capacity of 19,339,000 kw. contemplated by 1959, 2,981,000 kw. or 15.4% would be thermal generated. Of the presently developed generated capacity, 40%

was located in the province of Quebec, 32% in Ontario and 12% in British Columbia.

Firm energy requirements in 1955 were 72,603,000,000 kw.hr. against 65,978,000,000 kw.hr. in 1954. Requirements for 1959 were estimated at 101,508,000,000 kw.hr.

Major new developments under construction during 1956 included the joint Canadian-U.S. St. Lawrence river project (600,000 kw. for Canada) built in conjunction with the St. Lawrence seaway; the Bersimis river project in Quebec, which upon completion would provide 1,500,000 kw.; a program of the Aluminum Company of Canada which would result in the installation of an additional 450,000 h.p. in British Columbia, and of 1,000,000 h.p. on the Upper Peribonka river in Quebec, the first power to become available in 1959. Two gigantic power sites in Canada's north country, the "North West Power" project in the Yukon Territory and the Hamilton river project in Newfoundland, remained in the surveying stage.

Contracts had been let for Canada's first \$16,000,000 atomic power plant near St. Joachim, Ont., which was a joint undertaking of the federal government, the Hydro Electric Power commission of Ontario, and Canadian General Electric company. The plant was expected to produce 20,000 kw. in 1959. The Ontario Power commission assumed in its planning that by 1965 "nuclear fuel-electric stations will be more economical for base load operation than conventional fuel-electric generation." (R. RR.)

Other Countries.—Following on the Geneva atomic energy conference in the summer of 1955, there were in June 1956 the Conférence Internationale des Grands Réseaux Electriques in Paris and the World Power conference, in Vienna, which all produced a mass of information on the latest practice in electric power generation.

The total capacity of nuclear reactors planned in Canada, France, Sweden, Switzerland, the United Kingdom, the United States and the U.S.S.R. was about 2,300 Mw. The first to operate was Calder Hall (in 1956) and it was estimated that, in Britain, nuclear energy would contribute 16% of the total in 1965.

Most countries were actively examining the possibilities of nuclear energy to fulfil their future needs but there was general agreement that about 20 years must elapse before this source could make a significant contribution to the total energy required. Coal would remain as the most important source of thermally generated energy for several decades to come. Oil as a fuel increased in importance, but world political conditions threw some doubt on the dependability of this source. Hydroelectric schemes of ever-increasing magnitude were being studied. The World Power conference at Vienna reviewed national resources of energy and plans for development.

TINY TRANSISTOR capable of operating an electrical relay which will turn on a light bulb by reacting to the light generated by a match. The transistor, about the size of a pencil eraser, was developed by Westinghouse Electric Corp. and demonstrated in Dec. 1955

*Only countries with an output exceeding 6,000,000,000 kw.hr. in 1955 are included. †Total output, i.e., including that by industrial establishments generating primarily for own use, if not otherwise stated. ‡Excluding China. §Production by enterprises generating primarily for public use. ¶Excluding Northern Ireland and Lochaber Power Co. ||Excluding electricity generated by the federal railways. ¶Coverage incomplete, about 95% of total production.

Europe.—Two reports of the Organization for European Economic Cooperation (O.E.E.C.), *The Electricity Supply Industry in Europe* and *Europe's Energy*, gave a comprehensive survey of progress and future requirements. Consumption of electrical energy rose by 10% in both 1954 and 1955 and although difficulties in financing new construction were still serious in some countries, as a whole they were much reduced. Forecasts for the future were that electricity production would rise from a total (for O.E.E.C. member countries) of 350,000,000,000 units a year in 1955 to 480,000,000,000 in 1960 and between 1,050,000,000,000 and 1,400,000,000,000 in 1975, by which date nuclear production might amount to 200,000,000,000 units as compared with 350,000,000,000 from hydro power and 850,000,000,000 from thermal plant. (E. W. G.)

Electronics. During 1956 earlier and more reliable warning of storms were foreseen for the United States with the aid of a network of 31 specially designed weather radar sets to be installed by the U.S. weather bureau at strategic points along the eastern and Gulf coasts, as well as inland. Each of these would be able to detect hurricanes, tornadoes and other storms as far as 250 mi. away, relay the data from one station to the next and thereby provide meteorologists with a continuous check on storm progress and development.

Weather radar is based on the fact that rain and clouds reflect radar waves. Following World War II, the weather bureau used military equipment, with a range of 150 mi. or less, to track storms with an accuracy not previously possible. It was planned that as new sets became available early in 1958 from the manufacturer, Raytheon Manufacturing company, at the rate of about five per month, the old equipment would be reconditioned for installation at weather bureau stations along the coast and inland which were now without radar.

One feature of the new sets was that they would be convertible, operating at frequencies of 9,300, 5,600 or 2,800 megacycles, enabling operators to select the frequency best suited for the weather conditions anticipated. Because it would be possible to study the entire life cycle of a storm, and to analyze its structure from the time it formed until it disappeared, the new

AIR-BORNE RADAR DOME, resembling a "flying saucer," mounted on a U.S. navy Super Constellation plane, an aircraft development by Lockheed Aircraft Corp. in 1956. The radar plane was to be used for fleet protection and patrol of open ocean areas

Equipment was expected to be a valuable research tool, providing perhaps not only earlier and more reliable warning of storms but also clues as to the best ways of coping with these destructive conditions.

Radar for military application continued to appear, and the U.S. air force announced a new, lightweight, mobile set of long range and novel design which had been developed by the Westinghouse Electric corporation. Its principal feature is the antenna, designed to focus the radio waves into a beam like that of a searchlight, which sweeps around until it encounters an aeroplane. As the echo comes back, it is picked up by the antenna, which then acts as a telescope.

The antenna of the new set consists of two paraboloids, made of vinyl-coated Fiberglas fabric, which are joined at their rims and inflated. One surface is coated on the inside with aluminum so that it can reflect the radio waves and is called the Paraballoon antenna. The antenna and other equipment are covered by a flexible "radome," also supported by air pressure inside. Blowers maintain pressure slightly higher in the Paraballoon than just under the radome, which, however, is still higher than that of the air outside. If necessary, the entire radar set may be dropped from an aeroplane. A trained crew of 20 men can erect it in two hours.

A system that would save considerable time in transmitting intercept information to fighter aircraft was disclosed in an announcement of air-borne "data link" radio units to be built for the U.S. air force by the General Electric company. Data would be fed from a network of air-borne, shipboard and land-based radars to a ground-control centre complete with electronic computers. Intercept information would be automatically coded for transmission to the units on the fighter aircraft, which would select the proper message for that particular aircraft and convert it for display on a cockpit indicator. The same data could also be fed into the plane's automatic pilot or transmitted to guided missiles.

An electronic system known as Low Altitude Bombing, developed by the Minneapolis-Honeywell Regulator company, permits "loft bombing," whereby the rapid movement of the plane itself hurls the bomb into the air so that it falls on the target. The

bombing pilot heads for a landmark a little short of the target. As he approaches it, the preset electronic system takes over control and pulls up the plane into a steep climb. At the proper instant the bomb is released, with a speed comparable with that of a shell from an 81-mm. mortar, which has a range of two miles. Since it may take nearly a minute for the bomb to reach the target, as it climbs and then falls, the pilot is able to roll his plane over to an upright position and fly to safety before the explosion.

Structures inside the human body, such as the pancreas, may be "photographed" with high-frequency, ultrasonic waves, using a new diagnostic device developed by E. E. Suckling of the State University of New York college of medicine and William R. MacLean of the Polytechnic Institute of Brooklyn, N.Y. The sonic camera comprises a plastic tank filled with water, in which the object to be viewed is placed, a source of the ultra-sound, and a sonic lens that forms an image of the object on a piezoelectric crystal. This converts the waves into varying electrical charges, which are scanned, amplified and displayed on a screen like that of a television receiver, thereby presenting an image that can be viewed or photographed. With the waves only one-fiftieth of an inch long, objects about as small as that could be detected. This suggests that nerves, veins, arteries and small lesions in the body might be photographed.

An instrument that might provide an automatic analysis of brain waves recorded on the electroencephalograph and permit faster and more accurate analysis of the men who have to stand the stresses of jet flight was developed jointly by the Aero Medical laboratory of the air research and development command, Wright Air Development centre, and the Mechanics Research department of the American Machine and Foundry company. The data developed by this Period Analyzer proved to be a sensitive measure of physiological changes which affect the shape and frequency of the recorded brain waves. It seemed to be more sensitive than methods presently used in distinguishing degrees of sleep and wakefulness in the subjects. Since it could also correlate the pattern of brain waves more precisely with oxygen

deficiency in the blood, it was anticipated that it might lead to an automatic device which would correct this condition in pilots by switching on more oxygen as soon as a deficiency appeared.

A device somewhat analogous to the electroencephalograph, the electrogastrograph, which detects waves of electrical activity in the stomach, was developed and studied by a research team headed by Edmund N. Goodman at Presbyterian hospital, New York city. Minute electrodes make contact with the mucous membrane lining the stomach. After examination of more than 1,000 subjects, Goodman found a basic pattern for the normal stomach, consisting of three waves per minute. A strikingly different pattern was found in 70% of a group of patients with stomach cancer, which suggested that the device might give early warning of such malignant conditions.

At ocean depths of 2,000 ft., where the illumination is about one-trillionth of 1% of the full sunlight at the surface, light measurements can be made with a new instrument called the bathyphotometer, developed by George L. Clark and Gunther K. Wertheim, of Harvard university. The limit of most instruments previously used for such measurements was about 0.01% of full sunlight, at depths of less than 600 ft.

When the bathyphotometer was lowered into the sea on a moonless night, it was found that the light fell off rapidly until it reached a depth of about 600 ft., where flashes of light were encountered. Below this the flashing increased, becoming constant at 900 ft. At 1,800 ft. there was no difference in the amount of light at day or night. This illumination was attributed to luminescent organisms at these depths.

The light-recording equipment consisted of two parts. One was an underwater unit, carrying the photomultiplier tube, which detected the light and amplified it, and a pressure gauge to determine the depth. The other was the deck unit, which recorded the measurements. Tests of the equipment were made from research vessels of the Woods Hole (Mass.) Oceanographic institution.

Another electronic device for seeing in the dark, announced during 1956, was the ebicon, a development of two Westinghouse scientists, R. J. Schneeberger and R. W. Decker. The name comes from the initials of the phrase "electron bombardment induced conductivity," the effect basic to its operation. As light strikes the tube, electrons are produced, and are then accelerated by a potential of about 20,000 v. Hitting a storage target, consisting of a small aluminum-coated metal screen and a selenium semiconductor, these electrons are both stored and multiplied. This produces a signal large enough to operate conventional multipliers. The ebicon gave promise of operating at light levels far lower than the human eye can detect, so that it would show a scene where the darkness seems complete.

Slowed-down motion pictures of the inside of an aircraft engine while it is running are possible with an X-ray motion-picture technique called strobioradiography, announced by the General Electric company's X-ray department. A betatron, operated at 5,000,000-15,000,000 v., provides pulses of highly penetrating X-radiation, lasting but a few millionths of a second, to make the radiograph. The exposure may be accurately synchronized with the motion of the machine and repeated a number of times at the same stage of the cycle in order to produce a fully exposed picture. To obtain slow-motion movies, such X-ray still pictures are taken, for example, at various points in the travel of a piston, and the exposures are spliced together to show the complete operation.

The gears used in an automatic transmission for an automobile must be very accurate, necessitating careful inspection and gauging. This is done automatically with an electronic gear gauge, developed for the Plymouth transmission plant by the Airborne

Instruments Laboratory, Inc., at Mineola, N.Y. Each gear is automatically inspected as it comes from the hobber where it is machined. If the gear is not right, it is set aside, and a control signal is sent to the machine to adjust it and correct the error. Moreover, the unacceptable gears are automatically divided into two groups, those that can be salvaged and those that are unsalvageable.

An electronic banker that is able to perform the daily bookkeeping tasks for 55,000 commercial checking accounts was developed by the Stanford Research institute, of California, and was to be constructed for the Bank of America by the General Electric company. The device was called erma (electronic recording machine—accounting). It was described by banking officials as being capable, when operated by a staff of eight operators and clerks on a two-shift basis, of sorting checks and deposit slips and entering the amounts in the individual accounts of each customer. It could remember details of all transactions, maintain customers' correct balances, accept stop-payment orders and immediately notify the operator of an overdrawn balance. (J. Sto.)

Elizabeth II

(ELIZABETH ALEXANDRA MARY) (1926–) queen of Great Britain, was born at London April 21. She spent her early years at the London home of her father, then duke of York, at Windsor and at Balmoral castle. She was educated by her governess, Marion Crawford, and Sir Henry Marten, later vice-provost of Eton. During World War II she joined the Mechanical Transport Training centre, Aldershot. In 1947 she visited South Africa with the king and queen and Princess Margaret, and from there on her 21st birthday she broadcast to the empire, promising "My whole life shall be devoted to your service." Her engagement to Prince Philip of Greece (who later became the duke of Edinburgh) was announced in July 1947; they were married in Westminster abbey on Nov. 20. Prince Charles was born on Nov. 14, 1948; Prince Anne on Aug. 15, 1950. In 1951 she toured Canada and visited Washington, D.C., with the duke of Edinburgh, but in 1952 she was obliged to cut short her tour of the commonwealth by the death of her father on Feb. 6. She was crowned at Westminster abbey on June 2, 1953.

The queen received Juscelino Kubitschek de Oliveira, president of Brazil, on Jan. 11, 1956. She left with the duke of Edinburgh on Jan. 27 for Lagos, Nig., and returned to London on Feb. 17. Their tour of Nigeria included a spectacular durbar at Kaduna and a visit to a leper settlement on the Oji river. N. A. Bulganin and N. S. Khrushchev of the Soviet Union visited them at Windsor castle on April 22. During June 8–10 the queen and the duke paid a state visit to Sweden. King Feisal II of Iraq was welcomed by the queen on July 16 when he arrived in Great Britain for a state visit.

Employment. **United States.**—The total labour force of the United States increased by 2,582,000 from 69,692,000 in June 1955 to 72,274,000 in June 1956. Total

employment increased by 2,487,000, from 64,016,000 in June 1955 to 66,503,000 in June 1956. This increase was accounted for by a rise of 2,734,000 in the size of the civilian labour force (from 66,696,000 to 69,430,000) and a growth in the number of unemployed of 248,000 (from 2,679,000 to 2,927,000). Both agricultural and nonagricultural employment increased during this period. Nonagricultural employment grew by 2,292,000 (from 56,335,000 to 58,627,000); and agricultural employment grew by 195,000 (from 7,681,000 to 7,876,000).

Male employment behaved in a manner similar to total employment. Male employment rose from 44,135,000 (June 1955) to 45,351,000 (June 1956), an increase of 1,216,000. This increase was accounted for by an increase of 1,230,000 in the male civilian labour force (from 45,888,000 to 47,118,000) and an increase in male unemployment of 14,000 (from 1,753,000 to 1,767,000). During this period the male total labour force rose from 48,848,000 to 49,928,000, an increase of 1,080,000.

Females in the civilian labour force numbered 22,312,000 in June 1956, and represented an increase of 1,504,000 over the level of June 1955. Female employment rose by 1,271,000 (from 10,882,000 in June 1955 to 12,153,000 in June 1956). The number of unemployed females also increased from 926,000 to 1,160,000, an increase of 234,000.

It is interesting to note that the increase in the size of the civilian labour force, from June 1955 to June 1956, was composed of an increase of 1,230,000 males and 1,504,000 females. Similarly, the 2,487,000 increase in employment was taken up by an increase in male employment of 1,216,000 and in female employment of 1,271,000.

The total number of employees in nonagricultural establishments continued to increase. In June 1955 the number was 50,155,000, and it grew by 1,377,000 to 51,542,000 in June 1956. Wholesale and retail trade absorbed 313,000 of this increase. Wholesale trade employment rose by 118,000, and retail trade employment rose by 195,000. Contract construction accounted for 307,000 of this increase. Government employment grew by 77,000. Almost the entire increase in this form of employment was accounted for by the growth in state and local government employment. Federal government employment grew by 5,000, whereas state and local governments increased employment by 2,000. In June 1956 state and local government employment

was 4,950,000, and federal government employment was 2,188,000. Employment in the manufacturing sector increased by 180,000. Of this total, 98,000 was accounted for by the durable goods sector and 82,000 by the nondurable goods sector.

There was a great divergence of employment trends within the manufacturing sector. Total manufacturing employment rose by 180,000, but some manufacturing industries experienced substantial declines in employment. Gains in employment occurred in the machinery (except electrical) industry (+110,000), electrical machinery industry (+64,000), food and kindred products (+37,000), printing, publishing and allied industries (+36,000), primary metal industries (+34,000), chemicals and allied products (+24,000), stone, clay and glass (+20,000), paper and allied products (+19,000), instruments and related products (+12,000), furniture and fixtures (+10,000) and miscellaneous (+9,000). Losses of employment occurred in transportation equipment (-91,000), lumber and wood products (-44,000), fabricated metals (-17,000), textile mill products (-17,000), ordnance and accessories (-10,000), leather and leather products (-8,000), rubber products (-3,000), tobacco manufactures (-3,000), apparel (-1,000) and products of petroleum and coal (-1,000).

A slight decline occurred in the average weekly hours worked in the entire manufacturing sector. In May 1955 the average weekly hours worked were 40.8 and in May 1956 the average weekly hours worked in manufacturing had dropped to 40.

United Kingdom.—Employment increased and unemployment decreased in the British economy during the year 1955. The number in civil employment grew by 279,000, or 1%, from 22,721,000 in Dec. 1954 to 23,000,000 one year later. This growth was the result of 197,000 more in the working population, 30,000 fewer unemployed and 51,000 fewer in the armed forces. During the period Dec. 1954 to Dec. 1955, the working population grew from 23,823,000 to 24,020,000, a 1% increase. Registered unemployment fell from 280,000 to 250,000; and the size of the armed forces and women's services fell by 6%, from 830,000 to 779,000.

Men comprised 67% of the total working population in Dec. 1955, and approximately the same percentage of the numbers in civil employment were men. Of the 279,000 increase in civil employment from Dec. 1954 to Dec. 1955, 143,000, or 51%, were men. Of the 197,000 increase in the total working population from Dec. 1954 to Dec. 1955, 120,000, or 61%, were women and 39% were men.

As in 1954, the main increases in employment occurred in the manufacturing industries and the distributive trades. Except for textiles and clothing, all the main manufacturing groups increased

Source: Ministry of Labour Gazette (Feb. 1956).

their labour forces. Total manufacturing employment rose by 178,000. Employment in textiles declined by 39,000 and in clothing by 10,000. Much the largest rise, 173,000, occurred in the metals, engineering and vehicles group, which included increases of 46,000 in vehicle manufacture and 45,000 in the production of electrical goods and equipment. Employment increased in all industry groups except agriculture, mining and public administration.

Canada.—The civilian labour force of Canada increased from 5,426,000 in 1954 to 5,558,000 in 1955. In May 1956 this total was 5,664,000. During this same period, the total civilian labour force with jobs increased from 5,194,000 (in 1954) to 5,327,000 (in 1955) to 5,499,000 in May 1956. Employment in agriculture declined from 873,000 (1954) to 818,000 (1955) and was 817,000 in May 1956. On the other hand, nonagricultural employment increased during the period from 4,320,000 (1954) to 4,510,000 (1955) to 4,682,000 (May 1956). Unemployment declined during this period from 232,000 (1954) to 230,000 (1955) to 165,000 (May 1956). The index of total employment (1949=100) rose from 109.9 (1954) to 112.5 (1955) to 113.4 (April 1956). In forestry, the employment index rose from 95.1 (1954) to 101.8 (1955). The employment index in mining increased from 109.8 (1954) to 113.4 (1955). In manufacturing, the index also rose from 107.7 (1954) to 109.3 (1955). Both the durable and nondurable sectors exhibited increases in the index of employment. In the durable sector, the index rose from 115.0 to 116.6, while the index increased from 101.4 to 103.9 in the nondurable sector, from 1954 to 1955. Similarly, the index increased in construction, transportation and communication, trade, finance and service, from 1954 to 1955.

Australia.—The general employment index (1953=100), excluding agriculture but including forestry, fishing and trapping, rose from 106 in March 1955 to 108 in March 1956. Employment in manufacturing (1953=100), including wage earners and salaried employees, rose from 108 in March 1955 to 109 in March 1956.

France.—The general employment index (1953=100), excluding agriculture and certain services, increased from 101 in Jan. 1955 to 103 in Jan. 1956. Using the same base, the index of manufacturing employment, including wage earners and salaried employees, increased from 101 in Jan. 1955 to 102 in Jan. 1956.

Japan.—The Japanese index of general employment (1953=100), excluding agriculture but including fishing, rose from 107 in March 1955 to 116 in March 1956. Again, with 1953 as a base, the index of manufacturing employment, including wage earners and salaried employees, rose from 101 in March 1955 to 121 one year later.

Norway.—The index of general employment (1953=100), excluding agriculture, grew from 102 in April 1955 to 103 in April 1956. Using the same base, the index of employment in manufacturing, covering both wage earners and salaried employees, rose from 103 in April 1955 to 105 one year later.

Union of South Africa.—The index of general employment (1953=100), excluding agriculture and commerce, was at 107 in both March 1955 and March 1956. The index of employment in manufacturing, including mining and quarrying, was 107 in March 1955 and 108 in March 1956, with 1953 as the base year.

West Germany.—The index of general employment, excluding agriculture, grew from 107 in March 1955 to 114 one year later. The year 1953 is used as the base year. The index of employment in manufacturing, including both wage earners and salaried employees (1953=100), grew from 109 in March 1955 to 118 in March 1956.

(P. TA.)

Endocrinology.

Hypothalamus and Pituitary.—New evidence was presented in 1956 which it was believed might clarify the function of the little understood hypothalamic portion of the brain. The pituitary gland, long known as the master gland, was again shown to be really subservient to higher centre, the hypothalamus. A highly potent fraction was isolated from the hypothalamus which puts the pituitary gland to work when the animal or human is faced by physical or mental stress. It seems that specific hypothalamic substances stimulate the release of ACTH (adrenocorticotrophin) which in turn stimulates the adrenal glands. These findings were given further confirmation by independent studies wherein a technique was developed for stimulation of certain areas in the hypothalamus through permanently implanted electrodes in the conscious monkey. Stimulation through electrodes implanted in the infundibular region of the hypothalamus produced marked elevation in the secretion of adrenal cortical hormones, whereas stimulation of the electrodes in the anterior thalamus failed to elicit a similar adrenal response. It would appear that ACTH secretion is regulated by selective areas in the hypothalamus. These discoveries lent support to the theory that the hypothalamus secretes substances which govern the pituitary gland, and thus it may be said that in some measure the hypothalamus regulates the endocrine system.

Of considerable importance in endocrinology was the work on the isolation of pituitary hormones and the structure of the pituitary hormone molecules such as ACTH. It appeared that large pituitary hormone molecules like ACTH are simply conglomerates of several hormones. Efforts were being made to fragment the large molecule and identify each part with some specific function.

In 1953 the chemical structure was proposed for vasopressin, a hormone stored in the posterior pituitary gland. By 1956 this substance had been synthesized, the second hormone of the pituitary gland to be analyzed and built up in the chemistry laboratory. The first was oxytocin, an important factor in childbirth and lactation. Vasopressin may be described as a blood pressure raising and antidiuretic principle. The synthetic product had the same chemical, physical and biological properties as the most potent extracts obtained from natural sources. It was expected that the use of synthetic vasopressin for the treatment of diabetes insipidus would eliminate the allergic reactions so often encountered with the preparations obtained from extracts of the posterior pituitary gland.

Adrenals.—Successful synthesis of aldosterone was also accomplished. Aldosterone is one of about 30 hormones that have been isolated from the cortex of the adrenal. It is perhaps the most important of the adrenal cortical hormones.

Adrenal function was implicated as a factor in hypertension by researchers in experimental animals such as mice and rats. One investigator found that the administration of minute amounts of aldosterone to both intact and adrenalectomized mice, for several months, resulted in the development of hypertension. Another demonstrated that a condition closely resembling the syndrome of malignant hypertension in human beings was induced in young rats during regeneration of the adrenal cortex following the enucleation of the adrenals.

Previously, the opinion had been prevalent that adrenocortical cancer was an autonomous tumour which was not influenced by ACTH or cortisone administration. A person with a functional adrenocortical cancer was recently studied before and after metastases. Unlike previously reported adrenocortical cancer this tumour was not autonomous, since, in response to ACTH there was a decided rise in steroidal output. Furthermore, when cortisone was administered there was a significant fall in ketosteroids below control levels. Furthermore, chemical modification

of the secretory capacity of the tumour was achieved during administration of a drug known as amphenone, a pituitary inhibitor. The importance of this study lay in the demonstration that this adrenocortical cancer retained residual capacity to respond to both humoral and drug influence. This finding bore significantly on the problem of endogenous and exogenous control of function of these tumours and gave encouragement to the search for similar effects with other neoplasms.

New tests for the detection of pheochromocytoma were advanced during the year. One involved the use of a spiral strip of rabbit aorta placed in a muscle bath. When urine from a patient with a pheochromocytoma was added to the water bath a marked increase in height of contractions was recorded on a slowly revolving drum.

Another aid in diagnosis of this tumour was a new simple test using the adrenergic blocking agent piperoxan. The test was based on the effects of this agent on urinary volume following the ingestion of a salt-water load. In a normal person the administration of piperoxan results in increased urinary output, whereas the patient with a pheochromocytoma shows a decrease.

Thyroid.—The concept that hyperthyroidism increases resistance to tuberculosis received confirmation. When rabbits which were known to be highly susceptible to tuberculosis were made hyperthyroid by injections of triiodothyronine, the resistance to tubercle bacilli was markedly increased. Animals which were rendered hypothyroid by the administration of propylthiouracil were found to have a diminished resistance to the experimental production of tuberculosis. It is believed that hyperthyroidism increases physiologic activity of phagocytes and thus speeds up destruction of bacilli. One of the reasons for the untoward effects of cortisone in tuberculosis may be the suppressive action of this hormone on thyroid function.

Diabetes and Metabolism.—One of the most significant developments in the field of diabetes mellitus was the discovery of compounds for oral use which lower blood sugar. Although it had been known since 1941 that a variety of sulfonamide derivatives are effective hypoglycemic agents in animals, only recently had extensive trials been made with the aryl sulfonylureas in human diabetics. Of the two antidiabetic agents extensively evaluated, one of them, tolbutamide, proved preferable because of minimal side effects, in comparison with the other, carbutamide.

The mechanism of the hypoglycemic action of the sulfonylureas remained to be clarified. The theory most current was that these agents stimulate the production of insulin in patients with mild diabetes. Extensive evidence, however, had been gathered to favour the concept of insulinase inhibition; *i.e.*, inhibition of the enzyme that destroys insulin. A third widely held theory was that these drugs act on the liver by inhibiting gluconeogenesis (the conversion of protein into carbohydrates), thus lowering the blood sugar.

These orally effective agents had been found most useful in controlling hyperglycemia and glycosuria of patients with the adult form of diabetes mellitus. They did not prove of value in the management of juvenile diabetics. In general, the range of usefulness of these oral hypoglycemic agents varied considerably from an enthusiastic 66% to a more sober figure of 10% of diabetics who needed treatment in addition to dietary control.

Reproduction and Sex Hormones.—A potent purified preparation of relaxin, the ovarian hormone of pregnancy responsible for pubic relaxation, was developed. The source of the raw material is the ovaries of pregnant sows. When used early enough this hormone can diminish the frequency and severity of uterine contractions and halt premature labour, thus allowing the foetus additional time for growth in the uterus.

Several new steroid compounds with increased progestational activity became available for clinical use. One of these, 17-alpha-

ethinyl-19-nortestosterone, more simply known as norethisterone, was shown to be somewhat more potent than ethisterone (17-ethinyl testosterone). Another preparation, 17-alpha-hydroxyprogesterone caproate, is a long-acting progestogen with marked progestational activity. Some idea as to the prolonged activity of this compound may be obtained when its effect on withdrawal bleeding in amenorrhoeic females is compared with that of progesterone. A single injection of 50 to 100 mg. of progesterone, when administered to a female with functional amenorrhoea, will be followed by withdrawal bleeding within 48 hours in most instances. When 125 to 250 mg. of 17-alpha-hydroxyprogesterone caproate is employed, withdrawal bleeding will be delayed for 7 to 14 days. This property of long action is particularly desirable since it obviates the need for frequent injections of progesterone which are often employed in the management of threatened and habitual abortion.

Recent studies showed that accurate prediction of the sex of the unborn infant during the ninth month of pregnancy is possible by obtaining cells from the amniotic fluid. The presence of a sufficient number of cells with nuclei containing a positive sex chromatin mass is indicative of a female child.

The discovery of "sex chromatin" in resting somatic cell nuclei, and its dimorphism in accordance with the genetic sex of the individual, opened new approaches to the study of various types of anomalies in the sexual sphere. A male sex chromatin pattern was found in most cases of gonadal dysgenesis with castrate-female type of secondary sex characteristics. Surprising indeed was the observation that many eunuchoid males with gynecomastia and atrophic bilateral scrotal gonads have a female sex chromatin pattern. Furthermore, determination of the sex chromatin pattern in intrinsic testicular disorders would probably facilitate classification and serve to differentiate cases of definite congenital origin.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Endocrine Glands* (1939).

England: see GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

English Literature. **General.**—The holding of the P.E.N. International congress in London in 1956 not unnaturally directed attention to the present condition of English literature in its several branches, considered as a means of expression and not merely as a vehicle for facts. A tangible offshoot from the discussions was the symposium, edited by John Lehmann, on *The Craft of Letters in England*. Its talented contributors discussed not only the creative arts of poetry and fiction but also those fields of applied literature, such as history, biography, criticism and philosophy, wherein an author's personal conviction could shape and colour the work. As it chanced, this individual approach was present in many of the year's productions, which thus proved livelier than the somewhat gloomy expectations aroused by these surveyors. The analysis of gloom itself could be almost a triumph, as 24-year old Colin Wilson showed in *The Outsider*, described by him as "an inquiry into the nature of the sickness of mankind in the mid-twentieth century." This brave exploration into real and fictional characters caught the public imagination and supplied a new term for a type of spiritual rebel that had long been recognized

but never so clearly defined.

Other, more practised, writers focusing on a less comprehensive field, still shaped their beliefs and theories with a fearless independence. Aldous Huxley, one of the few remaining adherents of the discursive essay, brought to *Adonis and the Alphabet* all his traditional erudition, wit and exhortation, tackling some of humanity's newest problems with the wisdom of a lengthening experience. Jack Lindsay and Christopher Hollis, writing respectively on the life and work of George Meredith and George Orwell, each stressed the political motives of his subject. With Meredith, the most substantial and serious effort yet made to assess his stature lost something in balance and finality by this insistence on an almost Marxian creed. Orwell on the contrary left his zealous analyst defeated on political and religious doctrine, certain only that he stood for liberty and the decencies. In *Amphibian: a Reconsideration of Browning* Henry Charles Duffin brought a fresh, unorthodox view to bear on the printed poems; while *Shelley at Work* was built up by Neville Rogers from a close scrutiny of the poet's rough notebooks, tracing the thought-progressions through a broken stanza, a Platonic reference or a drawing of trees and boat.

Even full-scale biographical works were stamped frequently by the individual outlook. St. John Ervine's *Bernard Shaw: His Life, Work and Friends*, with its new material and unpublished diaries, was not only the weightiest record to date, but gained much in truth and virility from its author's personal friendship with his subject. Thus, also, only the son of Stanley Baldwin could have revealed the inner strains and tensions of an unpopular prime minister in *My Father; the True Story*—a sympathetic yet undistorted narrative. Further—though without knowing his hero in the flesh—Christopher Devlin, himself a Jesuit, was able, in *The Life of Robert Southwell, Poet and Martyr*, to enter vividly into the career of the inspired and hunted Jesuit priest in England during the reign of Elizabeth I.

The now-popular compendium of personal story, science and travel appeared in C. W. Cerram's (K. W. Marek) *Narrow Pass, Black Mountain*, on the Hittite empire; and in Norman Kemp's report on the South Polar expeditions, *Conquest of the Antarctic*. Other travellers tended to favour the near east; Lord Kinross (J. P. D. Balfour) writing with enjoyment of the ruins, history and present-day aspect of *Europa Minor*, Desmond Stewart and John Haylock tempering description with a discussion of politics in *New Babylon: a Portrait of Iraq*, and Robert Liddell's *Byzantium and Istanbul*, if a trifle opinionated, providing useful guidance to the city's evolution and antiquities. A more general *History of Turkey* was compiled by M. Philips Price; but Alan Moorehead's focus on *Gallipoli* concentrated also on its most significant event of modern times—the wasted campaign in World War I, admirably set forth in its disturbing detail. The historians of broader scope were led impressively by Sir Winston Churchill, of whose projected *History of the English-Speaking Peoples*, vol. 1, *The Birth of Britain*, was followed in a matter of months by vol. 2, *The New World*, carrying the tale to 1688.

Earl Leslie Griggs edited the first two volumes (1785–1806) of *Collected Letters of Samuel Taylor Coleridge*, which promised to be the most complete and accurate collection of the self-revelatory correspondence. Similarly, E. S. de Beer edited and expanded *The Diary of John Evelyn*, with new material, into six volumes; and unpublished documents filled out Sir Geoffrey Keynes' edition of *The Letters of William Blake*. Most striking, in its novelty and expressiveness, was the first volume (edited by Joan Evans and J. H. Whitehouse) of *The Diaries of John Ruskin*.

Other books of the year included:

BIOGRAPHY.—J. H. Plumb, *Sir Robert Walpole: (vol. 1) The Making of a Statesman*; Richard Barkeley, *The Empress Frederick, Daughter of Queen*

WORKMEN EXPLORING tomb of Sir Thomas Walsingham at Chislehurst, Eng., May 1, 1956, in a fruitless search for a document which was believed would prove that Christopher Marlowe (1564–93) had written the plays of William Shakespeare

Victoria; Virginia Cowles, *Edward VII and His Circle*; Tom Driberg, *Beaverbrook*; René MacColl, *Roger Casement: A New Judgment*; Charles Beatty, *Ferdinand de Lesseps*; Robert Speaight, *Life of Hilaire Belloc*; A. Vibert Douglas, *Arthur Stanley Eddington*; Mary Moorman, *William Wordsworth, the Early Years*.

MEMOIRS AND LETTERS.—L. E. Jones, *An Edwardian Youth*; Negley Farson, *A Mirror for Narcissus*; Sir John Kotelawala, *An Asian Prime Minister's Story*; E. M. Forster, *Marianne Thornton*; John Malcolm Brinnin, *Dylan Thomas in America*; Eric Newby, *The Last Grain Race*; Violet Markham, *Friendship's Harvest*; Duchess of Windsor, *The Heart Has Its Reasons*; Virginia Woolf and Lytton Strachey, *Letters*; J. R. Hale (ed.), *The Italian Journal of Samuel Rogers*.

LITERARY CRITICISM.—Geoffrey Briereton, *An Introduction to the French Poets: Villon to the Present Day*; James Reeves, *The Critical Sense*; David Daiches, *Literary Essays*; Mario Praz, *The Hero in Eclipse in Victorian Fiction*; Robert Gittings, *The Mask of Keats*; F. E. Halliday, *Shakespeare in His Age*.

TRAVEL.—Sacheverell Sitwell, *Denmark*; Peter Schmid, *Beggars on Golden Stools*; Lobsang Rampa, *The Third Eye*; Agnes Newton Keith, *Bare Feet in the Palace*.

HISTORY, POLITICS, SOCIOLOGY.—A. P. Ryan, *Mutiny at the Curragh*; William McElwee, *England's Precedence*; Aidan Crawley, *Escape From Germany*; Walter Lord, *A Night to Remember*; Field Marshal Sir William Slim, *Defeat Into Victory*; Percy Arnold, *Cyprus Challenge*; Michael Burn, *Mr. Lyward's Answer*; T. D. Kendrick, *The Lisbon Earthquake*; J. D. Scott, *Life in Britain*; Alan Pryce-Jones (ed.), *The New Outline of Modern Knowledge*. (S. NN.)

Fiction.—There were few new names in the fiction list of 1956, but many well-known writers added to their reputations. Rose Macaulay's *The Towers of Trebizond* displayed her familiar virtues of wit and erudition, and to these were added a subtle analysis of the spiritual predicament of a young woman torn between sacred and profane love. Sir Compton Mackenzie also astonished the critics by his *Thin Ice*, a study of homosexuality not so much from the psychological as from the politico-social point of view. Wyndham Lewis, on the other hand, disappointed with his *Red Priest*, a diatribe directed indiscriminately against both the Christian and the Communist ethics. C. P. Snow continued his sequence of studies in the new bureaucracy with

Homecoming. Judgment had to be suspended until the cycle reached completion, but the ambitious scope of his work commanded respect even when its detail did not excite.

The most widely discussed novel of the year was Angus Wilson's *Anglo-Saxon Attitudes*, an elaborate satire on English academic life. In its size and in the large number of its principal characters it recalled the Victorians, but it had a brittleness of texture and a shrillness of tone that gave it a strictly contemporaneous air. William Sansom's collection of short stories *A Contest of Ladies* was disappointing, but his novel *The Loving Eye* was his best work to date. William Golding's *Pincher Martin*, describing the last hours of a sailor shipwrecked on a rock in the north Atlantic, was a tour de force, which failed to reveal the remarkable powers of original narration displayed in his first two books. Elizabeth Jane Howard's *The Long View* was technically interesting because of its retrospective manner of telling and for the excellence of its dialogue. Monica Stirling in *Some Darling Folly* showed a delicacy of perception recalling that of Elizabeth Bowen. It was a deceptively simple account of a married woman's love affair in Paris, told with great wit and insight. A new name, and one to be reckoned with, was that of Sybille Bedford, hitherto known only as the author of a travel book on Mexico. *A Legacy* was, in the opinion of several critics, the most interesting novel of the year. Elaborate in form, it dealt with life in a German family at the turn of the century, partly Catholic and aristocratic, partly Berlin-Jewish.

Three of the year's most impressive volumes came from the commonwealth. By the highest standards Patrick White's *The Tree of Man* was a fine achievement. A long novel about an Australian couple, it had a natural vigour and simplicity that set it apart from most contemporary fiction. John Hearne's *Stranger at the Gate* put him at the head of the younger school of Caribbean writers. Nadine Gordimer's *Six Feet of the Country* was a collection of short stories worthy of a fellow countryman of Olive Schreiner and Pauline Smith.

The year produced the usual crop of historical novels, of which incomparably the best was Mary Renault's *The Last of the Wine*, a most impressive reconstruction of life in the Athens of Alcibiades.

In the field of comedy P. G. Wodehouse's *French Leave* showed no fading of an ever green talent; but Iris Murdoch's eagerly awaited *The Flight From the Enchanter*, while giving evidence on every page of a sharp intellect at work, failed in its final effect, as the object of her satire remained in doubt. Honor Tracy's *The Straight and Narrow Path* was a comedy on stock Irish themes, but the freshness of its approach to the well-worn subjects of local credulity and petty corruption lifted it above its fellows. Hugo Charteris' *Marching with April* was a farcical satire on life in the Highlands, written with the greater distinction. Two new writers took Malaya as their theme. Mary McMinnies in *The Flying Fox* displayed an enviable gift of characterization that never degenerated into caricature, and Anthony Burgess on a smaller scale produced the sharply-etched *Time for a Tiger*. (J. D.)

Poetry.—Future historians, looking back on a not very exciting year, may decide that the most significant poetic event of 1956 was the publication of *New Lines*, edited by Robert Conquest. This anthology of nine poets, all of whom found themselves not earlier than the late 1940s, was by no means representative of the whole poetic scene, but it did seem to express the prevalent mental attitude of the fifties rather as *New Signatures* had spoken for the 1930s. Eschewing all extravagant gestures, tidy in technique and cultivating "the plain style," these new poets undoubtedly reflected in their work something of the spirit of the times.

To judge a poet by his anthology pieces is not, however, alto-

gether fair. Fortunately several of the poets in *New Lines* brought out individual volumes during the year. John Wain (*A Word Carved on a Sill*) and Kingsley Amis (*A Case of Samples*), while interesting, intelligent and sometimes enjoyable, seemed to many readers to reduce much of their poetry to a kind of intellectual exercise or academic joke. D. J. Enright (*Bread Rather Than Blossoms*), a less tidy and more travelled writer than these two, avoided this rather arid approach. But the most widely acclaimed and accessible poet in this group was undoubtedly Philip Larkin, whose *The Less Deceived* appeared late in 1955. This most attractive collection promised well for its author's future.

Of other volumes published in 1956 the most notable were *One Foot in Eden* by Edwin Muir and *Collected Poems* by Kathleen Raine. The intuitive, far-ranging vision of these two poets emphasized the rather poverty-stricken imagination of many of their younger contemporaries. Two other poets of unashamedly romantic temperament were Thomas Blackburn (*In the Fire*) and W. S. Merwin (*Green With Beasts*).

Other volumes of merit and interest included *The River Steamer* by E. J. Scovell, a poet of loving observation and true feminine grace; *The Scale of Things* by Patric Dickinson, a more varied volume than previous ones by this poet; and Kathleen Nott's *Poems from the North*. In a year rich in anthologies, mention must be made of (apart from *New Lines*) *The Chatto Book of Modern Poetry 1915-1955*, edited by C. Day Lewis and John Lehmann, and *Poetry Now*, edited by G. S. Fraser.

Entomology: see AGRICULTURAL RESEARCH SERVICE; AVIATION, CIVIL; BACTERIOLOGY.

Epidemiology.

Epidemiology has had its most frequent application in the field of communicable disease, but by 1956 there was an increasing awareness that this same approach had application in many other spheres. One such case was the use of epidemiological principles in the investigation of motor vehicle accidents. Studies were under way to demonstrate the factors (human, mechanical and sociological) most involved in the occurrence of vehicular accidents.

Epidemiological methodology also was being employed in the study of chronic diseases such as coronary heart disease. Men are more likely to develop coronary heart disease than women. This difference is most striking for those below the age of 60. The number of deaths reported caused by heart disease had increased considerably in past decades in the United States and several European countries, and this apparent increase in the disease may not have resulted entirely from improved diagnostic procedures and patterns of diagnosis by physicians because women seemed to be involved to a less extent. Evidence derived from both epidemiological and clinical studies was presented which suggested that people who eat a high proportion of fat in their diets are more likely to develop coronary heart disease. Persuasive evidence was presented recently that fats from animal sources are more to blame for coronary heart disease than fats derived from vegetable sources.

In the field of communicable diseases, many which were formerly of great importance in Europe and the Americas were being controlled or to a large extent were controllable through the use of antibiotics, vaccination and immunization. With the advent of the Salk vaccine, poliomyelitis was the most recent disease to be curbed.

Polio vaccine was used widely in certain parts of the world, principally in the western countries which suffered epidemics. The formalin-inactivated vaccine developed by Jonas Salk had been proved effective and safe but poliomyelitis had not disap-

peared from the countries where vaccine was used. The time lag in proceeding from an experiment to a routine program of public health departments and practitioners was, in part, responsible. Similarly, the transition from the rigidly controlled conditions of a field trial to mass use made it difficult to assess the exact degree of efficacy of the vaccine. It was believed that the vaccine was most effective when given in three injections, yet in the Massachusetts epidemic in 1955, which was caused by the Type I polio virus (the usual type implicated in paralytic polio), only one injection was 76% effective in preventing the more severe forms of paralytic polio.

In the United States the Salk vaccine was limited at first to the 5 to 9 year age group but as the supply grew more plentiful, it was extended to other ages up to 20 years. It was used to a very limited degree in ages 20 to 39 years. What had this vaccination program accomplished in the United States? The number of polio cases in 1956 was lower than in former years but this could be the result of natural fluctuations in the number of cases from year to year. It would be more profitable to consider in detail the experience in New York state. This experience did not include that of New York city which, being a large metropolis, had a somewhat different epidemiological pattern. It was estimated that 80% of the population in the state under 20 years of age had had at least one injection of vaccine, while more than half of these had two injections, but few had the complete series of three.

The age group 5 to 9 was particularly well covered. In comparison with the average experience in 1951 to 1953, the rate of paralytic polio in all ages decreased 73%. The decrease was greatest (82%) in ages 5 to 9, the group most thoroughly vaccinated. The rate fell also in adults, being actually 64% lower than the 1951-53 average.

It was difficult to assess how much of these decreases could be attributed to immunization and how much to natural annual fluctuations. In former years the ratio between children aged 5 to 9 and adults over 20 years of age was six to one. In 1956 the ratio was cut in half. It may well be that immunization of children had decreased the reservoir of virus in children, therefore decreasing the chances of disease in adults. If this were so, the rate in adults could not be used as a yardstick to measure how much polio there would have been in children had vaccine not been used. At any rate, it had been proved that the formalin-inactivated vaccine was safe and was effective in preventing paralytic polio, even though more effective vaccines, including the feeding of an avirulent live virus, might be developed.

As the acute communicable diseases were becoming to a varying extent controllable, heretofore unrecognized agents of disease and diseases themselves were uncovered. One such group of agents was the APC (adenoidal-pharyngeal-conjunctival) group of viruses, usually referred to as the adeno-viruses, some of which cause upper respiratory symptoms much like those of a severe cold.

Other such agents were the so-called "orphan viruses" (ECHO group; named from entero-cytopathogenic human orphan) which can produce the same symptoms as nonparalytic poliomyelitis and are usually referred to as aseptic meningitis. While these newly recognized disease agents do not usually produce illnesses of a dangerous nature, the illness produced can be acutely severe, and frequently there is the problem of differentiating them from diseases of more serious import. In most instances a conclusive diagnosis depends on laboratory determinations.

The diseases of international importance which caused sporadic outbreaks of epidemic proportions during 1956 included the following:

Cholera.—Cholera remained confined to Asia with an outbreak of epidemic proportions, beginning in May, occurring in

India. An unusually high incidence of cholera was reported from Pakistan during March and April.

Plague.—Sporadic cases of plague continued to occur in various South American and African countries. One case was reported in the United States in June. The disease continued to smoulder in Asia.

Smallpox.—Smallpox was epidemic in various cities of Brazil during the last quarter of 1955 and in certain Asian provinces during May and June 1956. The disease remained endemic in Africa with sporadic outbreaks of epidemic proportions. As of Nov. 1956 all areas of North America north of the Rio Grande had been free of smallpox for one year. The status of Mexico was uncertain because of incomplete reporting, but the disease is not common there.

Yellow Fever.—The expected movement of jungle yellow fever northward into Mexico had not occurred. The virus of yellow fever had been isolated from mosquitoes (*Haemagogus mesodentatus*) in Guatemala and from monkeys in Guatemala and Honduras. Sporadic cases had been reported from Africa. The *Aedes aegypti* mosquito, which is the vector of this disease in its spread to man, is indigenous as far northward as the southern portion of the United States. Vaccination against yellow fever and eradication of the *Aedes aegypti* mosquito still constitute the best means of control of the spread of this disease.

Typhus, Epidemic.—Typhus fever (louse-borne) was reported from Africa, Asia, South America and Mexico during 1956. Delousing with DDT powder and vaccination of persons in endemic regions were the chief means of control of this disease.

Sporadic cases of endemic typhus (flea-borne) were reported in the United States during 1956. In the natural history of this form of the disease, man is an accidental victim since the disease is usually spread from rat to rat by the rat flea and only occasionally to man by the rat flea or rat louse. It differs from the epidemic, louse-borne typhus in that the latter disease is spread from man to man by the human louse (*Pediculus humanus*) and man is the natural reservoir.

Influenza.—Type A influenza virus was found to be responsible for sporadic outbreaks of illness in the United Kingdom and in North America. During Dec. 1955 influenza infection was diagnosed in outbreaks of relatively mild intensity among children in scattered southern parts of England. Several weeks later, laboratory-confirmed cases of influenza A were detected in the United States, in California. In the early months of 1956, sporadic cases of influenza A and limited outbreaks were reported in Washington, D.C., New York, Pennsylvania, Ohio and Illinois. In the United States, mortality from all causes and from influenza and pneumonia did not reflect a high incidence of influenzal infection.

By contrast with the winter of 1954-55, influenza B infection was found only rarely. Influenza C infection was recognized and reported only once.

Infectious Hepatitis.—This disease, which is caused by a virus and primarily affects the liver, remained world-wide in distribution. There was an epidemic in Denmark, and Sweden, Norway and Israel also reported a sizable number of cases. An extremely extensive epidemic involving tens of thousands of cases occurred in India. The virus of infectious hepatitis was reported to be isolated for the first time. If this work could be confirmed, it might well represent a great forward step in the effort to understand this disease more fully and the means of its control.

Malaria.—Eradication campaigns directed at destroying the mosquito vectors of malaria through the use of residual DDT spray, swamp drainage and the use of oil on swamp regions which could not be drained continued in many parts of the world. The

disease continued to occur in many countries of South America; an epidemic occurred in Mozambique, Af., and the republic of Haiti also experienced a high incidence of the disease.

Rabies.—Ecologically rabies continued to be primarily a problem of various species of wildlife but it also affects domestic animals and humans. The second and third cases of laboratory-confirmed rabies in a rat were reported in April 1956 from Nebraska and Louisiana. The first such case occurred in Georgia in Oct. 1955. For the first half of 1956, skunks accounted for about a third of the total rabid animals found in California. In several parts of the United States, wild foxes represented the chief species of wildlife which were rabid in nature. In Jan. 1956 a fatal case of rabies was reported from Texas of an entomologist who was engaged in research on bat rabies. Rabid bats were reported from Texas, California, Florida, Louisiana, Montana, New Mexico, Ohio and Pennsylvania between June 1953 and Nov. 1955.

Eritrea: see ETHIOPIA.

Estonia. A Soviet Socialist republic, Estonia is bounded north by the Gulf of Finland, east by the Russian F.S.R., south by Latvia and west by the Baltic sea. Area: 17,400 sq.mi. (18,359 sq.mi. before 1940). Pop. (1956 est.) 1,100,000. Languages: Estonian and Russian. Religions: Lutheran and Greek Orthodox. Chief towns (pop., 1939 est.): Tallinn (cap.) 146,400 (1956 est., 257,000); Tartu 60,100; Kohtla-Järve (1950 est.) 30,000. First secretary of the Estonian Communist party in 1956, Ivan Kabin; chairman of the presidium of the supreme soviet, August Jakobson; chairman of the council of ministers, Aleksey Muurisepp.

History.—In Feb. 1956 the 20th congress of the Communist party of the Soviet Union granted to Soviet republics greater autonomy in the field of economic planning. As a result, a common railway and sea transport administration for the Baltic republics was dissolved and three separate administrations were formed. Writing in the *Izvestia* (Sept. 22), Muurisepp claimed increased efficiency of Estonian railways and sea transport and greater productivity of Estonian agriculture.

An official report said that by Oct. 20 Estonia had supplied the state 262,000 metric tons of milk; i.e., 62,000 tons more than was planned for 1956 and 78,000 tons more than had been supplied by the same date in 1955. It was expected that by the end of 1956 Estonian collective and state farms would supply an additional 40,000 tons of milk. The average amount of milk per cow was 1,745 kg. in the collective farms and 2,958 kg. in the state farms.

Kustaa Wilkuna, a Finnish folklore expert, who in April had spent five days in Estonia, said in a press interview that about 100,000 Estonians who had been deported to the U.S.S.R. in Marxist and Stalinist times had returned home. Tallinn had been well rebuilt, but in Tartu, which had been more than half destroyed in 1944, rebuilding was still going on.

On Sept. 1 the 700th anniversary was celebrated of the foundation of the city of Narva.

(See also LATVIA; LITHUANIA.)

(K. SM.)

Education.—Schools (1950): primary 1,148, pupils 142,500; secondary, pupils 13,500; vocational, pupils 14,000. In 1953 Estonia had 7 institutions of higher education with about 10,000 students.

Finance.—Budget: (1955 est.) balanced at 1,161,466,000 roubles; (1956) balanced at 1,280,457,000 roubles.

Ethiopia. An independent empire of northeastern Africa, including (from Sept. 15, 1952) the autonomous province of Eritrea, Ethiopia is bounded west by Sudan, north-east by the Red sea, French Somaliland and (British) Somaliland Protectorate, and southeast and south by (Italian) Somaliland trust territory and Kenya. Area: 457,142 sq.mi., including Eritrea (47,876 sq.mi.). Pop. (1954 est., no census ever taken): 16,000,000, including Eritrea (1,000,000). Language: Amharic, official language; also Galla, Tigrinya, Tigré, Somali, etc. Religion: Christian Monophysite (in communion with the Egyptian Coptic Church) 57%; Moslem 20%; other 23%. Chief towns (pop., 1951 est.): Addis Ababa (cap.) 401,915; Asmara 117,000; Harar 45,000; Dessye 35,000; Dire-dawa 30,000. Ruler, Emperor Haile Selassie I; premier in 1956, Bitwoded Makonnen Endalkatchou; chief executive in Eritrea, Asfaha Woldemikael.

History.—Ethiopia took a prominent part in the early stages of the Suez canal controversy in 1956, and the foreign minister attended the two London conferences. He was a member of the committee which presented the proposals of the conference to Pres. Gamal Abdel Nasser in Cairo, but Ethiopia did not join the Canal Users' association. The government announced in February that surveys of the Blue Nile river basin were being made and that international bids would be invited for hydroelectric and irrigation projects. An active part was taken in all United Nations affairs.

The 1954 Anglo-Ethiopian agreement, which restored to Ethiopia the administration of certain areas of the Ogaden province, encountered difficulty over British-protected Somalis, which excited criticism of Ethiopia in the British press. The emperor went to Ogaden in August and made a speech which emphasized the need for unity among all Ethiopian peoples and, with reference to the Italian trust territory of Somalia, asserted that all Somalis were economically linked with Ethiopia.

A harmonious settlement of affairs with Italy made further progress. A reparations agreement was concluded in March, and negotiations were opened in Addis Ababa for the delimitation of the Somali-Ethiopian frontier. The agreement provided for payments by Italy, including finance for a big hydroelectric project, the provision of ships, factories and public works and restitution of historical objects.

Missions arrived from the International Bank for Reconstruction and Development and the Export-Import Bank of Washington. The former was concerned with a projected loan for road and port construction and the latter with a loan for airfield development. Point Four assistance from the United States continued to expand, and agreements were signed embracing additional projects of public administration, education and development of natural resources.

Economically, the country continued to progress. Trade was good, and exports of coffee, the principal commodity, were satisfactorily maintained though slightly smaller than in preceding years. Other exports were steady. Foreign monetary reserves increased, but the Suez canal closure in November resulted in a restriction of shipping for exports.

In Eritrea, in elections to the second four-yearly legislature, most members were elected for a second term, and the retiring chief executive and the president of the legislative assembly were unanimously re-elected.

(F. E. ST.)

Education.—*Ethiopia:* Schools (1953-54): government primary 431, pupils 69,081, teachers 2,372; government secondary and vocational 11, pupils 2,155, teachers 117; private (all levels) 79, pupils 8,675. Teacher training colleges 2, students 533. Institutions of higher education 3 (including 1 university college), students 475 (including 200 at university college extension classes), teaching staff 34. *Eritrea:* Schools (1952): primary 100, pupils 13,500; secondary and technical 16, pupils 1,367. One teacher training college with 80 students.

Finance and Banking.—Monetary unit: Ethiopian dollar, with an exchange rate of Eth. \$2.50 to the U.S. dollar. Budget: *Ethiopia* (1954-55 est.; 1953-54 est. in parentheses): revenue Eth. \$108,000,000 (Eth. \$121,340,

000); expenditure Eth. \$108,170,341 (Eth. \$121,295,606). *Eritrea* (1956-57 est.; 1955-56 est. in parentheses): revenue Eth. \$12,978,102 (Eth. \$12,623,462); expenditure Eth. \$12,952,456 (Eth. \$12,610,018). Currency circulation: (Dec. 1954) Eth. \$118,682,613, (Dec. 1953) Eth. \$114,600,000. Deposit money: (Dec. 1954) Eth. \$119,801,764, (Dec. 1953) Eth. \$103,000,000.

Foreign Trade.—(Sept. 1954-Sept. 1955): Imports Eth. \$162,560,000; exports Eth. \$154,010,000.

Transport and Communications.—*Ethiopia*: Roads (1955): first class 4,075 km.; others 10,622 km. Motor vehicles in use (1954): passenger cars 8,300; commercial vehicles 3,700. Railways (1956) 784 km. Air transport (*Ethiopian Airlines*, 1955): 48,852,000 passenger-km.; cargo, 2,808,000 ton-km. Telephones (Jan. 1955) 5,825. *Eritrea*: Roads (1955): first class 889 km.; others 2,240 km. Railways (1956) 306 km.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): barley 600,000 (600,000); rapeseed 20,000 (20,000); sunflower seed 10,000 (10,000); dry beans 75,000 (75,000); sesame 35,000 (35,000); lentils 75,000 (75,000); (1954) millet (*Ethiopia*) 1,660,000, (*Eritrea*) 60,000; coffee 45,800; bananas 20,000; wheat (*Ethiopia*) 175,000, (*Eritrea*) 2,000; maize (*Ethiopia*) 150,000, (*Eritrea*, 1953) 20,000; chick-peas (1953) 6,000.

European Unity. Since the end of World War II the idea of strengthening Europe by a union of the various European countries has occupied much public attention. The year 1952 marked the high point on the road to European unity. In that year the European Coal and Steel Community (E.C.S.C.) was set up and the treaties establishing the European Defense Community (E.D.C.) were signed. In the same year it was proposed to draft a treaty establishing a European political community. Since that time no real progress on the road to European unity has been achieved.

The E.D.C. was rejected by France and was replaced by the Western European union (W.E.U.) for common military defense, a union consisting of Great Britain and the six nations of the European Coal and Steel Community—France, Italy, the German Federal Republic, Belgium, Luxembourg and the Netherlands.

The Council of Europe.—The largest of the various European organizations is the Organization for European Economic Co-operation (O.E.E.C.), of which Austria, Belgium, Denmark, France, the German Federal Republic, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey and the United Kingdom belong and of which Canada and the United States are associated members. The second largest organization is the Council of Europe, with its seat in Strasbourg, Fr. The council, which is purely advisory, considers such matters as European co-operation in economic, social and political affairs. It was enlarged when Austria joined the other 15 members in April 1956. By that step Austria, until recently partly under Soviet occupation, joined western Europe, and although militarily neutral, showed that spiritually it belongs to the west.

The door of the Council of Europe has always been left open since the organization was formed, to admit nations from the area called eastern Europe, in the hope that with the rolling back of the "iron curtain" the division of western and eastern Europe will cease.

The second important event at the April 16-23 session of the Council of Europe's Consultative Assembly was the election by acclamation of the Belgian senator, Fernand Dehousse, as president of the Assembly to replace Guy Mollet who was soon to become French prime minister.

The Council of Europe also adopted its own flag, with 12 gold stars forming a circle in the centre of an azure blue field. The stars were always to be 12 in number, not to indicate any number of member states, but because 12 is regarded as a symbol of completeness and perfection.

European Coal and Steel Community.—The European Coal and Steel Community is a much narrower unit than the Council of Europe, consisting of only six member states; but it represents a much closer approach to the goal of co-operation and integration than does the Council of Europe. In March 1956 the Common Assembly of the E.C.S.C., meeting at Brussels, Belg., approved the general principles of the proposed treaty for further economic integration, which would allow the establishment of a common market for the six nations. However, the problem of the integration of atomic energy led to a split between those who advocated private enterprise in the development of atomic energy and those who stood for collective enterprise. Some of the speakers also insisted that the treaty concerning atomic energy had to assure that the energy produced would be directed exclusively to peaceful uses.

The proposal for the creation of a common market envisaged its gradual establishment by reducing customs duties by 30% in four-year stages, by abolishing government subsidies, by the creation of a common investment fund and of another fund to finance retraining persons losing their jobs through economic integration.

EURATOM.—Serious consideration in the field of European unity was given during 1956 to the creation of a supranational atomic energy community (EURATOM) established among the six nations of the E.C.S.C., but opened to Great Britain and others to join. The Action Committee for the United States of Europe, which was formed by Jean Monnet at the end of 1955 concentrated on seeking rapid agreement on a definite project to pool atomic energy resources and their development in western Europe. It suggested the formation of a high authority similar to that which directed the European Coal and Steel Community. Thus EURATOM could become a second step toward a European federation which was the avowed goal of Monnet's Action Committee. Europe is an energy-deficit area, and therefore large scale industrial application of the energy released by nuclear fission is of vital importance. The situation was much aggravated by the Suez canal crisis in the fall of 1956, which dramatized the need for additional energy sources for Europe. The Suez canal crisis threatened the regular delivery of middle eastern oil to western Europe where it was most urgently needed to make up for the growing coal deficit. Although nuclear power could not be developed quickly enough under any circumstances to be of immediate help, it would nevertheless have great long-range importance, to diminish the growing dependence of western Europe on outside sources for its supply of power. By the end of Sept. 1956 five of the six parliaments (all but that of Italy) of the proposed member nations of EURATOM had adopted resolutions approving, in principle, the pooling of their atomic resources.

In this connection it may be noted that there exists a European Organization for Nuclear Research (C.E.R.N.) with its seat in Geneva, Switz., but this centre is exclusively dedicated to research. It was expected that its smaller synchro-cyclotron would be ready for use in 1957 and that its proton synchrotron, which would be the largest in Europe, would be in operation by 1960. Twelve member states, including Switzerland, participate in C.E.R.N.

EURATOM and Great Britain.—The United States pledged its support to the projected European Atomic Energy Authority in Feb. 1956 during a visit of René Mayer, chairman of the High Authority of the E.C.S.C., to Washington, D.C. Pres. Dwight D.

RUSSIA'S 'GENEROUS' OFFER," a cartoon of 1956 by Yardley of the Baltimore Sun (Md.)

Eisenhower assured Mayer that the United States would support any form the European nations might choose for their atomic energy co-operation. Great Britain, however, was more reluctant in its support at the beginning, fearing that a supranational economic grouping on the continent would tend to discriminate against countries outside the grouping. Great Britain favoured a program without supranational controls, allowing considerable flexibility to the member countries. Instead of joining the projected EURATOM. Great Britain proposed a form of association through the wider channel of the Organization for European Economic Co-operation. In July 1956 the council of the O.E.E.C. at its meeting in Paris, Fr., decided to set up a steering committee for nuclear energy, to devise a system of security controls for the nuclear undertakings in which European nations could join to form a limited pooling of their efforts, and to co-ordinate whatever joint nuclear programs might emerge. Efforts were made to conciliate the two opposite points of view, a supranational pool covering the whole nuclear field (as proposed by the six E.C.S.C. nations) and of less extensive co-operation for specific limited projects. It was suggested that the six nations build their own isotope separation plant while sharing a plant for the chemical treatment of irradiated fuels with the other nations. On the other hand, the same council meeting of the O.E.E.C. witnessed a more favourable British attitude toward the plan for creating a common European market and a free-trade area in Europe as distinct from a customs union. In that way Great Britain could retain its imperial preference tariffs.

Western European Union.—The Western European union (W.E.U.) to which the six nations of the E.C.S.C. and Great Britain belong took the first steps in 1956 toward an initiative in the control of arms production of the seven member nations. On Sept. 15, 1956, the W.E.U. council met in Paris. It was called at the suggestion of the German Federal Republic whose government was alarmed by the rumour of long-range intentions of the United States and British governments to reduce their armed

forces stationed in western Germany. The council meeting agreed that a prior accord had to precede any reduction of conventional armed forces in favour of nuclear weapons. Representatives of the United States and Canada attended the meeting as observers. It was generally agreed that the problem of reduction of ground forces should be discussed together by the western allies and a general agreement reached before any one nation made a decision. In any case the over-all strength of the western alliance should be maintained, although the nature of this strength could change in the future according to technical studies which were being carried out. In this respect, the functions of the Western European union tended to merge into those of the North Atlantic Treaty organization (NATO), in which all the member nations participated.

At the beginning of October new moves were made to strengthen western European union. The reasons for these moves were twofold: the revelation of Europe's weakness in the Suez canal crisis, and the agreement between France and the German Federal Republic about the future of the Saar territory. The west German chancellor, Konrad Adenauer, stressed in Oct. 1956, that a united and independent Europe would be a powerful factor, independent from the Soviet Union, but also independent from the United States. Adenauer made the point that such a united Europe had been for many years the goal of United States policy. He also stressed the need to unite not only the six countries of the E.C.S.C. but to create a link between Great Britain and a federally united Europe. At the same time Great Britain moved nearer to the acceptance of a proposal to create a free-trade region linking western Europe with Great Britain and, if possible, with nations of the British Commonwealth. Great Britain would thus form the link between western Europe and the Commonwealth. It was hoped that such a new form of co-operation would restore the positions of influence of Great Britain and Europe in world affairs. On the other hand, Italian Foreign Minister Gaetano Martino, in opening the discussion of Italian foreign policy before the Italian parliament at the beginning of October, stressed the need of a wider western solidarity. He warned that "otherwise we shall be exposed, one by one, to attacks carried out by political means. It is, therefore, necessary to devise new instruments of western collaboration more adequate to face a new situation."

Events of the Year: see CALENDAR OF EVENTS, 1956, pages 65–80.

Exchange Control and Exchange Rates.

In 1955 and the first half of 1956 there were few changes of major importance either in exchange rates or in exchange control systems. On the whole, production and trade continued to expand, and conditions approaching full employment prevailed in many countries. Indeed there was a growing tendency for aggregate demand to outrun the supply of goods and services, and signs of inflation appeared in several countries.

The signs of strain were particularly clear in the sterling area, in France, in Turkey and in various Latin-American countries which had been unable by either fiscal or monetary measures to adjust domestic demand to changes in foreign exchange earnings.

In Europe the European Payments union continued to function smoothly, there were no important exchange rate changes,

and some measures of detail were taken, notably in Belgium-Luxembourg, Germany and the Netherlands, to ease restrictions on the use of foreign exchange. In Latin America the devaluation of the peso in Argentina and the partial depreciations in Chile and Uruguay were the most significant developments. In the middle east the unification of the Iranian exchange rate structure was a noteworthy improvement. In the far east the continued improvement of economic conditions brought some easing of exchange restrictions in Japan, while in Indonesia they were tightened in response to renewed balance of payments difficulties.

United States.—Since World War II the U.S. payments position had been a decisive factor in the stability of many other countries throughout the world. In the last year or two, however, the rest of the world had shown itself better able to withstand the shock at least of moderate business fluctuations in the United States. This was so not only because of increasing economic strength abroad. Imports of goods and services were also becoming more important to the United States while dollar payments by the U.S. government to foreign countries were considerably larger than before the war and were not directly affected by business conditions. Further, U.S. income from investment abroad was now derived to a much greater extent from direct investments and was therefore much more flexible than service on fixed-interest obligations. In the first half of 1956, as in 1955, foreign countries as a whole continued to strengthen their positions by accumulating gold and dollar assets through transactions with the United States, while the gold stock of the United States remained virtually stationary. The U.S. dollar still stood at a substantial premium in the free foreign exchange markets of various countries. As in 1955, however, that premium reflected unfavourable economic conditions in the country in question rather than a general imbalance in payments between the United States and the rest of the world.

Canada.—As it had done for several years, Canada continued to allow the exchange rate to be determined by free market forces. Indeed, in March 1956 the government removed the last restrictions on transactions in gold. In the latter part of 1955 and the first months of 1956, its balance of payments position was rather less favourable. For 1955 as a whole, Canada's deficit on current account was \$665,000,000, against \$431,000,000 in 1954. At the same time the inflow of long-term capital showed a tendency to slacken as the interest rate spread between Canada and the United States narrowed. As a result Canadian reserves of gold and U.S. dollars declined slightly from the end of Sept. 1955 to the end of April 1956 and, reflecting these changes, the exchange rate for the Canadian dollar drifted downward to around par with the U.S. dollar in the winter of 1955 and spring of 1956 for the first time in more than two years. In the second quarter of 1956, however, Canadian long-term capital receipts rose again, and despite a continuing large import surplus, the fall in gold and U.S. dollar reserves stopped, and they stood at \$1,904,000,000 at the end of July compared with \$1,946,000,000 in Sept. 1955. The exchange rate for the Canadian dollar rose appreciably again and stood at U.S. \$1.02 per Canadian dollar at the end of July.

Latin America.—Because of deteriorating terms of trade, failure to provide adequate incentives to producers of agricultural exports and a continuing inflation, the international economic position of Argentina had worsened steadily in the last few years. On Oct. 27, 1955, Argentina announced a substantial devaluation of the peso. A single official exchange rate of 18 pesos per U.S. dollar replaced the former multiple rate structure, and a free exchange market was established to be applicable to minor exports, capital goods imports, payments

for services and capital transactions. In order to allow for future cost increases the full benefit of the devaluation was not passed on to the exporters of major agricultural products: taxes of 25% being levied on exports of greasy wool, cattle hides and hogs, 15% on meat and dairy products and wool tops and 10% on cereals, linseed and cotton. The free rate fell steeply at first, reaching 42 pesos per dollar by the end of Feb. 1956, but it subsequently recovered sharply as the minor exports were stimulated, imports were still kept on an austerity basis, and some foreign capital began to flow into the country again. On Aug. 6 the free peso was quoted at 28 to the dollar in New York.

Over the past years Argentina had accumulated very substantial debts to western European countries, and in some cases the repayment of these debts was restricting exports from Europe to Argentina. To facilitate the settlement of them, multilateral payments arrangements were set up in July 1956 with the so-called Paris club, comprising Austria, Belgium, Denmark, France, the Netherlands, Norway, Sweden, Switzerland, the United Kingdom and, later, Italy. All payments and collections with these countries could be in any of their currencies, which were therefore transferable among them.

The exchange system in Bolivia remained substantially unchanged. All exports were made by government agencies, while importers had to purchase exchange at the official rate of 190 bolivianos per U.S. dollar plus import surcharges ranging up to 15 times the official rate. However, the persistent weakness in the country's international economic position was reflected in the continued steep rise in the free rate, applicable to invisible transactions, from 3,600 bolivianos per dollar at the end of Sept. 1955 to no less than 7,360 per dollar by the end of June 1956.

In Brazil inflationary pressures persisted, originating largely from budget deficits and the expansion of bank credit. With imports restricted for lack of foreign exchange, however, and with coffee exports to the United States recovering, the balance of payments position improved somewhat, and foreign exchange reserves tended to rise in the first half of 1956. There were no important changes in the system of multiple exchange rates, but the weakness of Brazil's position was reflected in the continuing tendency for a greater proportion of exports to be sold at the more depreciated rates. The free rate also declined in the first half of the year and stood at 76 cruzeiros to the dollar at the end of July. The multilateral payments arrangements made in Aug. 1955 between Brazil on the one hand and the United Kingdom, Germany and the Netherlands on the other were extended to Belgium in Nov. 1955. This system, known as the Hague club, came into being for the same reasons as the multilateral payments arrangements made by Argentina with western European countries.

For several years inflation had put a continuous strain on the Chilean balance of payments, and in 1955 a partial depreciation of the peso had been carried through, with most transactions taking place at 300 pesos to the dollar. In the spring of 1956 the government instituted credit controls and wage policies to curb the inflation, and following this a system of free exchange rates was introduced in April 1956, replacing the multiple rate structure previously in effect. The principal free rate, applicable to all exports, imports and a few capital transactions, fluctuated between 490 and 495 pesos per dollar in the summer, while the other free rate, used for tourist expenditures and most capital transfers, moved above 500.

Since the fall of 1954 when coffee prices had declined somewhat from their extraordinarily high level, the international economic position of Colombia had remained rather precarious. The multiple exchange rate structure was maintained in 1955, and

In October the proportion of imports coming in at the free and more depreciated rate was greatly increased. There were still large commercial arrears, and importers had to wait about six months to obtain the exchange required to make their payments. In July the Colombian authorities offered importers with applications for foreign exchange pending the immediate allocation of exchange at the current official rate of 2.50 pesos per dollar for half their pending allocations, provided that they purchased the rest in the free market at a rate then about 4.60 pesos per dollar. If they preferred to wait their turn, they would receive the whole amount at the official, and of course very much more favourable, rate.

Ecuador's position was also weak, and in late 1955 and early 1956 exchange reserves, which were already at a low level, declined still further. To halt this the authorities took various measures mainly to restrict imports by either prohibiting certain categories or allowing them to come in at the free and more depreciated rate. This rate, which was affected by the intervention of the authorities to prevent speculative movements, dropped from 17.35 sucres per U.S. dollar at the end of Sept. 1955 to 18.62 at the end of July 1956.

As of March 1, 1956, Paraguay established a new par value of 50 guaranies per U.S. dollar, replacing the former par of 21 guaranies. At the same time the complicated multiple rate system, which had involved discrimination among currencies as well as among categories of payments, was greatly simplified. The new rate was applicable to all exports and government transactions, to payments for essential imports and certain services. For nonessential imports an exchange surcharge of 25 guaranies per dollar was temporarily imposed, while capital transactions and other services took place at the free market rate which stood at 120 guaranies per dollar at the end of June.

Despite the measures taken earlier in 1955 to avert a loss in reserves, Uruguay's foreign exchange position remained unfavourable. To encourage various exports (for instance, wool exports) premiums were given for exports of them. Then on Aug. 4, 1956, a new system, basically a partial depreciation, was introduced. It established a certificate market for all commercial transactions, exporters of different products being permitted to retain a varying percentage of their foreign exchange earnings which they would sell to importers of goods other than those deemed essential.

Sterling Area.—In the first half of 1955 the position of sterling had deteriorated sharply. Although monetary measures had been taken in the United Kingdom to halt the decline in reserves, the gold and dollar holdings of the sterling area, held

by the U.K., continued to fall till the end of the year, when they stood at \$2,120,000,000, only \$120,000,000 above the level generally regarded as critical. Part of this fall was seasonal, for exports of important sterling commodities are concentrated in the first half of the year, but the fact that they rose only to \$2,405,000,000 at the end of July, and dropped by \$129,000,000 in August, the first month of the Suez canal crisis, was indication enough of the continuing strain. Exports continued to rise, but imports kept pace; the opinion grew that the steps taken in 1955 were not drastic enough, and it occasioned no surprise when in Feb. 1956 the Bank of England raised the rediscount rate again, to the very high level of 5.50%.

These developments were reflected in the continued weakness of sterling exchange rates. Though the selling rate for U.S. account sterling firmed slightly from \$2.79 per pound sterling at the end of Sept. 1955 to almost \$2.81 at the end of Feb. 1956, it had dropped again in July and August practically to \$2.78, the lower of the limits within which it was permitted to move. Indeed, it was reported that on some days in August official intervention had been necessary to prevent the rate's falling below that point. Movements in rates for transferable and security sterling were similar; in the spring the gap between them was smaller than it had hitherto been, suggesting a greater measure of interchangeability. In the early summer, however, the spread widened again. The sterling rate for purchases of dollar securities showed further weakness, falling by the end of July to \$2.66 per pound sterling, while the authorities had to support the transferable rate in order to hold it above \$2.75.

Among the other sterling area countries Australia was still beset by balance of payments difficulties. The measures taken in Oct. 1955 to reduce aggregate demand and restrict imports did not prove sufficient, and Australia's international reserves, largely held in sterling, fell from the equivalent of \$721,000,000 at the end of Sept. 1955 to \$579,000,000 at the end of April 1956. Widespread increases in indirect taxes were therefore introduced in March, further restrictions in imports at the beginning of July, while exchange allowances for Australian tourists in the sterling area were reduced. By the middle of the year the decline in reserves appeared to have been halted.

Pakistan had devalued the rupee in 1955. In October of that year the government introduced a retention quota scheme, allowing exporters of some commodities to keep certain percentages of their earnings of foreign exchange and use them to purchase specified imports.

Continental Europe.—A steady demand for steel and capital goods reinforced the already strong international economic position of Belgium-Luxembourg. This was reflected in the tendency for the official rate to move toward 49.50 fr. per U.S. dollar, the lower limit within which fluctuations were permitted. Following the measures taken in 1955 to free foreign exchange transactions, particularly capital transfers, the monetary authorities, as of Jan. 1, 1956, lifted restrictions on dealings in gold. Payments for international transactions in gold had to be made either in bank notes or through the free exchange market, in which quotations for the dollar were, how-

†Including Pakistan.

ever, only very slightly higher than the official rate. With this action Belgium and Luxembourg had restored complete freedom for capital transactions in foreign exchange and in gold.

In Finland the practice of quoting fixed buying and selling rates for various western European countries was abolished on Jan. 1, 1956. This move was made possible by the substitution of agreements providing for some degree of transferability for the purely bilateral agreements between Finland and these countries.

The international financial position of France, which had improved considerably in 1955, deteriorated sharply in 1956. The causes were several. The severe winter seriously affected agricultural production and made necessary large imports of wheat and other foods. The increased military effort in North Africa necessitated large imports and also withdrew labour from industry, and the strain on French resources was only too noticeably reflected in the upward movement of prices. At the same time prices of certain imported raw materials rose, while U.S. military aid declined. Gold and foreign exchange reserves, which had risen to \$2,120,000,000 at the end of 1955, had fallen to \$1,858,000,000 at the end of June, and the indications were that most of the \$750,000,000 increase registered in 1955 would be wiped out by the end of the year. In the circumstances it was not surprising that gold prices and black market rates for the franc rose, the rate for the U.S. dollar standing well above 400 by mid-year, compared with an official parity of 350.

The position of the Federal Republic of Germany, on the contrary, continued strong. Exports still rose faster than imports, and the rapid inflow of foreign exchange went on, stimulated in the early summer by unfounded rumours that a revaluation of the deutschemark was imminent, and also by an inflow of foreign short-term capital attracted to Germany by the relatively high interest rates prevailing. From \$2,969,000,000 at the end of Sept. 1955, the reserves of the Bank Deutscher Länder rose to \$3,449,000,000 at the end of May 1956. In that month the monetary authorities took certain measures to relax somewhat the exchange control regulations applicable to residents. They were given permission to purchase marketable foreign shares and bonds, and were allowed to maintain foreign exchange accounts for an unlimited period with the Foreign Trade banks. Whereas previously German residents had been allowed to hold such accounts for only six months, from May 6 on they had full freedom to decide whether and when to sell their foreign exchange to the central bank. This change caused a dip in the central bank's foreign exchange holdings in June, but this merely represented a shift of funds from it to the Foreign Exchange banks.

In Greece most of the few remaining exchange taxes on exports of olive oil were removed in Nov. 1955 in order to maintain prices and stimulate exports in the face of a considerable increase in output. In Jan. 1956 a significant change was made when imports of gold in all forms were freed from all exchange control or customs formalities. This measure was taken in order to limit profits from arbitrage operations with foreign markets and thus lower the domestic drachma price of the sovereign. As a result the discrepancy between gold prices in Greece and in foreign markets narrowed, but in July it was apparently still sufficient to make gold imports into Greece attractive.

In 1956 the Italian international economic position continued to improve. On June 8, 1956, a new decree law became effective, co-ordinating and simplifying the basic exchange control regulations. The new law also liberalized the system of payments by introducing a free market in Italy for foreign bank notes.

Some further steps were taken in 1956 to relax exchange controls in the Netherlands. As from Jan. 14, residents were allowed to purchase foreign securities without first having to obtain a licence, and the range of goods for which import or export

licences were required was considerably reduced, while on July 9 guilder balances were made more widely transferable with the establishment of the "transferable guilder area" covering not only the member countries of the European Payments union but also Brazil, Chile, Finland and certain other countries. Until early in 1956 gold and foreign exchange reserves, bolstered by foreign purchases of Dutch securities, remained at the substantial level of about \$1,300,000,000 in spite of an increasing trade deficit, but by the middle of the year the inflow of capital had ceased and reserves began to fall.

The international economic position of Turkey, which had deteriorated since 1954, did not improve in 1956. Although exchange controls were tightened, the balance of payments on current account still showed a very large deficit, commercial arrears had not yet been liquidated, and the value of the lira continued to fall on the black market. Whereas the curb rate for the U.S. dollar had stood at £T9.15 at the end of Sept. 1955, by the end of May 1956 it had fallen to £T12.80 per U.S. dollar compared with an official rate of only £T2.80.

Major changes were introduced in the Yugoslav foreign exchange system at the beginning of 1956. Exporters, who had previously been allowed to retain 10% of their export proceeds for their own use or for sale in the free market, were henceforth permitted to retain only 1% for their own use, and the free market was abolished. Foreign exchange had to be surrendered to the National bank at rates which varied according to the type of exports involved and was allocated to importers often at rates which varied with the nature of the goods to be imported. A 33½% premium was also henceforth applied to the official rate of exchange applicable to foreign tourist expenditures in Yugoslavia, resulting in an effective rate of 400 dinars per U.S. dollar compared with the par value of 300.

Far East.—A new currency, the riel, had been introduced in Cambodia, and on March 21, 1956, its gold parity was officially set at 25.3905 mg. of gold.

Indonesia's international economic position, which had improved in 1955, began to deteriorate again in 1956. From \$253,000,000 on Dec. 31, 1955, gold and convertible foreign exchange reserves had declined to only \$132,000,000 on July 11, 1956. The move to simplify the exchange rate structure was therefore reversed, and on Aug. 6, 1956, a new system of export inducement certificates was introduced. Export premiums on minor exports were abolished, and instead exporters received negotiable certificates equivalent to from 3% to 20% of their export receipts. These certificates could be used for invisible payments and to import goods for which exchange was not made available.

The foreign exchange position of Japan continued to improve in 1956. As a result, selected trading firms were permitted to hold foreign exchange on their own account, the foreign exchange market was extended to permit forward transactions, and in other ways also measures were taken to relax control over foreign exchange and normalize Japan's foreign exchange transactions.

A new currency, the kip, was introduced in Laos in Dec. 1955. In May 1956 the kip rate was at 5.50 French francs per kip in the Hong Kong free market.

The ties between the French franc and the Vietnamese piaster were also loosened. The convention fixing the exchange parity between the two currencies was abrogated as from Jan. 1, 1956, and an exchange market was established in Saigon. The official parity of the piaster remained at 35 per U.S. dollar; the free market rate opened at 72 piasters and subsequently rose to 74.5 piasters per dollar in August.

Exploration and Discovery. The year 1956 saw a considerable amount of exploratory activity, of which the largest part was preparatory work for the International Geophysical year exploration in Antarctica. During 1956 several parties from various nations went to Antarctica to set up bases and otherwise prepare for the large operation in the following year. (For an account of these activities, see ANTARCTICA.)

Mountaineering exploration had a successful season. Mt. Everest was climbed for the second time on May 24, 1956, by a Swiss team which included veterans of previous climbs in the Himalayas. The Swiss group also climbed Lhotse, an adjacent high peak, on May 18. A Japanese party led by Yuko Maki reached the summit of Manaslu, 26,658 ft. high, on May 9. During the summer of 1956 Gasherbrum II in the Himalayas, which is 26,360 ft. high, was climbed by an Austrian party.

In the Andes, a Dutch party climbed Vicanota, Salcantay and Moray in Peru. A French expedition, led by Lionel Terray, climbed Charcaraju, a Peruvian peak 20,013 ft. high, in July. This mountain is considered to be extremely difficult. An Italian expedition was attempting Mt. Sarmiento in Tierra del Fuego. The peak is only 7,546 ft. high, but is heavily snow covered and has glaciers running down to the sea. The expedition included a geologist, a topographer and other scientific personnel. The mountain is considered one of the most difficult and inaccessible on the South American continent. Almost simultaneously, a Chilean army party led by Capt. René Cajardo climbed a peak named Ojos del Salado, which also lies in the main backbone of the Andes, inland from the town of Copiapó. Its summit is just inside Chilean territory. This party made a barometric determination of the altitude as 7,084 m., which if later proved correct would make the mountain slightly higher than Aconcagua's 6,960 m.

The year 1956 saw new records established in the geophysical exploration of the earth. An oil well drill reached a depth of more than 22,000 ft. below the surface of the ground, or somewhat more than 1,000 ft. farther than the previous record boring. The well was in Louisiana and started from near sea level. In the opposite direction, an unmanned balloon launched from Minnesota reached an altitude of 142,900 ft., a new record for a free balloon. The balloon carried cosmic ray equipment and other instrumentation, and was made of a thin plastic material, inflated with helium. The flight, made in September, was a part of the University of Minnesota (Minneapolis) cosmic ray research program.

Also in September a new altitude record for manned craft was established when a U.S. air force rocket-propelled Bell X-2 reached an altitude of approximately 124,000 ft. The pilot was Capt. Ivan C. Kincheloe. The flight took off from Edwards air force base in California. As usual, the rocket ship was attached to a larger ship, a Boeing B-50, and was cut loose when the carrier had reached about 30,000 ft. The new altitude record exceeded by far the previously announced records, and was almost as high as the unmanned free balloon record.

On Nov. 8, 1956, two U.S. navy balloonists soared to a record altitude of about 76,000 ft., breaking the former record for manned balloon flight of 72,395 ft. set in 1936. Lieut. Com. Malcolm D. Ross and Lieut. Com. Morton L. Lewis, riding in an aluminum globe beneath a helium-filled plastic balloon, took off near Rapid City, S.D., and landed about 140 mi. away in Nebraska.

Numerous other exploring expeditions were in the field during 1956, or had recently returned. A party of seven men under the leadership of Edward R. LaChapelle of Alta, Utah, embarked upon the ninth consecutive season of field work in the American geographical society's program of scientific studies on the Juneau

ice field in Alaska. As in several preceding seasons, the focus of the glaciological, seismological, meteorological and botanical investigations was Lemon Creek glacier; the Jamesway hut, located on the southeastern ridge that borders the glacier, was occupied during July and August.

Leonard J. Brass, associate curator in the department of mammals of the American Museum of Natural History, New York city, headed a scientific collecting team that planned to work for nine months in the eastern islands of the Papua area. The expedition was sponsored by Richard Archbold, a research associate of the American Museum of Natural History and president of Archbold Expeditions. The expedition planned to work first on Normanby and Fergusson Islands in the D'Entrecasteaux group, making extensive collections of mammals and plants. In addition to vascular plants, the group would collect mosses, liverworts and lichens. Plans also called for field work on the Louisiade archipelago and Woodlark Island, and for limited study and collection of reptiles, amphibians, fresh-water fishes, insects and birds.

The first members of a team of research workers and their assistants left New York to continue work on a geologic and ecologic survey in the West Indies that it was believed might throw new light on the relationships between present-day communities of living organisms and those that existed thousands of years ago. The expedition, led by Norman D. Newell, curator of historical geology at the American Museum of Natural History, would make use of such techniques of investigation as skin diving and underwater and aerial photography in an attempt to bring back evidence of the history of life to be found in the waters of the Great Bahama bank.

The Peabody museum of Salem, Mass., sponsored an expedition to the South Seas by the yacht "Varua," captained by William Robinson and including a photographer, Eliot Elisofohn, and an entomologist, David Bonnet. During a lengthy cruise among the Pacific islands, the expedition attempted to trace the origins of the Polynesian people. A new approach was used in an endeavour to determine the possible origin of the Polynesians. Recent findings of entomologists and research workers indicated that a particular type of filaria, apparently confined to people of the Polynesian race, is distributed throughout the archipelago and also extends across the Pacific to the mainland of Southeast Asia.

An expedition to northwest Spitsbergen was carried out by Nottingham (Eng.) university, which conducted studies in glaciology and geology and made a survey of the Loven islands. An Oxford university expedition returned from Northeast Land, where extensive ice thickness measurements were made. Cambridge university sent an expedition to east Greenland, which made a systematic collection of rocks in the area and did general ethnological, botanical and zoological collecting. The ring-footed and barnacle geese were banded in a study of bird migration patterns.

Exploration by members of the National Speleological society's Flint Ridge project disclosed that Floyd Collins Crystal cave in Kentucky is actually the nucleus of a cave system larger than any other now known. This exploration uncovered many miles of cave passages, including connections between Crystal cave and other nearby caves, showing that integration exists in the Flint Ridge cave system. Passages already surveyed or explored in the system totalled 32 mi.

The city of Tikal, Guatemala, largest and possibly oldest site of Mayan civilization, was being explored and partially restored by the University of Pennsylvania, Philadelphia. Tikal, deep in the rain forests of the Petén region and virtually deserted for nearly a millennium, is a foliage-covered metropolis of skyscraper temples, lavish palaces, dwellings, paved expressways and long-

"COLUMBIAN AVENUE," a passage in the Flint Ridge (Ky.) cave system which led to the discovery in 1956 of hitherto unexplored areas of the Floyd Collins Crystal cave and established it as the largest cave system in the western hemisphere

dry reservoirs. Occupied for 2,000 to 3,000 years up to about the 10th century A.D., Tikal was rediscovered about a century ago, but was accessible only by muleback until the Guatemalan air force built a landing strip nearby.

Oceanographic research continued during 1956. The "Vema," research ship of the Lamont Geophysical laboratory, made several research voyages, studying the ocean and the ocean floor. During January seismic refraction studies were made in the western Caribbean, the Cayman trench and the Puerto Rican trench. During the summer the ship was taken to the Mediterranean for a study of the Nile delta. It was planned to study the rate of exchange between the Atlantic and the Mediterranean waters, and to seek any evidences of the turbidity current which might have been produced by the Orléansville earthquake which took place in Sept. 1954.

The French oceanographic vessel, the "Calypso," in an expedition in which the National Geographic society co-operated, began a study of the 18,500-ft. deep off the coast of Liberia in the equatorial Atlantic. If successful, the next study would be made in the Romanche trench, the 25,000-ft. deep which is one of the deepest in the Atlantic. Harold Edgerton of the Massachusetts Institute of Technology, Cambridge, was to accompany the expedition, to test his new high-intensity underwater light. The camera and light were to be lowered on a nylon line, which is practically weightless when submerged, since it has almost the same density as sea water.

In Africa, Oxford university had an expedition operating in the High Atlas, making comparative studies of the dry southern slopes and the moister northern slopes.

Cambridge university had an expedition in the Tibesti mountains, part of a study of this area which included a general survey from the coast of Libya as far as Gatrún.

A United States-Australian scientific cruise was made on a British submarine in an endeavour to determine the exact shape of the earth. Sponsored by the office of naval research, the 7,500-mi. cruise was made by H.M.S. "Telemachus" between June 1 and Aug. 1. The "Telemachus" crossed the Tasman sea from Sydney, Austr., to New Zealand, then zigzagged across the Tonga-Kermadec trench between the Tasman sea and the open Pacific ocean. Observations were made from the submerged submarine at depths ranging from 50 to 200 ft., where disturbances from surface waves are sufficiently reduced to allow precise measure-

ments. The Tonga-Kermadec trench, which is about 1,200 nautical miles long, extends from Samoa to New Zealand. Along the sides of the trench the ocean depth is about 15,000 to 20,000 ft. and the trench itself is about 10,000 ft. deep, making the distance from the surface of the ocean to the bottom of the trench a total of about 25,000 to 30,000 ft., one of the deepest ocean floors in the world. During the trip about 130 gravity measurements were made by Hugh H. Traphagen of the Lamont Geological observatory and Stewart Gunson of the Australian bureau of mineral resources. The Tonga-Kermadec trench is of particular interest to geologists and geophysicists, since it is believed to be an initial stage in the development of a new mountain range.

Explosions: see DISASTERS.

Export-Import Bank of Washington. Established in 1934 as a District of Columbia banking corporation, the Export-Import bank was reincorporated as an independent agency of the United States government by the Export-Import Bank act of 1945 and operates under that act as amended. The basic purpose of the bank is to aid in financing and to facilitate the overseas trade of the United States. During 22 years in pursuit of this objective the bank had authorized loans or guaranties in 67 countries in a total amount of \$7,400,000,000. A total of \$5,171,000,000 had been disbursed of which \$2,648,000,000 was outstanding at the close of the 1956 fiscal year.

During fiscal 1956, 156 credits totalling \$375,900,000 were authorized. There were 492 credits in 57 countries in the bank's portfolio on June 30, 1956.

The bank authorized credits for development projects requiring United States goods and engineering services as well as to enable United States suppliers to consummate individual sales of equipment abroad. The bank also established 51 exporter credit lines on behalf of United States exporters amounting to \$32,800,000. Although the greatest dollar volume of loans was applied for by overseas borrowers for the purchase of United States equipment for development projects, the greatest number of applications for credit was received from United States exporters desiring assistance in consummating sales to their customers overseas.

In financing exports upon application of the United States exporter, whether on a case-by-case basis or under a line of credit, the bank generally required the exporter to participate to the extent of 20% of the sales price and required the buyer to make an advance payment of varying percentages but usually amounting to at least 20%. The bank then agreed either to guarantee or to purchase the remaining 60% without recourse to the exporter.

The capital stock of the bank amounting to \$1,000,000,000 is held by the United States treasury. The bank is authorized to borrow from the treasury up to four times the amount of this capital stock, thus placing a ceiling of \$5,000,000,000 on the loans and guaranties which it may have outstanding at any one time. On June 30, 1956, the bank had in its portfolio loan authorizations and guaranties totalling approximately \$3,300,000,000, leaving an uncommitted lending authority of approximately \$1,600,000,000.

During fiscal 1956 the bank's net income was \$60,200,000 out of which the bank paid a dividend of \$22,500,000 to the treasury, adding the balance of net earnings of about \$37,000,000 to its reserve for contingencies, which at the close of fiscal 1956 amounted to \$404,700,000. (S. Sd.)

Eye, Diseases of the. The man-made fireball of atomic and hydrogen detonations is more brilliant than the sun or any other natural light source visible on earth. Depending on the intensity, light sources of such extreme brightness may have both temporary glare and burning effects. The glare effects from nuclear explosions are similar to those experienced when looking directly at the sun. The permanent lesions from the fireballs have a parallel in the chorioretinal burns described as eclipse blindness.

On a theoretical basis it was predicted that damage to the unprotected retina would occur at distances greater than any known biological effect from the fireball of atomic detonations. To test this prediction, extensive experiments with rabbits were performed. They demonstrated that chorioretinal burns may occur from exposure to atomic bombs at distances up to 42.5 miles.

The chorioretinal damage occurred at much greater distances from atomic flashes than skin burns were known to occur. This was because of the focusing effect of the optical system of the eye and the pigment distribution in the tissues. The extent of chorioretinal injury depends on the heat generated in the pigmentary layers. Since these layers are thin, the energy is absorbed in a small volume. Consequently, high temperatures are reached rapidly. Close to the detonation this temperature should theoretically be higher than the boiling point of water, causing a water vapour explosion. Histologic examination of experimental animals suggested that such explosions occurred. Eclipse blindness occurs only if the sun is fixed voluntarily and the blink reflex is suppressed.

However, the human blink reflex, occurring at an average within 0.1 sec., is not fast enough to prevent damage from atomic detonations. The latter has a peak emission before 0.01 sec. During this early phase, the fireball of a nominal weapon reaches brightness up to 100 times that of the sun.

Relatively small amounts of visible radiation in excess of that to which humans are adapted cause glare. This is a temporary effect. Greater amounts of visible radiation cause after-images, which may last for seconds, minutes or hours. Excessive degrees of visible and infra-red irradiation cause permanent chorioretinal burns, with resultant scotomata and possibly retinal detachment. Surgical treatment has proven to be of great value in saving the

sight of eyes in which detachment of the retina in some degree has occurred. The earliest operations consisted of multiple points of fulguration of the detached portion of the retina by electric current through small pins inserted into the eye through the sclera. In selected cases the results are satisfactory. The retina is restored to its proper anatomical position and sight is saved. However, many detachment cases are in myopic eyes where the eyeball becomes enlarged through expansion of the sclera. The choroid and retina do not expand equal to the sclera, with the result that the retina becomes separated from the choroid and is sometimes lacerated in the process. The fulguration operation in such cases is not successful in restoring the retina, so it was abandoned for "scleral shortening" operations; i.e. reduction in size of the eyeball.

Two procedures proved quite successful; (1) scleral resection operation, which causes a decrease in the surface of the sclero-choroidal wall which has to be covered by a reattached retina, axial shortening of the eye, and decrease in the inner volume of the eye; (2) scleral buckling operation, which causes no decrease of the inner surface of the choroid which has to be covered by a reattached retina, axial shortening of the eye identical to that in scleral resection, decrease in the inner volume of the eye considerably higher than that caused by the scleral resection, and permanent or at least a long-lasting cylindrical protusion of the sclero-choroidal wall into the eye.

These operations may in some cases be followed by fulguration to produce permanent adhesions of the retina and choroid to the sclera but in some cases this is not necessary. With slight variations in technique these surgical procedures may be the means of saving sight for thousands of persons otherwise doomed to a life of darkness.

Isoniazid, a chemotherapeutic agent, which proved valuable in treatment of pulmonary tuberculosis, was found to be effective against tubercle bacilli introduced into the eyes of rabbits, but not against other bacteria. Half or more of the patients having choroiditis, periphlebitis and anterior scleritis with uveitis improved while under treatment with isoniazid, although the tubercle bacillus was not proved to be the cause of the disease.

Because of the public nuisance aspect, the stinging and burning sensation of the eyes which is associated with the smog of some large cities (particularly Los Angeles, Calif.) stimulated considerable research by industrial and public health agencies, yet the substances responsible for the eye irritation were not identified.

The opinion was that either hydrocarbon (petroleum) or ozone might be responsible.

Faeroe Islands (FAERÖERNE). This self-governing part of the kingdom of Denmark in the north Atlantic situated between Iceland and the Shetland Islands is about 200 mi. northwest of the latter. Area: 540 sq.mi.; there are 21 islands of which 18 are inhabited. Pop. (1950 census) 31,781; (1955 est.) 34,000. Language: Faeroese, akin to Icelandic rather than to Danish. Religion: Lutheran. Capital, Thorshavn, on the island of Stromo, pop. (1950) 5,607. Governor general in 1956, C. A. Vagn-Hansen.

History.—During the first months of 1956, in opposition to the Landsstyre (government), which in its endeavour to control the rioting at Klaksvig in 1955 had requested assistance from the Danish police, the Tjodveldisflokkurin (Republican [Left-

wing] Independence party) gathered signatures on a motion demanding a general election. However, the motion got support only from about 25% of the electorate and did not cause dissolution of the Lagting (local parliament). As a result the political crisis arising from the Klaksvig episodes was overcome and a commission was appointed to make proposals for a reorganization of the Faeroese police. Later in 1956 H. C. Hansen, the Danish premier, visited the Faeroe Islands in order to hear the Faeroese proposals for the improvement of Danish-Faeroese relations. (H. LN.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*A Faroe Islands Family* (1953).

Fairs and Exhibitions. **United States and Canada.**—United States continued to expand during 1956 at an amazing rate. The reason appeared to be that they feature the products of the land and products for the home, as well as the types of entertainment which appeal to the masses. Steadily increasing attendance kept about 3,000 fairs in operation and stimulated huge new building additions to the larger fairs. The Canadian National exhibition in Toronto, Ont., started work in 1956 on a new \$3,000,000 convention hall and women's building. The Arizona State fair at Phoenix was building a \$1,000,000 Coliseum to be ready in 1957. The Kentucky State fair, Louisville, was building a new \$15,000,000 plant, and the Calgary (Alta.) exhibition and stampede started an \$800,000 expansion campaign.

Among the larger fairs and exhibitions there was keen rivalry for leadership. New buildings, new entertainment features and larger premiums for exhibits were offered, which resulted during 1956 in a general upsurge in attendance, in many instances surpassing any previous years.

No fair on the continent seemed able to approach the Canadian National exhibition in attendance. The 1956 figure for the 14-day event was 2,832,000, a new high and far ahead of any fair in the United States. The State Fair of Texas, Dallas, annually records slightly more than 2,000,000 attendance, and the Los Angeles County fair, Pomona, Calif., draws more than 1,000,000.

The number of fairs precludes the possibility of listing more than a few, but besides the aforementioned, the following list gives, in round figures, the attendance at some of the larger agricultural and horticultural fairs and exhibitions.

United States

Feb. 16-22	Riverside County fair, Indio, Calif.	136,000
Aug. 4-12	Orange County fair, Middletown, N.Y.	114,000
Aug. 6-12	North Iowa fair, Mason City, Ia.	112,000
Aug. 17-26	San Joaquin County fair, Stockton, Calif.	180,000

FLOOR SHOW of contemporary abstract sculpture, part of an international exhibition of modern art at Venice, It., in 1956. Artists of 34 nations participated

Aug. 18-24	Darke County fair, Greenville, O.	248,000
Aug. 18-26	Wisconsin State fair, Milwaukee	779,000
Aug. 18-26	Missouri State fair, Sedalia	537,000
Aug. 21-26	Colorado State fair, Pueblo	823,000
Aug. 24-31	Ohio State fair, Columbus	660,000
Aug. 25-Sept. 3	Minnesota State fair, St. Paul	1,036,000
Aug. 29-Sept. 7	Indiana State fair, Indianapolis	855,000
Aug. 29-Sept. 9	California State fair, Sacramento	823,000
Aug. 30-Sept. 3	Central Wisconsin State fair, Marshfield	117,000
Aug. 31-Sept. 9	Michigan State fair, Detroit	821,000
Sept. 1-8	New York State fair, Syracuse	400,000
Sept. 3-8	South Dakota State fair, Huron	115,000
Sept. 9-15	Saginaw fair, Saginaw, Mich.	335,000
Sept. 9-15	Brockton fair, Brockton, Mass.	195,000
Sept. 10-15	Clay County fair, Spencer, Ia.	165,000
Sept. 11-15	Eastern Idaho State fair, Blackfoot	110,000
Sept. 18-23	Eastern States exposition, Springfield, Mass.	455,000
Sept. 14-23	Utah State fair, Salt Lake City	248,000
Sept. 14-23	Western Washington fair, Puyallup	361,000
Sept. 17-22	Tennessee State fair, Nashville	257,000
Sept. 21-29	Mid-South fair, Memphis, Tenn. (centennial)	465,000
Sept. 22-29	Oklahoma State fair, Oklahoma City	416,000

Canada

July 16-21	Edmonton exhibition, Edmonton, Alta.	270,000
July 9-14	Calgary exhibition and stampede, Calgary	521,000
July 30-Aug. 4	Provincial exhibition, Regina, Sask.	228,000
Aug. 18-25	Ottawa exhibition, Ottawa	423,000
Aug. 22-Sept. 3	Pacific National exhibition, Vancouver, B.C.	737,000
Aug. 31-Sept. 9	Provincial exhibition, Quebec, Que.	390,000
	Fredericton exhibition, Fredericton, N.B.	60,000

Scores of other fairs had attendance running from 100,000 to more than 250,000.

Industry and Miscellaneous.—The list of trade shows and other important exhibitions other than fairs held annually runs to considerably more than 2,000. Trade shows are a \$3,000,000,000 industry and are steadily growing. In every large city there are auditoriums and arenas seating from 5,000 to 20,000 persons and with exhibit space for huge displays. These and the large exhibition halls on most state fair grounds house the auto shows, home shows and shows of many other industries. New building costing from \$10,000,000 to \$30,000,000 and more each were being planned or built. New York and Chicago are the trade show centres in the United States. Among the important 1956 shows in New York were the International Auto show, National Photography show, International Philatelic show, National Home Furnishings show and International Antiques exhibition; in Chicago, the home show, auto show, sports show and National Premium Buyers show. Home shows, under the general title of National Home show, are held annually in nearly 50 cities. Auto shows and sports shows are held in every city of 100,000 or more. The paper trade, the electrical industry, the manufacturers of jewelry, gifts, electronic products and tobacco, and in fact every leading industry, hold annual shows throughout the country. (NA. G.)

Great Britain and Other Countries.—During 1956 the following fairs and exhibitions attracted much attention:

EXHIBITION AND CONVENTION BUILDING, the Coliseum, opened in New York city April 28, 1956. Exhibition space is contained in the six-story section on the right; twenty floors of office space are housed by the building on the left

Agriculture and Horticulture

May 22-25 Royal Horticultural society's show, Chelsea, Eng.
 May 30-June 2 Bath and West and Southern counties show, Cardiff, was the society's 12th visit to Wales. At the last Cardiff show, in 1948, there were 162,943 visitors; in 1956 there were only 109,519, which showed a loss.
 June 12-14 Three Counties show, Hereford, Eng., was the last of the shows to be held in turn in the counties of Hereford, Worcester and Gloucester. The society acquired a permanent show ground at Malvern, Eng.
 June 19-22 Royal Highland show, Inverness, Scot.
 June 20-23 Royal Counties show, Poole, Dorset. Total attendance, 69,285.
 July 3-6 Royal Agricultural show, Newcastle upon Tyne, was marred by bad weather but the number of visitors (242,548) was a record. Livestock entries totalled 3,536. This was the seventh royal show to be held at Newcastle upon Tyne since 1846.

Industry

Dec. 29-Jan. 10 National Boat show, Olympia, London, sponsored by the *Daily Express*, attracted 144,705 visitors, nearly 24,000 more than in 1955.
 Feb. 22-March 2, British Industries fair: the exhibition was held in two parts, first at Earl's Court, London, when it was combined with the British Toy fair, and later at Olympia, London, and Castle Bromwich, Birmingham. Before the second part of the fair was opened the government decided, because of declining trade interest, not to renew its grant to British Industries Fair Ltd. Therefore, as from 1957, only the Birmingham section (devoted to heavy engineering and organized by the Birmingham chamber of commerce) would be held.
 March 6-31 *Daily Mail* Ideal Home exhibition, Olympia, London, for many years the largest and most popular of exhibitions, again had an attendance of more than 1,000,000.
 Aug. 28-Sept. 15 The fourth British Food fair, Olympia, London, was open for a week longer than the previous fair in 1954. The United States, for the first time, was one of 14 overseas countries taking part.
 Sept. 4-9 Seventeenth flying display and static exhibition of Society of British Aircraft Constructors, Farnborough. Bad weather caused many changes to be made to the planned flying program. There were more overseas visitors than ever before, and 338 exhibitors were a record.
 Oct. 17-27 Motor show, Earl's Court, London, attracted 494,912 visitors, 22,000 fewer than in 1955. The number of overseas visitors (16,787) was a record.
 Nov. 12-17 Cycle and Motor Cycle show, Earl's Court, London. The show opened two days late because of a strike of exhibition workers.

Overseas

The British government announced a change of policy with regard to participation in some overseas trade fairs. Following the ending of the British Industries fair in London it was decided to sponsor British pavilions at some fairs overseas. One of these was the Damascus fair (Sept. 1-30), the only annual trade fair in the middle east.
 March 13-22 Utrecht spring fair in the Netherlands attracted 1,416 exhibitors, including 351 from Great Britain and 138 from the United States.
 April 14-24 Swiss Industries fair, Basle, Switz., had about 2,300 exhibitors.
 May 5-21 Foire de Paris was held for the first time in a new exhibition hall. The largest foreign participation was from

Italy and Switzerland. A fire on May 20 caused considerable damage.

June 4

The U.S.S.R. permanent agricultural exhibition reopened for the 1956 season.

June 17-30

The twenty-fifth Poznan fair, Pol., was interrupted by riots which started shortly after the fair was opened. About 400,000 people visited the exhibition, including 3,000 from overseas.

Sept. 1-3

International Police exhibition, Essen, Ger. A British exhibit had as its theme "the generally friendly and happy co-operation between the police and the public."

(See also SHOWS.)

Falk Foundation, Maurice and Laura: see SOCIETIES AND ASSOCIATIONS, U.S.

Falkland Islands. The Falkland Islands include a British colony (East and West Falkland and adjacent islands) and dependencies in the South Atlantic. Dependencies: (1) South Georgia (1,450 sq.mi.; pop., 1953 census, 1,358; whaling industry centre), with South Orkney (240 sq.mi.) and South Sandwich (130 sq.mi.); and (2) South Shetland (1,800 sq.mi.) and Graham Land (on antarctic mainland). Dependencies, total pop. (1953 census) 1,400. Area of colony: 4,618 sq.mi. Pop.: (1953 census) 2,230, (1955 est.) 2,000, mainly of British descent and Protestant. Only town, Stanley (cap.), pop. (1953 census) 1,135. Governor in 1956, O. R. Arthur.

History.—In Stanley in 1956 a new infants' school, a new power station and new harbour jetties were completed as part of the colony's development scheme. The town water supply was improved, and progress was made on plans for a new senior school. Work was begun on a system of roads designed to connect Stanley with the farms and settlements of East Falkland, and plans were made for a similar road system in West Falkland. A new boarding school was opened at Davison settlement, West Falkland, and a similar school for the outlying farming communities of East Falkland was proposed.

In the dependencies two new survey bases were opened on the Danco and Loubet coasts, Western Graham Land. The main base of the commonwealth transantarctic expedition was established on the Filchner ice shelf, and the British International Geophysical year base was established in Coats Land. Meteorological reports from the new bases were included in the regular summaries, and forecasts were broadcast from Stanley for the benefit of South Atlantic shipping.

(B. SE.)

Education.—(1955) Five schools, pupils 350; also 19 itinerant teachers. Darwin boarding school opened 1956.

Finance and Trade.—Currency: sterling with local notes. Budgets: (1954-55, approved est.) revenue £285,142, expenditure £284,648; (1955 est.) revenue £299,000, expenditure £403,000. Foreign trade (including dependencies, 1955): imports £2,970,000; exports £3,840,000. Principal exports (1955): wool (4,395,322 lb.), hides and skins, guano, whale oil (185,739 bbl.), whale meat meal. Principal imports (1955): hardware, provisions, timber, coal, tobacco.

Famines: see AGRICULTURE.

Farm Co-operatives: see CO-OPERATIVES; FARM CREDIT SYSTEM.

Farm Credit System. Farmers and their co-operatives in the year ended June 30, 1956, borrowed \$2,700,000,000 from the organizations of the co-operative Farm Credit system supervised by the Farm Credit administration. This was \$273,000,000 or 11% more than in the previous year.

The system operates through 12 Farm Credit districts and includes 1,100 national farm loan associations, 498 production credit associations, 12 federal land banks, 12 federal intermediate credit banks, 12 production credit corporations (which were to be merged into the 12 intermediate credit banks on Jan. 1, 1957) and 13 banks for co-operatives including a Central Bank for Cooperatives located in Washington, D. C.

Farmers' and their co-operatives' investment in the capital stock of the system reached a new all-time high of \$217,000,000

on June 30, 1956. This compared with \$198,000,000 a year previous. All the national farm loan associations and the 12 federal land banks are entirely farmer-owned, as well as 441 of the 498 production credit associations. Farmers' marketing, purchasing and service co-operatives owned 12.3% of the capital of the 13 banks for co-operatives on June 30, 1956, and the remainder was owned by the U.S. government.

The 12 federal intermediate credit banks and the 12 production credit corporations are entirely government owned but legislation enacted in 1956 provided a basis for gradually shifting ownership to the production credit associations. During the year, the amount of government capital in the system declined from \$243,885,000 to \$239,305,600.

Farm Mortgage Loans.—Farmers obtained 60,600 farm mortgage land bank loans for \$513,000,000 through their 1,100 farm loan associations in the year ended June 30, 1956. This was 3,600 more loans and \$111,000,000 more credit than in the preceding year. At June 30, farmers were using 357,000 land bank loans for \$1,600,000,000, the largest amount since 1942. They had obtained these loans in 1956 and prior years.

To obtain funds to make loans, the land banks in the year sold \$490,000,000 of consolidated federal farm loan bonds to investors. On June 30, 1956, the banks had outstanding \$1,385,000,000 in bonds. These bonds are not guaranteed by the U.S. government in any way. A part of the loan volume is financed with the banks' own funds and with borrowings from commercial banks which totalled \$32,700,000 on June 30, 1956.

In the year, farmers repaid \$194,000,000 on their land bank loans. Of this amount \$116,000,000 was matured principal and interest and \$78,000,000 was payments ahead of schedule.

The Farm Credit act of 1955 broadened the services of the land bank system. One of the provisions made the system better able to serve part-time farmers. This resulted in 3,755 part-time farmers obtaining \$17,000,000 in loans through local national farm loan associations during the year.

In the year, farmers received \$4,400,000 in dividends on the capital stock they owned in their national farm loan associations, thus cutting the cost of their credit.

Production Credit.—Farmers obtained 270,100 operating loans for \$1,400,000,000 from their 498 production credit associations in the year ended June 30, 1956. While the number of loans remained about the same as the previous year the amount was up about 7%. At June 30, farmers had 251,200 loans outstanding for \$863,000,000. Funds to make loans are obtained primarily by discounting farmers' notes with the federal intermediate credit banks.

The 481,000 members of production credit associations on June 30, 1956, owned capital stock in their associations amounting to \$100,172,647. This was \$4,038,695 more than a year previous. During the year, 22 more associations became completely member-owned, bringing the number so owned to 441 or 89% of the total. The capital stock of the production credit associations owned by the government, through the 12 production credit corporations, was reduced to \$2,020,000. This compared with \$90,000,000 that the government had invested in these associations in the mid-1930s.

Farmer-owned stock, plus accumulated earnings of \$100,867,033, represented about 99% of the total net worth of the associations on June 30.

Farmer-members of 202 associations received \$1,000,000 in dividends in the year, which compared with \$792,000 paid by 121 associations in the preceding year. Farmer-members of 47 dividend-paying associations also received patronage refunds amounting to \$537,000, which compared with \$418,000 paid by 30 associations in the 1955 fiscal year. The 441 completely farmer-owned production credit associations paid \$2,479,765 in

state and federal income taxes during the fiscal year.

Credit for Co-operatives.—Farmers' marketing, purchasing and business service co-operatives borrowed \$567,000,000 from the 13 banks for co-operatives in the year ended June 30, 1956. Of the total credit, 66% was for operating capital, 26% was commodity loans and 8% was for facilities.

The 2,277 farmers' co-operatives using the banks on June 30 was the largest number at any year-end. These co-operatives had loans amounting to \$349,000,000, which was 10% more than on the same date the previous year.

Part of the funds to finance the banks' loans was obtained through the sale of consolidated debentures totalling \$141,650,000. Debentures are not guaranteed in any way by the U.S. government. Debentures outstanding at June 30, 1956, totalled \$132,800,000. Commercial bank borrowings totalled \$272,000,000 during the year.

Farmer co-operatives owned capital stock in the 13 banks amounting to \$20,700,000 on June 30, 1956, compared with \$18,300,000 a year earlier. For the six months the banks operated under the new Farm Credit act of 1955, which makes it possible for farmers' co-operatives to eventually completely own the banks, co-operatives received \$225,000 in dividends on their class-B (investment) stock. They also received patronage refunds of \$1,600,000 in the form of class-C stock. As a result of co-operatives increasing their stock ownership in the banks the 13 banks were able to repay \$2,600,000 of government-owned capital. For the year ended June 30, 1956, the 13 banks paid \$1,298,687 in federal franchise taxes.

Federal Intermediate Credit Banks.—The 12 federal intermediate credit banks, which provide funds for lending institutions making loans to farmers, made loans and discounts of \$2,000,000,000 in the year. Of this amount, 91% was for production credit associations, 8% for privately capitalized institutions and 1% for banks for co-operatives and co-operative associations. Funds to make loans and discounts were obtained by selling \$1,050,150,000 in consolidated debentures in the investment market. Debentures outstanding on June 30, 1956, totalled \$834,500,000. These debentures are not guaranteed by the U.S. government in any way. The intermediate credit banks paid \$91,792 in franchise taxes to the government for the fiscal year 1956.

(R. B. T.)

Farmers Home Administration. Farmers in every agricultural county in the United States used the credit services of the Farmers Home administration, an agency in the U.S. department of agriculture, during the fiscal year ended June 30, 1956. About 132,000 farm families obtained loans totalling \$308,000,000, the most the agency ever loaned in a single year.

The loans were accompanied by appropriate technical assistance and were made for operating, purchasing, enlarging, developing and improving farms, and for meeting emergency credit needs of farmers who, because of drought, storms or similar disasters, needed a supplemental source of credit to continue normal operations.

Only farmers unable to get suitable credit from private or co-operative sources were eligible for the aid. The agency's approvals of loan applications were based on the policy of supplementing rather than competing with private credit.

A large proportion of the loans were made to young farmers, including veterans, who had need for adequate credit and some technical help in developing sound farming systems and adopting efficient farm management practices. Veterans received preference for most types of loans.

A total of 78,280 family-type farmers borrowed production loans amounting to \$147,052,000 to purchase livestock, feed, seed, fertilizer, insecticides and equipment, and to pay other

farm and home operating needs.

Progress made by families who paid production loans in full in 1955 and continued to farm in 1956 was analyzed in the 1956 fiscal year. The average farmer in this group used the agency's credit four years, during which time his net worth increased from \$6,145 to \$9,075 and the value of his livestock and equipment rose from \$2,760 to \$4,800.

Loans to buy, enlarge or develop farms, called farm-ownership loans, totalled \$58,765,000, and were made to 5,100 farmers. The Farmers Home administration continued its policy of making most of these loans from funds advanced by private lenders on an insured basis. Of the total loaned, \$39,765,000 was from insured loan funds and \$19,000,000 was from funds annually appropriated by congress for direct loans.

The agency continued its policy of making most of its soil and water conservation loans from insured funds advanced by private lenders. This program helped 2,320 farmers and farmers' associations carry out measures for soil conservation, water development and use, permanent pasture development and farm drainage. Total loans amounted to \$11,910,000, of which \$10,589,000 was advanced by private lenders on the insured loan basis.

Farm housing loans, authorized during about the last six weeks of fiscal 1956, enabled farm owners to obtain decent, safe and sanitary farm dwellings and other essential farm buildings. A total of \$3,721,000 was loaned for this purpose.

In designated areas where emergencies caused need for supplemental agricultural credit not available from other sources, 45,840 farmers and ranchers received \$87,044,000 in emergency loans.

The loans aided farmers in continuing their normal operations after suffering losses from drought, storms or other disasters, or those who, because of local economic conditions, were unable to obtain credit from other sources. Of the total loaned, \$13,530,000 was for special livestock loans which helped established producers and feeders (except commercial feed lot operators) maintain normal livestock operations.

During the fiscal year ended June 30, 1956, total principal and interest payments by borrowers on all types of loans amounted to \$282,333,000, compared with \$275,927,000 during fiscal 1955.

Fashion and Dress: see SHOE INDUSTRY; WOMEN'S FASHIONS.

Fats and Oils: see VEGETABLE OILS AND ANIMAL FATS.

FBI: see FEDERAL BUREAU OF INVESTIGATION.

Federal Bureau of Investigation. The Federal Bureau of Investigation, established in 1908 by Attorney General Charles J. Bonaparte, is charged with the investigation of violations of certain specific federal laws and the collection of evidence in such cases. As the fact gathering and fact reporting arm of the United States department of justice, the FBI has jurisdiction over more than 140 federal investigative matters, encompassing both general investigations and domestic intelligence operations. It also assists local, county and state law enforcement agencies and other agencies of the federal government. FBI headquarters is located in Washington, D.C., and 52 field offices are maintained in major cities throughout the United States and in Alaska, Puerto Rico and Hawaii.

The primary responsibility for combating foreign intelligence agents and other internal enemies of the United States rests

with the FBI. Objectives of FBI investigations of foreign intelligence operations are: (1) to identify subversive elements within the United States and secure intelligence information concerning their activities and future objectives; (2) to obtain legal evidence of violations of federal laws; and (3) to disseminate security information vital to other federal agencies. Since the FBI's security operations are primarily preventive, it is not possible to measure their effectiveness by arrests and convictions alone. The 76,704 security-type matters received for investigation during the fiscal year ended June 30, 1956, suggests the magnitude of these operations.

Investigation of Subversive Organizations.—During the 1956 fiscal year, a number of organizations cited as subversive by the attorney general under executive order 10450 were under investigation by the FBI. In addition, facts concerning other groups were reported to the department of justice so that determination could be made as to their character. The facts gathered by the FBI concerning subversive organizations are promptly disseminated to interested agencies of the federal government. The FBI does not decide whether an organization is subversive or not and makes no recommendation to those responsible for such decisions. The FBI's investigations involving the Communist party in the United States, during the fiscal year resulted in the arrest of eleven Communist party leaders who were charged with violating the Smith act. As of July 1, 1956, 145 Communist party leaders had been indicted on Smith act charges, 102 had been convicted in federal court and others were awaiting trial.

General Investigation.—Convictions in cases investigated by the FBI during the 1956 fiscal year totalled 10,957 as compared with 10,615 during the 1955 fiscal year. These convictions represented 96.4% of the persons brought to trial in FBI cases. Sentences imposed totalled 29,992 years, 6 months and 14 days. Fines, savings and recoveries in cases investigated by the FBI during the 1956 fiscal year exceeded \$123,000,000, an all-time high and more than double the 1955 figure.

Investigations by the FBI in cases involving interstate crimes reflected a general increase for the 1956 fiscal year. Convictions for theft from interstate shipment rose from 772 during 1955 to 790 in 1956; interstate transportation of stolen property convictions totalled 856 while interstate transportation of stolen motor vehicle convictions totalled 4,736. The latter two figures, as well as the 14,636 automobiles recovered in FBI cases, represented all-time peaks. The 558 convictions in fraud matters, which included fraud matters involving federal lending and insurance agencies and the Federal Housing administration, exceeded the total in this category for any prior year.

Co-operation with Other Agencies.—Co-operation with local, state and federal law enforcement agencies is an integral part of the FBI's operations. Upon request, the services of the FBI laboratory and the FBI identification division are available without cost to law enforcement agencies and other federal government agencies. During the 1956 fiscal year, the FBI laboratory received 124,066 specimens of evidence for examination. These specimens were submitted in connection with 31,316 individual requests and involved 142,627 examinations. In the previous fiscal year, the FBI laboratory conducted 133,724 examinations involving 118,398 specimens of evidence submitted in connection with 27,664 individual requests.

The identification division during fiscal year 1956 received 5,284,357 fingerprint cards from 12,902 contributors, an average of more than 20,000 fingerprints each working day. Fugitives identified through fingerprint comparisons totalled 13,833, an all-time high. As of June 30, 1956, the identification division had more than 140,000,000 fingerprints in its files, representing approximately 72,000,000 persons.

The FBI, upon request, assists local law enforcement agencies

in special training programs held at the FBI National academy in Washington, D.C., and in police training schools conducted throughout the nation. With the completion of its 57th session in June 1956, the FBI National academy had graduated 3,163 men representing police agencies in every state in the United States, and in Alaska, Hawaii, Puerto Rico, the Canal Zone and several foreign nations. In addition, during the 1956 fiscal year, the FBI participated in 3,492 police training schools held on a local basis.

Use of Confidential Informants.—The value of confidential informants to effective police work was emphasized during the 1956 fiscal year when information furnished by them resulted in the arrest of more than 1,200 persons in FBI cases. In those cases where information furnished by informants concerned matters within the investigative jurisdiction of other law enforcement agencies, the information was confidentially disseminated to them. As a result, more than 750 persons were arrested by those agencies.

Publications.—As additional aids to law enforcement, the FBI publishes the *FBI Law Enforcement Bulletin* and the *Uniform Crime Reports*. The *FBI Law Enforcement Bulletin*, published monthly, serves as a medium for the exchange of ideas among law enforcement agencies. The *Uniform Crime Reports* bulletin, published annually and semiannually, is a statistical analysis of local crime based on reports submitted by more than 5,800 law enforcement agencies throughout the United States. (See also CRIME; JUVENILE DELINQUENCY; POLICE; SECRET SERVICE, U.S.) (J. E. H.)

Federal Civil Defense Administration: see CIVIL DEFENSE, U.S.

Federal Communications Commission.

Radio and television sets outnumber bathtubs and even running water facilities in U.S. homes, according to figures compiled by the Federal Communications commission in 1956. Of the nation's 164,000,000 sets—representing more than 60% of the world's total—39,000,000 were television sets in 1956 (about 80% of the world total). The commission estimated that by mid-1956 nine out of ten persons in the United States were within reception range of at least one television station.

In mid-1956 there were 4,352 broadcasting stations with 2,700 auxiliaries authorized by the FCC (Table I) and about 342,000 authorized nonbroadcast stations (Table II). The nonbroadcast stations alone were using a total of approximately 1,200,000 fixed and portable transmitters.

The FCC took a major step toward bringing more television service to smaller U.S. communities when it authorized the new "translator" stations beginning July 2, 1956. These low-power, economically operated stations pick up the programs of regular TV stations and rebroadcast them locally. Still another type—the "satellite" station—duplicates the programs of regular stations to set up a local outlet.

Table I.—Radio and TV Stations in the U.S., June 30, 1956

Service	Authorized	On Air
Commercial TV*	609	496
Educational TV†	41	20
Commercial radio (AM)	3,020	2,896
Commercial radio (FM)	546	530
Educational radio (FM)	136	126
Total	4,352	4,068

*Stations equipped for colour telecasting numbered about 300.

†Total number of channels reserved for educational TV stations was 258.

Table II.—Nonbroadcast Radio Station Authorizations in U.S., June 30, 1956

Amateur	150,500	Land transportation	28,000
Marine	57,000	Public safety	21,000
Aviation	49,000	Common carrier	2,300
Industrial	30,600	Other	3,500

Monitoring and National Defense.—Aided by mobile units, the FCC during the fiscal year 1955-56 detected a total of 147 illegal radio transmitters in the United States—42 more than in the previous year. Approximately 20,000 complaints of interference with reception were received by the commission's 24 district offices.

FCC engineers gave assistance to 117 planes and ships in distress during the fiscal year.

The commission continued its supervision of conelrad (control of electromagnetic radiation), a program designed to confuse potential enemy aircraft that might try in wartime to use commercial radio signals to get their navigational bearings. Participating stations in the program switch rapidly to different frequencies so that beams cannot be followed.

The commission's 18 monitoring stations, comprising the only nation-wide listening network, took about 118,000 bearings during the year.

Frequency Allocations.—The FCC was represented at 11 international conferences on frequency allocation during the fiscal year and continued its duties of implementing the decisions of such conferences domestically. The commission's master list included about 157,000 frequency assignment records.

Telephone and Telegraph Rates.—No major telephone rate changes (supervised by the FCC) were authorized during the year. On July 27, 1956, the FCC authorized Western Union, the only domestic telegraph carrier, to increase its rates by a total of approximately \$9,657,000, to offset increased wages paid by the company. The new rates went into effect Aug. 26, 1956.

Personnel.—George C. McConaughy was renamed chairman of the FCC by Pres. Dwight D. Eisenhower on Feb. 26, 1956. Richard A. Mack became a member of the commission on July 7, 1955, and T. A. M. Craven on July 2, 1956.

(See also RADIO AND TELEVISION; TELEGRAPHY; TELEPHONE.)

Federal Deposit Insurance Corporation.

In the fiscal year July 1, 1955, to June 30, 1956, there were two cases in which disbursements by the Federal Deposit Insurance corporation were necessary to protect depositors of insured banks. Disbursements in these two cases totalled \$4,567,372 and there remained unpaid claims of about \$14,000.

From the beginning of deposit insurance until June 30, 1956, the corporation had disbursed \$338,600,000 in the cases of 429 distressed insured banks. This consisted of \$337,000,000 for protection of depositors and \$1,600,000 to facilitate termination of liquidations. The banks involved held approximately 1,400,000 accounts with deposits of about \$572,000,000, of which about 0.3% was lost to depositors. Liquidation of assets by the corporation had resulted in recovery of about nine-tenths of its total disbursements.

On June 30, 1956, the assets of the corporation totalled \$1,822,462,212, of which \$1,816,847,213 consisted of obligations of the United States government. Liabilities totalled \$131,643,818. The excess of assets over liabilities, known as the deposit insurance fund, amounted to \$1,690,818,394. This fund represented accumulated assessments and investment income in excess of losses and expenses in the past.

As of Dec. 31, 1955, the 13,457 insured banks held deposits totalling \$212,225,648,000. Based on studies made in the past, it was estimated that 54.8% of this total, or \$116,380,000,000 was insured. On Dec. 31, 1955, the deposit insurance fund of \$1,639,588,832 was equal to 1.4% of estimated insured deposits.

The board of directors of the Federal Deposit Insurance corporation was composed in 1956 of H. E. Cook, chairman; Ray M. Gidney, comptroller of the currency, vice-chairman; and Maple T. Harl.

Federal Power Commission. **Natural Gas.**—During the year ended June 30, 1956, the Federal Power commission authorized construction in the United States of 4,400 mi. of natural gas pipelines and compressor units aggregating 255,000 h.p., costing \$461,400,000. These facilities were designed to add nearly 2,250,000,000 cu.ft. to the daily delivery capacity of the nation's transmission systems, and to benefit 170 cities of 50,000 population or more in 31 states and the District of Columbia, as well as numerous smaller communities. Since Feb. 7, 1942—the date the certificate provisions of the Natural Gas act became effective—the FPC had authorized nearly 69,000 mi. of pipelines and more than 1,600,000 h.p. in compressor units. These facilities were estimated to cost approximately \$5,300,000,000 and were designed to add nearly 26,000,000,000 cu.ft. of daily delivery capacity to the individual gas pipeline systems in the United States.

The commission, as a result of the U.S. supreme court decision of June 7, 1954, in the Phillips Petroleum company case, assumed jurisdiction over sales of natural gas in interstate commerce for resale made by independent producers. During the fiscal year, 1,029 applications for certificates were filed by independent producers, 3,003 were disposed of by the commission and 2,980 were pending, as of June 30, 1956.

Wholesale natural gas rate increase applications totalling approximately \$25,689,000 annually, filed by seven pipeline companies, were acted upon by the commission during the 12 months ended June 30, 1956. Of this amount, \$23,146,700 was suspended and \$2,542,300 accepted.

At the beginning of this period there was a backlog of \$134,000,600, making a total of \$157,847,300, in suspended rates requiring commission action during the year. Of this amount, \$7,457,000 was disallowed as not justified, \$14,137,300 was permitted to become effective and \$2,022,000 was permitted to be withdrawn by the companies. Including the carry-overs and the suspensions in 1956, there was a backlog on June 30, 1956, of \$134,231,000, of which \$113,990,300 was in effect under bond awaiting the commission's determination of the amounts to be allowed, and \$20,240,700 was still under suspension.

During the fiscal year, 4,442 rate filings were received from independent producers, including 748 rate increases totalling \$2,681,849, of which 130 amounting to \$10,187,102 were suspended and 618 amounting to \$2,494,747 were allowed.

At the beginning of fiscal year 1956 there was a backlog of \$11,055,017, making a total of \$21,242,119 in suspended independent producer rates requiring action during the year. Of this amount, \$1,218,773 was disallowed as not justified, \$2,197,650 was permitted to become effective and \$33,194 was permitted to be withdrawn by the producers. Including the carry-overs and the suspensions in fiscal year 1956, there was pending on June 30, 1956, a backlog of \$17,792,502 in suspended independent producer rates.

Electricity.—During the year ended June 30, 1956, the commission placed under license 3,008,350 kw. of hydroelectric generating capacity, representing an investment of approximately \$84,177,000. A total of 116 applications were filed and 112 licenses were completed. In the last 15 years the commission had placed under license 9,503,650 kw. of hydroelectric generating capacity, representing an estimated cost of \$2,230,731,000. As of June 30, 1956, there were 648 FPC licenses in effect involving a total installed capacity of 10,354,350 kw. and a claimed or estimated cost of \$3,024,177,000.

Electric utility generating plants in the United States pro-

duced a total of 583,623,488,000 kw.hr. during the year ended June 30, 1956. This amount was the largest on record to that date and 16% above the utility output for the year ended June 30, 1955. Combined utility and industrial production in the year ended June 30, 1956, reached 664,758,880,000 kw.hr., 14.9% above 1955.

Total installed capacity of utility generating plants on June 30, 1956, was 117,501,675 kw., including the net addition of 9,884,000 kw., or 9.2%, in the 12-month period ended on that date. Industrial generating capacity was 16,105,095 kw. on June 30, 1956, while the nation's total utility and industrial generating capacity reached 133,606,770 kw. on the same date.

For the year ended June 30, 1956, electric utility thermal plants burned 155,484,877 tons of coal, 1,184,508,642,000 cu.ft. of gas and 73,228,134 bbl. of fuel oil. These quantities were higher than those of fiscal year 1955 by 21.0% for coal, 1.7% for gas and 2.5% for fuel oil.

Water-Power Potentials.—Studies of water-power potentials indicated that, including projects under construction or authorized, the total undeveloped water power of the United States was approximately 86,900,000 kw., which, if developed, would be capable of generating about 358,400,000,000 kw.hr. annually. Of this undeveloped power 54%, or about 47,000,000 kw., was west of the continental divide, with 38%, or about 33,300,000 kw., in the north Pacific area, of which about 29,600,000 kw. was in the Columbia river drainage system. Of the remainder, California had approximately 7,800,000 kw., or about 9.5%, and the Colorado river basin 5,200,000 kw., or about 6%. The Missouri river basin had about 8,900,000 kw. of undeveloped water power, about 10.3% of the U.S. total. The largest concentration of undeveloped power east of the Mississippi river was in the north Atlantic drainage area, extending from the St. John river in Maine to the Rappahannock river in Virginia, with approximately 7,200,000 kw., or about 8.2% of the national total. (See also ELECTRICAL INDUSTRIES; GAS, NATURAL AND MANUFACTURED; PUBLIC UTILITIES.) (J. K. K.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Light and Power* (1955); *Water Power* (1937).

Federal Reserve System. During 1956 the federal reserve system of the United States continued to pursue the policy of firm credit restraint which had been established late in the preceding year. The combination of federal reserve restraint, very high demands for funds and sharply lessened liquidity positions of financial institutions and business firms led to tight money and a credit squeeze.

The federal reserve system did not reduce either the money supply or the volume of bank credit outstanding during the year, but did effectively limit their increase well below the average of the postwar period and somewhat lower than in the corresponding period of 1955. During the 12 months ending with Oct. 1956 the increase in total loans and investments of all commercial banks was held to 2%, and growth in the active money supply—demand deposits and currency—to about 1½%.

In a situation in the economy of high utilization of resources and strong upward price pressures, the policy of monetary restraint pursued by the federal reserve system was designed to keep monetary expenditures within bounds in these circumstances and thereby to help maintain the stability of the dollar and promote sustainable growth in the economy.

Free Reserves.—The extent of credit restraint during the year was not fully indicated by the course of free reserves of member banks, that is, excess reserves minus borrowings from federal reserve banks. These were about a minus \$490,000,000 in Nov. 1955. After moving to an average of about a minus \$255,000,000 in Dec. 1955, Jan. 1956 and Feb. 1956, a tightening was

"JUST DON'T LET 'ER BLOW UP, BOYS," a cartoon of 1956 by Fitzpatrick of the *St. Louis Post-Dispatch* (Mo.)

indicated in late spring, as free reserves changed to an average of minus \$520,000,000 during April and May 1956. For the rest of the year, however, there was an improvement in this statistical measurement of the reserve position of member banks. Thus, free reserves averaged a minus \$197,000,000 in October and a minus \$294,000,000 in November. During the four weeks ended Dec. 19, 1956, free reserves were just barely on the negative side, with excess reserves almost equal to member bank borrowings.

During the second half of 1956 other factors had a cumulative effect which gave to a given negative reserve position of the member banks a far more restrictive effect. In the first place, the effect of the tightened reserve positions was heightened by the sharp decline in holdings of short-term government securities by money market banks and by the sharp drop in prices of government bonds which had taken place. Second, such a significant decline in holdings of short-term government securities by nonfinancial business firms had occurred as to lead to a greater tightening of this segment of the money market than evidenced by the free reserve position of member banks.

Open Market Operations.—Open market operations of the federal reserve system in the framework of growing pressure on the lending and investing ability of commercial banks continued to play an extremely important role. During Dec. 1955 the federal reserve entered the market in direct support of a treasury refunding for the first time since Sept. 1952, when it acquired on a when-issued basis \$167,000,000 of a new certificate issue. In the subsequent 12 months, however, no such direct support was given, and all changes in the total system portfolio of government securities resulted from transactions in treasury bills, either bought outright or under repurchase agreements. Open market operations, within the framework of restraint, were of assistance to banks in adjustment of their reserve positions as a result of temporary shifts in deposits and seasonal fluctuations in credit demands and currency in circulation.

In Jan. and Feb. 1956 the federal reserve sold or redeemed \$1,400,000,000 of government securities, primarily for the purpose of absorbing reserve funds made available by the seasonal return of currency from circulation and the reduction in required reserves associated with the seasonal decline in commercial bank deposits. Between the end of February and the last of July there was little net change in total federal reserve holdings of government securities. During Aug., Sept. and Oct. 1956 there was a net increase of about \$300,000,000. During Nov. and Dec. 1956, through increases primarily in treasury bills bought outright but also in those held under repurchase agreements, there was a further seasonal increase in the federal reserve portfolio of more than \$1,000,000,000.

Discount Rate.—Two rounds of increases in the discount rate occurred during 1956, following four such increases during the previous year. The discount rate is the rate on advances to member banks secured by obligations of the United States or discounts of eligible paper or advances thereon to member banks. During April 1956 ten federal reserve banks increased their discount rates from $2\frac{1}{4}\%$ to $2\frac{3}{4}\%$, and the federal reserve bank of Minneapolis, Minn., and San Francisco, Calif., advanced their rates from $2\frac{1}{2}\%$ to 3% . In Aug. 1956 the ten banks increased their discount rate from $2\frac{3}{4}\%$ to 3% . This brought the discount rates of all 12 federal reserve banks to 3% , where they remained the rest of the year.

During the last half of Nov. and Dec. 1956 the rate on new issues of treasury bills was above 3% , and as a result there was widespread discussion late in 1956 of the possibility of still another increase in the discount rate. Before the emergence of a credit restraint policy on the part of the federal reserve in April 1955, the discount rate had been $1\frac{1}{2}\%$.

During the year no changes were made by the board of governors in member bank reserve requirements, emphasis being placed rather on open market operations and discount rate policy. Member bank reserve requirements remained at the level set in the summer of 1954. Likewise, there were no changes during 1956 in margin requirements for credit extended by brokers and banks to finance new purchases and short sales of stock exchange securities.

Hearings were held concerning federal reserve policy before the subcommittee on economic stabilization of the joint economic committee of congress in Dec. 1956. While there was some congressional and business criticism of tight money, more and more, there was general approval of restrictive federal reserve policies in an environment of high boom and inflationary pressures.

(J. K. L.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Federal Reserve System* (1950).

Federal Trade Commission. The Federal Trade Commission was created in 1914 by the congress of the United States to safeguard free and fair competition in the nation's multibillion dollar annual sale of goods and services.

The commission consists of five members appointed to overlapping seven-year terms by the president of the United States and confirmed by congress. Laws enforced by the commission are: the Federal Trade Commission act, the Clayton Antitrust act (including the Robinson-Patman and Antimerger amendments), the Wool and Fur Products Labeling acts, the Export Trade act and the Flammable Fabrics act. The FTC also has duties under the Lanham Trade Mark act.

During 1956 the commission's principal target was illegal mergers. Typical of recent complaints were those against four of the nation's biggest dairies which had acquired a total of 290 small dairies; against one of the country's four largest sporting

goods manufacturers for having acquired one of the other three; and against a paper products company for having acquired three other pulp and paper companies. In addition, the commission ordered a principal manufacturer of safety and common pins to divest itself of the acquired properties of a competitor; a leading farm magazine was ordered to divest itself of the name and subscription list of a purchased competitor; and a paper product company was ordered to limit the amount of a competitor's stock it held.

During the fiscal year, the commission set postwar records for the number of complaints and orders issued both against monopolistic and deceptive practices. The former included complaints against favoured treatment of chain stores by their food suppliers, and against exclusive dealing contracts in such diversified fields as hearing aids, liquefied petroleum gas and outboard motors. Price discrimination was attacked in such fields as automotive parts, materials handling equipment and candy. Trade restraint cases were brought against three tire manufacturers and the manufacturers of fibre rope, cordage and twine.

The commission issued 150 complaints and 133 orders against firms charged with using deceptive practices. These, of course, covered a wide range of business methods and advertising. Hardest hit by the FTC was the false or misleading advertising of furs, woollens, health and accident insurance, household products, make-money-at-home schemes, cure-all medicines and cosmetics. Also attacked was bait advertising in which unavailable or spurious "bargains" were advertised simply to lure customers into stores.

The commission also levelled complaints at correspondence schools which made false claims for the ease of learning skills or the job opportunities for graduates.

In addition to its mandatory procedures, the FTC also conducts trade practice conferences in which rules of behaviour are promulgated for an entire industry. These rules serve as guides to what the commission and the industry consider fair practice.

Other work of the FTC includes stipulations whereby individual firms agree to discontinue objectionable practices. This informal method is used only when the commission has reason to believe that discontinuance of the evil can be assured without resort to formal complaint and order.

The five members of the commission in 1956 were: John W. Gwynne, chairman; Robert T. Secrest, Sigurd Anderson, William C. Kern and Edward T. Tait (newly appointed and not yet confirmed by the U.S. senate.) (J. W. Ge.)

Fencing. The 1956 fencing season was climaxed in the United States by the national championships, which were held in New York city, June 7–15. The men's foil championship was won by Sewall Shurtz, U.S. navy and Los Angeles, Calif.; Albert Axelrod, of the Salle Santelli, New York, and Daniel Zukantz, Fencers club, New York city (both former champions) tied for second and finished second and third respectively on panches. Abram Cohen of the Fencers club was the only successful defending champion. He retained the *épée* title, with Lieut. William Andre, U.S. navy, second, and Sewall Shurtz, U.S. navy, third. Tiber Nyilas of the Salle Santelli, won his seventh sabre crown. His teammates Alan Kwartler and George Worth, former champion, were second and third respectively. Former champion Janice Lee Romary of Los Angeles defeated the defending champion Maxine Mitchell of the Los Angeles Athletic club in a fence-off for the women's title. Judy Goodrich, 16-year-old high school

girl from Lapeer, Mich., was third.

In the team events, the Fencers club of New York was first in the foil team championship, the Salle Santelli second and the U.S. air force third. The *épée* team championship was won by the Salle Csiszar of Philadelphia, Pa., the third naval district team was second, and the Annapolis navy officers were third. The Salle Santelli retained the team sabre crown; the Salle Csiszar placed second; and Maryland was third.

The two leading women fencers of the United States, Janice Lee Romary and Maxine Mitchell, formed a composite team, and fencing without a third member, won the women's team championship. Forfeiting three bouts in each match, they each went through the entire competition undefeated. The Salle Santelli defeated the Fencers club for second place.

At the completion of the national championships the U.S. Olympic Fencing committee selected the U.S. Olympic fencing team. (For the winners of the fencing events in the 1956 Olympic games, see OLYMPIC GAMES.)

The Southwest Sectional championships were held in Abilene, Tex., on May 5–6. Jack Carnell of the North Texas division won the men's foil. The *épée* crown was won by Robert Miller of the Gulf Coast division. Jack Carnell won his second title by taking the sabre and Mary Taylor of North Texas division won the women's title.

The North Atlantic championships were held in Towson, Md., on May 19–20. The foil title was won by Joseph Levis of Boston, Mass.; Roger Jones (U.S. navy) won the *épée* title; and R. Richard Dyer of Philadelphia took the sabre crown. Louise Dyer kept pace with her husband, Richard, by winning the women's title.

The Pacific Coast championships were held in Los Angeles on May 19–20. The foil title was won by Gerard Biagini of the Olympic club of San Francisco, Calif.; Albert Lambert of the Berkeley Fencing club won the *épée* and the sabre title went to Werner Kirchner of the Cavaliers (Los Angeles). Maxine Mitchell of the Los Angeles Athletic club won the women's championship. (W. A. Dw.)

Fiji. Fiji is a British colony, consisting of 322 islands (106 inhabited) in the Pacific ocean, about 1,100 mi. north of New Zealand. Total area: 7,083 sq.mi., including the main islands Viti Levu (4,011 sq.mi.) and Vanua Levu (2,137 sq.mi.), and Rotuma dependency (18 sq.mi.), 400 mi. to the north. Pop. (1946 census) 259,638; (1955 est.) 345,164 including Fijians 42.5%, Indians 48% and Europeans 2.6%. Religion: Fijians are Christian (80% Methodist); Indians, 83% Hindu and 17% Moslem. Capital: Suva, on Viti Levu, pop. (1946 census) 113,398; (1952 est.) 32,000. Governor in 1956, Sir Ronald Garvey.

The governor of Fiji is also governor of Pitcairn ex officio and is responsible for the general exercise of British protection of Tonga (*q.v.*).

Pitcairn.—A British colony by settlement, Pitcairn is situated in the Pacific ocean midway between Australia and South America. Area: 2 sq.mi. Pop. (Dec. 1954 est.) 136, Anglo-Polynesians descended from "Bounty" mutineers. Dependencies: Oeno, Henderson and Ducie islands (total area 17 sq.mi.). Reli-

gion: Seventh-Day Adventist. Chief magistrate in 1956, Parkin Christian.

History.—Figures of population published in 1956 showed that the Indian population continued to increase at a faster rate than the Fijian. The total population of 345,164 represented an increase of 4% over the figure for the previous year, Indians exceeding Fijians by more than 20,000.

Improvements in communications were effected by an automatic telephone exchange in Suva and modifications to Nadi airport. The Fiji battalion which had served in Malaya since 1952 returned to Suva in June.

Elections for a new legislative council were held in August. An unofficial member of the council, W. G. Johnson, produced a plan for solving the most pressing social and political issue in the colony, the claim of non-Fijians to land. Under the terms of cession land could not be sold to non-Fijians, but the plan proposed the establishment of a board to control the orderly development of land unused by Fijians but which other peoples; *i.e.*, Indians, could develop. The plan aroused great interest but had yet to be discussed by the government. The third South Pacific conference was held in Fiji at the end of April.

Finland. An independent republic of northern Europe, Finland has an area of 130,119 sq.mi., including the Åland Islands. Pop.: (1950 census) 4,029,803; (1956 est.) 4,276,000. Capital: Helsinki, pop. (1950 census) 369,380; (1954 est.) 396,343. Other cities (1954 est.): Turku (Åbo) 107,519; Tampere (Tammerfors) 107,577; Lahti 46,822. Language and nationality: 90% Finnish, 10% Swedish. Religion: Lutheran Christian. President to March 1, 1956: Juho K. Paasikivi, thereafter Urho Kekkonen. Prime minister after March 3, 1956: Karl August Fagerholm.

The Åland Islands, a Swedish-populated archipelago belonging to Finland, lie to the southwest of Finland at the mouth of the Gulf of Bothnia. Area: 581 sq.mi. Pop. (1950 census) 21,690. Chief town: Mariehamn, pop. 3,273.

History.—The campaign for the presidency was well under way before the end of 1955. In a sense it was the first real campaign, for traditionally the office had sought the man, and an outstanding elder statesman had been chosen. But 85-year-old Juho Paasikivi was ready to retire, and six candidates entered the field, each with party backing. Urho Kekkonen, Agrarian prime minister, and Karl August Fagerholm, speaker of parliament and head of the Social Democrats, were the leading contenders. In mid-January 1956, 300 electors were chosen by popular vote, and in mid-February they made their choice. The first vote was scattered, and only on the third ballot was Kekkonen chosen over Fagerholm by 151 to 149.

Soon after the decision of the electors, the president-elect entrusted the formation of a ministry to Fagerholm. On March 3 the new cabinet took office, a coalition of Social Democrats and Agrarians with six posts each, and the Finnish Peoples' and Swedish Peoples' parties with two posts each; Ralf Törngren of the Swedish party became foreign minister.

During the time of the election there developed a price and wage controversy that resulted in a general strike just as the new regime took office. In Dec. 1955 the price control law had been allowed to lapse. In Jan. 1956 the dairy interests raised milk prices 30% to 40% and all dairy products about 18%. The Trade Union federation demanded that the increases be rescinded or that wages be raised 6.7%. The farmers threatened a delivery stoppage. By March 1 the impasse was complete, and the general

strike was declared. From 200,000 the number of strikers rose to about 440,000, and the economic activity of the nation came to a standstill. Only after 19 days was a solution reached, providing wage increases of about 11% for the workers, and promises for the farmers. Approximately \$40,000,000 of wages had been lost, and more than \$200,000,000 of production. The nation recognized the dangers of the wage-price spiral that had already brought a high degree of inflation; but each special interest group was concerned primarily with its own advantage. Rents and farm prices remained low, and a healthy balance had not been achieved in the national economy. Many agreed that the general strike weapon had been unwisely invoked, and that broad-based, vigorous rethinking and economic planning was essential.

The pleasure of the Finns at the return of the Porkkala territory by the U.S.S.R. was dimmed by the reality that faced them when they moved into Porkkala at the end of January. Houses had fallen into ruin, roads had to be rebuilt and the land had to be prepared anew for cultivation. Problems of resettlement were complicated by the decision to confiscate a portion of the area for Finnish defense purposes. It was estimated that 10 to 15 years would be necessary to restore Porkkala to its condition prior to 1944.

(F. D. S.)

Education.—Schools (1954-55): primary 6,481, pupils 564,807, teachers 23,298; secondary 373, pupils 135,348; vocational 473, pupils 34,792; teachers (1953) 3,360; people's high schools, etc. (1953-54) 180, pupils 53,980, teachers 1,110; teacher-training (primary) schools (1954-55) 15, students 3,680. Institutions of higher education (1954-55) 15, students 15,887, teaching staff 1,278.

Finance and Banking.—Monetary unit: markka, with an exchange rate of 230 mk to the U.S. dollar. Budget: (1954, final) revenue 215,570,000,000 mk, expenditure 213,660,000,000 mk; (1956 est.) revenue 205,900,000,000 mk, expenditure 205,880,000,000 mk. Internal debt (Nov. 1955) 53,900,000,000 mk, external debt 54,500,000,000 mk. Currency circulation (March 1955) 44,500,000,000 mk; (March 1956) 50,000,000,000 mk. Deposit money: (March 1955) 37,800,000,000 mk; (March 1956) 44,000,000,000 mk. Gold and foreign exchange: (central bank, Jan. 1955) U.S. \$243,900,000; (Jan. 1956) U.S. \$224,800,000.

Foreign Trade.—(1955) Imports 176,960,000,000 mk; exports 181,250,000,000 mk. Main sources of imports: U.K. 20.3%; U.S.S.R. 14.7%; other

SOVIET MARSHAL A. M. VASSILEVSKY (left) absorbed in conversation with an unidentified man, as Soviet deputy first premier Mikhail Pervukhin signs his name in the guest book of the Finnish diet, Jan. 26, 1956, after official ceremonies marking the return of the Porkkala enclave to Finland by the U.S.S.R.

soviet bloc 12.4%; Latin America 7.4%; U.S. and Canada 5.4%; German Federal Republic 9%; other O.E.E.C. (Organization for European Economic Cooperation) countries 27.4%. Main destinations of exports: U.K. 24%; U.S.S.R. 17.5%; other soviet bloc 8.3%; Latin America 5.5%; U.S. and Canada 5.7%; German Federal Republic 9.1%; other O.E.E.C. countries 23.3%. Chief exports: wood 39%, wood pulp 26%, paper 22%.

Transport and Communications.—Roads (1953) 63,460 km. Motor vehicles in use (March 1956): passenger 88,504; commercial 52,105. Railways (1955): 5,046 km., of which state 4,859 km.; (1954) 2,072,000,000 passenger-km.; freight (1955), 4,200,000,000 ton-km. Navigable inland waterways (1953) 49,900 km. Merchant shipping vessels (100 gross tons and over, July 1955) 346; total tonnage 730,573. Air transport (1955): 120,972,000 passenger-km.; freight, 1,095,600 ton-km. Telephones (Jan. 1955) 433,001. Licensed radio receivers (1954) 971,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 179,000 (235,000); rye 123,000 (132,000); barley 254,000 (262,000); oats 870,000 (799,000); potatoes 1,067,000 (1,090,000); beet sugar, raw 23,000 (37,000). Livestock (June 1954): cattle 1,885,094; sheep 908,093; goats 4,245; reindeer 140,754; pigs (Dec. 1954) 507,000; horses (Dec. 1954) 311,000. Fish landed (1954) 65,500 metric tons.

Industry.—Electricity production (1955) 6,744,000,000 kw.hr. Production (metric tons, 1955): pig iron 114,840; crude steel 186,840; copper, smelter 27,840; cement 1,010,400; pyrites (1954) 1,071,000; copper ore (metal content, 1954) 22,600. Forest products (cu.m., 1954): sawn softwood 4,759,000; sawn hardwood 42,000; plywood (1955) 342,200; (metric tons, 1955) cellulose 1,825,800; cardboard and fibreboard 423,900; newsprint 544,600; paper other than newsprint 467,300; pulp (1954) mechanical 878,000, chemical 1,572,000.

Fires and Fire Losses.

For several months in 1955, fire losses in the United States were slightly less than in the corresponding period of the prior year, but the year ended with a loss record about 1% higher than the previous year. Despite the increase in the total dollar loss from fires, the number of fires dropped from 854,116 in 1954 to 822,392 in 1955. This was the lowest point in the number of losses since 1949.

It must be remembered that the rapidly expanding economy has increased the incidence of fire hazards. Price inflation has exaggerated the fire damage losses. The population increase has also affected the potential of fire loss. With these factors as a background, coupled with the reduction in the number of fires, one might be justified in holding the opinion that the line was being held in the battle against fire.

The 1956 fire loss record tended to belie this conclusion. For the first eight months of 1956, losses totalled \$661,085,000. This was a 9.7% increase over the first eight months of 1955. The only bright period was in the month of February when the losses were less than in the corresponding months of 1955.

Matches and smoking continued as the principal causes of fire losses when measured in terms of number of claims. Misuse of electricity produced the largest dollar loss.

Fisheries.

The world catch of fish, crustaceans, mollusks, etc., amounted to 62,412,000,000 lb. in 1954, according to information released in 1956 by the Food and Agriculture Organization of the United Nations. Asiatic countries, excluding the U.S.S.R., produced 43.7% of the total; European countries, excluding the U.S.S.R., 26.1%; North America, 13.1%; U.S.S.R., 8.8%; Africa, 5.6%; South America, 2.3%; and Oceania, 0.4%. Fishing fleets throughout the world were expanded in 1956, improvements in the design and operation of fishing gear continued, and exploratory operations were conducted in many areas to discover new fishing grounds.

In recent years much thought had been given to the problem of obtaining agreement among nations as to the breadth of territorial waters. This resulted primarily from a rapid increase in the total world catch of fish and shellfish, expansion of fishing activities by fishermen from various nations off the shores of other countries, and concern over the ability of stocks of fish to support increased fishing. The International Law commission, appointed to consider the problem, voted in June 1956 after five years of discussion to make no decision on the breadth of these waters. The commission approved the following statement relative to jurisdiction over coastal waters:

FIRE HOSES POURING WATER into the burned-out shell of the abandoned Wanamaker department store building in New York city which caught fire July 14, 1956. Six hundred firemen were summoned to bring the fire under control

(i) The Commission recognizes that international practice is not uniform as regards the delimitation of the territorial sea.

(ii) The Commission considers that international law does not permit an extension of the territorial sea beyond 12 mi.

(iii) The Commission, without making any decision as to the breadth of the territorial sea within that limit, notes, on the one hand, that many states have fixed a breadth greater than three miles and, on the other hand, that many states do not recognize such a breadth when that of their own territorial sea is less.

(iv) The Commission considers that the breadth of the territorial sea should be fixed by an international conference.

The International Law commission's statement was expected to increase pressure to have the breadth of territorial waters set at 12 mi. rather than the commonly accepted 3 mi., or the 200 mi. claimed by some nations. In mid-1956, the Canadian government announced that it was considering such action. In Aug. 1955, the Soviet Union refused to renew the Anglo-Soviet Fishing treaty of 1930 by which British trawlers, and no others, could fish up to 3 mi. from the north Russian coast rather than 12 mi. However, in 1956 the treaty was renewed, permitting British craft to continue normal fishing operations on this coast.

In an effort to gain new customers for fish and shellfish and hold existing markets, considerable attention was given during 1956 to improving the quality of fishery products. In the United States, quality standards that proved so valuable as a marketing aid for agricultural products became available for fishery products. In August voluntary standards for frozen fried fish sticks became effective, the first quality standard for a fishery product in the United States.

In Canada uniform minimum standards for plants processing fish and shellfish products were established by the department of fisheries during 1956, and a voluntary program of plant inspection was instituted in Nova Scotia, New Brunswick and Prince Edward Island. The setting of minimum standards of construction, equipment and sanitation of fish and shellfish plants was a further step in the program designed to maintain peak quality from the time fish were caught until they reached the customer.

A fish processing technologist meeting in Rotterdam, Neth., during 1956 considered the possibility of using antibiotics to keep fish fresh. Investigations showed that aureomycin and other antibiotics could keep fish in a fresh condition two or three times as long as was possible with conventional ice-storage methods. If antibiotics were approved for use in preserving fish (as they had been for poultry in some countries) vessels could stay at sea for longer periods, an entire catch could be marketed at top prices and consumers would receive better quality products.

Fishery research and management officials and commercial fishermen used numerous electronic devices in their activities. Fish "shockers" were used in streams to temporarily "knock out" fish to permit population counts. Electric weirs protected fish by jolting the life out of destructive and valueless lamprey eels, or they could be used to guide fish away from areas where they might be injured, or to counting stations. Electric fences were used to keep Kodiak bears away from sections of salmon streams where they fed on spawning fish. Sonic trackers attached to the backs of salmon flashed information to recording instruments for as long as 100 hours on every twist and turn of the fish, thereby furnishing valuable information on the effectiveness of fishways over dams or natural waterfalls. An underwater telemeter was developed to supply continuous information on the exact distance of commercial trawls or nets below the surface of the water. Improvements were made in underwater television developed to study fish in their natural habitat and to learn how to make fishing gear more efficient and effective. Besides these devices, fishermen used fathometers to measure ocean depths and locate fishing banks; electronic fish finders to locate schools of fish; radar to guide ships and planes; Loran to determine exact location; and radio for communication.

Data released by the U.S. fish and wildlife service indicated the sums expended to learn more about the world's fishery resources and to assist the fishing industry. Expenditures in the United States and Alaska on fishery research and services for commercial fisheries amounted to \$13,975,000 in the year ended June 30, 1956. Of this amount, \$9,292,000 was spent by the U.S. fish and wildlife service, \$4,015,000 was expended by states and \$668,000 by international commissions. More than 60% of the funds was spent on research and services relating to four species—salmon, \$4,733,000; tuna, \$1,504,000; oysters, \$1,068,000; and sardines, \$1,184,000.

The trend of European fishing fleets to expand operations to more distant northern grounds continued in 1956. Nearly half of all fish landed in 1955 at Hull, Grimsby and Fleetwood in Great Britain by distant-water trawlers came from Arctic grounds, principally Bear Island and the White (Barents) sea. A slight increase in the temperature of northern Atlantic waters made it possible for cod to move into vast new areas. Large stocks of cod were found near Greenland, indicating that fishing in that area could be greatly expanded. A large portion of the European fishing fleet became dependent upon the cod in northern waters.

The Russian Atlantic fishing fleet, reported to be organized on a naval basis, with big factory ships for processing catches and groups of trawlers for catching the fish, had expanded rapidly in recent years, and a vast program for increasing catches of fish had been prepared. Helicopters and "spotter" ships were used to follow and locate fish shoals. During 1956 the Soviet fleet was understood to include twenty-four 10,000-ton factory ships built for them in Germany. Twenty big trawlers were constructed in Britain alone for the Soviet Union. (See also MARINE BIOLOGY.)

Floods and Flood Control. By 1956 the flood control program of the U.S. army corps of engineers had grown to be one of the major elements of the federal public works activity. The active flood control program, including the major project for the lower Mississippi river but excluding multiple-purpose improvements, involved more than 760 projects with a total estimated cost of \$6,300,000,000. Of this amount, \$2,600,000,000 had been appropriated by congress, leaving a total of \$3,700,000,000 required for completion. If the multiple-purpose projects which serve flood control purposes were added, the estimated cost of the total authorized flood control program would become \$9,500,000,000, of which a total of \$4,000,000,000 had been appropriated through fiscal year 1956. The projects in full or partial operation were preventing flood damages of \$500,000,000 a year and, in addition, producing additional benefits of \$250,000,000 a year. The total annual value of this program, \$750,000,000 a year, was being achieved at an annual cost of slightly more than \$200,000,000. The flood control program was paying off at the rate of more than \$3 for each \$1 invested, and this did not take into account the values which could not be measured in monetary terms, such as the saving in life and the economic security of hundreds of urban communities and farming areas.

Much remained to be done in the field of flood damage prevention. The potential flood losses in the United States on an average annual basis without flood control works amount to \$900,000,000 a year. These are estimated losses for the main river and major tributary valleys and do not include flood losses in many small upstream tributaries. The \$500,000,000 reduction in the \$900,000,000 annual loss, presently being achieved by the operating flood control program, still leaves a balance of \$400,000,000 annual loss.

Severe Floods in the United States.—Some of the severer floods in 1956 may be summarized as follows:

Widespread general storms during January and February affected most of northern California, southern Oregon and western Nevada. The rainfall from these series of storms was not particularly severe, but, because of the saturated conditions existing on most watersheds as a result of severe floods in Dec. 1955, moderate floods occurred on several streams.

Floods on Feb. 21 in the Esquatzel Coulee basin in eastern Washington exceeded any flows previously known. The floods occurred as a result of runoff caused by chinook winds and heavy rain on above-normal snow cover.

Heavy rainfall during the period March 5-8, 1956, augmented by melting snow in western New York and northern Pennsylvania, caused major flooding in the upper Allegheny and lesser flooding on the lower river and on the Ohio river below Pittsburgh, Pa. The towns most severely damaged in the Allegheny river basin were Salamanca, N.Y., and Warren, Oil City and Meadville, Pa.

Heavy rains in north central Texas during April and May caused serious flooding in Brown, Coleman and San Saba counties. Elm creek reached the highest stage in 24 years of record. The most extensive flooding occurred in the Pecan bayou in and below the town of Brownwood.

Also in May, heavy local rain of as much as eight inches in a reported three-hour period resulted in damaging floods in and near Indianapolis. Major rivers such as the White and Wabash were not seriously affected. Especially severe flooding occurred

along Eagle creek, Fall creek and Pogues run in and adjacent to the city of Indianapolis.

The mountain snow pack was extremely heavy over the headwaters of the upper Columbia river basin during the winter and spring. The first major flooding of the season began in the Kootenai river valley in northern Idaho on May 20. Flooding occurred at numerous points late in May throughout the Columbia basin, including the Clearwater and Snake rivers in Idaho, the Payette at Emmett, Ida., the Yakima river at Parker, Wash., and most other east slope Cascade streams in Washington.

Severe local thunderstorms occurred in the vicinity of Reno, Nev., in July, causing excessive runoff from Peavine and Galena creeks. About 60 blocks in the city of Reno were flooded. Severe local flooding occurred in the south and east portions of Denver, Colo., during the night of July 31 as a result of heavy local rainfall.

In August a severe storm, accompanied by hurricane-force winds and flooding rain, was described as the worst to hit the Crosby-Ironton area of Minnesota since 1915. Also in August severe rainstorms caused heavy flooding in Chartiers creek, south of Pittsburgh, Pa.

Flood Control Appropriations.—Appropriations by the U.S. congress for the civil works program of the corps of engineers in fiscal year 1957 gave leading place to flood control projects. Of the amounts appropriated for construction, under "construction general," flood control projects received \$160,631,500, compared with \$158,010,000 for multiple-purpose projects which serve flood control, navigation and hydroelectric power purposes and compared with \$128,956,000 for navigation projects. In addition, the big Lower Mississippi River and Tributaries Flood Control project received \$62,791,000, most of which was for construction. Smaller sums were appropriated for planning, surveys and maintenance of flood control projects.

Some of the leading individual flood control appropriations for fiscal year 1957 were:

Los Angeles County Drainage area, California . . .	\$17,500,000
Central and Southern Florida project, Florida . . .	8,750,000
Tuttle Creek reservoir, Kansas . . .	9,000,000
Buffalo bayou, Texas . . .	6,900,000
Eagle Gorge reservoir, Washington . . .	6,300,000

Multiple-purpose projects serving both flood control and hydroelectric power included the following:

Table Rock reservoir, Arkansas and Missouri . . .	\$14,750,000
Hartwell reservoir, Georgia and South Carolina . . .	10,000,000
Garrison reservoir, North Dakota . . .	16,000,000
The Dalles dam, Oregon and Washington . . .	42,457,000
Oahe reservoir, South Dakota . . .	27,500,000

(E. C. I.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Conservation Road* (1947); *Man's Problem* (1953); *Seeds of Destruction* (1948).

Florida. The extreme southeastern state of the United States. Florida was admitted to the union in 1845 as the 27th state. It is called the "Sunshine state" and sometimes the "Peninsula state." Area: 58,560 sq.mi., of which 4,298 sq.mi. is water surface. Population (1950 census): 2,771,305, of whom 1,813,390 were urban dwellers and 957,415 were rural; 2,166,047 were white and 605,258 were nonwhite. The 15 cities of more than 25,000 persons in 1950 were: Miami 249,276; Jacksonville 204,517; Tampa 124,681; St. Petersburg 96,738; Orlando 52,367; Miami Beach 46,282; Pensacola 43,479; West Palm Beach 43,162; Fort Lauderdale 36,328; Lakeland 30,851; Daytona Beach 30,187; Tallahassee (the capital) 27,237; Gainesville 26,861; Key West 26,433; Panama City 25,814. On July 1, 1956, the state population was estimated at 3,770,000, according to provisional figures of the U.S. census bureau.

History.—The state elective administrative officers in 1956, whose terms were to expire in Jan. 1957, were Leroy Collins,

governor; R. A. Gray, secretary of state; Richard W. Ervin, attorney general; Ray E. Green, comptroller; J. Edwin Larson, state treasurer; Thomas D. Bailey, superintendent of public instruction; Nathan Mayo, commissioner of agriculture.

The state legislature in 1955 proposed 11 amendments to the state constitution to be voted on at the general election of Nov. 6, 1956. In brief, these were as follows: (1) revising article v relating to the judicial department, the most important change being the establishment of district courts of appeal; (2) providing for home rule in Dade county; (3) abolishing the court of record in Escambia county and vesting all its jurisdiction in the circuit court of that county; (4) provisions relating to regular and extra sessions of the legislature whereby the members of the legislature may extend the regular session beyond the 60-day period, and providing also for extra sessions called by members of the legislature; (5) relating to apportionment of the senate and house of representatives; (6) providing for two judges of the criminal court of record in Duval county; (7) abolishing the office of county special tax school district trustee, and transferring the duties to the county board of public instruction; (8) providing for the appointment of the county superintendent of schools in Duval, Sarasota, Dade and Pinellas counties by the county board of public instruction; (9) abolishing the office of county solicitor in Dade county and transferring the duties to the state's attorney of the judicial district in which Dade county is located; (10) relating to fees and compensations of county offices of Escambia county; (11) authorizing the legislature to establish civil service systems and boards for municipal, county and state employees and for municipal, county and state officers not elected by the people or appointed by the governor.

After the regular session of the legislature in the spring of 1955 an extraordinary session was called for June 6, 1955, on the subject of apportionment of representation in the legislature. This session lasted until Aug. 10, resumed Sept. 26 and continued to Sept. 29, and resumed again June 4, 1956. The session was deadlocked on the problem of apportionment, so it recessed June 11, 1956, until Nov. 6, 1956.

In the Nov. 6, 1956, election, Pres. Dwight D. Eisenhower carried Florida over his Democratic opponent, Adlai E. Stevenson, by more than 150,000 votes. All the Democratic nominees for state offices were elected by large majorities. However, William C. Cramer, the only Republican representative in congress from Florida, was re-elected. All the proposed amendments to the state constitution were approved by the electorate except that concerning the reapportionment of the state legislature.

The question of racial segregation in the public schools and the problem of the Mediterranean fruit fly were pressing, so a second extraordinary session of the legislature was called for July 23, 1956, and continued to Aug. 1, when it was dissolved by the governor. In addition to the enactment of statutes on these problems, the legislature took steps to alleviate crowded conditions in the state prisons and other state institutions and to expand the work of the parole commission. A statute was passed to forbid the use of false and misleading advertisements in real estate, and the legislature appropriated \$800,000 to complete the construction of the teaching hospital building at the University of Florida medical school.

Education.—Enrolment in the public schools for the year 1955-56 in grades 1 through 12 was as follows: white, 588,338; Negro, 164,569; total, 752,907. Kindergartens: white, 2,292; Negro, 194; total, 2,486. Junior colleges (grades 13 and 14): white, 3,590; Negro, 167; total, 3,757. The total enrolment in the public schools of Florida in 1955-56 was 759,150. There were 1,219 elementary and 472 secondary public schools, 38 kindergartens and 5 junior colleges in the state, of which there were 830 white and 389 Negro elementary schools, 329 white and 143 Negro secondary schools, 36 white and 2 Negro kindergartens and 4 white and 1 Negro junior colleges. These schools had instructional staffs (exclusive of 200 supervisors) of 26,363 teachers and 1,112 principals, of whom 20,481 teachers and 857 principals were employed in schools for whites and 5,882 teachers and 255 principals were employed in schools for Negroes. There was a total

of 27,675 instructional positions in the school year 1955-56.

Social Insurance and Assistance, Public Welfare and Related Programs.—Florida disbursed for state welfare through the state welfare board \$58,535,572.86 in 1955-56. From grants by the federal government the state received in 1955-56 for old-age assistance \$25,771,871.56; dependent children \$11,818,898.16; aid to the blind \$1,128,706.28; aid to the disabled \$625,060.83; total \$39,344,536.83. Disbursements for old-age assistance were \$38,623,446.53; dependent children \$13,989,635.57; aid to the blind \$1,620,466.14; aid to the disabled \$582,611.50; total \$54,816,159.74. Administrative and other welfare services amounted to \$3,719,413.12, which included \$1,719,432.78 federal funds. The total net addition to the unemployment compensation fund was \$12,228,275.12, while the gross unemployment benefit payments were \$11,414,041.02 with net benefit payments of \$11,333,454.35.

The parole commission had an appropriation for 1956-57 of \$301,250. The state supports tuberculosis hospitals at Orlando, Tampa, Tallahassee and Lantana, and the appropriation for the Tuberculosis board which administers these institutions for 1956-57 amounted to \$4,800,000. The state also supports hospitals for the insane at Chattahoochee and Arcadia, the Florida farm colony for the feeble-minded at Gainesville and the Florida school for the deaf and blind at St. Augustine. The appropriations for these institutions for 1956-57 were \$8,735,018, \$2,247,844 and \$923,004, respectively.

The population of the state prisons and other institutions as of Aug. 31, 1956, was as follows: state prison at Raiford, 2,276; Glades state prison farm at Belle Glade, 353; industrial school for boys at Marianna, 708; industrial school for girls at Ocala, 99; industrial school for girls at Forest Hill, 92; Florida correctional institution for women at Lowell, 267; the Apalachee correctional institution at Chattahoochee, 237; the state hospital at Chattahoochee and Arcadia, 8,130; the farm colony at Gainesville, 1,215.

Communications.—The total highway and street mileage in the state at the end of the year 1955 was 56,748 mi., of which 28,064 mi. were paved and 4,145 mi. were constructed of gravel or stone. Disbursements for the calendar year 1955 were \$78,141,473.09 for construction and \$12,540,543 for maintenance. Effective July 1, 1956, the state road department changed from a calendar year to a fiscal year. For the period Jan. 1, 1956, to June 30, 1956, \$35,692,305.59 was spent for construction and \$6,615,520.30 for maintenance. The state road department budget for the fiscal year July 1, 1956, to June 30, 1957, was \$215,775,000 for construction and \$17,771,716 for maintenance. Florida had in 1955 approximately 4,860 mi. of railroad exclusive of yard tracks.

Banking and Finance.—On June 30, 1956, there was a total balance in the state treasury of \$138,006,980.87 with outstanding warrants of \$20,529,572.77. On June 30, 1956, there were within the state 88 active national banks with deposits amounting to \$2,248,542,000 and 156 state banks and trust companies with deposits of \$1,194,270,693.64. There were also nine

industrial banks with deposits of \$11,533,187.79. These represented total deposits of \$3,454,345,881.43, a gain of \$348,412,875.43 in the fiscal year.

The total revenue receipts for the state of Florida for the fiscal year ending June 30, 1956, amounted to \$474,716,666.63. Included in this sum were \$90,200,300.69 from gasoline tax, \$86,094,584.34 from sales and use tax, \$36,217,030.72 from beverage tax, \$21,793,692.64 from cigarette tax, \$36,884,492.64 from motor vehicle licenses and \$24,456,207.24 from racin fees, licenses and taxes. The state expended \$49,431,902.75 for education in the fiscal year ending June 30, 1956. State investments par value securities as of June 30, 1956, was \$158,918,474.15.

Agriculture.—On Jan. 1, 1956, the livestock resources of the state were as follows: 1,421,000 beef cattle and calves; 178,000 milk cows; 427,000 swine; 5,000 sheep; 35,000 horses and mules.

The total income from the sale of agricultural commodities for the year 1955 was \$626,171,000. Revenue from the sale of cattle and hogs amounted to \$50,247,000; poultry and eggs \$29,292,000; dairy products \$57,054,000; truck crops approximately \$164,370,000; citrus fruits \$201,458,000; greenhouse and nursery products \$30,221,000; and from field crops: tobacco \$22,130,000, potatoes \$26,275,000, corn \$1,042,000, sugar cane for syrup \$865,000, sugar cane for sugar \$9,822,000, cotton \$4,626,000 and peanuts \$6,077,000.

Manufacturing and Business.—The net personal income paid to the people of Florida in 1954 was \$5,312,847,000. The value of retail sales in the year was \$4,014,417,000. The value of wholesale trade was \$3,402,000,000. The Selected Service trades receipts in 1954 was \$652,661,000.

(A. N. P.)

Mineral Production.—Table III shows the tonnage and value of Florida minerals in 1953 and 1954 whose value was \$100,000 or more. In 1954 Florida continued to be first among the states in output of phosphate rock and was first in zircon, second in peat output and third in ilmenite. It ranked 26th in the value of its mineral output in 1954, with 0.77% of the U.S. total.

Folsom, Marion Bayard (1893—), U.S. government official and business executive, was born on Nov. 23 at McRae, Ga. He studied at the University of Georgia, Athens, and at Harvard university and worked for the Eastman Kodak company at Rochester, N.Y., of which he became treasurer and member of the board of directors. During World War I he was an army quartermaster officer with the American Expeditionary forces. Pres. Franklin D. Roosevelt appointed Folsom a member of his advisory council on economic security (1934-35) and of the federal advisory council on social security (1937-38). During World War II he held several federal and regional advisory appointments dealing with problems of manpower and employment.

Under Pres. Dwight D. Eisenhower, Folsom became undersecretary of the treasury in 1953. Following the resignation of Oveta Culp Hobby as secretary of health, education and welfare in 1955, Eisenhower appointed him to that cabinet post, and he took office Aug. 1. He reported on April 8, 1956, that the medical expenses of 500,000 U.S. families had equalled or exceeded their total annual incomes in 1953.

Football. Early in 1956 the National Collegiate Athletic association and several conferences cracked down on member colleges for giving excessive financial aid to athletes or for irregularities in the recruiting of stars. Auburn, Louisville, Miami (Fla.), Mississippi college, Texas A. and M. and Kansas were among the first punished. Auburn, runner-up for the South west title in 1955, was among the hardest hit, being placed on indefinite probation by its own conference and declared ineligible for a bowl game for one year. Then the N.C.A.A. put the school on three years' probation and barred it from taking part in N.C.A.A. or invitation events for the first two years of that period. The Texas Aggies were given a trial period until May 14, 1957, and ruled ineligible to compete in any events approved by the N.C.A.A. In addition, North Carolina State college was sus-

suspended for four years from taking part in any N.C.A.A. championship competition, bowl contest or participating in a televised event.

The reform movement struck the Western conference in April when Commissioner Kenneth L. ("Tug") Wilson announced that Ohio State had been placed on probation for one year and barred from Rose Bowl football for the same length of time for violation of Big Ten rules regarding aid to athletes. The Buckeyes had represented the Big Ten in the Rose Bowl on Jan. 1, 1955.

In May the Pacific Coast conference started house cleaning, Washington and U.C.L.A. being the first affected. Investigating the much-publicized "under the table" payoffs to athletes and prospective players, the conference banned Washington from all postseason sports for two years and denied the Huskies any share in the conference's Rose Bowl profits, a fine equivalent to about \$53,000. Athletes who had received aid from any non-union fide groups were ruled ineligible. The conference handed down the most severe penalty in its history on May 19 when it suspended U.C.L.A. for three years. It fined the university its share of bowl receipts and an additional \$15,000, estimated around \$95,000 in all. Guilty players lost a year's eligibility, but later this ban was eased allowing seniors to play in five consecutive games. On May 22 the conference assessed fines on eight of its nine members, Washington State being given a clean slate. Then, on July 8, Southern California was hit, being fined the equivalent of \$63,400 and banned from bowl games for two years. California drew a \$25,000 penalty and was put on probation until July 1, 1957. The N.C.A.A., in its November sessions, also punished California (one-year probation from Nov. 13, 1956); Southern California (two-year probation, during the first of which it would not be eligible to enter athletes in N.C.A.A. championships and events sanctioned by that body); and Ohio State (reaffirming the action taken by the Big Ten).

Roundup of the 1955 Collegiate Season.—Oklahoma, after gaining recognition as the leading team of the campaign, added to its reputation with a convincing 20-6 victory over Maryland, which had won ten straight games, in the Miami (Fla.) Orange Bowl on Jan. 2, 1956. On the same day the Rose Bowl battle at Pasadena, Calif., resulted in one of the wildest finishes in history when Michigan State toppled U.C.L.A., the Pacific conference

champion, 17-14. Ohio State had won the Western conference championship, but having played at Pasadena the year before was ineligible for the trip and Michigan State was chosen.

Georgia Tech capitalized on a pass interference penalty against Bobby Grier, Pitt star, to turn back the Panthers, 7-0, in the New Orleans Sugar Bowl. Mississippi came from behind to upset Texas Christian, 14-13, in the Cotton Bowl, and Vanderbilt upset Auburn, 25-13, in the Gator Bowl. Results of other bowl contests were: Wyoming 21, Texas Tech 14 (Sun); Border All-Stars 13, Skyline All-Stars 10 (Salad); Prairie View 59, Fisk 0 (Prairie View); U.S. air force All-Stars 33, U.S. army 14 (Rice). The East set back the West, 29-6, in the annual Shrine benefit contest at San Francisco on Dec. 31, and the South conquered the North, 20-7, in the renewal of their annual all-star game at Miami, Fla. The South also halted the North, 20-19, in the traditional Blue-Gray contest.

1956 College Campaign.—Oklahoma, sweeping through its third season without a loss or a tie, was ranked as the nation's no. 1 team for the second straight year, and, having won the honours three times, it retired the O'Donnell trophy, symbol of inter-collegiate supremacy. Bud Wilkinson's Sooners won 10 games to run their streak through 40 straight, an all-time record.

Yale, losing only to Colgate, 14-6, in a nonleague encounter, took the championship in the first official season of the Ivy league and also won the Big Three crown. Iowa captured the Big Ten title as Michigan ran a close second. Other group champions of 1956 included the following: Pacific, Oregon State; Big Seven, Oklahoma; Missouri Valley, Houston; Southwest, Texas A. and M.; Border, Texas Western; Skyline, Wyoming; Rocky Mountain, Montana State; Yankee, Connecticut; Southern, West Virginia; Atlantic, Clemson; Southeastern, Tennessee; Mid-American, Bowling Green; Midwest, St. Olaf and Carleton (tie); Midwestern, Tennessee State; Little Three, Williams; National Negro Championship, Tennessee A. and I. Paul Hornung, quarterback of Notre Dame, which had its worst season in history, was named to receive the Heisman trophy and won a place on several All-America teams, as did Jerry Tubbs, centre, and Tommy Mc-

RICK CASARES (35) at the start of a 68-yd. touchdown run in the second quarter of the championship game of the Western division of the National Football league, Dec. 16, 1956. Casares totalled 190 yd. rushing as the Chicago Bears defeated the Detroit Lions, 38-21

Donald, back, of Oklahoma; Ron Kramer, Michigan end; and Jim Parker, Ohio State guard. Tubbs was voted the college line-man of the year. The Maxwell trophy went to Oklahoma's McDonald. Syracuse won the Lambert trophy as unofficial eastern champion.

The campaign held its usual number of upsets, Pitt providing one of the biggest surprises on the last day of the regular campaign when it checked previously unbeaten Miami of Florida, 14-7, at Miami. Penn State proved a spoiler on two occasions, halting Ohio State, 7-6, and tying Pitt, 7-7. Syracuse set back Army, 7-0, at Syracuse as 40,053, a record football crowd for central New York, looked on. Illinois accounted for one of the Big Ten's major upsets when it beat Michigan State, 20-13, on Oct. 27, to end a 13-game unbeaten streak for the Spartans. The Western conference again set the pace in attendance with crowds of more than 80,000 at many contests. A gathering of 101,000 saw Michigan State shut out Michigan, 9-0, on Oct. 6, and Ohio State routed Stanford, 32-20, the same day before 82,881. A crowd of 93,101 saw Michigan overpower Army, 48-14, and 84,639 persons were on hand as Minnesota surprised Michigan, 20-7. In the east, a crowd of 68,000 at New Haven, Conn., saw Yale rout Princeton, 42-20, toppling the Tigers from the unbeaten ranks. The 57th Army-Navy contest at Municipal stadium in Philadelphia on Dec. 1 drew a crowd of 102,000 that saw favoured Navy rally to gain a 7-7 deadlock in a hard-fought defensive struggle.

Professional Football.—The National Football league, with attendance of 2,722,683 for 72 games, established a new mark for the circuit during the 1955 campaign. The Cleveland Browns captured Eastern conference laurels and the Los Angeles Rams triumphed in the Western division. A record play-off crowd of 87,695 at Los Angeles on Dec. 26 saw the Browns rout the Rams, 38-14. The 1956 campaign bid fair to surpass the previous one in attendance. As the regular season drew to a close the greatly improved New York Giants won the Eastern title, and the Detroit Lions were overwhelmed 38-21 by the Chicago Bears, Dec. 16, 1956, in a game which decided the Western championship. The Giants moved the site of their home games from the Polo Grounds to Yankee stadium prior to the start of the season. Lou Groza kicked four field goals as the Cleveland Browns beat the College All-Stars, 26-0, at Soldier field in Chicago Aug. 10. A crowd of 75,000 saw the contest. A team of Hawaii All-Stars, led by Y. A. Tittle of San Francisco's Forty-niners, beat a team of college all-stars, 51-20, in the Hula Bowl at Honolulu on Jan. 8, 1956. The East subdued the West, 31-30, in the Pro Bowl game at Los Angeles, Jan. 15.

Canadian Football.—The Edmonton Eskimos won the Grey cup for the third straight season by defeating the Montreal Alouettes, 50-27, at Toronto on Nov. 24, 1956. Edmonton gained a place in the play-off by routing the Saskatchewan Rough Riders, 51-7, in the Western division final. Montreal advanced by conquering Hamilton in their play-offs. The West defeated the East, 35-0, in the second annual Shrine benefit contest at Vancouver, B.C., on Dec. 8. The Canadian Rugby union made one important change in rules, raising the value of a touchdown from 5 to 6 points.

Ford Foundation: see SOCIETIES AND ASSOCIATIONS, U.S.

Foreign Aid Programs, U.S. United States foreign aid in the fiscal year ended June 30, 1956, came to \$4,600,000,000 net. The slight increase over the previous year's aid reversed the trend of several years.

The rise was entirely attributable to increased military aid, which came to a little more than \$3,000,000,000, compared with about \$2,500,000,000 the year before. Nonmilitary aid fell from nearly \$2,000,000,000 to \$1,600,000,000, the lowest for any year since the end of the war. Sales of surplus agricultural products, which are not included in these figures, rose from \$379,000,000 in fiscal 1955 to \$809,000,000 in fiscal 1956.

Composition of Aid.—Tables I and II show the composition of the aid given in fiscal 1956. Military aid accounted for about two-thirds of the total. The share of western Europe continued to fall as it had during recent years, but it remained the largest part of military aid. Asia, Africa and the near east continued to rise in importance, receiving \$1,300,000,000 in nonmilitary aid more than four-fifths of the total (compared with half the year before). Aid to Latin America, military and other, declined.

These figures show net aid; that is, grants and credits provided by the United States government minus repayment of principal on past loans and reverse grants (from foreign governments to the United States). As the next to last line on Table I shows, the latter were minor. Repayment of past loans, however, had become a matter of some importance in the 11th year of postwar aid programs. Table I shows net credits as negative because foreign governments repaid the United States about \$400,000,000 more on past loans than the United States advanced in current credits during fiscal 1956. New credits, advanced under aid programs, came to \$472,000,000. Of this, \$344,000,000 went to Asia, Africa and Australasia, which in the same period repaid \$100,000,000 on past loans. Latin America received \$87,000,000 in new credits but repaid \$129,000,000 of old loans. Western Europe received \$41,000,000 in new loans but repaid \$263,000,000 on past loans. Thus the net figure conceals important geographical differences and reduces the apparent volume of transactions.

Other aid, as shown in these tables, includes several kinds of aid, of which three are most important. Defense support aid given to countries that also receive military aid, to enable the economies to support an enlarged defensive effort. Some of the

"MASSIVE RETALIATION," a 1956 cartoon by Pratt of the McClatchy newspapers

is aid directly related to the maintenance of troops, but much of it goes into the general economy (for instance, raw materials and transport and industrial equipment). Development aid is given to countries that do not receive military aid from the United States. Much of it is essentially of the same character as the defense support given to other countries. The third category, technical assistance, goes to both kinds of country either directly or through the United Nations. It is distinguished from other aid primarily by the fact that it usually pays for training, advice and the transmission of techniques rather than the shipment of goods. Some supplies and equipment, however, are classified as technical assistance when shipped in connection with such programs. Relief and emergency shipments and payment of ocean freight on private contributions are among the other forms of aid in the nonmilitary category.

Military aid includes both goods and services, such as the training of foreign troops. Some of the military equipment is drawn from the stocks of the U.S. armed forces. These items are likely to be replaced in the U.S. inventories by somewhat more advanced models which cost more. In the past, the foreign aid account was charged for the replacement value. Thus, to some extent, as the senate foreign relations committee pointed out, the military assistance program has subsidized the procurement program of the Army, Navy, and Air Force." It introduced certain changes in the Mutual Security act of 1956 (covering the program for fiscal 1957) intended to eliminate much of this. Military assistance also includes offshore purchases; that is,

STEAM POWER PLANT opened at Masan, Korea, in 1956, one of three to be built with U.S. foreign aid funds. The plant consists of two 25,000 kw. generators

United States payment for production and purchase of military equipment produced outside the United States and supplied to countries participating in the Mutual Security program. Sometimes these are for items produced in the country receiving the aid and sometimes for items produced in third countries. In fiscal 1956 deliveries of offshore purchases totalled \$600,000,000. These came largely from past contracts, and the letting of new ones was relatively small.

Surplus Farm Products.—Sales of surplus agricultural products in fiscal 1956 exceeded \$800,000,000 and were more than double those of the year before. For the most part these are sold for local currencies which may be used by the United States government for some of its own expenses in that country, for grants or loans to the country in question, or for purchase of goods shipped to third countries. Until the money is used in one of the last two ways the transaction is not classified as aid, but in the meantime the receiving country has the benefit of an increase of resources with no strain on its foreign exchange supplies. Hence certain aid accounts include these shipments. Table III shows the amount of surplus farm products sold, the use of the proceeds for aid and the net change of U.S. government holdings of foreign currencies as a result of transactions under this program in each fiscal year. The largest takers of these products during fiscal 1956 were Yugoslavia (\$99,000,000), Spain (\$95,000,000), Japan (\$83,000,000), France (\$61,000,000) and the United Kingdom

(\$57,000,000). Formosa, Korea, Israel and Greece each took between \$30,000,000 and \$40,000,000, and Argentina, Brazil, Egypt, Germany, Italy and Turkey took between \$20,000,000 and \$30,000,000.

Late in August the largest contract for sale of surplus farm products was signed with India. The United States agreed to provide \$305,900,000 worth of wheat, rice, cotton, tobacco and dairy products and to pay \$54,200,000 in shipping charges. Sixty-five per cent of the rupees the United States would receive would be loaned back to India for development purposes, and another 15% would be a grant to India. The remainder would be used

for U.S. government expenses in India, the purchase of strategic materials for shipments to the U.S., and payment for goods sent as aid to other countries.

Western Europe.—United States aid to western Europe was predominantly in the form of military assistance, which totalled nearly \$1,900,000,000 in fiscal 1956 compared with \$1,600,000,000 the year before. This figure included, in addition to assistance to individual countries, the U.S. contribution to the NATO (North Atlantic Treaty organization) "infrastructure" program, by which the cost of airfields, oil pipelines, communications and

transportation systems and certain other items were jointly financed, with the United States bearing 38% of the cost of the whole program.

Aid funds were also spent on joint development of weapon and other military supplies and on the expansion of munition production capacity.

Outside the military program, net aid to western Europe came to only \$220,000,000, less than one-third what it had been the year before. Since the repayment of earlier loans exceeded this amount, the gross figure for new aid came to nearly \$500,000,000. About two-fifths of the gross aid went to France, largely to support military production and in reimbursal for earlier expenditures in the war in Indochina. The other main recipients were Spain, Yugoslavia and Italy. Aid to Spain almost doubled in fiscal 1956, while that to all other European countries declined. Food, raw materials and industrial equipment were shipped to Spain under the aid program (and there was military assistance as well). Under special arrangements, Spain was to pay for part of the cost of building air and naval bases for joint U.S. and Spanish use. Aid to Yugoslavia declined in fiscal 1956 to about the same level as to Spain (\$116,000,000, counting surplus agricultural products in both cases). There were also military shipments.

Aid to Europe in fiscal 1956 largely reflected deliveries on commitments made in earlier years. The continued decline of the area's role in the U.S. nonmilitary aid program was emphasized by the fact that of the new obligations for aid undertaken during fiscal 1956, only 7% were to Europe.

Asia and Africa.—In the far east, south Asia, the near east and Africa, military aid—\$1,100,000,000 (compared with \$887,000,000 the year before)—was less important than other forms of assistance, which totalled \$1,300,000,000 (compared with \$990,000,000 the year before). Although detailed figures are not published on the allocation of military aid, it went principally to Korea, Formosa and south Vietnam and to members of the Baghdad pact—Turkey, Iraq, Iran and Pakistan. Defense support aid to the first three of these countries accounted for nearly one-third of the nonmilitary aid given to Asia and Africa. Korea was the largest recipient (\$259,000,000), followed by Indochina—Laos and Cambodia as well as Vietnam—with \$248,000,000 and Formosa (\$105,000,000). Pakistan received \$107,000,000 in aid, a sharp rise from the \$31,000,000 of fiscal 1955. India received \$99,000,000 worth of aid, most of it in grants, compared with \$71,000,000 the year before. Turkey was the next largest recipient (\$91,000,000), followed by Japan (\$69,000,000), Greece (\$57,000,000), Israel (\$47,000,000), Iran (\$41,000,000), Thailand (\$26,000,000) and the Philippines (\$18,000,000).

In terms of new obligations undertaken during fiscal 1956 commitments to Asia, the near east and Africa accounted for 90% of defense support, 75% of the development assistance and 60% of technical assistance.

Appropriations for Fiscal 1957.—Early in 1956 the administration indicated that in the coming fiscal year aid would be roughly at the same level as in fiscal 1956. Congress was therefore surprised when the president asked for an appropriation of nearly \$5,000,000,000 compared with \$2,800,000,000 the year before. Most of the increase requested was in military aid, for which \$3,000,000,000 was asked, compared with appropriations of a little more than \$1,000,000,000 the year before. The explanation was that while the administration expected the level of aid spending to increase only slightly, the sharp cut in military appropriations for fiscal 1956 had led to depletion of the pipeline, which would mean that future military assistance would fall drastically. The desire to provide more advanced weapons to Allied countries, which cost more and took longer to produce, added to the sum.

EISENHOWER YOUNG, seven-year old second-grade student at an elementary school in Monrovia, Liberia, eating luncheon at his school cafeteria, opened in 1956 by the Joint Liberian-U.S. Technical Assistance program. The cafeteria, the first of its kind in the country, offered meals to the school children at a cost of \$0.05 each.

As in previous years, the administration's request underwent considerable whittling down through congressional action. The bill that was finally passed appropriated \$3,800,000,000 in new money and \$240,000,000 from the carry-over of unexpended funds.

The administration proposed changes in the aid legislation that would make possible long-term commitments, so that foreign countries embarking on projects that might take a number of years to complete could be assured of continuing U.S. support. It also sought to permit much greater flexibility in use of funds. On both points it had to be satisfied with much smaller changes from past practice than it had requested. There was an effort in congress to prevent any aid being given to Yugoslavia because of the apparent reconciliation between Yugoslavia and the U.S.S.R. This was defeated, but the authorization bill made further aid contingent on the president's finding (as he later did) that Yugoslavia was not under Soviet domination and that it was to the interest of the United States to provide aid to that country.

The appropriation bill stipulated that military aid to Yugoslavia provided by the new funds should consist only of maintenance and replacement parts for equipment already supplied or in the pipeline.

Proposals to amend the aid law to limit cotton goods imports into the United States were also defeated.

Continuing Debate.—Although the election campaign influenced some of the foreign aid debate, the program continued to have bipartisan support in congress and was broadly endorsed in the platforms of both major parties. Aid continued to be closely entwined with more general foreign policy measures. An offer to help Egypt build the Aswan dam was widely regarded as a step to check Soviet influence, and withdrawal of the offer played a part in precipitating the Suez crisis. After the fighting in the middle east the United States faced the possibility that western Europe would need aid for emergency oil imports. A shift in power in Poland led to the consideration of U.S. aid for that country, to help it limit Soviet influence.

Similar considerations regarding Hungary were largely dropped except for relief shipments—when the Russians crushed the rebellion there.

By the end of the year several major re-examinations of foreign aid were under way. The senate foreign relations committee had commissioned studies by universities and other organizations throughout the country as the basis for its consideration of fundamental issues. The president appointed a citizen's advisory committee under Benjamin Fairless to report to him and the public on the program. A number of private studies were also under way, generally centred on the situation created by the new Soviet activity. Underlying these studies was not only the need to devise a program for 1957 but also the feeling that basic issues needed re-examining if foreign aid was to be a continuing part of U.S. foreign policy.

Foreign Exchange: see EXCHANGE CONTROL AND EXCHANGE RATES.

Foreign Investments. Buoyed by a sustained high level of economic activity and capital movements in the United States and other industrialized countries, international capital movements reached new highs in 1956. After the middle of the year interest rates in the United States and other countries were rising sharply, reflecting the intense demand

for investment funds, but this was not expected to be a strong deterrent to foreign investments. The effects of the Suez canal crisis were not yet clear. United States investors increased their stake abroad at a record rate in 1956, and European investors were also making substantial additions to their investments in the United States and elsewhere.

U.S. Investments Abroad.—Long-term United States private foreign investments increased in value by a record \$2,200,000,000 in 1955, reaching a total value of \$26,600,000,000. The rate of investment was even higher in 1956, however, as an increase of about \$1,500,000,000 was registered in the first six months. Most of the increase was connected with direct investments, and there was also a substantial amount of new bond issues and short- and medium-term credits.

Earnings of U.S. private foreign investments totalled \$3,106,000,000 in 1955, much higher than in any previous year. Direct-investment enterprises accounted for \$2,846,000,000, equivalent to nearly 15% of all United States corporate profits after tax. In the first six months of 1956 earnings were more than 10% higher than in the previous year.

Direct Investments.—After expanding by a near-record amount of almost \$1,600,000,000 in 1955, direct foreign investments by U.S. business were sharply accelerated in 1956. Net capital outflows from the United States in the first six months of 1956 were \$619,000,000, compared with \$679,000,000 for all of 1955. The reinvestment of profits of foreign subsidiaries was a leading source of investment funds in 1955, amounting to \$868,000,000, and was probably approximately as large in 1956.

An additional source of funds for financing plant and equipment expenditures is the amounts charged against earnings for depreciation or exploration and development expenses. Although the use of funds from this source does not increase the book values of investment as measured by the department of commerce, the reports of leading companies indicated that much of their plant expansion was financed in this way. During the year the department of commerce conducted a special survey of United States companies operating in Latin America in order to develop data on actual capital expenditures, as well as collateral data such as output, employment, wages, taxes paid and sources of financing.

The petroleum industry took the lead in the rapid expansion of foreign investments in 1956, carrying out an extremely active program to develop the resources required to meet steeply rising world demand. A large number of countries were affected by this expansion. However, the direction of development by this industry could be greatly affected by the problem of the Suez canal and reaction to it in the middle east. At the beginning of 1956 nearly \$5,800,000,000 was invested in the petroleum industry abroad, including roughly \$1,000,000,000 in the middle east.

Manufacturing investments were also expanding vigorously in 1955 and 1956, totalling more than \$6,300,000,000 at the beginning of 1956, a gain of nearly \$600,000,000 over the previous year.

Direct U.S. investments in Canada rose nearly \$600,000,000 in 1955 to a total of \$6,464,000,000, and more than \$400,000,000 was added in the first six months of 1956. These massive additions to foreign investments in Canada gave rise to much discussion in Canada, especially in connection with the financing of Trans-Canada Pipe Lines, Ltd. A new study by the dominion bureau of statistics, *Canada's International Investment Position 1926-1954*, showed that in 1953 U.S. investors controlled 68% of the capital employed in petroleum in Canada, 53% of the total for mining and 39% for manufacturing. The study also showed that selected U.S. direct investment manufacturing establishments in Canada accounted for \$5,420,000,000 of factory shipments in 1953, or about 30% of the total.

A tax convention between the U.S. and Canada signed on Aug. 8, 1956, provided for a reduction in Canadian withholding taxes to 5% for companies owned 51% or more by U.S. parent companies. Previously the 5% rate applied only if the ownership was at least 95%, and the change was made largely as an inducement to U.S. companies to issue additional shares in their Canadian subsidiaries to residents of Canada.

U.S. investments in the Canadian petroleum industry continued on a large scale in 1956. The construction of the Trans-Canada pipeline to carry gas across the country was begun on the basis of an \$80,000,000 loan from the Canadian government. This loan was to be repaid by April 2, 1957, and the U.S. investors involved would then be required to provide the very large additional amounts needed to complete the line. The Westcoast Transmission Company, Ltd., organized to build a 650-mi. gas transmission line to bring Canadian gas to the U.S. border, arranged for about \$150,000,000 of financing, largely from U.S. institutional investors. Both of these projects would require large capital outflows from the U.S. in 1957.

Intensive investments to develop additional oil and gas reserves in western Canada were being carried out by many U.S. companies with considerable success. Sun Oil Co. announced the drilling of 56 wells, all of which produced oil or gas. El Paso Natural Gas company began exploration activities in British Columbia and Newmont Mining Corp. entered the Canadian oil business through Pathfinder Petroleum. An important development in 1956 was an exchange of stock between Gulf Oil Corp. and British American Oil Co. by which Gulf Oil acquired a major interest in British American, while British American acquired the large crude oil reserves of Gulf's Canadian subsidiary, Canadian Gulf Oil. In other branches of the petroleum industry, Imperial Oil Ltd. announced plans to build a \$25,000,000 petrochemical plant at Sarnia, Ont., and to expand its Montreal refinery.

Mining investments in Canada were also important in 1956, although much of the activity was still in the exploratory stage. Canadian iron ore resources remained a centre of interest: Steep Rock Iron Mines, Ltd., planned to spend an additional \$25,000,000 for further expansion; W. S. Moore Iron Co. entered into an agreement to explore and develop resources in Quebec; two U.S. companies, Atlantic Iron Ore Co. and International Iron Ore, were interested in the vast project of developing the great low-grade iron deposits in the Ungava bay area; U.S. interests announced plans to reopen the Moose Mountain iron mine and achieve sizable production; Jones & Laughlin Steel corporation agreed to carry out explorations and possible development of the Quebec iron ore properties of Quebec Cobalt and Exploration, Ltd.; and a Canadian subsidiary of the United States Steel Corp. was also active in the same area. Other developments in mining included expenditures of \$15,000,000 by the American Metal Co., Ltd., to develop lead-zinc-copper properties in New Brunswick, National Gypsum company's development of a 500-ac. tract for an asbestos open pit mine and plant, and plans by Potash Company of America and others to spend \$18,000,000-\$20,000,000 to expand potash production in Saskatchewan.

U.S. manufacturing investments in Canada at the beginning of 1956 totalled \$2,834,000,000, and a great number of new projects were under way during the year. In the general field of chemicals the du Pont Co. of Canada was planning a new plant to produce hydrogen peroxide and an \$8,000,000 plant to manufacture Orlon, a Canadian affiliate of Commercial Solvents Corp. was constructing a \$22,000,000 plant to produce ammonium phosphate and nitrate fertilizers, Dow Chemical of Canada was expanding production facilities for plastics, A. M. F. Atomics (Canada) Ltd. was constructing a plant to fabricate fuel elements, a Canadian subsidiary of Jefferson Lake Sulphur Co. was to construct a

\$1,800,000 sulphur manufacturing plant, and Procter and Gamble Co. of Canada announced plans for a multimillion dollar plant for processing shortening and edible oils.

Facilities to produce pulp and paper products were also being expanded. A Canadian affiliate of Rayonier Inc. was completing a \$1,000,000 processing and drying plant, a \$750,000 plant to produce paper bags was planned by Canadian International Paper Co., a \$15,000,000 kraft pulp mill operated by a subsidiary of Crown Zellerbach Canada, Ltd., began operations, and Hinde Dauch Paper Co. was beginning a \$2,000,000 expansion program.

Following up its earlier expansion, Aluminium Ltd. announced a \$250,000,000 program for the construction of a new hydroelectric project on the Peribonka river in northern Quebec. Reynolds Metals Co. was considering a \$100,000,000 primary aluminum plant also in Quebec.

Direct U.S. investments in Latin America increased by more than \$300,000,000 in 1955 to a total of \$6,556,000,000. This represented the beginning of an upward trend in U.S. investments in the area which was accelerating in 1956. Petroleum investments were especially active in 1956, but there were also widespread new projects in manufacturing and other industries.

There was renewed interest in investing in Argentina following the overthrow of the Perón regime, although the development of the petroleum resources of the country continued to be reserved to domestic capital and there were negotiations for large U.S. government loans. Among the industrial investments were a plastics plant largely financed by Koppers International corporation, a new pharmaceuticals plant by Merck & Co., Inc., a plant to produce adhesives by Minnesota Mining & Manufacturing company, and the first output of Jeeps by the Argentine subsidiary of Kaiser Industries Corp.

Principal developments in Bolivia were the granting of a petroleum concession to Gulf Oil Corp., discussions of pipeline projects to deliver Bolivian oil to Brazil and natural gas to Chile and granting of a mining concession to South American Gold and Platinum Co.

Direct U.S. investments in Brazil, valued at \$1,107,000,000 at the beginning of 1956, continued their steady expansion. Brazil's serious power shortage would be helped by the \$200,000,000 expansion program of American & Foreign Power Co., to be financed partly by the Export-Import Bank of Washington. Industrial investments included a Willys Overland plant to produce Jeeps, new facilities by the Hyster Co. to produce materials handling equipment, a new Brazilian subsidiary of Electric Auto-Lite Co. to produce automotive parts, and a \$3,500,000 expansion by the Borden Co. for the production of basic chemicals. A New York company, Wah Chang corporation, was investing \$5,000,000 in the extraction of tungsten, and Firestone Tire and Rubber company was establishing a 3,000-ac. rubber plantation to supply its tire manufacturing plant. There was still no indication, however, that foreign capital would be sought to develop Brazil's petroleum resources.

A considerable improvement in the economic situation of Chile occurred in 1955 and 1956 as high taxes on copper production were reduced, copper prices rose sharply, the exchange rate system was greatly improved and serious efforts were being made to halt inflation. New copper investments to be carried out included \$53,000,000 by the Anaconda company to bring into production its new El Salvador mine, \$1,250,000 by the same company to expand refineries, and \$1,900,000 by Braden Copper Co. to expand flotation facilities. Also important for Chile were the plans of American & Foreign Power Co. to invest \$60,000,000 to produce additional electricity, and new investments in nitrates following legislation in April improving taxes and exchange rates for the companies. There was also a multimillion dollar investment in an acetate yarn plant to be built by an affiliate of Celanese.

ese Corp. of America. More liberal legislation to bring in foreign oil producers was being considered.

Colombia was affected by the boom in oil exploration in 1956 as International Petroleum company announced a \$25,000,000 two-year exploration program, Cities Service company announced a development contract with the government-sponsored oil company, and four concessions were granted to John W. Mecom, a Texas oilman. South American Gold & Platinum Co. acquired a sizable interest in mining properties in Colombia.

One of the most important oil discoveries of 1956 was in Costa Rica, where Union Oil company announced in September it had brought in a well producing 1,000 bbl. a day. Cuba was also the scene of an intensive oil search by many companies, and industrial investments were also important. Cuban Electric company, a subsidiary of American & Foreign Power Co., was to carry out a five-year \$147,000,000 program to double its power production, Goodyear Tire and Rubber Co. planned a \$2,500,000 expansion of its tire plant, Firestone Tire and Rubber company was to build a \$4,000,000 plant in Havana, there were several projects to increase capacity for producing paper and other products from bagasse, and Esso Standard Oil S.A. announced an expansion of its Havana refinery to cost more than \$16,000,000. The Cuban subsidiary of Freeport Sulphur Co. was to invest \$40,000,000 to exploit nickel and cobalt properties in Oriente province.

Several oil companies were preparing to explore for oil in Guatemala, although there was some confusion resulting from conflicting leases. The first investment guaranty contract by the International Cooperation administration (I.C.A.) covering Latin America was granted to a U.S. company investing in logging and lumber processing in Guatemala. A wood-treating plant in Guatemala was also to be built by the Koppers company and Robinson Lumber Co. planned a \$3,000,000 investment.

In Haiti the Reynolds Metals Co. began bauxite mining operations in July and would soon produce about 400,000 tons of bauxite annually. On the island of Jamaica and its surrounding islands a subsidiary of Stanolind Oil & Gas Co. began exploratory operations early in 1956. In Trinidad, W. R. Grace & Co. was considering the establishment of a chemical industry.

Direct U.S. investments in Mexico increased notably by \$75,000,000 in 1955 to a total of nearly \$600,000,000. Most of the increase was in manufacturing facilities, which increased by a record \$52,000,000. Among the 1956 developments were the entry of Hercules Powder Co. into the naval stores industry, new expansion plans by Pennsalt Chemicals and Montrose Chemical Co., and the opening of the first Mexican store of the F. W. Woolworth Co. in April. A number of U.S. companies were investing substantial amounts to develop Mexico's large sulphur resources, including plans by Texas Gulf Sulphur Co. to construct a Frasch process sulphur plant.

U.S. investment activity in Panamá was highlighted by plans of Panama Refining Company, Inc., to build a deep-water dock together with a petroleum refinery and petrochemical plant. In addition the Union Oil Co. of California was to begin drilling for oil and the Cataract Mining Corporation announced the acquisition of a 2,000,000-ac. oil and gas concession near the Costa Rican border.

The largest U.S. investment in Latin America is in Venezuela, where the total at the beginning of 1956 was \$1,424,000,000. About \$1,056,000,000 of this total was in the petro-

leum industry, and plans for the expansion of oil output indicated a very large increase in these investments in 1956 and for several years to come. In 1956 Venezuela began to accept bids for new development concessions. Many U.S. companies offered large amounts, and the total received by Venezuela would be several hundred million dollars. The companies were also expanding existing properties with the largest producer, Creole Petroleum Corp., planning to spend nearly \$200,000,000 in 1956. Venezuela is also rich in other minerals, including newly discovered aluminum ore which the Henry J. Kaiser interests were studying. An important industrial development was the plan of Burlington Industries, Inc., to open a textile plant at Valencia.

Encouraged by the continued production gains of the western European countries, U.S. companies increased their direct investments in that area by about \$350,000,000 in 1955 to a total of nearly \$3,000,000,000. Most of the increase was in manufacturing facilities, and the expansion of much-needed petroleum resources also required substantial investments. Interest remained high in 1956, and there was investment activity in a large number of countries.

In Belgium a newly formed company was to manufacture Mack trucks and buses, and in France California Spray-Chemical Corp. was constructing a \$1,500,000 plant to produce an agricultural fungicide. Investments in Germany were being stepped up, including a plant expansion by the German affiliate of the Perkin-Elmer Corp. manufacturing various instruments, Ford Motor company's plans to spend \$8,000,000 for expansion under an I.C.A. guaranty, and participation by an affiliate of Celanese Corp. of America in a corporation to produce plastics for the building industries. Deere & Co. announced the purchase of one of the largest manufacturers of farm machinery in Germany.

The outlook for foreign investment in Italy was clouded in late 1956 as the Italian senate pondered an oil bill which restricted the areas open to foreign companies and set sliding scales on royalties. Gulf Oil company, the most successful of the companies, was said to be considering abandoning further activity on the Italian mainland. In Sicily, however, which was not affected by the legislation, Gulf Oil announced the construction of a new pipeline and a Dutch-American firm started test drilling. Aside from the oil situation, there was some liberalization of exchange regulations affecting foreign investors in Italy, and Chas. Pfizer & Co. announced plans for a new factory to produce pharmaceuticals and agricultural feed.

There was considerable investment activity in the Netherlands, including a new Dutch subsidiary of Thew Shovel Co. to manufacture power shovels and cranes for the European market, a decision by Netherlands Ford to carry out a 16,500,000-guilder plant expansion, Caltex Petroleum Co. (Netherlands) Ltd. planned to double the area of its enterprise at Pernis, an undertaking by the Netherlands affiliate of Standard Oil Co. of New Jersey to build a new \$28,000,000 refinery, Ferro Corp. investment in a new plant to produce Fiberglas mats, and construction by Dow Chemical Co., under an I.C.A. guaranty, of a \$1,320,000 manu-

facturing plant.

Many restrictions affected foreign investors in Spain, although Monsanto Chemical Co. announced that it had acquired an equity interest in a Spanish firm to produce polystyrene, and oil exploration was being carried out. In Turkey, an affiliate of the Caltex group was undertaking test drilling on newly acquired concessions in southern Turkey and a number of other U.S. companies were carrying out extensive explorations on the large new areas opened by the Turkish government.

U.S. direct investments in the United Kingdom were becoming an increasingly important factor in that country's domestic economy and export trade. According to new British studies, British plants in which U.S. investors had a 75% or more interest produced about \$1,540,000,000 worth of goods in 1954. At the beginning of 1956 the total investment was valued at \$1,424,000,000 and was continuing to expand at an impressive rate. By far the largest transaction in 1956 was the purchase by the Texas company of Trinidad Oil company from British owners for \$176,400,000. By this purchase the Texas company acquired producing and refining facilities in Trinidad and marketing outlets in the United Kingdom and Canada. Anglo-American Regent Oil company planned a \$70,000,000 refinery near Southampton.

Other investments in England included plans for the construction by Esso Petroleum of a butadiene plant at Fawley, an expansion plan by Monsanto, Ltd., calling for the expenditure of about \$25,000,000, a new plant by Borg-Warner Corp. to produce transmissions, a new du Pont subsidiary to manufacture chemical products, the expansion of Dresser Industries, Inc., through two British companies producing oil and gas industry equipment, a joint venture including Firestone Tire and Rubber company to produce synthetic rubber, and purchase of a British plant by Caterpillar Tractor Co. Caterpillar Tractor was also building a new plant in Glasgow, Scot., to produce for foreign markets. In Northern Ireland, Chemstrand Corp. announced plans for a \$10,000,000 plant to manufacture synthetic fibres, and California Texas Corp. together with other U.S. and foreign investors was participating in the construction of a \$34,000,000 refinery at Whitegate, Cork county.

The investment outlook in the middle east and Africa was extremely complex in 1956, with many companies undertaking or proposing sizable outlays while parts of the area were greatly disturbed by the Suez canal crisis and other developments. Investments by petroleum companies continued to be most important. Early in 1956 Continental Oil Co. was preparing to drill an exploratory well in Egypt near Alexandria, in Israel there was further investment in the area where oil was recently discovered and the government of Israel encouraged increased investment by liberalizing depletion allowances, and Kuwait Oil Co. announced discovery of a great new oil field and planned to greatly enlarge its refining facilities. Pipeline operators were negotiating with Lebanon and other countries through which the lines pass in order to reach an agreement on taxes.

An important development was the granting by Libya of large exploratory concessions to a number of the largest U.S. companies. The Texas company was planning a large-scale expansion of its distributing facilities in western Africa, and the American Metal Co. announced the opening of a \$16,800,000 copper and cobalt producing mine in Northern Rhodesia.

The far east also presented a mixed picture to foreign investors in 1956. In Australia the search for oil was continuing without any promising new discoveries, but manufacturing investments were expanding rapidly, including new enterprises by Fruehauf Trailer Co. and Yale & Towne Manufacturing Co. Burma issued a statement expressing its interest in attracting foreign investment, and Cambodia enacted a foreign investment law setting various conditions on foreign investments. The government of

Ceylon rejected a proposal by American and British interests to construct a \$35,000,000 refinery, and India was advised by a survey mission to drop its "negative and grudging attitude" toward foreign investors. Indonesia released in June the text of a bill intended to promote foreign investments, and earlier in the year Standard-Vacuum Oil Co. arranged for a \$20,000,000 refinery modernization program.

Although U.S. companies continued to invest in Japan they tended to take minority shares in joint enterprises. Typical of this development were plans of Celanese Corp. to establish a plant to produce acetate yarn in conjunction with a Japanese company, and further investments by Dorr-Oliver Inc. in a company producing ore-dressing equipment. Oil exploration began in Pakistan with concessions granted to Nelson Bunker Hunt calling for the expenditure of \$42,000,000 and to the Standard-Vacuum Oil Co. calling for expenditures of more than \$40,000,000. The government of Pakistan was a participant in both ventures.

There was considerable investment activity by U.S. companies in the Philippines in 1956. B. F. Goodrich Co. completed a \$6,000,000 plant to produce tires and Firestone Tire and Rubber company was planning a \$5,300,000 tire and tube plant. Several companies began oil explorations, including the Texas company, Standard Oil Co. of California and Standard-Vacuum Oil Co.

Other Private Investments.—Other forms of private U.S. investment abroad increased in value by about \$800,000,000 in 1955 to a total of \$9,800,000,000 at the beginning of 1956. In the first half of 1956 net capital outflows were substantially higher than in the same period of 1955, and although rising interest rates in the U.S. after midyear were a restraining influence, sizable outflows were expected to continue.

U.S. purchases of new foreign dollar bonds totalled \$184,000,000 in the first half of 1956, all being Canadian issues except about \$25,000,000 for Israel and about \$11,000,000 for Australia. Yields on new Canadian bonds were exceeding 4% by midsummer. Net U.S. purchases of foreign corporate stocks were about \$75,000,000 in the first half of 1956, of which about \$30,000,000 were of European corporations and \$44,000,000 were Canadian. The continued outflow of U.S. funds into foreign dollar bonds, and the sizable increase in short- and medium-term bank loans, reflected the relatively high interest rates prevailing in most foreign countries. The shortage of investment funds in Canada, for instance, was largely responsible for the decision of Northspan Uranium Mines, a Canadian company, to turn to the U.S. for \$70,000,000 in September to finance completion of its uranium properties.

Continued purchases of the stocks of foreign corporations reflected confidence in the future economic progress of Canada and western Europe. Purchases of European stocks were being increasingly facilitated by the widespread use of American depository receipts issued by U.S. financial institutions and by listings on leading stock exchanges.

In July a new organization, the International Finance corporation, was set up as an affiliate of the International Bank for Reconstruction and Development. The I.F.C. had 31 member countries and a subscribed capital of \$78,366,000, including more than \$30,000,000 from the U.S. The I.F.C. would make investments in the securities of private enterprises, without the guarantee of the country in which the investment was made, and would endeavour to interest private capital in participating in these ventures.

Repayments on outstanding U.S. government credits were slightly larger than disbursements in 1955, leaving the total outstanding nearly unchanged. In the first half of 1956 the rate of disbursements on long-term government loans was rising somewhat. Short-term foreign assets of the U.S. government, consist-

ing mainly of foreign currencies and claims arising out of the disposal abroad of agricultural surpluses, rose by a net amount of \$343,000,000 in 1955 and by \$245,000,000 in the first half of 1956.

Foreign Investments in the U.S.—Foreign assets and investments in the U.S. increased by about \$2,800,000,000 in 1955, of which about \$1,100,000,000 represented gains in liquid dollar assets, nearly \$350,000,000 was long-term capital inflows, about \$130,000,000 was reinvested earnings of direct investments and about \$1,200,000,000 represented the appreciation in market values of foreign-held U.S. corporate stocks. In the first half of 1956 about \$1,500,000,000 was added to the value of foreign holdings in the U.S., of which considerably more than half was in liquid reserves.

In addition to the gains in liquid dollar reserves foreign countries were also adding to their gold reserves out of current production. Of course, the gains in monetary reserves were not evenly distributed among countries, and there had been a declining rate of increase since 1953.

Long-Term Investments.—European investors continued to buy large amounts of U.S. corporate stocks in 1955 and 1956. At the beginning of 1956 the total market value of foreign holdings was \$6,575,000,000. In the first half of 1956 net foreign purchases were at a postwar high of more than \$100,000,000. The extent to which foreigners acquired interests in U.S. business enterprises was the subject of a series of hearings by the senate internal security subcommittee. Witnesses stated that very little could be determined about the identity of the beneficial owners of securities held through U.S. or foreign nominees. During 1956 at least two European mutual funds, one German and one Swiss-Belgian, were set up to facilitate foreign purchases of U.S. stocks.

There were also larger foreign purchases of U.S. corporate bonds and some sizable loans to U.S. companies, especially to finance their foreign expansion. In April 1956 Caltex issued a \$50,000,000-fr. loan in Switzerland to finance new refineries, and in March the Standard-Vacuum Oil Co. borrowed the equivalent of \$11,800,000 in the Netherlands and Caltex borrowed the equivalent of \$10,500,000 in the same country.

Foreign direct investments in the U.S. were also on the rise in 1955 and 1956, as foreign companies sought to participate in the expansion of the U.S. economy. Among the major developments were plans by the Belgian group, Petrofina, to invest \$15,000,000 to \$20,000,000 in a U.S. company in the petroleum industry, a move by Borax Consolidated, Ltd., to consolidate its holdings in the U.S. in a new company and greatly expand its operations with U.S. financing, a joint venture by a French firm with Crane Co. and Vitro Corp. of America to produce thorium and other minerals, acquisition by Britalta Petroleum, Ltd., of Alberta of Wilshire Oil Company of Texas by an exchange of stock, U.S. expansion by Nipissing Mines Co., a Canadian company, with new properties in North Carolina and California, and purchase by Canadian interests of National Tea Co. The Bowater organization planned a new \$100,000,000 pulp mill in South Carolina, and Abitibi Power and Paper Co. of Canada was also planning a multimillion dollar U.S. expansion, while a Canadian company, Morrison Brass Corp., purchased three U.S. companies for about \$5,000,000. In addition, the Buderus Iron works of Germany announced plans to establish a large sheet-metal proc-

essing plant in the U.S., and the Japanese government decided to aid the Alaska Pulp company of Tokyo in its plans to finance a \$50,000,000 project to build a rayon pulp mill in Sitka, Alaska.

The suit by the Swiss company, I. G. Chemie (Interhandel), to recover its interest in General Aniline and Film Corp. was dismissed in United States district court and the justice department could proceed to sell the property seized during the war.

Forests. United States.—In 1956 a preliminary report on the findings of the Timber Resource review, a three-year study of the forest situation in the United States, was made by the forest service, U.S. department of agriculture. The forest service conducted this study with the co-operation of state forestry agencies, forest industries and other private and public organizations. Of the 647,686,000 ac. of forest land in the United States, 484,340,000 ac., or about one-fourth of the country's total land area, was classed as commercial forest land, capable of and available for growing commercial timber crops. Three-fourths of the commercial forest land was in the states east of the Great Plains, but more than two-thirds of the saw-timber volume was in the west; 80% of the saw-timber volume was softwoods, 20% hardwoods.

One-tenth of the country's standing timber was reported to be made up of cull trees. The report said that nationwide timber quality appeared to be declining. About 115,000,000 ac. of commercial forest land (one acre of every four) was poorly stocked or nonstocked, and about 50,000,000 ac. were said to need planting to be made productive within a reasonable time.

The study showed a near balance between annual saw-timber growth, 47,400,000,000 bd.ft., and annual cut, 48,800,000,000 bd.ft. Softwood cut was in excess of growth, whereas growth of hardwoods exceeded cut. Insects, diseases, fire and other destructive agencies were estimated to take an additional toll of about 13,000,000,000 bd.ft. of saw timber each year.

On public forest lands and on forests managed by the forest industries, the productivity of recently cut forests was reported to be relatively good. Poorest productivity was generally found on the cutover lands of farm and other small private forest

holdings. These small forests, however, represented 60% of the nation's commercial timberlands.

Possibilities for increasing timber growth to keep pace with the nation's growing needs, the report said, lay in improved stocking; intensified control of insects and diseases; accelerated tree planting and forest improvement measures to increase volume and improve quality; closer utilization of timber cut (about one-fourth of the timber cut was unused logging and plant residues); and improvement of forest management, especially on the small holdings.

The Agricultural act of 1956 (soil bank) included provisions for federal financial assistance to farmers for converting general cropland to conservation uses, including the planting of trees. Another act of congress authorized a middle Atlantic states forest fire protection compact, to facilitate co-operation in fire control among the states of Delaware, Maryland, New Jersey, Pennsylvania, Virginia and West Virginia.

A southern forest fire prevention conference, sponsored by the American Forestry association, the Louisiana Forestry association and a number of other industrial and conservation groups, was held in New Orleans, La., in April 1956. Several hundred southern business and civic leaders, public officials and educators met with foresters and forestry officials to assess the damage done by forest fires in the south and to consider means of reducing fire losses. Eighty-five per cent of the forest fires in the United States occurred in the southern states. Deliberate woods burning had been a special problem in rural areas; 94% of the national total of fires of incendiary cause were in the south. The conference endorsed a program of action by all agencies to reduce southern forest fire losses, estimated at about \$250,000,000 a year.

Forest tree planting by all agencies, public and private, totalled 780,839 ac. in 1955. An additional 31,749 ac. were planted for shelter belts or wind barriers. Of the area planted for forest purposes, 239,000 ac. were planted by forest industries, 52,000 by other industries, 77,000 by federal agencies, 51,000 by state and other public agencies and 261,000 by farmers and other private landowners. The 1955 total of planting by all agencies showed a slight increase, about 1,500 ac., over the 1954 figure.

The U.S. congress appropriated a total of \$91,025,129 to the forest service for research, protection and administration of the national forests and co-operative work with the states in the fiscal year 1956. On June 30, 1956, the area of the 149 national forests and related lands under administration of the forest service was 181,058,682 ac. During the fiscal year 1956 the national forests supplied a total of 6,907,000,000 bd.ft. of timber, a new record and an increase of about 600,000 bd.ft. over the 1955 cut. Receipts from the sale of timber, grazing fees and other uses of lands under forest service administration in fiscal 1956 amounted to \$114,793,000, compared with \$81,137,000 in 1955.

(C. E. R.)

Canada.—The Canadian forest industry continued to expand steadily during 1956. Probably the most significant development was the extension of the pulp and paper industry to the prairie provinces of Alberta, Saskatchewan and Manitoba. Construction of a new mill on the east slope of the Rockies in western Alberta and another pulp mill in central Saskatchewan were planned. On the west coast a large increase in pulp production was based entirely on chips produced from slabs and edgings from sawmills, material which was formerly burned or discarded. Similar developments in sawmills in the Lake St. John area in Quebec and

in New Brunswick pointed to equally intensive utilization in eastern Canadian forests.

A chair of forest biology was established during the year at the University of Toronto, faculty of forestry, with the assistance of the Abitibi Power and Paper Co., Ltd. One of Canada's leading research foresters, J. L. Farrar, was appointed to this chair.

The Canadian Forestry association, in co-operation with the Canadian chamber of commerce, the Engineering Institute of Canada and the Canadian Institute of Forestry, held a national forestry conference in Winnipeg, Man., Sept. 17-19, 1956. This educational conference was designed to call to the attention of the Canadian public the value of its forest resources and to indicate the manner in which information on renewable natural resources could be more effectively disseminated. The 1956 conference marked the 50th anniversary of the first such conference held in Canada.

Under the Canadian tree farm program, more than 300 certified forest landowners were managing 365,000 ac. of freehold under approved tree farm standards. Also during 1956 a national forest fire prevention "Smokey Bear" campaign was planned. It was to be sponsored by the Canadian Forestry association in co-operation with other national, provincial and industrial forest fire protection organizations, and assisted by the U.S. forest service and the Advertising Council of the United States.

A published report of the Newfoundland Royal Commission on Forestry was made under the chairmanship of Maj. Gen. Howard Kennedy. Virtual conclusion of studies by the New Brunswick Forest Development commission was reported, as was the conclusion of the Royal Commission on Forestry hearings in British Columbia. In Ontario the provincial government appointed a five-member Water Resources commission with extensive powers for production, maintenance and disposition of water, a factor in Ontario forestry programs. (J. L. V. C.)

Great Britain.—On May 8, 1956, a commemoration stone was unveiled by the queen to mark the completion of the planting by the Forestry commission of 1,000,000 ac. of state forests in Britain.

In private woodlands an increased government grant of £17 per acre encouraged more extensive planting, and the demands for transplants of some species exceeded the supplies available from the nurseries.

An important forestry congress was held in Oxford in July by the International Union of Forest Research Organizations. The congress was attended by 243 delegates from 42 countries. The numerous topics discussed included research on site factors, climate in relation to the growth of native and exotic species and the fluctuations in population of harmful forest insects and the problems of their control.

Other Commonwealth Countries.—In New Zealand the planting of marram grass (*Ammophila arenaria*) for the fixation of drifting sand was successfully achieved by a new type of planting machine hauled by tractor. Three rows of the grass tufts were planted simultaneously. A serious forest fire destroyed 7,600 ac. of Corsican pine plantations in Canterbury province, and sawmills were set up in the area at once to salvage the damaged timber.

In Nigeria the results of cutting evergreen climbers and creepers to reduce the shade and to induce regeneration in dense tropical forests had proved to be so successful that it was decided to extend this method of forest improvement over larger areas.

It seemed that the effect on tropical forestry of the new uses for cellulose in the form of composite wood and fibreboard might be of great importance, particularly in Malaya and in Kenya where investigations were made in the economics of the produc-

tion of fibreboard for local consumption. This might help in finding a use for some of the very large number of tree species in these countries which are unsuitable for export as timber.

In Pakistan the government issued details of a new policy laying down the requirements for large-scale afforestation and the division of land uses between forestry and agriculture. The state forests covered only 4% of the total land area.

Europe.—In Sweden the Research Institute in Forest Tree Genetics, which was established in July 1946, published the results of ten years of the breeding of pine and spruce from the seed of carefully selected trees of high quality. Valuable trees were also multiplied vegetatively, brought to early flowering and crossed with one another. The successful results obtained led to the growing of young trees of the selected strains on a large scale. Seeds and transplants from these trees were now being used to replace the natural regeneration in many forests where the existing trees were of poor quality.

In Norway a plan to establish 120 demonstration forests in different parts of the country was inaugurated with the object of showing the advantages of methodical forest management to owners of farm woodlands, and the first 20 of these demonstration forests were started during 1956.

The growing of eucalyptus timber for domestic use was the subject of a Food and Agriculture organization conference in Rome in Oct. 1955. In many countries the growth of the indigenous tree species was too slow to meet the local needs for fuel, posts and boxwood, and in the Mediterranean countries extensive planting of eucalyptus species was officially encouraged. In Germany larger experimental plantations of selected strains of eucalyptus were also planted during the year.

In the U.S.S.R. the chief developments reported were in the increased mechanization of felling by chain saws and extraction by tractors, and the use of aircraft for seed sowing was said to be on a large scale.

In Bulgaria heavy demands for timber during the past few years for building purposes and for export led to overfelling of softwoods, particularly on mountain slopes. The government announced strong measures to control future exploitation and to ensure better regeneration of new crops by selection fellings. Clear fellings in high forest were forbidden. (See also LUMBER.)

Formosa. (TAIWAN). Separated from the China mainland by about 100 mi. of sea, Formosa, a semitropical island, is situated north of the Philippines and south of Japan and Okinawa. Including the Pescadores (Penghu), Formosa has an area of 13,885 sq.mi. consisting of 78 islands (64 in the Taiwan group and 14 in the Penghu group). Pop.: (1953 census) 4,438,016; (1955 est.) 9,078,000, excluding armed forces and aliens. The populations of the five municipalities, according to the 1953 census (1955 est. in parentheses) were: Taipei, the capital, 627,752 (677,159); Kaohsiung, 316,193 (341,740); Tainan, 252,493 (268,243); Taichung, 224,710 (235,584); Keelung, 174,254 (184,688).

History.—Plane clashes and artillery duels between Nationalist and communist forces near the offshore islands continued in 1956. The defense of Formosa was further strengthened with continued military and economic aid from the United States, while considerable military build-up along the Fukien coast of the mainland was reported. In the meantime, efforts by the United States to persuade Communist China to renounce force in its objective of "liberating" Formosa bore no fruit.

Peking intensified its campaign to obtain Nationalist defections. This culminated in the open invitation of June 28 by Premier Chou En-lai to the Nationalist government to send a delegation to Peking for peace negotiations. Nationalist officials denounced Chou's offer as a deliberate attempt to deceive the free world and outlined their conditions for direct negotiations, which included the abolition of the Peking government. (See also CHINA.)

United States financial and economic aid to the Nationalist government continued. The International Cooperation Administration had provided financial assistance in the amount of U.S.\$137,118,000 for the fiscal year 1955, of which U.S.\$101,265,000 was spent for defense. For the fiscal year 1956 U.S.\$72,960,000 was provided for defense and for technical co-operation. With economic aid from the United States, agricultural and industrial output in Formosa had steadily increased. However, Formosa's production remained inadequate to maintain, by itself, a viable economy and a defense establishment to meet an all-out attack from the mainland.

Measures for putting the economy of Formosa on a self-sustaining basis were carried forward. The Four-Year Plan 1953-56 set forth a series of production, investment, reconstruction and financial goals, and although these goals were not reached, encouraging results in expanding industrial and agricultural production, developing basic electric power and transportation facilities and improving rural conditions were achieved. In September a second Four-Year Plan for 1957-60 was formulated.

Important development projects launched or completed during 1956 included: the Shimen reservoir, at a total cost of NT\$662,000,000 plus U.S.\$14,800,000, which would help irrigation and increase the generation of electric power; construction of about 130 mi. of highway linking east and west Formosa through the central mountain range; completion of the Keelung port facilities expansion program; creation of a free trade zone in the island's southern port of Kaohsiung.

LOUDSPEAKER ON QUEMOY ISLAND used by the Chinese nationalists in 1956 to broadcast messages and propaganda to the communist-held mainland, a few miles away

During 1956 only one out of five mayors and one out of 16 magistrates elected were not Taiwan-born; 16 Taiwan-born persons were appointed to the provincial government council of a total of 21 members. The seventh plenary session of the Koumintang, ruling party in Formosa, which met in May, demanded government efficiency on all levels, stressed the importance of personal integrity of all public officials, and recommended that local election procedure be improved.

Education.—At the end of 1955, more than 92% of school-age children were attending school in Formosa. The total enrolment in all schools in early 1956 exceeded 1,400,000, and in the fall new grade schools were established for more than one-third of about 89,000 school-age children who had lacked educational facilities. The government decided to extend the period of free and compulsory education from 6 to 9 years, i.e. through junior high school. In early 1956 there were 14 institutions of higher learning (6 in 1949), 1,399 primary schools (1,199 in 1949), 245 secondary schools (206 in 1949), and 36 supplementary institutions. There were about 15,000 students in college.

Finance.—While the certificate rate of the Taiwan Yuan or dollar was maintained in 1956 at about NT\$15 to U.S.\$1 the rate of exchange most generally applicable was approximately NT\$24. A special rate for foreign diplomatic personnel was adjusted to NT\$34 to U.S.\$1, which was about the same as the black-market rate. In March 1956 the total note issue by the Bank of Taiwan reached NT\$1,321,000,000 (an increase of NT\$114,000,000 over April 1955) and total bank deposits were NT\$4,862,000,000 (an increase of about NT\$100,000,000 over 1955). Three budgets exist in Formosa, the central, provincial and local, and a major portion of the provincial revenue went to finance the national budget. For the fiscal year beginning July 1, 1954, the total expenditure of NT\$5,161,000,000 for the budgets of the three levels of government were: national 55.7%; provincial 18.6%; and local 25.7%. The estimated total deficit was NT\$503,000,000 or 17.5%, which was to be met largely by provincial subsidy and U.S. aid. In addition to supporting the National government, the provincial revenue was used mostly for reconstruction projects and educational and cultural developments.

Trade.—During 1956 sugar remained the most important export of Formosa, whose leading trade partners were Japan, the United States and Hong Kong. In 1955 Japan took about 60% of Formosa's exports and supplied about 64% of its imports (not counting U.S. aid imports). In early 1956 a new trade pact with Japan was concluded calling for a combined trade value of U.S.\$152,000,000 for the 12 months ending March 1957. Excluding U.S. aid arrivals, Formosa had a favorable trade balance in 1955 of U.S.\$41,801,000. The value of exports was U.S.\$133,441,000 (U.S.\$97,756,000 in 1954) while imports were valued at U.S.\$91,640,000 (U.S.\$110,217,000 in 1954). Exports and imports for the first six months of 1956 amounted to U.S.\$69,780,000 and U.S.\$61,160,000, respectively, compared with U.S.\$62,560,000 and U.S.\$42,950,000 for the same period in 1955.

Transportation and Communications.—The total length of the railway system is about 2,800 mi., approximately 2,000 mi. of which are owned and operated by the Taiwan Sugar corporation as feeder lines. The provincial railway administration operates more than 700 mi. of railway, 480 of which constitute the main and branch lines along the west coast, and in 1955 carried 74,147,802 passengers (63,220,000 in 1953) and 10,123,790 metric tons of freight (8,800,000 in 1953). Passengers carried by vehicles operated by the highway bureau and private companies in 1955 increased to 71,973,000 (59,541,000 in 1954) and 96,899,000 (80,613,000 in 1954), respectively.

Agriculture.—Because of drought, rice production in 1955 was 1,633,000 metric tons, a setback of 93,000 metric tons from 1954. The sugar crop had increased steadily since 1946. The crop unit yield for 1954-55 reached a record high of 10.49 metric tons per hectare, surpassing the former record production of 1932.

Mining and Industry.—As shown in the table, industrial rehabilitation and development were steady. In April 1956 registered factories reached 17,030, an increase of 876 plants in one year. Shortage of capital and power, lack of raw materials and inadequate transport facilities remained the principal problems.

Industrial Output in Formosa

	1946	1954	1955
Power and mineral production:			
Power (1,000 kw.hr.)	472,002	1,805,322	1,966,358
Coal (1,000 metric tons)	1,049	2,118	2,359
Crude oil (kl.)	2,539	5,460	3,571
Natural gas (1,000 cu.m.)	39,025	29,064	28,520
Manufactured products:			
Sugar (metric tons)	80,656	642,017	802,924
Chemical fertilizers (metric tons)	500(1945)	168,000	169,000
Cement (metric tons)	97,269	536,416	589,833
Machines (metric tons)	800	6,316	7,185
Gasoline (kl.)	2,810	137,097	169,297
Cotton yarn (metric tons)	410	23,012	25,232
Paper (metric tons)	2,585	29,591	33,765

ENCYCLOPEDIA BRITANNICA FILMS.—Formosa (1955).

Forssmann, Werner T. (1904-). German surgeon. was born on Aug. 24 at Berlin. He shared the 1956 Nobel prize for medicine with André Cournand

and D. W. Richards (*qq.v.*), for his contribution to the development of cardiac catheterization. Forssmann's pioneer work on this was a self-experiment carried out in 1929. He opened an artery in his arm and inserted a long, flexible tube. When he had pushed the tube as far as the shoulder his colleagues persuaded him to stop for fear he would kill himself. When he was alone he repeated the experiment, pushing the tube until it reached the right chamber of the heart. He then walked into the X-ray department and had his chest photographed. By this daring experiment Forssmann showed the practicability of passing a radiopaque catheter into the heart for the purpose of investigating its structure and function. The method was later elaborated, and by 1956 it had become a routine procedure in cardiological departments. It provides useful information on the behaviour of the heart and circulation in a great variety of diseases and under the influence of different drugs. It is much used in the investigation of congenital abnormalities of the heart prior to surgical intervention.

Forssmann qualified in medicine at Berlin university and after World War II he acted as a consultant to various U.S. and British hospitals in west Germany. In 1956 he was practising at Bad Kreuznach in west Germany as a urological surgeon.

Foundations: see COMMUNITY TRUSTS; SOCIETIES AND ASSOCIATIONS, U.S.

Four-H Clubs. A new high in 4-H club membership was attained in the United States during 1956 when the number rose to 2,155,952, or 51,165 more than in 1955. A total of 713,442 boys and girls were enrolled for the first time. About 64% of all members came from farm homes, 22% from rural nonfarm homes and 14% from urban homes. The members were organized into nearly 89,600 clubs, guided by about 270,000 men and women, mostly parents, who served as unpaid volunteer local leaders. Nearly 88,000 older 4-H club members assisted junior leaders.

Club members completed nearly 3,563,000 individual projects in farming, homemaking, community service and other activities. The clothing project had the largest enrolment, meal planning and preparation ranked second and vegetable growing third. Livestock and field crops were also highly popular, ranking first among boys.

During the year, members gave major attention to gaining better understanding of marketing and consumer buying, finding ways to improve quality of production, farm and home development, community betterment and an expanded program of activities particularly challenging to older teen-agers. For older youth stress was placed on choosing a career, especially in agriculture, home economics or related fields.

The 4-H program is a part of the national education system of co-operative extension work in which the U.S. department of agriculture, the state land-grant colleges and the county extension share. The National Committee on Boys and Girls Club Work, Chicago, Ill., and the National 4-H Club foundation, Silver Spring, Md., helped further the program.

Any boy or girl between the ages of 10 and 21 years may join a 4-H club by agreeing to follow 4-H ideals and standards. The club slogan is "learn by doing," and the club motto, "make the best better." The term "4-H" refers to head, heart, hands and health, emphasized in the program. Character development and good citizenship are long-range goals.

Many people in distant lands learned about 4-H club work in 1956 through the international farm youth exchange sponsored by the 4-H foundation and the extension service of the U.S. department of agriculture. More than 300 rural young men and women took part in this program of family, farm and community activities in other countries. Included were 126 outbound United

States delegates representing 36 states and territories, and 180 inbound exchangees representing 44 countries. (C. M. F.)

France. A republic of western Europe, France is bounded north by the English channel, northeast by Belgium and Luxembourg, east by Germany and Switzerland, southeast by Italy, south by the Mediterranean sea, southwest by Spain and west by the Atlantic ocean. Area: 212,736 sq.mi., including the Mediterranean island of Corsica (3,367 sq.mi.), but excluding the overseas *départements* of Algeria, French Guiana, Guadeloupe, Martinique and Réunion (*qq.v.*). Pop.: (1954 census) 42,774,445; (1956 est.) 43,600,000. Language: French is almost universally spoken but there are also other regional languages and dialects: German in Alsace and part of Lorraine; Breton in Brittany; Flemish in the northern corner of the Nord *département*; Provençal in the Alpes Maritimes, Basses-Alpes, Var and Bouches-du-Rhône *départements*; Catalan in Roussillon (Pyrénées-Orientales); Basque south of Bayonne; and Italian in Corsica. Religion: mainly Roman Catholic with about 700,000 Protestants and more than 230,000 Jews. Chief towns (pop., 1954 census): Paris (cap.) 2,850,139; Marseilles 661,492; Lyons 471,170; Toulouse 268,863; Bordeaux 257,946; Nice 244,360; Nantes 222,790; Strasbourg 200,921; 16 towns with a population of from 100,000 to 200,000. President of the republic, René Coty. Prime ministers in 1956: Edgar Faure and (from Jan. 31) Guy Mollet.

History.—*The General Election.*—The year 1956 began with a general election on Jan. 2 following on a dissolution of the previous national assembly on Dec. 2, 1955. The campaign had been embittered since the Socialists and left-wing Radicals, who had themselves created the situation which permitted the dissolution, had argued that though it was constitutionally legal, it was nonetheless constitutionally improper. The previous government led by the right-wing Radical Edgar Faure had hoped that the parties of the centre and right which formed his coalition would come back at least as strong as before, and perhaps stronger. The Socialists, left-wing Radicals led by Pierre Mendès-France, the U.D.S.R. (Union démocratique et socialiste de la Résistance) and the more left-wing Gaullists formed an alliance, the Republican front, and fought the elections on the declared assumption that a non-Communist left-wing majority was possible. The electoral law in force had been devised in 1951 to give an advantage to parties forming alliances, since such an alliance gained a majority in any constituency (all multimember), took all the seats and divided them between themselves. In 1951 most constituencies parties ranging from the Socialists to the conservatives had formed such alliances to keep out the Communists and the Gaullists. But in 1956 the Gaullists had become a party accepting the regime, while the Socialist and left-wing radical voters were in no mood to see their candidates allied with the catholic M.R.P. (Mouvement Républicain Populaire) and conservatives in support of a parliamentary republic which no longer seemed threatened. A split therefore ran through the centre, although there were still Communists allied to nobody on the left, and a new right-wing antiregime party led by Pierre Poujade also allied to nobody. With four groups of parties competing for votes instead of three, there were very few constituencies in which an alliance of parties could hope for an absolute majority. The lack of one meant that the seats would be distributed proportionally between all parties that attained a necessary minimum. It was possible therefore for a party to gain votes compared with 1951 and lose seats or vice versa. Because of the disturbed state of Algeria, no elections were held there so that 30 seats remained vacant.

The results were to some degree a disappointment to all parties except the Poujadists, who obtained 12.1% of the votes and 52

seats instead of a confidently predicted dozen. They won mainly at the expense of the Gaullists whose 20.5% of the votes in metropolitan France decreased to 4.2%. Some former Gaullist supporters also went to the Conservative groups (Independents and Peasants) who increased their vote from 13.1% to 14.1% but lost 30 seats. The M.R.P.'s share of the metropolitan vote decreased from 12.3% to 10.6% and their seats from 83 to 67. Indisputably therefore the former coalition's occasional majority had become a definite minority. But the Republican front was even further from having achieved anything like a majority. Radicals of all kinds and the small allied group U.D.S.R., both of them split in their attitude to the Faure government, returned with 71 seats instead of 82, though with 13.6% instead of 11.5% of the votes. But of these Faure (expelled from the Radical party after the dissolution) led 14, while the orthodox Radicals now led by Mendès-France only numbered 34 in metropolitan France and some of these were notoriously not his enthusiastic supporters. The Socialists increased their vote (for the first time since 1946) from 14.5% in 1951 to 15%, but their metropolitan deputies dropped from 94 to 88. The Communists, having again the advantage of a proportional distribution of seats, increased their metropolitan deputies from 93 to 145, but their vote by the official calculation (which they disputed) decreased from 26.5% to 25.6%.

The Communists demanded a revival of the Popular front of 1936 (Communists, Socialists and Radicals), but neither of the other two parties considered this for a moment, all the less since in 1956, unlike 1936, the Communists were the biggest of the three parties and could have claimed the premiership. The two principal leaders of the Republican front (Guy Mollet, Socialist, Mendès-France, Radical) had meanwhile claimed the premiership. They based this claim on being the most important expression of the popular discontent with the previous government, although in fact the front had fewer deputies than remained to the old coalition. A Socialist party congress meeting on Jan. 15 rejected any alliance on the government level with either "reaction" (*i.e.*, any members of the old coalition) or with the "enemies of democracy" (*i.e.*, Communists or Poujadists). The M.R.P. wished to re-establish their claim to be the right way of the left, rather than a party of the right and would have had no objection to entering a coalition with a Socialist premier; but the Socialists were adamant. A simple calculation showed that, with the Communists and Poujadists excluded from office, there was no possible government without the Socialists.

Mollet Cabinet.—On Jan. 26 President Coty sent for Mollet as the leader of the most important non-Communist party in the opposition. Mollet formed a minority government of the Republican front parties only. On Feb. 1 he received a large but unenthusiastic majority of 420 to 71. This majority included the Communists whom Mollet had spurned in his program speech, 173 members of parties which might be considered Republican front, the M.R.P. and some Conservatives. The Communists wished to demonstrate their readiness to enter a Popular front coalition, while in the centre and on the moderate right no one wished to take the blame for there being no government at all. Mollet's program included limited social objectives (increased old-age pensions, a third week of paid holiday and some wage adjustments), renewed effort for European unification through a common market for the six powers (admittedly a distant aim) and Euratom (European Atomic community) (an immediate aim), consolidation of the Atlantic alliance, pursuance of disarmament negotiations and firm opposition to inflation and devaluation. With regard to the burning question of Algeria, the immediate task, he said, was to end both terrorism and repression so that free elections could be held with a single electoral roll. Algeria's future statute would be determined in negotiation with

NEARLY DESERTED BOULEVARD in Paris, Fr., Nov. 26, 1956, reflecting the fuel oil shortage caused by the Suez canal crisis

its elected representatives. It must prevent oppression of either Algerian community by the other, respect Algeria's individuality and strengthen the links with France.

The Mollet government's activities fell clearly into two groups: those natural to a Socialist government—social, economic, educational, colonial and "European"—and those concerned with problems which it could not evade and cannot be said to have solved—north Africa and the middle east. It was these that made the Mollet government to an increasing extent a national government in a sense which no government had been since that of Gen. Charles de Gaulle.

Home Affairs.—The government succeeded in passing into law both extension of paid holidays and the increase of the old-age pensions, to be financed in part by a 10% increase of income tax and a new tax on cars. In November an immediate expansion of credits for education was announced and, as from 1958 the creation of a fund annually fed by 58,000,000,000 fr. for the modernization and democratization of French education, so as both to replace the ancient and inadequate buildings and allow for 340,000 university students in ten years' time instead of 170,000 as at present. A beginning was made with the industrial exploitation of the immense resources of natural gas, found at Lacq in the Basses-Pyrénées. Full utilization would, however, require big capital investment.

The government's anti-inflationary battle was fought with regard to the budget and to prices. Mollet insisted on increased taxes to finance the rise in old-age pensions and only accepted a loan instead of a further tax increase to pay for the Algerian war after a long struggle. This loan aimed at bringing in 150,000,000,000 fr. in six weeks but when it was closed on Oct. 3 after only three and a half weeks it had raised 320,000,000,000 fr. The terms were however very favourable: 5% and a guarantee that the capital value would rise (but not fall) according to the increase of the average value of shares and debentures quoted on the Paris Bourse. The 1957 budget approved for presentation to the assembly on Oct. 10 showed expenditure of 4,428,000,000,000 fr. against receipts of 3,810,000,000,000 fr. in spite of 370,000,000,000 fr. for economics, mainly on civil expenditure, as compared with the estimates for the current year. Military expenditure was up 110,000,000,000 fr.

Prices were a long and bitter battle, since a very slight in-

crease of the cost-of-living index figure would automatically involve a 5% increase of the basic minimum wage. Imports were admitted in spite of an adverse balance of trade, and indirect taxes were cut in spite of the deficit. Price stabilizing machinery with severe penalties was reintroduced. Even so it was universally believed that the index figure was only kept within bounds by statistical juggling.

Foreign Affairs.—Mollet's "European" policy made substantial progress. The essential precondition—elimination of outstanding disputes with Germany—was achieved after seven months' negotiation. The Luxembourg agreement (Oct. 27) wound up the Saar dispute. (See SAAR.) Mollet persuaded the assembly to approve in principle the plan for a European Atomic community (Euratom) on July 12 by 332 votes to 181 with 70 abstentions. Divergencies between France and Germany on this scheme and on the approach to the common market had been almost entirely smoothed out by the time of Konrad Adenauer's visit to Paris on Nov. 6, but this achievement attracted little attention in view of the middle east crisis.

As far as France was concerned this was organically connected with North Africa. The Mollet government's attitude to the Algerian rebellion was marked by insistence from the start on elections based on a single college of electors (*i.e.*, giving Moslems their natural majority), but also by a rejection of the Faure government's idea of a round table conference to be held immediately in the hope of ending the rebellion. France would negotiate only with Algeria's elected representatives. But even if the rebellion could be repressed, how were free elections to be held for a long period after it? Gradually the right, especially in Algeria, discovered that Mollet's approaches offered fewer dangers from their point of view than Faure's. On Feb. 28 Mollet appealed to the rebels to lay down their arms since France was now offering them free elections. This had no effect at all. hitherto the elections of the Moslem college of voters had been far from free and at all events the rebels wanted to control their own elections.

Meanwhile Robert Lacoste, the governor general, was urgently demanding 200,000 reinforcements. They could only be provided by calling up reservists, an unpleasant decision for men elected in the hope that they would end the war. The government had also to renew by law the special powers needed by the Algerian authorities, since the dissolution had automatically annulled the enabling act of the previous year. This again was an unpleasant duty for a Socialist government. The law finally passed the upper house on March 16.

On April 10, after six weeks' hesitation, the government called up reservists. By the end of June there were more than 400,000 soldiers in Algeria and more than 500,000 in North Africa. Lacoste could claim that areas controlled by rebel bands in Algeria had been gradually reduced, but the rebellion cropped up in new areas when it was put down in some of its original strongholds. Above all the government's critics noted that the gulf between the two communities, European and Moslem, was growing. The failure to seek a negotiation showed its price when relatively moderate leaders like Ferhat Abbas joined the F.L.N. (Front de Libération Nationale) in Cairo in April. (See also ALGERIA.)

Gen. Gamal Abdel Nasser's nationalization of the Suez canal came as a justification for all those Frenchmen who had claimed that tough action against him was necessary for the pacification of Algeria. The assembly adopted on July 21 by 422 to 150 (*i.e.*, by all except Communists) a resolution calling Nasser's action an act of violence and a violation of his commitments, and declared that by his explicit intention to establish a hegemony in the Arab world he was a "permanent threat to the peace." It called upon the government not to accept the *fait accompli* but to take the most energetic measures. It also called for the solidar-

ity of France's allies.

Relations with Tunisia and Morocco meanwhile were becoming increasingly difficult. France's attitude to Egypt created an additional complication, though neither of the governments went beyond verbal sympathy with Egypt. Both were increasingly interested in an Algerian settlement, and an idea for a North African federation of the three territories in close relation to France was taking shape. Sultan Mohammed V ben Yusuf's moderate speech of Sept. 25 at Oudjda, thanking the French for a liberal attitude to Morocco and Tunisia and urging the possibility of agreement in Algeria, brought no result though there were increasing numbers of Frenchmen both inside and outside the government who thought that use should be made of the sultan's good offices. Two incidents strengthened those who urged that France should remain firm until order was restored and elections could be held in Algeria.

On Oct. 18 a small ship, the "Athos," carrying 70 tons of arms was intercepted near the western extremity of the Algerian coast. It had been loaded by Egyptian soldiers in uniform in the naval port of Alexandria and was apparently to have landed the arms on the Moroccan coast so that they could be smuggled into Algeria. Here was undeniable evidence of Egyptian backing to the rebellion.

On Oct. 20 the sultan publicly received in his palace five of the principal Algerian rebel leaders, namely Mohammed ben Bella, Mohammed Khider, Ait Ahmed Hocine, Mustafa Lacheraf and Mohammed Boudiaf. They had been brought in his son's aircraft from Tetuán. It was announced that they would accompany the sultan to Tunis on Oct. 22 so that the meeting between him and the bey would become symbolic of a union of all the Maghreb (Occident). (See also TUNISIA.)

Franco-Moroccan relations had again worsened because of difficulties over troop movements, and there had been overt assistance to rebels on the Tunisian side of the border. The situation was ripe for "firmness." The French government decided to suspend all negotiations with the Moroccan government on Oct. 22. On the same day the French pilot of an aircraft belonging to the Moroccan State Air Transport company was induced to land the five Algerian rebel leaders at Algiers, where they were arrested. There was jubilation in France when the news was first received. It immediately provoked a grave crisis in French relations with both Tunisia and Morocco, both of whom withdrew their ambassadors. The French ambassador in Tunis resigned. By chance the post was vacant at Rabat. Seventy-one French colonists, including women and children, were massacred in the Meknes area and an exodus of Frenchmen from Morocco began. (See also MOROCCO.)

The "fruitlessness" of the two Suez conferences in London had been admitted by Mollet in a speech on Sept. 24 but he declared France's purpose was unchanged. On Oct. 16 Christian Pineau, the foreign minister, declared that nothing had yet been settled and it was too soon to judge the outcome.

The Israeli invasion of Egypt, therefore, struck a France that had been frustrated of expected action for three months but encouraged to remain expectant. Mollet's announcement to the assembly of the Franco-British ultimatum to Egypt and Israel on Oct. 30 was endorsed by 368 to 188 (Communists and Poujadists) and 11 abstentions (including Mendès-France). There was no further debate on the issue for more than three weeks though there was an impassioned debate on Soviet action in Hungary. In the press criticism of the principle of French policy was much less prominent than that of execution, especially as the allied offensive took nearly a week to develop and the cease-fire was called before the objectives had been reached. French opinion was dismayed. Daniel Meyer, a Socialist leader, spoke of "British duplicity" and *Le Monde* complained of "Puritan morality" of

SNOW ON THE RIVIERA, a rare sight, as France and other nations of western Europe suffered a severe cold wave in Feb. 1956. The photograph was taken on the Promenade des Anglais, Nice

British opposition to Sir Anthony Eden.

The Communist monopoly of opposition did not have the effect that might have been expected because everything said by them was disconnected when the party took the side of the U.S.S.R. in Hungary. No other party had challenged the government's attitude from July onward and critics were therefore hampered in challenging it at this late stage.

(D. R. GL.)

ENCYCLOPÆDIA BRITANNICA FILMS.—France (1955); *France and Its People* (1955); *Vacances En Normandie* (1956).

Education.—Schools (1954–55): primary 85,392 (including 4,422 kindergarten), pupils 6,248,000 (including 675,000 kindergarten), teachers (1953–54) 201,061; secondary (1953–54, including some primary classes): state 898, pupils (1954–55) 530,626, teachers 21,423; private (1953–54) 1,624, pupils 372,974, teachers 18,148; state vocational schools (1953–54) 1,064, pupils 282,897, teachers 19,035; state teacher training (1953–54) 162, students 16,868. Institutions of higher education (1953–54): state 53, students 15,806; private (including vocational) 40, students 8,136. Universities (1955) 17, students 155,803, teachers (1953–54) 3,600.

Finance.—Monetary unit: franc, with an official exchange rate of 350 fr. = U.S. \$1. Budget: (1955 actual) revenue 3,553,000,000,000 fr., expenditure 3,956,000,000,000 fr.; (1956 revised est.) revenue 3,373,000,000,000 fr., expenditure 3,959,000,000,000 fr.; (1957 est.) revenue 3,713,000,000,000 fr., expenditure 4,900,000,000,000 fr. Internal debt (Oct. 1955) 4,775,000,000,000 fr.; external debt 1,052,000,000,000 fr. Currency circulation (Dec. 1955) 2,853,000,000,000 fr., (Dec. 1954) 2,551,000,000,000 fr. Deposit money: (Dec. 1955) 3,139,000,000,000 fr., (Dec. 1954) 2,715,000,000,000 fr. Gold and foreign exchange, official (March 1955) U.S. \$1,535,000,000, (March 1956) U.S. \$1,969,000,000.

Foreign Trade.—(1955) Imports 1,640,852,000,000 fr.; exports 1,679,272,000,000 fr. Main sources of imports: continental E.P.U. (European Payments Union countries) dependencies 26%; continental E.P.U. 27%; U.S. and Canada 11%; U.K. 4%; other sterling area 19%; Latin America 4%. Main destinations of exports: continental E.P.U. dependencies 36%; continental E.P.U. 36%; U.K. 7%; other sterling area 4%; Latin America 5%; U.S. and Canada 5%.

Transport and Communications.—State railways (1954) 41,200 km., including 4,421 km. electrified; passenger-km. (1955) 27,780,000,000; freight, ton-km. (1955) 46,896,000,000. Roads (1953) 830,000 km. Motor vehicles in use (1954): passenger 2,520,000, commercial 1,222,000. Navigable inland waterways (1953) 8,500 km. Shipping (July 1955): merchant vessels of 100 gross tons and over 1,220; gross tonnage 3,922,478. Civil aviation (1955) 3,195,180,000 passenger-km.; freight 106,824,000 ton-km. Telephones (Jan. 1955) 2,945,564. Licensed radio receivers (1955) 9,044,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 10,379,000 (10,566,000); rye 439,000 (514,000); barley 2,665,000 (2,525,000); oats 3,580,000 (3,574,000); maize 910,000 (955,000); broad beans 78,000 (77,000); dry beans 105,000 (99,000); rice 90,000 (50,000); potatoes 15,458,000 (16,986,000); flax fibre 43,900 (34,200); tobacco 51,000 (56,900); olives 5,000 (1953) 8,000; dessert grapes (1954) 234,000. Livestock (Sept. 1955): cattle 17,322,000; sheep 8,013,000; horses 2,215,000; pigs 7,570,000; chickens (1954) 75,000,000. Food production (metric tons, 1955): beef and veal 1,410,000; pork 920,000; mut-

ton and lamb 115,000; milk (1954) 18,600,000; butter (1954) 305,000; cheese 350,000; olive oil 8,000; beet sugar, raw value 1,631,000; wine 56,720,000 hl., (1954) 58,490,000 hl. Fish landed (1954, including Algeria) 442,000 metric tons.

Industry.—Fuel and power (1955): electricity 49,560,000,000 kw.h.w.; manufactured gas 2,497,000,000 cu.m.; coke 10,079,000 metric tons; coal 55,332,000 metric tons; crude oil 874,800 metric tons. Production (metric tons, 1955): iron ore (35% metal content) 50,321,000; bauxite 1,497,000; pig iron 10,959,000; crude steel 12,348,000; zinc 137,400; aluminum 161,000; copper 27,400; tin 9,300; cement 10,764,000; cotton yarn 265,200; cotton fabrics 193,000; wool yarn 129,000; wool fabrics 70,000; rayon filament yarn 54,840; rayon staple fibre 55,200; sulphuric acid 1,472,000; superphosphates 1,073,000; passenger vehicles 553,320; commercial vehicles 171,720. Petroleum treated in refineries 25,086,000 metric tons. Merchant shipping launched (100 gross tons and over, 1955) 325,200 gross tons. Index of production (Jan. 1956; 1953 = 100) 132.

French Colonial Empire: see FRENCH UNION.

French Equatorial Africa. This federation in central Africa of four overseas territories of the French Union is bounded west by the Atlantic ocean, Nigeria and French West Africa, north by Libya, east by Sudan and southeast by the Belgian Congo. Cameroun, under French trusteeship, is administered separately. Areas and populations are:

Territory	Area (sq.mi.)	Population		Capital
		1950 census	(1955 est.)	
Gabon	103,089	408,778	392,000	Libreville
Middle Congo	132,046	684,450	698,000	Pointe Noire
Ubangi-Shari	238,224	1,071,791	1,063,000	Bangui
Chad	495,752	2,241,501	2,384,000	Fort Lamy
Total	969,111	4,406,520	4,537,000	
Cameroun	166,793	3,077,080*	3,116,000	Yaoundé

*1951 census.

Population: mainly Negro, but there are semi-Hamitic, semi-Negroid pastoralists in the northern savannah districts; European (1950) 20,120 in A.E.F. (Afrique Équatoriale Française), 12,249 (mostly French) in the Cameroun (1951). Religion: animism; 1,600,000 Moslems (in Chad they represent 46% of the population); about 280,000 Christians in Gabon and Middle Congo and 300,000 in the southern Cameroun. Chief towns: Brazzaville (cap. of A.E.F.) pop. (1950 census) 84,090; Bangui 41,800; Fort Lamy 23,200; Libreville 10,100; Douala (Cameroun, 1955 est.) 110,000; Yaoundé 36,000. High commissioner in A.E.F. in 1956, Gov. Gen. Paul Chauvet. Governors: Gabon, Yves Digo; Middle Congo, Ernest Rouys; Ubangi-Shari, Louis Sanmarco; Chad, Ignace Colombani. High commissioner in Cameroun, Pierre Messmer.

History.—Little change resulted from the elections to the French National assembly, held on June 2, 1956. In the Cameroun, Louis Aujoulat, a former minister, was defeated in his candidature. At Brazzaville disorders broke out between the supporters of the three candidates for election, who represented different racial groups.

In addition to the manganese at Franceville, deposits of potash and iron ore were discovered; and petroleum was discovered at Pointe-Clairette, near Fort-Gentil. The export of timber and of cotton was further developed. The township of Djoué, near Brazzaville, was handed over by France to the World Health organization.

In April, Pierre Messmer was appointed high commissioner in the Cameroun. The economic and political situation confronting him was difficult. The fall in the price of cacao, from 123 fr. per kilogram to 47, had hit the country hard, and a maintenance fund had to be set up, with aid from metropolitan France. In the south, where the effect of the fall in price of cacao was severely felt, political agitation broke out: Soppo Priso, president of the territorial assembly, founded a new party, the Union Nationale Camerounaise (U.N.C.), and announced that the "skeleton law"

voted by the French parliament was inadequate. In August the government decided to dissolve the assembly, to declare an amnesty and to proceed to elections for a new assembly. A movement opposed to the U.N.C. was started by the parliamentary representatives of the northern Cameroun. (Hu. De.)

Education.—Schools: A.E.F. (Afrique Équatoriale Française) (1954): primary 959, pupils 129,718; secondary 35, pupils 5,728; vocational 130, pupils 5,162. Cameroun (1954-55): primary 1,865, pupils 216,161, teachers 4,561; secondary 26, pupils 3,690, teachers 156; technical schools 16, pupils 966.

Foreign Trade.—(1955) Monetary unit: 1 franc C. F. A. (Colonies Françaises d'Afrique) = 2 metropolitan francs. U.S. \$1 = 350 metropolitan francs. Note circulation: A.E.F.: 7,000,000,000 fr. C. F. A.; Cameroun: 6,000,000,000 fr. C. F. A. A.E.F.: imports 18,000,000,000 fr. C. F. A., including 10,000,000,000 fr. C. F. A. from France; exports 13,000,000,000 fr. C. F. A., including 8,000,000,000 fr. C. F. A. to France. Cameroun: imports 18,000,000,000 fr. C. F. A., including 11,000,000,000 fr. C. F. A. from France; exports 16,000,000,000 fr. C. F. A., including 8,000,000,000 fr. C. F. A. to France, 3,000,000,000 fr. C. F. A. to the Netherlands. Principal exports: A.E.F.: cotton 5,000,000,000 fr. C. F. A., sisal 5,000,000,000 fr. C. F. A.; Cameroun: cocoa 6,000,000 fr. C. F. A., coffee 2,000,000,000 fr. C. F. A.

French Guiana. This overseas *département* on the north-east coast of South America has an area, including the territory of Inini of 35,135 sq.mi. and a population (1946 census) of 28,506; (1954 census) 27,863, including 1,059 natives of Inini. The coastal lowland population is Negro or mixed; Europeans about 5%; Inini, aboriginal Indians. Religion: mainly Roman Catholic. Capital and chief port, Cayenne, pop. (1954 est.) 11,458. Prefect in 1956, Pierre Malvy.

History.—Edouard Galmont, of the Social Republican party (formerly Gaullist), was re-elected as deputy on Jan. 2, 1956.

In Paris, Fr., negotiations began between France and Brazil to determine the frontier between Brazil and French Guiana.

On Aug. 10 Gen. Charles de Gaulle paid a short visit to Cayenne. (Hu. De.)

Foreign Trade.—(1955) Monetary unit: metropolitan franc, valued at 350 francs to U.S. \$1. Budget included in that of France. Imports 2,900,000,000 fr., including 2,000,000,000 fr. from France. Exports 300,000,000 fr. Principal exports: rum 150,000,000 fr., gold 100,000,000 fr.

French Guinea: see FRENCH WEST AFRICA.

French Literature. Literary production in France in 1956 was abundant and varied and many good novels came to view, but among the diversity of talents there was no dominant author. The tendency to describe life in its sombre colours and to depict intense, agonized people who were convinced of the absurdity of existence continued to show itself, particularly among the young authors.

Following his great work *Hommes de bonne volonté*, Jules Romains published *Le Fils de Jerphanion*, the bitter reflections on a new generation of unbalanced men who had lost all hope. This book, awaited with curiosity, was far from being the success of its predecessors. Henri de Montherlant wrote a new extract from *La Rose de sable* under the title *Les Auligny*. After his remarkable biographies of the previous year on George Sand and Hugo, André Maurois returned to the novel with *Les Roses de septembre*. Pierre Benoît in *Fabrice* evoked the drama of the German occupation. With *La Chute* Albert Camus wrote his grimmest book on human distress. From his side Blaise Cendrars gave free rein to his violence and leaning toward obscenity in *Emmène moi au bout du monde*. The new academician André Chamson published a penetrating study of the disordered imagination of a lonely invalid girl under the title *Adeline Venician*. Simone's last book with the strange title *Québéfi* (a condensation of *Quelle belle fille*) described a friendship between a man and an animal.

Among the books by known authors who had already produced important work the following must be mentioned: *Le Malfaiteur* by Julien Green; *Roi d'un jour* by Alexandre Arnoux; *Matinales* by Jacques Chardonne; *Tout est à vendre* by Roland

FRANÇOISE SAGAN, author of *A Certain Smile*, published in the U.S. in 1956 by E. P. Dutton & Co.

Dorgelès; *Colères* by Vercors; *Jeunes proies* by Roger Peyrefitte; *Charmante* by André Beucler; *Présence des morts* by Emmanuel Berl (a meditation on the dead who return, particularly on his friend Drieu La Rochelle); *Passion* by Jean Schlumberger; *La grive* by Henri Troyat (the third volume of the trilogy, *Les semailles et les moissons*); and *Les Flammes de l'été* by Jules Roy.

Outstanding among the new generation was the startling success of the young novelist Françoise Sagan who, having conquered the critics and public with *Bonjour tristesse*, wrote *Un certain sourire*, which was one of the best sellers of 1956. Among the other talented women who held attention were Liliana Magrini (*Carnet Venitien*); Sorana Aurian (*Récit d'un combat*, the reflections of a woman consumed with cancer, who lucidly observes the progress of the disease); and Célia Bertin (*Haute couture, terre inconnue*). It was interesting also to note that a lately forsaken style of novel (the brief and dramatic recital) returned to fashion. Many miscellanies appeared in 1956: *La Folle amoureuse* by Paul Morand; *Cordélia* by Françoise Mallet-Joris; *La Blessure* by Pierre Moinot; *Dieu vous garde des femmes* by Michel de Saint-Pierre; and *Le Chemin de L'étoile* by Alexandre Arnoux. Other novels of note were: *Antoine mon frère* by Jacques de Bourbon-Busset; *Les Demoiselles de Flanville* by Marc Blancpain; *Les taxis de la Marne* by Jean Dutourd (a vehement protestation against the national defeat); *Vous verrez le ciel ouvert* by Gilbert Cesbron; *Le Rendez vous de Quimper* by Robert Bourget-Pailleron; *C'est tout-à-fait moi* by Jean-Jacques Gautier; *Place des angoisses* (a new study of the medical set in Lyon) by Jean Reverzy; and *Le Chien et la pierre* by Lucien Psichari (grandson of Anatole France).

Among the poets, several names deserve notice: Cécile Perin (*Regards vers l'ombre*); Jean Mogin (*Pâtures du silence*); Jean-Pierre Rosnay (*Comme un bateau prend la mer*). The first volume of the complete works of the surrealist poet Antonin Artaud was published and also many studies on Mallarmé: *Mallarmé vivant* by Robert Goffin; *L'Oeuvre poétique de Stéphane Mallarmé* by Émilie Noulet; and *Les Clefs de Mallarmé* by Charles Chassé. Also a *Traduction en vers des Bucoliques de Virgile* was written by Paul Valéry.

Notable memoirs and recollections of literary men included *Journal littéraire* (vol. 3) and *Lettres à ma mère* by Paul Léautaud; *L'Âge de fer* (1925–1955) by Fernand Gregh; *Mémoires* by Romain Rolland (from infancy to the Dreyfus affair); *Souvenirs sans fin* (vol. 2) by André Salmon; *Près de Colette* by her husband Maurice Goudekot, and, for their great literary merit, the *Mémoires de guerre* by Charles de Gaulle (vol. 2, *L'Unité* from 1942 to 1944).

Literary history was represented by several interesting works: *Une amitié amoureuse: Mme. de Stael et Mme. Récamier* by Maurice Levaillant; *Monsieur de Vigny, homme d'ordre et poète* by Henri Guillemin; *Maurice Barres et le Quartier Latin* by Henri Mondor; *La Jeunesse d'André Gide* by Jean Delay and *Madeleine et André Gide* by Jean Schlumberger; *L'Époque contemporaine* (the period 1905–1930) by André Billy.

French Overseas Territories: see FRENCH UNION.

French Pacific Islands: see PACIFIC ISLANDS, FRENCH.

French Union. With the establishment, by the constitution of 1946, of the French union, in which are comprised both the mother country and the former empire, the old colonial terminology was abolished and for the colonies were substituted four categories of overseas regions. The older assimilated colonies claimed recognition as French *départements* administered as in the mother country; the others became overseas territories (*territoires d'outre-mer*) which henceforward would elect representatives to parliament and would have their own local assemblies possessed of wide powers; the trust territories, to be known in future as *territoires associés*, were similar in structure to the overseas territories and had the same electoral privileges; lastly, there were the former protectorates, now styled *états associés*, which could belong to the union only by an act of voluntary accession. Total area of the French union, excluding France proper (1955 est.): 4,217,546 sq.mi.; total population about 43,386,000. Certain essential information on the component parts of the French union is given in the table. (See also separate articles.)

History.—Elections in the overseas territories, to fill 42 seats in the French national assembly, resulted in gains for the R.D.A. or African Democratic Rally (who won 8 seats instead of 2) and losses for the Overseas Independents (9 seats instead of 14); the Socialists and the Gaullists lost 2 seats each. In general, local parties gained at the expense of metropolitan parties. In the Guy Mollet government (Jan. 31), Félix Houphouët-Boigny, the Negro deputy of the Ivory Coast, was appointed minister of state; a Socialist, Gaston Defferre, minister for Overseas France; and another Socialist, Alain Savary, secretary of state for Moroccan and Tunisian affairs. The new title of minister resident in Algeria was substituted for that of governor general when Gen. Georges Catroux was appointed to that office. On Feb. 6, Robert Lacoste, a Socialist, who had previously been minister of finance, took Catroux's place.

Algerian affairs were a grave concern to the cabinet. The insurrection of the *jellaghas*, directed by the Committee of National Liberation, spread to assume serious proportions, and the Moslems most favourably disposed to France began to adopt an attitude of reserve or even of hostility. The European community in Algeria showed itself intransigent, and received Mollet's visit to Algiers with hostile demonstrations (Feb. 6). Mollet declared that France was "unshakably resolved" to remain in Algeria and at the same time to promote the country's political development; recognizing Algerian individuality, he stated that the reign of violence must cease and free elections take place before the

*1955 estimate if not otherwise stated. †1954 est. ‡1951 est.

future of Algeria could be determined. Lacoste was given full powers in civil administration, and considerable armed forces were put at his disposal. The insurgents then changed their tactics to those of terrorism. In Paris itself Algerian students and workers raised the flag of the *fellaghas* in political demonstrations.

The independence of Tunisia and of Morocco was recognized in bilateral agreements terminating the two protectorate treaties.

For the tropical overseas territories, Defferre and Houphouet drafted a "skeleton law" which was passed by 477 votes against 99 (the Right wing) on March 22. This established the single-college electoral system and extended the function of the ter-

ritorial assemblies, empowering them to appoint government councils to assist the governors. Houphouet declared: "A federal organization must be our aim, though at present it would be merely idealistic to construct at once a federation on paper between a highly developed metropolis and territories that have barely come into being . . . I do not see nationalism as the sovereign remedy for Negro Africa in the 20th century, when interdependence has become the golden rule."

Meanwhile decrees were issued to ensure the entry of considerable numbers of Africans into the higher grades of the services and into the National School for Overseas France, which trains administrative staff.

By a law of Aug. 24 Togo was offered a new constitution as an

AFRICAN CHIEFS attending the opening of the new palace of the assembly of the French union, inaugurated in Paris, July 12, 1956

"THE OVERLY APT STUDENT," another 1956 cartoon by Yardley of the *Baltimore Sun* (Md.)

autonomous republic. The inhabitants were to make their will known through a referendum. The United Nations' Trusteeship Council refused to send observers. In the Cameroun elections for a new assembly were envisaged on the single-college system. Amnesties were declared with regard to acts of rebellion in the Cameroun and in Madagascar.

Tunisian and Moroccan independence and Southern Vietnam's withdrawal from the assembly of the French union, together with the transformation of the overseas territories and the new proposals for Algeria, caused article viii of the constitution of the union to lapse. Work was begun on the revision of the constitution.

ropolitan French) in A.O.F. (Afrique Occidentale Française), 1,427 (1952) in Togoland. Religion: animist 53.4%; Moslem 44.2%; Christian 2.4%. Chief towns (pop., 1951 census): Dakar (cap. of A.O.F.) 229,200; Abidjan 81,000; Bamako 97,900; Saint-Louis 60,000; Conakry 35,600; Ouagadougou 37,300; Porto Novo 28,400; Lomé (1953 est.) 35,000. High commissioner in A.O.F. in 1956, Gov. Gen. Gaston Cusin. Governors: Mauritania, Jean Paul Parisot; Senegal, Jean Colombani; Sudan, Lucien Geay; Upper Volta, Salvador Etcheber; Niger, Jean Ramadier; Ivory Coast, *vacant*; French Guinea, Charles Henri Bonfils; Dahomey, Pierre Biros. Commissioner in Togoland, Jean Louis Bérard.

History.—Elections to the French national assembly held on Jan. 2, 1956, returned most of the previous deputies to their seats. The Rassemblement Démocratique Africain (R.D.A.) registered gains, and its leader, Félix Houphouët-Boigny (deputy for the Ivory Coast), became minister of state in the Guy Mollet government. Houphouët declared that his party sought to impose an ideal of fraternity in the place of the ideal of independence, which he regarded as negative; and that he had confidence in the "radiant future" of the French union. Meanwhile the Bloc Démocratique Sénégalais (B.D.S.) under the leadership of the former minister Leopold Senghor, called for a "common front of the forces of Africa" and for the opening of the way toward a "French federal republic." The trade unions for the most part favoured autonomy. An unsuccessful attempt was made to regroup the Senegalese parties.

In Cairo, Egy., the Maghreb office set up a Mauritanian department with the collaboration of the former deputy Hormaould-Babana, who demanded the incorporation of Mauritania with Morocco.

In French Guinea the scheme for building a dam on the Konkouré was adopted. The association of Guinea chiefs decided to recognize tenants as owners of the land that they held and to revise the customary law of the country.

Gaston Cusin, inspector general of national economy, was appointed high commissioner in French West Africa on July 6, in succession to Bernard Cornut-Gentile, who had been appointed to an ambassadorial post.

A law of Aug. 26, drafted after debate in the Togo territorial assembly, offered Togo a new constitution; it was to be an autonomous republic represented in the French parliament. France was to be represented by a high commissioner in Togo and to be responsible for the country's defense and foreign relations. A Togo legislative assembly was to pass the laws of the country, its members being elected by direct universal suffrage every five years. The high commissioner was to designate the prime minister, who would be invested by the assembly and would appoint the other members of the government. The new constitution was to be the subject of a referendum. (HU. DE.)

Education.—Schools (1955): A.O.F. (Afrique Occidentale Française): primary 1,708, pupils 268,200; secondary 71, pupils 12,125; vocational 112, pupils 5,284; teachers' training colleges 28, students 2,830. Higher education: Institut des Hautes Études at Dakar, students 362. Teachers, all schools 7,588. Togo (1954): classes: primary 965, pupils 52,697; secondary 48, pupils 1,138. Teachers, all schools 1,025.

Foreign Trade.—(1955) Monetary unit: 1 franc C. F. A. (Colonies Françaises d'Afrique) = 2 metropolitan francs; 350 metropolitan francs = U.S. \$1. Note circulation 37,000,000,000 fr. C. F. A. A.O.F.: imports 67,000,000,000 fr. C. F. A., including 43,000,000,000 fr. C. F. A. from France; exports 52,000,000,000 fr. C. F. A., including 32,000,000,000 fr. C. F. A. to France. Togo: imports 3,000,000,000 fr. C. F. A., including 1,300,000,000 fr. C. F. A. from France; exports 3,800,000,000 fr. C. F. A., including 1,700,000,000 to France. Principal exports: A.O.F.: coffee 13,000,000,000 fr. C. F. A., cocoa 11,000,000,000 fr. C. F. A., peanuts 7,000,000,000 fr. C. F. A., palm oil 7,000,000,000 fr. C. F. A.; Togo: cocoa 2,000,000,000 fr. C. F. A.

Friends, Religious Society of. Friends (also called Quakers) numbered slightly more than 188,000 in 1956, mostly located in North America and Great Britain. During 1956 four events in the world

of Quakerism illustrated the involvement of Quakers in typical social situations.

The American Friends Service committee had two development projects in the near east, one in Israel, the other at Amman, Jordan. On Jan. 7, 1956, the project at Amman was attacked and completely destroyed by a group of Jordan Arabs, apparently moved by the general anti-western feeling in Jordan rather than by animosity toward the Quakers alone. The service committee gave up its work in Jordan until conditions might become more stable.

In April, Philadelphia Yearly Meeting sent three Friends as its representatives to Montgomery, Ala., then in the early stages of a boycott by Negroes against the city's bus lines. The purpose of the visit, which made contacts with both the Negro and white communities, was to commend the use of nonviolent methods in the dispute and, as the delegation stated, "to give support and encouragement to the creative potentialities we believe exist in both groups toward bringing about a solution which does not compromise basic human dignity."

A two-member subcommittee of the Un-American Activities committee of the U.S. house of representatives, investigating the Fund for the Republic, held a hearing in Philadelphia during July. In connection with the fund's grant of \$5,000 to Plymouth Monthly Meeting of Friends, Plymouth Meeting, Pa., for the meeting's refusal to discharge its librarian who was under attack in the community for refusing to sign the state loyalty oath and for alleged former membership in a Communist organization, some members of the meeting were subpoenaed to appear at the hearing. Nine prominent Philadelphia Friends, in an open letter to the house committee, protested the investigation as unwarranted interference with the internal affairs of a religious organization.

Six American Friends who had paid a visit to the Soviet Union in 1955 published a report of their journey in the spring of 1956. The *Saturday Review* reprinted a part of the report in its issue of Sept. 8, 1956, calling it "one of the most searching and valuable documents on the nature and meaning of Communist power that has yet appeared."

(I.Y. W. R.)

Frozen Foods. Retail sales of frozen foods in 1956 were indicated as fully 10% above the \$2,000,000,-000 volume of 1955, with about 25,000,000 of the country's 43,000,000 families buying frozen foods regularly. Quantities approached 5,000,000,000 lb. More than 270,000 grocery stores, about 70% of the total, doing more than 90% of all grocery sales volume, had frozen food cabinets. Prepared frozen foods, which increased by 67% in 1955 over 1954 to 425,000,000 lb., made further gains in 1956. Installation of frozen food cabinets in army messes in the continental U.S. and overseas widened the market.

Included in the 1956 pack were considerably more frozen vegetables than the 1,100,000,000 lb. packed in 1955; peas, potato products and green and wax beans were the leading items. Straw-

berries and cherries comprised about 60% of the fruit pack. Stocks of frozen fruits and vegetables in September were at all-time record highs; turkeys and total frozen poultry in September were at record levels for the month. Frozen strawberries reached a new postharvest high of 244,000,000 lb.

A study by the Wisconsin Alumni Research foundation of 5 frozen food items with respect to eight vitamins, six mineral and seven other components was reported favourable to their quality. An attempt was announced by a U.S. businessman to establish a frozen food industry in Italy. (J. K. R.)

Fruit. Total United States production of deciduous fruit in 1956 was slightly below both 1955 and the average for the previous decade. Peaches, pears, grapes and plums were about average; prunes were below average and apples down by one-tenth. The dried fruit pack was larger than in 1955. Canned fruits were ample.

Citrus prospects were generally favourable after an early summer drought was broken in some important areas. Exports continued at a high level. Production of frozen orange concentrate set a new record in 1955-56, and a further increase appeared likely in 1956-57.

Fruit crops of western Europe were reduced by the winter freeze and still further damage to quality and amount of harvest resulted from August storms. About 20,000,000 boxes of oranges were lost in Spain as a result of the freeze in Feb. 1956.

Ireland increased its duty on fresh and canned fruit to 37½% ad valorem. Norway put lemons and grapefruit from dollar area on the duty free list. France set a quota of 250,000 boxes of fresh citrus imports, but increased the apple and pear quota to 1,000,000 boxes. South Africa and Australia continued their upward trend in the production of canned fruit, with 2,900,000 cases produced in South Africa in 1955 and 3,500,000 cases in Australia, of which 2,100,000 cases and 5,000,000 cases respectively were exported, mostly to the British market. South African dried fruit production in 1956 was substantially lower than in 1955.

Cuba exported a record 33,000 crates (40 lb. each) of fresh mangoes to the United States. Increased amounts of pears, plums and grapes were exported from Argentina to the U.S.

Apples.—The 1956 commercial apple crop of the U.S. was estimated at 96,145,000 bu., 9% smaller than 1955 and 8% below the average for the previous decade. Colouring, sizing and general quality were favourable. Average price to producers in October was \$2.59 per bushel, higher than \$2.25 per bushel a year earlier. Exports of 2,042,000 bu. in 1955-56 were 8% larger than for 1954-55, and imports of 1,571,000 bu. were 44% larger.

Production of principal countries in the northern hemisphere was indicated at 378,821,000 bu. (excluding cider apples) as compared with 336,850,000 bu. in 1955 and 288,727,000 bu. average for 1945-49. Canadian production, afflicted generally with weather disabilities, was 11,614,000 bu. as compared with 19,142,000 bu. in 1955. The European crop, in spite of a rough winter, was the largest in several years, 405,063,000 bu. (including cider) or 271,271,000 bu. of "dessert" apples as compared with 357,476,000 bu. and 208,902,000 bu. respectively in 1955.

West Virginia	4,050	4,346	3,832	Colorado	1,505	1,210	1,273		
New Jersey	3,000	3,000	2,432	Wisconsin	1,190	1,380	1,072		
Illinois	2,550	1,430	3,002	Connecticut	1,040	1,530	1,191		

Apricots.—An indicated U.S. crop of 193,300 tons was 31% below 1955 and 10% less than average. All major producing areas shared the decline; California with 182,000 tons as compared with 253,000 tons in 1955 continued as major producing state.

The dried apricot crop of Iran was forecast at 4,400 tons, low compared with 6,000 tons in 1955 and an average of 7,500 tons for 1949-53.

Avocados.—The 1956 Florida crop was indicated at 11,000 tons, down 23% as compared with 14,000 tons in 1955 but above the average crop (1945-54) of 5,830 tons. Cuba shipped a record 205,000 crates (38 lb. net) to the U.S. in the period June to September.

Bananas.—The U.S. continued to be the leading importer of bananas, taking approximately 65,000,000 bunches. World exports were indicated as more than the 131,489,000 bunches of 1955. Ecuador was the leading exporter with more than 26,000,000 bunches while exports from Honduras were expected to reach 12,000,000 stems of 50 lb. each.

Cherries.—U.S. production of sour cherries was 102,620 tons, 1% smaller than in 1955 and 12% below average. Michigan was the leading state with 55,000 tons, followed by New York and Wisconsin. The canned pack was less than the 3,453,000 cases of 1955 but packers' carry-over stocks on July 1 of 354,613 cases were double those of a year earlier.

The sweet cherry crop was a small one of 68,460 tons, down 2% as compared with 113,090 tons in 1955; the average crop of 1945-54 was 95,686 tons. Prices to producers averaged \$288 per ton, 33% above those received for the 1955 crop.

The 1956 Italian crop of brining cherries was $\frac{1}{4}$ less than the average 1955 crop of 11,000 tons. The 1956 French crop was about normal in spite of the freeze.

Cranberries.—U.S. production in 1956 was estimated at 958,000 bbl., 8% less than in 1955 but above average. Massachusetts accounted for about half the crop. Prices were as much as 5 cents per pound higher than in 1955.

Dates.—Continuation of a new use program to broaden the market was announced by the U.S. department of agriculture in October, with 8,000,000 lb. from the 1956 crop to be set aside for use in other than whole or pitted form, in return for a diversion payment of 4 cents per pound. About 8,600,000 lb. were diverted from the 1955 crop.

The 1956 production of the Basra area of Iraq was forecast as much as $\frac{1}{3}$ below the normal of about 110,000 tons. Prices to exporters for the 1956 crop were lowered by about $\frac{1}{3}$, that of Halab from \$50 to \$35 per ton.

Figs.—The 1956 California crop developed well; Kadotas for drying were of good size and quality. Dried production was indicated as larger than the 25,300 tons of 1955.

Foreign commercial production of dried figs in 1955 was estimated at 148,700 tons, 15% below the previous year. The 1956 Turkish dried fig pack was estimated at 38,500 tons; the Greek crop was nearly 28,000 tons, while that of Portugal was indicated at 11,000 tons.

Grapefruit.—The U.S. 1956-57 crop was forecast at nearly 3,300,000 boxes, 3% smaller than the 1955-56 crop. Florida produced about 90% of the total. Early season prices were high, averaging \$1.88 per box as compared with \$1.07 a year earlier. Exports during November to July of the 1955-56 season were 1,000,000 boxes, 24% larger than a year earlier; larger exports were indicated for 1956-57.

Production of the principal countries in 1955-56 was estimated at 51,044,000 boxes (of 80 lb. each) as compared with 47,150,000 boxes in the preceding year. Israel, second to the U.S. in production, but with only 1,464,000 boxes in 1955-56, anticipated exports of 1,000,000 cases in 1956-57.

Grapes.—The U.S. 1956 grape crop was indicated at 2,993,500 tons, 8% less than 1955 but 3% above average. Wine varieties accounted for 600,000 tons against 601,000 tons in 1955; table varieties 529,000 tons against 709,000 tons; and raisin varieties 1,600,000 tons versus 1,706,000 tons. Raisin production was estimated at 205,000 tons (dried), about 180,000 tons of them being Natural Thompson Seedless, as compared with 224,000 tons in 1955. Raisin prices in excess of 12 cents per pound were up about 1 cent as compared with 1955.

The 1956 commercial raisin crop outside the U.S. was forecast at 292,800 tons as compared with 268,500 tons in 1955 and an average of 243,500 tons for 1949-53. The Turkish crop was a record one of 91,000 tons, more than double the 44,000 tons of 1955.

Production of currants, estimated at 104,500 tons, was of average size; the Greek crop was 88,000 tons as compared with 63,000 tons in 1955.

Lemons.—The 1956-57 lemon crop of California was indicated at 13,600,000 boxes against 12,600,000 boxes the previous year. Exports in 1955-56 took 558,000 boxes.

World lemon production in principal producing countries in 1955-56 was indicated at 29,509,000 boxes (of 76 lb.) as compared with 30,909,000 boxes in the previous year and an average of 26,070,000 boxes for 1945-49. Italy, with 8,296,000 boxes was second to the U.S.

Limes.—The Florida production in 1956-57 was estimated at 380,000 boxes, as compared with 400,000 boxes in the previous year and an average crop of 261,000 boxes. Production of frozen limeade concentrate increased to 560,000 gallons, 60% more than in the previous year.

Production by Mexico, Egypt and the U.S. in 1955-56 was 4,500,000 boxes (80 lb. each). Mexico with 2,260,000 boxes accounted for half the total.

Olives.—The condition of the California olive crop indicated a crop much increased over the 39,000 tons of 1955 and above average.

Oranges.—The U.S. early and midseason orange crop of 1956-57 was estimated at 70,885,000 boxes, 4% larger than in 1955-56 and 27% above average. The prospective Florida Valencia crop for 1957 was indicated at 41,000,000 boxes, 4% larger than 1956. The average price to producers in October was \$2.34 per box as compared with \$1.67 a year earlier. Exports in 1955-56, largely moving to Canada, and under government programs to western Europe, were the equivalent of 5,900,000 boxes, 28% larger than in 1954-55.

About 350,000,000 boxes (of 70 lb. each) were produced by the principal producing countries in 1955-56, as compared with 349,396,000 boxes in 1954-55 and only 257,179,000 boxes average 1945-49. Israel anticipated an export of Jaffa oranges 10% less than the 5,500,000 cases of 1955-56. Opening prices on Navel oranges in the Valencia area of Spain were as high as \$6.30 per box.

Table II.—U.S. Orange Production by States

*Boxes hold 77 lb. in California and Arizona; 90 lb. in other states; grapefruit somewhat less.

Peaches.—The U.S. 1956 peach crop of 68,285,000 bu. was the largest since 1949, about 30% larger than the small 1955 crop, and slightly above the 10-year average. It included a record California Clingstone crop of 27,085,000 bu. The southern states crop, though much above the near-failure of 1955, was about

*Less than 500 bu.

20% below average. Harvest time prices to producers were reduced to an average \$2.38 per bu. in August as compared with \$2.96 a year earlier. The dried peach pack approximated that of 1955.

Pears.—U.S. production in 1956 was estimated at 32,307,000 bu., largest since 1949, 9% above 1955 and 7% above average. Both California and Oregon had record high Bartlett crops. Prices to producers in October of \$2.05 per bu. exceeded the \$1.82 of a year earlier. Exports were 800,000 bu. in 1955-56, 15% larger than in 1954-55; imports were 424,000 bu., double those of the previous year.

Table IV.—U.S. Pear Production by Leading States
(In thousands of bushels)

Northern hemisphere pear production in 1956 was about 106,658,000 bu. (excluding cider pears) as compared with 116,075,000 bu. in 1955 and an average of 99,053,000 bu., 1945-49. Most of the reduction was in Europe.

Pineapples.—Hawaii continued to provide about 70% of the world's production, much of it destined for U.S. markets.

Malayan production recovered to a level of 28,000 tons, as compared with 76,000 tons prewar. A large part of the approximately 1,250,000 cases canned was exported.

Plums and Prunes.—The U.S. 1956 plum crop of 104,900 tons was 15% above 1955 and 25% above average. California accounted for about 95% of the total. Production of prunes in the Pacific northwest for fresh use, canning and freezing was 95,700 tons, 4% below 1955 and 7% below average. The California dry prune crop, indicated at 180,000 tons, was a large one, 2% above average and 37% larger than 1955.

The Yugoslav crop, badly damaged by a February freeze, was estimated at 130,000 tons (fresh basis), the smallest in 35 years and comparable with 996,000 tons in 1955.

Strawberries.—U.S. production in commercial areas in 1956 was 15,500,000 crates of 24 quarts each—much larger than the above-average crop of 1955. The frozen pack was a record one and prices somewhat lower. Acreage for 1957 was indicated at 122,600 ac., 4% larger than that harvested in 1956; Oregon and Washington accounted for most of the expansion.

The 1956 Mexican crop was estimated at 7,700 tons as compared with 8,800 tons in 1955. About 75% of the crop was exported, much of it in frozen form.

Tangerines.—The Florida tangerine crop was forecast at 5,000,000 boxes, 500,000 boxes more than 1955 and 12% above average.

(See also FROZEN FOODS; HORTICULTURE.) (J. K. R.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Apples* (From Seedling to Market (1950); *Orange Grower* (1939).

Furniture Industry. The U.S. furniture industry produced approximately \$2,750,000,000 goods during 1956 as against \$2,490,000,000 the preceding year, according to estimates of the National Association of Furniture Manufacturers, thus placing it second among the nation's durable goods industries. The automobile industry remained in first place. In contrast to the latter, however, the furniture industry comprised more than 5,000 relatively small manufacturing establishments, widely dispersed geographically but concentrated mainly in the middle and southern Atlantic, east north central and Pacific states.

The federal census of manufactures for 1954 showed that the number of individual establishments had grown from 3,951 in 1947 to 5,202 in 1954—an increase of 32%. In 1954 about 210,700 persons were employed in the industry, of whom 172,300 were production workers. About half of all individual manufacturing plants had sales of less than \$200,000 each.

Production data released in 1956 for the year 1953 showed that North Carolina led all other states in furniture manufacture, with gross output for the year estimated at \$257,000,000. New York was second in total value of output, with \$205,000,000, followed by Illinois (\$202,000,000), Indiana (\$185,000,000), Virginia (\$143,000,000), Pennsylvania (\$129,000,000), California (\$126,000,000), Michigan (\$103,000,000), Ohio (\$90,000,000) and Massachusetts (\$86,000,000). The metropolitan area of New York city continued to rank first in total retail sales of household furniture, followed by Chicago, Los Angeles, Philadelphia, Pittsburgh and Detroit, in that order.

Despite its record rise in total production and sales, the furniture industry generally continued to operate on a small profit margin in both 1955 and 1956 because of severe price competition. According to the National Association of Furniture Manufacturers, the average profit of all establishments after taxes was only 3.6% of net sales in 1955. The industry likewise lagged in developing foreign markets. In 1954, for example, the U.S. imported more furniture by value than it exported; the comparative figures for that year were \$6,984,428 against \$6,831,385. Exports amounted to only 0.3% of the total estimated value of production by U.S. manufacturers.

Manufacture of U.S. Furniture by Types, 1947 and 1954

	1954	1947	Per cent increase
Upholstered	\$658,553,000	\$390,606,000	69
Metal	397,006,000	218,223,000	81
Case goods (bedroom, dining room) . .	627,909,000	550,239,000	14
Tables	120,589,000	74,226,000	62
Infants' and children's	52,388,000	49,672,000	6

By 1956 there were approximately 25,000 retail furniture stores in the United States. Most of the marketing of goods in these stores continued to be accomplished through the traditional channel of furniture markets, of which Chicago's continued to lead in extent of displays and volume of wholesale business.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Furniture Craftsmen* (1940).

Furs. Retail sales of furs in the United States appeared likely to reach between \$290,000,000 and \$300,000,000 by the end of 1956, a gain of between 5% and 10% over the previous year. However, sales were expected to run far behind the 1955 peak of nearly \$500,000,000, although well above the 1953 low of \$230,000,000. While the gain over 1955 volume was encouraging to certain trade elements in the ranching and manufacturing fields, it did not reflect a healthy trade situation generally. In fact the volume advance in 1956 was attributable in most part

WOOL COAT lined with Norwegian blue fox fur, from the Patou collection exhibited in Paris, Fr., in 1956

a continuing fashion trend toward mink garments of all types, to the detriment of several traditional fur types, notably squirrel, muskrat and raccoon.

In the domestic mink field, the pastel shades were dominant both in terms of production and consumption, replacing the dark standard shade as the most popular of all mink types. Also popular in the mink field, however, were such colours as sapphire, silverblue, and to a lesser extent because of limited quantity, gunmetal.

Overproduction and lowering of quality standards were the chief problems facing the ranching industry. United States production had risen from about 2,900,000 to more than 3,200,000 skins during the 1955-56 auction season despite the efforts of marketing organizations to discourage an increase. In addition, more than 1,000,000 skins, both dark and pastel, had entered the U.S. from Scandinavia.

Other furs that appeared to be selling up to expectations at the retail level included Alaska fur seal, sheared beaver, Brazilian marten, Russian broadtail, mouton processed lamb and, unexpectedly, Persian lamb. While mouton had suffered somewhat from competition in the Dynel-Orlon field, improved styling and the introduction of a host of new shades, including beiges and greys, had compensated for losses to so-called imitation fur garments.

Skin dressing figures on Persian lamb were discouraging. They showed that less than 2,200,000 skins had been dressed and dyed the previous year, for use in 1956. This compared with peak year figures of nearly 10,000,000 skins. However, a cyclical fashion change to longer garments in certain areas of the nation, the promise of a cold winter based on 1955-56 experiences, introduction of lightweight garments, an accent on better styling and improved promotional activity buoyed up interest in Persian lamb from June through the early fall period. Most important manufacturers, projecting their results during 1956 through the

end of the year, predicted dollar gains of 5% to 20%. All agreed it would be their best year since 1951 when the Korean war prompted a wave of "scare buying."

Wholesale prices, in general, were below 1955 levels. This was particularly true for beaver, Persian lamb, mouton, pastel mink, squirrel, fox and muskrat. Stronger prices were experienced for raccoon, gunmetal, silverblue and fine dark mink. Alaska seal tended to maintain its 1955 price because the supply could be controlled by the U.S. government.

Toward the late fall period, Persian lamb prices began to rise in keeping with increased domestic interest, and with the growing industry in Europe, especially in west Germany.

The credit structure continued to show serious signs of instability. A scare appeared in the trade early in the year when, within a period of four months, the industry sustained two bankruptcies, each for an estimated \$1,000,000. Despite a snowballing effect, these large losses were checked by the end of June, and no large breakdowns were anticipated during the remainder of 1956.

One favourable sign that tended to alleviate concern about the one-fur nature of the industry and the unstable financial picture was a decided increase in the use of fur trimmings. The furs most affected were white, dark and pastel mink, blue- and silver fox and, to lesser degrees, beaver and Persian lamb. The new trimming interest in the coat and suit, dress and sportswear industries appeared certain to raise the market prices of the furs most desired.

Future Farmers of America: see SOCIETIES AND ASSOCIATIONS, U.S.

Gaitskell, Hugh Todd Naylor (1906–), British statesman, was born at London, Eng., April 9. He succeeded Clement Attlee as leader of the Labour party on Dec. 14, 1955. He was educated at Winchester and at New college, Oxford, where his socialist convictions were reinforced by study under G. D. H. Cole. He lectured in political economy at University college, London, from 1928 until appointed head of the department of political economy in 1938. During this period he was associated with the New Fabian research bureau in the reformulation of socialist economic thought, publishing *Chartism* in 1929 and *Money and Everyday Life* in 1939. In Sept. 1939 he entered the civil service and served during World War II in the ministry of economic warfare and at the board of trade. In 1945 he was elected to parliament as member for South Leeds. As minister of fuel and power he dealt firmly with the fuel crisis of 1947, and after the election of 1950 he became minister of state for economic affairs, succeeding Sir Stafford Cripps as chancellor of the exchequer in October. He was elected party treasurer in Sept. 1954 and renominated in April 1955.

During the visit of the Soviet leaders to Great Britain in April 1956, his request that N. S. Khrushchev, first secretary of the Soviet communist party, should use his influence to secure the release of certain Social Democrats imprisoned in the U.S.S.R. and other eastern European countries was rejected.

As leader of the opposition in parliament, Gaitskell condemned the action of Pres. Gamal Abdel Nasser of Egypt in seizing control of the Suez canal, but censured the British government for delay in referring the dispute to the United Nations Security council.

At the Labour party conference in October he made a successful appeal for unity within the party.

Galapagos Islands: see ECUADOR.

Gambia. This British colony and protectorate on the west coast of Africa is surrounded by the French territory of Senegal. Area: 4,003 sq.mi., including protectorate 3,974 sq.mi. Pop. (1951 census): colony 27,297; protectorate 252,389 (1955 est. 285,000). Language: many tribal dialects; Hausa. Religion: mainly Moslem, some pagan; about 5,000 Christians in Bathurst. Capital, Bathurst, pop. (1951 census) 19,602. Governor in 1956, Sir Percy Wyn Harris.

History.—In June 1956 K. A. S. Smith, assistant chief secretary of Aden, was appointed colonial secretary. At the end of the year, the governor toured the territory to remind the native authorities of their responsibility for preventing the smuggling of groundnuts (peanuts).

In Oct. 1955 an affray had taken place in Bathurst between the supporters of P. S. N'Jie, minister of education and welfare, and those of I. M. Garba-Jahumpa, another minister, following an election to the Bathurst town council. N'Jie wrote officially to the chief superintendent of police making serious allegations against the conduct and probity of the police. An inquiry, however, found that the conduct of the police had been beyond reproach and in no way biased. N'Jie was thereupon relieved by the governor of ministerial responsibility and suspended from the executive council. (W. H. Is.)

Education.—Schools (1955): primary 46, pupils 5,016, teachers 95; secondary 5, pupils 621, teachers 20; vocational 4, pupils 65, teachers 7; teacher training 1, students 34, teachers 5.

Finance and Trade.—Monetary unit: West African pound (£W.A.1 = £1 sterling = U.S. \$2.80). Budget (1955 est.): revenue £1,338,037, expenditure £1,274,744. Foreign trade (1955): imports £3,709,752, exports £2,472,439. Main exports: peanuts, palm kernels, beeswax, hides and skins.

Gambling: see BETTING AND GAMBLING.

Gas, Natural and Manufactured. In 1955, as before, so few countries producing a large part of the natural gas reported their output that it was not possible to compile complete world data on it. However, Table I shows the known output of those countries producing important quantities of natural gas, and Table II shows similar data for manufactured gas, both according to reports in the *Monthly Bulletin of Statistics*, UN.

Table I.—Natural Gas Production*

	1951	1952	1953	1954	1955

United States.—Table III, which was compiled from data from the U.S. bureau of mines and the American Gas association, shows a continuing upsurge during 1955. Natural gas was used in 43 of the 48 states in 1955 and consuming areas were extended therein in 1956. Department of commerce reports show exports in 1955 included 20,495,724,000 cu.ft. to Mexico and 5,744,666,-

Table III.—Production and Consumption of Natural Gas in the U.S.

	1950	1951	1952	1953	1954	1955

*Revised. †Mostly for repressuring oil fields; small amounts of surplus gas are returned to the ground for storage. ‡Includes manufactured gas, and not included in the consumption total.

000 cu.ft. to Canada. In the first quarter of 1956, the daily average marketed production of natural gas was 7% over the previous year. Residential consumption increased 11%, commercial 7% and industrial 12%. In the second quarter of 1956 the marketed production was 9% above the same quarter of 1955. Because of cool weather, residential consumption increased 25% and commercial 26%. Industrial use increased 16%.

Coke-oven Gas.—About 14,726 cu.ft. of gas per ton of coke made was produced in by-product coke ovens in 1955. Of the 1,083,624,595,000 cu.ft. made in 1955, waste and leakage accounted for 20,684,416,000 cu.ft. and 373,592,239,000 cu.ft. was used to heat ovens. The remaining 689,347,940,000 cu.ft. was used as follows: 8% under boilers, 69% in steel plants, 10% servicing city gas mains and 13% for other industrial uses, as reported by the U.S. bureau of mines.

Gem Stones. The United States does not produce any precious stones (diamond, emerald, ruby or sapphire), but imports a substantial quantity of gems, as shown in Tables I and II, based on U.S. department of commerce data and the U.S. bureau of mines compilations. The imports include also gems of natural origin, such as pearls, and synthetic stones.

The United States produces a great variety of semiprecious and ornamental gem stones. Output of gems in 1955 was worth more than \$800,000, an increase of about \$100,000 over 1954.

Table I.—U.S. Imports of Gem Stones

	1955		1954	
	Carats	Value	Carats	Value
Rough diamonds	1,064,932	\$76,735,186	887,702*	\$59,423,768
Cut diamonds	707,859	74,833,550	594,772	62,758,349
Cut emeralds†	45,233	1,564,676	24,460	385,063
Pearls, natural		669,351		503,753
Pearls, cultured		6,197,897‡ .		4,333,890*
Marcasites, real and imitation		44,439		61,073
Other varieties				
Rough		228,939		265,837‡
Cut		2,837,932		1,848,989‡
Imitation		12,150,056‡		14,008,155
Total		\$175,262,026‡		\$143,588,877*

*Revised. †Effective Jan. 1, 1954, rough and cut emeralds not classified separately, but rough included with precious and semiprecious stones, rough or uncut. ‡Because of changes in tabulating procedures by the U.S. department of commerce, data known not to be comparable to earlier years.

Table II.—Value of U.S. Imports of Gem Stones

	1955	1954
1945	\$114,435,231	\$128,953,866
1946	189,017,646	124,699,402

1949	84,132,466	175,262,026
1950	118,508,049	

*Revised.

Gem collectors and lapidaries continued to compose the principal market for the domestic stones.

(See DIAMONDS; MINERALOGY.)

(F. E. H.)

Genetics. **Human and Mammalian Genetics.**—H. W. Kloepper and J. W. Rosenthal made an extensive study of two large kindreds carrying pedigrees of the recessive type of the spherophakia-brachymorphia syndrome, marked by short fingers and stature and several eye abnormalities. They were able to identify most of the heterozygous carriers by careful measurement of stature and finger length. Another so-called recessive in man was thus added to the growing list of hereditary diseases recognizable in heterozygous carriers by the use of proper tests.

E. H. Chu and N. W. Giles made chromosome counts on six species of old world monkeys; in three the chromosome number was 42, and in the other three the numbers were respectively 54, 60 and 66. All somatic chromosome numbers in primates determined to date, including man with 48, were multiples of 6, although the interpretation of this situation was not yet clear.

With the increased interest in human genetics and particularly in the genetic effects of radiation in man, the genetics of the other mammal, the mouse, best adapted to large-scale study, took on added significance. In the monumental experiment on the genetic effects of radiation in the mouse being carried on by W. L. Russell and collaborators, Russell reported a significantly lower proportional mutation rate at 1,000-r radiation in the mouse than at 300-r and 600-r. He suggested a possible "heterogeneity among spermatogonia with regard to radiation sensitivity, and that sensitivity to damage that results in cell death is positively correlated with sensitivity to mutation. Thus at the higher dose more of the sensitive spermatogonia would be killed and the mutation rate in the more resistant cells that survive would be lower."

New mutations in the mouse were reported as follows: cordovan, a new allele of black and brown colour by D. S. Miller and M. Z. Potas; steel, a new dominant coat colour, by P. A. Sarvella and L. B. Russell; blind, lethal in homozygote and causing blindness in the heterozygote, by L. Vankin; and tufted, a recessive causing repeated waves of hair loss and regrowth, by M. F. Lyon.

Biochemical Study of Chromosome Structure.—R. P. Levine demonstrated an increased amount of crossing over between homologous chromosomes in the fruit fly, *Drosophila melanogaster*, subjected to calcium deficiency, and a corresponding decrease in crossing over with excess calcium in the diet. R. A. Eversole and E. L. Tatum secured similar results in crossover frequency in the green alga, *Chlamydomonas*, by varying the amount of calcium and magnesium in the culture medium. They concluded that "the sensitivity of crossing-over in *Chlamydomonas* to ionic environment is consistent with the theory that chromosomes are composed of macronuclear unit particles linked together by divalent ions."

Dale Steffenson found a greatly increased amount of spontaneous chromosome fragmentation in the plant, *Tradescantia*, under calcium deficiency. Sheldon Wolff and H. E. Luippold irradiated seeds of the plant *Vicia faba* and found two types of chromosome breaks. One type, which rejoined rapidly, was interpreted as a break in an ionic bond, the calcium bond, and the other type, which rejoined slowly, was interpreted as a break in a covalent chemical bond requiring energy intake for restitution. The concurrent results of calcium deficiency on chromosome fragmentation and crossing over lent weight to the hypothesis of Daniel Mazia that calcium forms bonds with terminal phosphate groups of different deoxyribonucleic acid, DNA, units in the structure of the chromosome.

D. P. Bloch suggested a mechanism for chromosome replica-

CURLY-HAIRED CAT, apparently produced by a genetic mutation, born in England in 1950. Bred back to his curly-haired daughter, this male produced additional curly-haired offspring, and by 1956 a true-breeding curly-haired line had been established. The cats were owned by Mrs. Nina Ennismore of Cornwall, Eng.

tion during cell division based on a double helical structure of DNA with histone cross bonds between the original polynucleotide helices and also between the newly replicated helices. L. S. Lockingen and A. G. DeBusk constructed a theoretical model to account for the formation of ribonucleic acid, RNA, units from minimal chemical units of DNA and the subsequent restitution of the DNA. By this mechanism the RNA units could be released from time to time to the surrounding cytoplasm to serve as enzymes in various chemical syntheses in the cell.

By an ingenious technique C. Levinthal was able to label the DNA of a bacteriophage with radioactive phosphorus and to measure the amount of this labelled phosphorus per particle. After several divisions of phage particles he could still measure the amount of phosphorus label per individual particle. The results of this experiment indicated that during repeated reproduction of phage particle the labelled phosphorus remained in one large piece of DNA and was not distributed to the new pieces of DNA being formed. These findings lent strong support to the hypothesis that new DNA molecules are replicated with the old molecule serving as a template. Most of the DNA per phage particle was in one large piece thought to be the genetic material of the phage particle. Further studies by Levinthal and C. A. Thomas indicated that this large piece of phosphorus labelled DNA remained intact after the formation of new genetic recombinations. They concluded that such recombinations were formed, not by physical crossing over, but by *de novo* formation of the new chromosome or DNA piece, under the co-operative control of two parental chromosomes.

Geography. Geographic attention in 1956 focused on Rio de Janeiro, Braz., where, on Aug. 9–18, the International Geographical union held the 18th International Geographical congress and convened its 9th general assembly. The attendance at the meetings was 1,013, representing 48 countries. The union promotes international co-operation by maintaining a number of commissions for the study of special problems. Eleven commissions (arid zone, bibliography of ancient maps, coastal sedimentation, erosion surfaces around the Atlantic, evolution of

slopes, inventory of world land use, karst phenomena, library classification of geographical books and maps, medical geography, periglacial morphology and teaching of geography in schools) presented reports, and four new commissions (applied geomorphology, humid tropics, national atlases and population mapping) were established.

Ethiopia, Hungary, Iceland and the U.S.S.R. were granted full membership in the union. French West Africa, Iraq, Kenya, Nigeria, Sudan and Uganda were made associate members. The total number of nations adhering to the union in 1956 was 42 with 6 associates.

Among other significant international geographical meetings, the International Geographical union and the United Nations Educational, Scientific and Cultural organization (UNESCO) jointly sponsored a symposium on natural resources and population in intertropical Africa at Makerere college, the University College of East Africa, during Sept. 10-17, 1955. In Jan. 1956 the Indian Universities commission sponsored an International Geographical seminar, attended by nearly 200 geographers, at the Aligarh Moslem university. The part played by geography in national planning and reconstruction was apparent among the diversified papers presented. The seminar demonstrated remarkable advance in geographic research and the application of geographic techniques in government not only in India and Pakistan but especially in the Soviet Union and satellite states.

The Congress of Hungarian Geographers, held in Budapest from Sept. 19 to 23, 1955, was mainly a regional meeting of geographers of the "iron curtain" countries, as was the congress of the U.S.S.R. Geographical society held in Moscow earlier in 1955. It was reported that more than 2,000 geographers, representing all parts of the U.S.S.R. and 11 other countries, attended the Moscow meeting. The Hungarian geographers' meeting was attended by delegates from Bulgaria, Czechoslovakia, Poland, Rumania and the U.S.S.R. Announced at the conference was the institution of faculties of geography in four Hungarian universities (Budapest, Debrecen, Pecs and Szeged), an institute of geographical science and research in the Academy of Sciences in Budapest, and the re-establishment of the Hungarian Geographical society originally founded in 1872.

Another regional meeting was the convening of the Commission of Geography of the Pan American Institute of Geography and History at Rio de Janeiro from July 30 to Aug. 4, 1956. In attendance were representatives of Brazil, Bolivia, Chile, the Dominican Republic, Ecuador, Guatemala and the United States.

Polar Expeditions.—Knowledge of both arctic and antarctic areas was increasing because of the many scientific and practical operations being conducted. The Soviet northern sea route was operating as many as 100 ships annually, some making the 3,000-mi. run from Murmansk to Bering strait. About 100 coastal and 3 drifting stations were providing ice and weather forecasting data.

In the North American arctic 90 ships engaged in supply of northern stations and two overland trucking operations successfully made freight hauls from Alaska to Mackenzie bay, Canada.

In preparation for the International Geophysical year, 1957-58, scientific stations were being readied in both the arctic and antarctic. As part of its scientific program on the Greenland ice cap, the U.S. army corps of engineers conducted a training school for glaciologists representing eight nations. Design criteria were developed for under-ice structures such as personnel and storage shelters and road and railway tunnels.

In the antarctic 11 countries prepared to man 56 International Geophysical year stations. During the 1955-56 season the U.S. antarctic Operation "Deepfreeze I" built and occupied two stations, 73 men wintering on Kainan bay and 93 on McMurdo sound. In the period Oct. 1956 to March 1957, stations would be

occupied at 80° S. 120° W. and on the 10,000-ft. plateau at the south pole. Accomplishments included aerial observation of approximately 800,000 sq.mi. of previously unobserved Antarctic and discovery of a new high ice dome in the vicinity of 82° 49' 90° E. Two firsts in aviation included a flight of two Skymasters and two Neptunes nonstop from New Zealand to McMurdo sound, and a flight across the south pole from McMurdo sound to the Weddell sea and back, a distance of 2,400 mi. Seven ships in addition to cargo-carrying and icebreaking functions, surveying tens of thousands of square miles of ocean bottom, made hydrographic and biological investigations and landed numerous shore parties to check various geographic features.

Between Sept. and Dec. 1956, a total of 12 ships left east and west coast ports of the United States on Operation "Deepfreeze II." More than 3,500 men including 89 scientists were engaged in this operation, which, in addition to relieving the crews of Little America V and McMurdo sound, established stations on the Knox Coast, Weddell sea and Cape Adare, bringing the total U.S. stations to seven.

By 1956 several nations had already established 39 stations on the antarctic or on subantarctic islands. Among these, 22 were on the continent proper and 20 were on the Palmer peninsula alone. The Argentine station, General Belgrano, on the Weddell sea and the Australian station at Mawson were the only other proposed International Geophysical year stations in operation by 1956 on the continent.

The French station at Pointe Géologie was reoccupied in Jan. 1956 by a 14-man expedition under Paul Emile Victor, and in the same month the Soviet flagship "Ob" reached Farr bay and the expedition, led by M. M. Somov, established its station and a landing strip from which its planes began reconnaissance flights of the continent. From this station they later established the permanent base, Mirny, of 24 buildings near Haswell Island and later explored the "oasis" at Bunger hills.

On Jan. 11 the expedition ship "Tottan" of the Royal Geographical society of Great Britain arrived in the Weddell sea and prevented by ice from reaching the proposed site at Duke Ernest bay, established their station 150 mi. E. at 75° 50' S., 26° 30' W. The second British ship, "Theron," was trapped in the ice 25 days and finally established Shackleton post office with a wintering party of eight men about 40 mi. from the Argentine General Belgrano station. From this point an expedition planned to traverse the continent to the Australian station of Mawson. An Australian traverse team had already penetrated more than 20 mi. to the foot of a newly discovered range of mountains where a cache was established. Another British 46-man expedition carried out an aerial mapping survey of 1,000 sq.mi. of Graham Land (Palmer peninsula).

Other stations were being established by Chile, Japan, Norway and New Zealand. (See also ANTARCTICA; INTERNATIONAL GEOPHYSICAL YEAR, 1957-58.)

Geographic Societies.—The Ford foundation granted the American Geographical society \$140,000 to be used to develop an internship program that would provide continuity in the society's program and maintain the specialized knowledge of senior members of the staff. The society engaged in a series of expeditions, in collaboration with the U.S. air force and Georgetown university, Washington, D.C., to observe the Dec. 14, 1955, total eclipse of the sun from stations in Somaliland, Sudan, Ethiopia, Ceylon, Burma, Thailand, Cambodia, Vietnam and Formosa. It continued its glacial research program in Alaska, began a new program of glacier inventory, assisted in planning the International Geophysical year glaciological program and issued a new four-sheet general reference map of Antarctica on a scale of 1:3,000,000.

The Association of American Geographers held its annual

meeting at Montreal, Que., April 1-5, 1956. The Outstanding Achievement award was conferred on John K. Wright, and citations were presented to Robert B. Hall and Victor Roterus. The National Council of Geography Teachers presented the annual Distinguished Service award to J. Russell Whitaker and *Journal of Geography* awards for outstanding professional articles published in that magazine to Thomas F. Barton, Neville V. Scarfe and Earl B. Shaw. The Geographical Society of Philadelphia awarded the Henry Grier Bryant gold medal to Lester E. Klimm.

The Royal Geographical society awarded the Patron's medal to John Giaever, leader of the Norwegian-British-Swedish antarctic expedition (1949-52); the Founder's medal to Charles Evans, leader of the Kanchenjunga expedition of 1955; the Murchison grant to Alice Garnett, for contributions to physical geography and geographical education; the Mrs. Patrick Ness award to Robert Dovers of the Australian National Antarctic expedition; the Gill memorial to R. A. Skelton, for studies on the history of cartography and exploration; the Back grant to Richard Hamilton, chief scientist of the British North Greenland expedition (1952-54); and the Cuthbert Peck grant to David Oates, for archaeological surveys in Iraq.

ENCYCLOPEDIA BRITANNICA FILMS.—*Airplane Changes Our World Map* (1942); *Our Earth* (1937).

Geological Survey, U.S. This bureau in the United States department of the interior has as its principal objectives the determination and appraisal of the nation's mineral and water resources, delineation of the physical features of the United States, its territories and possessions, and supervision of mineral leasing on federal and Indian lands.

During 1956 emphasis continued to be placed on activities to attain these objectives—the preparation of topographic, geologic and hydrologic maps; systematic collection, exploration, appraisal and interpretation of quantitative and qualitative data on mineral and water resources; classification of public lands for mineral and water-power potential; supervision of mining and oil and gas development on federal and Indian lands; fundamental research in the sciences and techniques involved; and publication and dissemination of maps and reports setting forth the results of its investigations and mapping. In addition, the survey was frequently called upon to provide consultative and technical services to other federal agencies.

Publications.—The primary purpose of the geological survey is to provide for the people and agencies of government such information as is necessary for the exploration, development and conservation of U.S. mineral and water resources. Books, pamphlets, maps and charts were published in 1956 in part by the survey and also by co-operating states and by scientific journals. Publications included maps of the topographic and geologic features of the United States; studies of mining districts and mineral deposits, of the composition and structure of rocks and minerals, of fossils and the rocks in which they are found, of geophysics and geochemistry; and studies of stream flow and ground waters and their chemical quality.

Altogether, 3,019 survey topographic, geologic, hydrologic and related maps were published or reprinted during 1956. In addition, 147 reports, consisting of professional papers, bulletins, water-supply papers, circulars, hydrologic atlases and chapters for the new edition of the topographic manual, were published. Production of maps increased about 13% over the fiscal year 1955. Several hundred free map indexes showing all areas covered by U.S. geological survey mapping in each state, and free booklets listing all survey publications, were mailed out each

month in answer to public inquiries.

Geologic Investigations.—During 1956 the geologic division carried on co-operative investigations with 13 states, Puerto Rico and Alaska. A milestone in the progress of geologic mapping was the publication of a geologic map of Montana.

New developments in geophysical, geochemical and geobotanical prospecting aided exploration for new deposits of minerals and mineral fuels. In co-operation with engineers of the bureau of mines, survey geologists continued to evaluate applications for loans to mining companies and individuals and to supply technical advice necessary for effective execution of contracts under the Defense Minerals Exploration administration and the Emergency Procurement service.

A research project to study living Foraminifera on the continental shelf was started in 1956 in co-operation with the Scripps Institution of Oceanography. Survey scientists also collaborated with the West Virginia geological survey and several private institutions in making detailed studies of drill cores from the first well to penetrate the sedimentary sequence and reach rocks of the basement complex in the heart of the northern Appalachian oil and gas basin. The 11th edition of the map showing oil and gas fields of the United States was published. A completed study in the Piceance creek basin of northwestern Colorado showed the amount of oil present in the oil-shale deposits there to be approximately double that of previous estimates.

Engineering geologic investigations were continued in the metropolitan areas of Seattle, Wash., Portland, Ore., San Francisco and Los Angeles, Calif., Denver, Colo., Knoxville, Tenn., and Anchorage, Alaska, to provide basic geologic information pertinent to urban development. Reports on the general geology and volcanology of several Aleutian islands, studied in earlier years for the department of defense, were completed. Studies of the physical properties of rocks and minerals were increased, and facilities were made available for measurement of electrical resistivity, dielectric constant, magnetic susceptibility, remanent magnetization and dynamic elastic moduli. Radiocarbon age determinations made on a series of deep-sea-core carbonates allowed an extrapolation to the earliest Pleistocene climatic cycles, based on an assumed uniform sedimentation rate. Research in geochemical exploration continued to provide new geochemical and geological concepts and techniques to aid in the discovery of mineral deposits.

More than 45,000 fossils from 32 states, Alaska, Puerto Rico and 14 areas outside the United States were examined by palaeontologists and stratigraphers. The resulting information was incorporated in 551 administrative reports for use in guiding the field work of other geologists and for eventual publication.

Water Resources Investigations.—Although the United States is a water-rich nation except for a few regions such as the southwest, water supply has become a major national problem because requirements are increasing so rapidly. The basic facts contributing to the problem were population growth coupled with a rising standard of living.

In achieving its principal objective of an accurate appraisal of U.S. water sources, survey scientists and engineers systematically collected, analyzed and interpreted hydrologic and geologic data; evaluated water resources of specific areas; determined water requirements for industrial, domestic and agricultural uses; performed research and development to broaden the knowledge of basic principles in water occurrence and movement, and to improve its investigation techniques; and prepared technical and scientific reports for publication.

Since the survey's work meshes closely with many state and local interests in water supply, federal-state partnerships had developed with all the states. Federal funds for co-operative water investigations in fiscal 1956 amounted to \$4,580,000.

About 6,800 gauging stations to obtain stream-flow data were operated in 1956 in the U.S., Alaska, Hawaii and Guam. A project summarizing stream-flow records in the United States for the period 1888-1950 was about 68% complete. Flood frequency reports for Nebraska, Connecticut and Missouri, prepared co-operatively by the geological survey, were published. Flood studies were in progress in six other states at the end of 1956. Hydraulic data for about 90 stream sites were furnished to highway departments.

The devastating floods of Aug.-Oct. 1955, extending from New England to North Carolina, were documented by intensive field investigations, and a preliminary report published in 1956 as U.S. geological survey circular 377. Similar investigations followed the floods of Dec. 1955 and Jan. 1956 in the west coast region.

The growing importance of ground water to the nation caused a continued increase in demands for information on which to base plans for its use and conservation. Mutual federal and local interest was reflected in co-operative programs in 44 states, Hawaii and Guam. Of 550 ground-water investigations under way during 1956, about 80% were in the federal-state co-operative program.

The chemical quality of more than 65,000 samples of water from streams, lakes, springs and wells was determined, and sediment investigations were in progress in 15 states and Alaska in 1956.

Topographic Mapping.—This activity is designed to furnish accurate and detailed information on natural and man-made topographic features of the United States, its territories and dependencies. Since the geological survey was established in 1879 it had published about 18,500 different topographic maps that covered about 75% of continental U.S., although by the end of 1956 only 43% of the country was covered by maps that met modern needs. The next two decades were expected to see the country substantially covered with topographic maps made to modern standards. During 1956 mapping or map revision was carried on in all 48 states, Alaska, Puerto Rico, Hawaii and the Virgin Islands. In 30 states and Puerto Rico mapping was accelerated through federal-state co-operative programs whereby mapping costs were shared equally between the federal government and a state, county or municipality. Altogether, 2,353 map manuscripts were transmitted to the publications office for printing and distribution; 517 of these maps were transmitted for reprinting.

Conservation.—Conservation activities in 1956 were aimed at assuring proper development and use of water and mineral resources on federally controlled lands. This work required field surveys; preparation of maps and reports dealing with water power, fuels, minerals and chemicals; and on-site supervision of mining and drilling operations to assure safe and economical production of coal, oil, gas and other minerals.

In mineral classification alone, 28,884 cases were handled involving either the outright disposal of federal lands with no reservation of any mineral; disposal of such lands with qualifications; or exercise of the government's right to lease such property for minerals exploration and production by private enterprise.

More than 2,500 mining properties were under supervision during fiscal 1956, involving leases, permits and licences in 32 states and Alaska. Minerals production was estimated at nearly 19,728,000 tons, valued at more than \$135,274,000 with royalties amounting to \$5,862,000.

Drilling on supervised lands during fiscal 1956 included the spudding of 2,778 wells and completion of 2,525 wells, of which 1,711 produced oil or gas. In all, 33,860 wells, including 19,321 capable of producing oil or gas, were under supervision at the end of fiscal 1956. Production was appreciably greater than in

1955, and royalty returns to the United States amounted to about \$60,000,000.

(H. B. N.)

Geology. Published articles and books show the evolution of thought, research and application of geology. Geologic literature produced in all fields of geology in 1956 was principally concerned with topics of limited scope, but the fields of general geology and stratigraphy were represented by fundamental or comprehensive writings.

General and Historical Geology.—A theoretical discussion entitled "Mountain Building Chronology and Nature of Geologic Time Scale" by Edmund M. Spieker appeared in the Aug. 1956 issue of the *Bulletin* of the American Association of Petroleum Geologists. Spieker challenged the concept of simultaneous orogenic movements by postulating that crustal deformation, even of a single tectonic unit, can be divided into subdivisions in both space and time, and illustrated by examples from the Laramide Revolution of western North America. He also questioned the validity of the application of a single time scale to the entire world, and contrasted the different time scales which might have been established on the different continents. As an example of the tenuous character of boundaries between even such large units as eras, he described the Palaeozoic-Mesozoic boundary in the Colorado plateau and the Rocky mountains, which is distinct in some areas and impossible to define in others.

Stratigraphic Geology (1950), 4th edition, by Maurice Gignoux was translated by Gwendolyn G. Woodford late in 1955. This French text was principally concerned with the geology of France, but the concepts of facies relationships in both space and time are so well expressed that it is a classic stratigraphic synthesis. A similar synthesis, W. J. Arkell's *Jurassic Geology of the World*, presented a complete study of the entire marine Jurassic system, including the basis for classification and correlation of the system, descriptions of the rocks, and syntheses of palaeogeography, climate, tectonic patterns and volcanism.

A University of Texas publication, *Proceedings of the Conference on Latin-American Geology*, edited by Fred M. Bullard, included papers in the fields of applied and economic geology, with Colombia, the Colombian Andes, Mexico, eastern Venezuela, Brazil and volcanism as principal subjects. *The Atlas of Paleogeographic Maps of North America*, by Charles Schuchert and edited by Carl O. Dunbar, was published in 1955. Schuchert's 1942 conceptions of North American palaeogeography were shown in these maps, and although more information was made available in the period 1942-1955, changes in the maps would be insignificant. In "Handbook of South American Geology, An Explanation of the Geologic Map of South America," Geological Society of America *Memoir* 65, edited by William F. Jenks, papers by 17 students in the field were published, which were planned to accompany the 1950 edition of the society's geologic map of South America. However, information discovered since publication of the map was included in the papers. Among the more significant issues were the statements that there were no definitely Pre-Cambrian rocks in the Andean belt and that except for Argentina there was comparatively little knowledge of the Lower Palaeozoic of South America, the large body of evidence for continental drift and the complexity of the Mesozoic and Cenozoic igneous history of western South America. An article was devoted to each nation in South America and one to the island of Trinidad. Five flat-topped seamounts (guyots) in a submarine range of mountains extending from Hawaii to near Wake Island were the subjects of Edwin L. Hamilton in "Sunken Islands of the Mid-Pacific Mountains," Geological Society of America *Memoir* 64 (1956). Bathymetric, dredge and core data furnished evidence for origin of the seamounts as a chain of

basaltic islands in the Cretaceous period, their reduction to flat banks by wave erosion later in the Cretaceous and submergence to their present depths during the Cenozoic because of regional subsidence.

Corollaries of the history were the presence of a deep Pacific ocean in Cretaceous time and faunal migrations from island to island rather than along "sunken continents."

Economic Geology.—The 50th anniversary volume of *Economic Geology*, edited by Alan M. Bateman and published in Oct. 1955, contained reviews of progress in various fields of economic geology since 1905. In part i, 13 articles by different authors were devoted to theoretical and practical discussions of the origin, classification and earth temperatures associated with ore deposits. Part ii contained 12 articles on such topics as engineering geology, ground water, fuels, geophysical prospecting for ground water and ores, and physical and chemical characteristics of certain minerals as related to their economic use. In keeping with the title of the volume, most articles contained reviews of developments in their fields. L. R. Page, H. E. Stocking and H. B. Smith compiled "Contributions to the Geology of Uranium and Thorium by the United States Geological Survey and Atomic Energy Commission for the United Nations International Conference on Peaceful Uses of Atomic Energy, Geneva, Switzerland, 1955," United States Geological Survey professional paper 300. Included were 89 reports on the occurrence of uranium and thorium in the United States and methods of prospecting for them. Mines and prospects were described. The analytical chemistry of the elements was discussed.

The United States department of agriculture published *Water, the Yearbook of Agriculture 1955*, edited by Alfred Stefferud. The book's 96 articles had essential value in that they stated the broad relationships between geology, ground water and agriculture. The translation by May Hollander of the revised edition of *Realms of Water* (1955) by P. H. Kuenen, an introductory book describing the hydrologic cycle, was published. Major subdivisions were: water in its inorganic states, the actions and effects of water on the surface and near-surface zone of the earth's crust, and geologic variations in the quantity of terrestrial water, salinity of the ocean and distribution of water among various environments. A symposium on ground water was presented in the Aug. 1956 issue of the *Transactions of the American Geophysical union*. V. C. Fishel, in "Long-Term Trends of Ground-Water Levels in the United States," correlated ground-water levels in several areas of the United States with precipitation records and concluded that lowered water tables were correlated with general drought conditions rather than with progressive depletion of the ground-water reservoir. Graphic methods of predicting ground-water levels nine months in advance were demonstrated in "Prediction of Ground-Water Levels on the Basis of Rainfall and Temperature Correlations" by M. I. Rorabough. William E. Clark, in "Forecasting the Dry-Weather Flow of Pond Creek, Oklahoma; A Progress Report," outlined a method of predicting dry-weather stream flow several months in advance, and considered the method to be applicable to many stream beds.

Engineering Geology.—George A. Kiersch prepared a basic outline of the field of engineering geology which was published in the July 1955 issue of the *Quarterly* of the Colorado School of Mines.

Geochemistry.—*Physics and Chemistry of the Earth* (1956) by L. H. Ahrens, Kalervo Rankama and S. H. Rincorn, the first of a series of periodic reviews of the physics and chemistry of the earth, presented articles by several authors which related geology, chemistry and physics to the origin of the earth, earth temperatures, the interior of the earth and associated topics.

Petroleum Geology.—A review of drilling activities in North

America for 1955 was given in the June 1956 issue of the *Bulletin* of the American Association of Petroleum Geologists. The international aspects for the same period were presented in the July 1956 issue of the *Bulletin* of the same organization and for a similar period in the International Outlook issue of *World Oil*, Aug. 15, 1956.

The latter included special reports on Canada and on the U.S.S.R. and its satellite countries.

Sedimentation and Marine Geology.—Lithofacies maps used in the study of stratigraphic units were subject to more rigorous mathematical analysis in 1956 than in previous years. Paul E. Potter and Raymond Siever, in "A Comparative Study of Upper Chester and Lower Pennsylvanian Stratigraphic Variability," published in the Sept. 1955 issue of the *Journal of Geology*, used statistical methods to describe areal variability of the unit. Tectonic control over large areas and hydrodynamic control over small areas were observed. The reliability of the data was discussed. The technique was considered to have application in determination of environmental contrasts, local contemporaneous tectonism and stability of sedimentation. W. C. Krumbein, in "Statistical Analysis of Facies Maps" in the same publication, showed the application of the analysis of variance to lithofacies maps representing stratigraphic units in which local effects overshadowed regional trends. Paul E. Potter and Raymond Siever, in "Sources of Basal Pennsylvanian Sediments in the Eastern Interior Basin: 1. Crossbedding" in the May 1956 issue of the *Journal of Geology*, presented in this first of three articles the analysis of variance as used to reduce sampling density and to determine the reliability of the sampling.

Articles describing modern sediments included "Macro-invertebrate Assemblages as Indicators of Sedimentary Environments in East Mississippi River Delta Region," by Robert H. Parker, in the Feb. 1956 issue of the *Bulletin* of the American Association of Petroleum Geologists. Sea bottom biological collections and sediment cores were the source of data which enabled the author to recognize seven depositional facies, each with its own fauna. Faunal stratigraphic ranges were such that palaeoenvironments in this and nearby areas were expected to be reliably determined in sediments as old as Miocene. Norman N. Greenman and Rufus J. LeBlanc, in their study "Recent Marine Sediments and Environments of Northwest Gulf of Mexico," which appeared in the May 1956 issue of the *Bulletin* of the American Association of Petroleum Geologists, delineated five major environments of deposition in that basin related to the Pleistocene and Recent geologic history, each with a characteristic sedimentary facies.

Structural Geology.—Geophysical studies of the Atlantic ocean basin and adjoining continental areas were made and interpreted. Charles R. Bentley and J. Lamar Worzel, in "Geophysical Investigations in the Emerged and Submerged Atlantic Coastal Plain. Part x: Continental Slope and Continental Rise South of the Grand Banks," published in the Jan. 1956 issue of the *Bulletin* of the Geological Society of America, stated that in the area studied there were three sedimentary layers with a maximum thickness of 10 km. lying on the subbasement. The subbasement materials showed a gradual change from oceanic areas to continental areas, which indicated that the classic concept of a sharp discontinuity in the earth's crust at the ocean-continent boundary was not valid everywhere. Samuel Katz and Maurice Ewing, in "Seismic-Refraction Measurements in the Atlantic Ocean. Part vii, Atlantic Ocean Basin West of Bermuda," in the April 1956 issue of the *Bulletin* of the Geological Society of America, showed a substantial contrast between oceanic and continental crustal structure in that area. G. Lynn Shurbet and Maurice Ewing in "Gravity Reconnaissance Survey of Puerto Rico," in the April 1956 issue of the *Bulletin* of the

Geological Society of America, related their gravity data to previous work on island arc gravity patterns. Gravity minima on the island were found to be readily correlated with granitic outcrops or with Tertiary sedimentary basins. The largest feature, a gravity maximum, was not correlatable with the surface geology.

Geophysical Year: see INTERNATIONAL GEOPHYSICAL YEAR, 1957-58.

George, Walter Franklin (1878-), U.S. senator who announced his retirement in 1956 after six successive terms in the senate. Born at Preston, Ga., on Jan. 29, he studied at Mercer university, Macon, Ga., and began law practice in 1901 at Vienna, Ga. From 1907 to 1912 he was solicitor general of a Georgia judicial circuit, and from 1912 to 1917 judge of the circuit's superior court. In 1917 he became associate justice of the Georgia supreme court, resigning in 1922 when he was elected to the U.S. senate. He was re-elected in Nov. 1950 for his sixth consecutive term (1951-57).

In 1938 Pres. Franklin D. Roosevelt's attempt to purge George as a reactionary failed when the senator easily won the Democratic nomination over Roosevelt's candidate. Thereafter a prominent member of the anti-New Deal wing of the Democratic party, George frequently criticized government spending, particularly additional appropriations for foreign military and economic assistance.

He declared in Aug. 1951 that if European nations "can't stand on their own feet now, there is no use . . . thinking they will do it later."

In the Eisenhower administration, however, George, as chairman of the senate foreign relations committee, became leader of a strong bipartisan foreign policy. After his decision on May 9, 1956, not to run for a seventh senatorial term, George accepted Pres. Dwight D. Eisenhower's appointment as his personal representative and special ambassador for NATO affairs.

Georgia. Georgia, popularly known as the "empire state of the south," is the largest state east of the Mississippi river. It is located in the south Atlantic region of the United States and has an area of 58,876 sq.mi. On July 1, 1956, Georgia had an estimated population of 3,712,000 according to provisional estimates of the U.S. bureau of the census. Of the 1950 population (3,444,578), 54.7% was rural and 45.3% urban; 68.6% was native white and 30.9% Negro. Atlanta, the capital, had a 1950 population of 331,314. Its 1955 estimated population was 469,000.

Other chief cities and their 1950 populations, with their estimated 1955 populations in parentheses, are: Savannah, 119,638 (132,100); Columbus, 79,611 (93,400); Augusta, 71,508 (94,700); and Macon, 70,252 (77,200).

History.—The school segregation problem continued to be the most important problem in the state. The Jan. 1956 session of the state legislature enacted a series of measures designed to maintain the traditional pattern of segregation in the schools of the state. An interposition resolution was passed declaring the U.S. supreme court's segregation decision of May 17, 1954, and all similar decisions, as null, void and of no effect. Another act authorized the governor to close the public schools of any city, county or independent school district by executive order

AGED MEMBER of the Ku Klux Klan attending a recruiting rally held at Macon, Ga., Aug. 4, 1956

whenever such public school could not be operated so as to entitle them to state funds under the laws of Georgia. The act had special reference to previous act enacted in the 1955 session which prohibits payment of state funds to non-segregated schools. Upon the exercise of this power by the governor, each child of school age in the state becomes entitled to an educational grant from state and local funds to enable such a child to obtain an education at a private school. In another act the state legislature gave the cities, counties, municipalities and city and county boards of education an

governing bodies of independent school districts authority to lease school property to private persons including corporations for a term not exceeding five years for private educational purposes.

Other important actions of the Jan. 1956 session of the legislature included: the passage of a controversial libel law which provided that corporations engaged in publishing newspapers, magazines and other periodicals shall be deemed to be domiciled and subject to suit in any county in which the newspaper, magazine or periodical published by such corporation is regularly circulated to more than 50 subscribers; the passage of an act extending absentee voting privileges to spouses and dependents of military personnel; and an act providing that the parent having the custody and control of a minor child under 17 years of age shall be liable for acts of vandalism of such child.

The legislature also proposed an amendment to the state constitution changing the method of amending the constitution by clarifying the requirement of the advertisement of and voting on local amendments. Other important proposed amendments would authorize the legislature to fix the salaries of elective officers provided for in the constitution and would authorize the state supreme court and the state court of appeals to review actions of juvenile courts by direct writ of error without the necessity of a motion for new trial having been made.

Among the more significant political developments of the year was the Democratic senatorial primary in which former governor Herman Talmadge defeated former governor Melville E. Thompson. Talmadge won an overwhelming victory, carrying every one of Georgia's 159 counties. Nomination in the Democratic primary is tantamount to election, since the Republicans were not opposing Talmadge in the general election. Talmadge would succeed veteran senator Walter F. George, who at 78 years of age retired from the U.S. senate to become Pres. Dwight D. Eisenhower's personal representative and special ambassador to the Council of the North Atlantic Treaty organization.

In the Nov. 6, 1956, general election, Georgia, a traditionally Democratic state, gave its 12 electoral votes to Adlai E. Stevenson. Stevenson received 66.3% of the total popular vote, while Pres. Dwight D. Eisenhower polled 33.3% of the total. The Constitution party and scattered write-in votes accounted for the remaining fraction of votes. The Democrats won all of Georgia's 10 seats in the U.S. house of representatives and all state-wide offices as well as the one vacant seat in the U.S. senate.

The principal state officials during 1956 were: governor S. Marvin Griffin; lieutenant governor, Ernest Vandiver; secretary of state, Ben W. Fortson, Jr.; comptroller general, Zach D. Cravey; attorney general, Eugene Cook; treasurer, George B.

Hamilton; commissioner of agriculture, Phil Campbell; commissioner of labour, Ben T. Huie; and superintendent of schools, M. D. Collins.

Education.—During the school year 1955–1956, there were 2,864 public schools in Georgia with an enrolment of 892,467 pupils and a teaching staff of 29,255, according to the state department of education.

There were 1,615 elementary schools, 741 for white children and 874 for Negro children. An additional 1,249 elementary schools had one or more high school grades (including 524 for Negro children). There were 665 five-year high schools (419 for white children and 246 for Negro children). There was an enrolment in the elementary grades of 666,808 (442,514 white children and 224,294 Negro children) and a teaching staff of 19,057 (12,839 white and 6,218 Negro). There was an enrolment in high school grades of 225,659 (166,651 white children and 59,008 Negro children) and a teaching staff of 9,033 (6,763 white and 2,270 Negro). There were 645 nonteaching principals (490 white and 155 Negro).

Total expenditures of the state government for education during the fiscal year ending June 30, 1956, amounted to \$139,917,191, compared with \$122,295,266 the preceding year and \$145,950,000 for the operating budget for the fiscal year beginning July 1, 1956.

Social Insurance and Assistance, Public Welfare and Related Programs.—Public assistance programs during the fiscal year ending June 30, 1956, amounted to \$65,084,889, an increase of approximately 4.6% over the previous year, according to the state department of public welfare. Old-age assistance amounted to \$44,745,096; aid to the blind, \$1,766,706; aid to dependent children, \$13,010,729; and aid to disabled persons, \$5,562,135. In June 1956 a total of 97,708 persons received old-age assistance with an average allowance of \$38.35; 3,440 blind persons received benefits averaging \$43.41; 39,348 dependent children received benefits averaging \$27.00; 11,970 disabled persons received benefits averaging \$42.35.

During the fiscal year ending June 30, 1956, a total of 7,072 persons were convicted of crimes (2,104 of felonies and 4,968 of misdemeanors) and committed to state and county penal institutions under the control of the state board of corrections. There were 8,126 prisoners in these institutions on June 30, 1956, compared with 7,789 on June 30, 1955.

Communications.—As of June 30, 1956, the state highway department reported that there were 88,042 mi. of public roads in Georgia and an estimated additional 7,483 mi. of city streets and alleys. The state highway system extended 15,130 mi. and county roads extended 72,912 mi. For the fiscal year ending June 30, 1956, the state highway department expended \$62,289,817.05. The state received \$12,364,539.16 from the federal government for highway purposes during the fiscal year.

On Dec. 31, 1955, there were 6,284 mi. of operated railroads in Georgia, according to the Interstate Commerce commission. The Georgia Public Service commission reported there were 853,984 telephone stations in the state as of June 30, 1956. There were 4,190 mi. of federal airways and 79 active civil airports in Georgia as of June 30, 1956.

Banking and Finance.—On Dec. 31, 1955, there were 407 operating banks of all types in Georgia with total deposits of \$2,332,554,000 and total assets of \$2,556,606,000, according to the Federal Deposit Insurance Corporation. The same source showed that 298 of these banks were insured state banks with total deposits of \$1,037,392,000 and total assets of \$1,147,857,000. There were 51 national banks in the state with total deposits of \$1,282,343,000 and assets of \$1,392,601,000 as of Dec. 31, 1955.

The Georgia Savings and Loan league reported that there were 82 savings and loan associations on June 30, 1956, of which 75 were chartered by the federal government and 7 by the state. These 82 associations had resources of approximately \$700,000,000.

Total receipts of the state government for the fiscal year ending June 30, 1956, were \$296,514,316; budget allotments for the period were \$281,728,149. On June 30, 1955, the state had a net surplus of \$31,150,825.

Agriculture.—The U.S. department of agriculture estimated that the total

cash income (including government payments) of Georgia farmers for 1955 was \$664,358,000. This represented an increase of 12% from the \$593,136,000 (revised figure) for the previous year. Of the 1955 cash income \$354,938,000 or 53.4% was derived from crops while \$301,048,000 or 45.3% came from livestock and livestock products. Government payments during 1955 amounted to \$8,372,000 or 1.3% of the total cash income.

Manufacturing.—In June 1956 there were 331,100 persons employed in manufacturing industries in Georgia, compared with 330,000 in June 1955, according to the U.S. bureau of labor statistics. The same source reported that gross average weekly earnings of production workers in manufacturing was \$56.74 in June 1956, compared with \$52.93 for June 1955. The Atlanta field office of the U.S. department of commerce reported that manufacturing plants in Georgia in 1955 paid wages and salaries totalling \$999,000,000, third largest amount in the south and 16th greatest in the nation, and \$117,000,000 more than in 1954. The U.S. department of commerce also reported that a value of \$1,594,600,000 was added by manufacture during 1954, compared with \$1,545,467,000 in 1953 and \$1,355,318,000 in 1952. (G. S. Ps.)

Mineral Production.—The tonnage and value of those minerals produced in Georgia in 1953 and 1954 whose value was \$100,000 or more are shown

Table III.—Mineral Production of Georgia

Mineral	1953		1954*	
	Quantity	Value	Quantity	Value
Total		\$51,395,000		\$55,803,000†
Clays	2,651,000	23,455,000	2,711,000	24,111,000
Iron ore	291,000	1,101,000	248,000	872,000
Sand and gravel	2,051,000	1,901,000	2,703,000	2,466,000
Stone	7,122,000	17,756,000	8,058,000	21,384,000
Talc	58,000	203,000	51,000	177,000
Other minerals	6,979,000	...	7,558,000

in Table III. Georgia produces a variety of nonmetallic minerals and continued first among the states in output of kaolin or china clay with 70% of the total in 1954. It was second in beryllium output and fourth among the states that sold or used mica. A slight quantity of bauxite also was produced besides some barite, slate and asbestos. It was 31st in rank in value of mineral output with 0.4% of the U.S. total in 1954.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

German Literature. The book season of 1956 produced no best sellers, no sensations nor any major work from the pen of a recognized author. No new talent appeared to nurture the hope of years that German literature might find itself and put an end to the barren period that began with the third reich. No one seemed able to fill the places left during the year by the deaths of the novelists Thomas Mann and Hans Carossa, the poet Gottfried Benn and the dramatist Berthold Brecht.

The most valuable contributions were in the field of philology, in which significant editions of collected works and studies were presented to the public. Made available in eight volumes were Ludwig Thoma's *Gesammelte Werke*, edited by Albrecht Knaus, including many newspaper sketches and articles. Hannah Arendt edited in two volumes the *Essays* of the novelist Hermann Broch, which clearly revealed the author's strong ethical bent that often obscures the aesthetic element. Well received were the diaries of Oskar Loerke, *Tagebücher, 1903–1939*, edited by his close friend the author Hermann Kasack. These diaries, which were not originally written for the public, show the author's physical approach to the intellect and intellectual approach to the physical. Appearing as the second volume in the complete works of Robert Musil, whose 1,000-page novel, *Der Mann ohne Eigenschaften*, won him a lasting place in literary history, was his *Tagebücher, Aphorismen, Essays und Reden*, edited by Adolf Frise.

The works of two young authors, both of whom met a tragic end in Berlin in 1945, were brought to the attention of the public: Felix Hartlaub's *Das Gesamtwerk, die Dichtungen und Tagebücher* and Friedo Lampe's *Das Gesamtwerk*. The detached observations contained in Hartlaub's notes and diaries from the last days of Berlin were by far the best of this genre that had yet appeared. Friedo Lampe, whom the Russians killed when he was unable to prove that he was not an S.S. man, filled his work with the quiet circumstances of everyday life. Delicately, romantically, he enlarged the small, pathetic occurrences of life.

Table I.—Principal Crops of Georgia

Crop	Estimated 1956	1955	Average, 1945–54
Cotton, bales	620,000	701,000	675,000
Corn, bu.	65,064,000	67,080,000	46,942,000
Peanuts, lb.	544,950,000	513,240,000	608,353,000
Tobacco, lb.	127,800,000	147,965,000	116,444,000
Oats, bu.	14,304,000	11,525,000	12,270,000
Pecans, lb.	53,400,000	10,000,000	35,631,000
Potatoes (sweet), bu.	836,000	864,000	1,331,000

Benno von Wiese's study, *Die deutsche Novelle von Goethe bis Kafka*, provided searching individual philosophical interpretations of the most important novellas in the period covered. Almost lost among the myriad titles of the many pocket-book series was the convincing interpretation of the life and works of the dramatist Grillparzer, in a book of the same name by Walter Naumann.

A revised and enlarged second edition of the four-volume biographical collection *Die Grossen Deutschen*, which numbered among its contributors Theodor Heuss, the president of the Bundesrepublik, led the list of important biographical works of the year. Shortly after the death of Thomas Mann his daughters, Monika and Erika, published studies centred around their famous father. *Vergangenes und Gegenwärtiges*, *Erinnerungen* by the former was a more general study of the life led by the Mann family as she saw it; whereas *Daz letzte Jahr*, *Bericht über meinen Vater* by the latter concentrated heavily on the last year of the celebrated author's life. In his *Ludens*, *Erinnerungen und Versuche* the nonagenarian Emil Strauss, who secured for himself a place in literary history though never enjoying wide public acclaim, presents the fragment of an earlier autobiography as well as several previously unpublished works and fragments. This friend and early colleague of Gerhart Hauptmann proved himself in this book to be a realist with a romantic tendency for the homely. His ascetic but very vital personality comes strongly to the fore, especially in the details of his early home life and in the biographical sketch of his grandmother. Almost more a work of philosophy than of biography is Karl Jasper's study of the Romantic philosopher: *Schelling—Grösse und Verhängnis*. In this work Jasper, the most outstanding living German existentialist philosopher, produced a definitive work concerning the life and philosophy of this first existentialist.

There were several outstanding new publications in the field of lyric poetry, where it seemed that creative German talent might accomplish something original and significant. The collected poems, *Gesammelte Gedichte*, of Gottfried Benn presented a graphic curve of the German lyric in its many moods and styles from World War I to the present. Rescued from a threatened oblivion were the collected poems, *Das Lyrische Werk*, of Gertrud Kolmar (Gertrud Chodziesner). This Jewish poetess, who disappeared in the blackness of the concentration camps, was being hailed as one of Germany's greatest, far superior to the talented Else Lasker-Schüler. Filled with a love for her Prussian landscape, she sings of its beauties, its flora and fauna. In her love poems too she combined a charming naïve realism with fairy-talelike overtones. The finest lyric poems of the year were contained in the small volume *Botschaften des Regens* by Günter Eich, Germany's most promising young poet.

In the post World War II period the German novella had been, usually, more successfully handled than the novel. In 1956 one of the outstanding new novellas was *Die Frau des Pilatus* by the aged Catholic writer Gertrud von Le Fort. Using as her source the only biblical reference (Matthew xxvii, 19) to Pilate's wife, the author created a masterpiece which illustrates her favourite, oft-treated theme that woman by her very nature is destined to be the leading bearer of the Christian attitude in order to lessen the severities of masculine actions and worldly might. An established master of the novella, Werner Bergengruen, further justified his place in German letters with *Das Netz*, a story of an unfaithful wife who is miraculously saved from punishment. Heinrich Böll in his "cheerful stories," *Unberechenbare Gäste*, again demonstrated that he had no superior when it came to treating the tragi-comic in everyday life. The fourth short story collection of Kurt Kusenberg, *Wein auf Lebenszeit*, appeared to rank with his earlier ones. His elegantly written surrealistic tales in his peculiar style, like that of the Grimm

brothers, had a slight tinge of melancholy while still showing respect for the bounds of reality.

The novels in 1956 which earned the best critical treatment were written by comparatively unknown authors. Hans Erich Nossack in his *Spätestens in November* told the old story of the eternal triangle, but the complex yet real psychological characterizations of the people involved lifted the novel onto the artistic level. Still fairly infrequent in German literature was the talented humorist. Thaddäus Troll, already distinguished as a *Kabarettist* and *Feuilletonist*, produced a very lighthearted first novel, *Sehnsucht nach Nebudistan*, written with a delightful touch of wit, irony and humour. *Kein Quartier in Träumen*, the adventures of a 17-year-old girl refugee in western Germany with typical situations of present-day life, was a distinguished first work of Hans Bachmüller. Maria Mathi's *Wenn nur der Sperber nicht kommt* traced the lives of a Jewish family in a small German city from the period of Wilhelm II through the days of the third reich, and succeeded in presenting real characters and their destinies.

Although the German dramatic literature and the stage were overrun with translations, especially French and American, several German originals are worth mentioning. Friedrich Dürrenmatt, a Swiss writer, had two successes during the season: *Griechen sucht Griechin*, a gay spirited comedy of the want-ad marriage of a middle-class worker with a well-known—but not to him—courtesan, filled with satirical stabs at modern business and its social life; and *Besuch einer reichen Dame*, satirical in its far-fetched plot and biting in its condemnation of personal and social cruelty as pictured in the successful return of a wealthy woman to her small home town where she had been meanly treated. Hans Henny Jahn, winner of the 1956 Lessing prize, awarded by the city of Hamburg, was represented by the play *Thomas Chatterton*. The author's strong social sympathies were, as usual, plainly in evidence.

Characteristic of contemporary life was the attention given to the problem of modern man's health in its relation to his technologically dominated daily life. Friedrich Deich, a psychiatrist, sought to give his views of the problem in his well-received novel *Windarzt und Apfelsinenpfarrer*. In *Gesundheit und technische Welt* Joachim Bodamer felt that the "technologizing" of the world brings with it a disregard for the living of a normal life and a concern for the functioning of man in the mass.

The eminent medical author Victor von Weizsäcker, in his book *Pathosophie*, or "Medical Anthropology," developed a completely new idea of disease. To him it is the means of directing lives, for illness is the striving for final redemption, the effect of "unlived life." The farther man is from his goal, the sicker he is; but the farther away he is, the greater his urge for the goal.

Hannah Arendt's study of totalitarian government as it affects the individual, *Elemente und Ursprünge totaler Herrschaft*, was drawn mainly on the basis of Nazi Germany from 1930 and Soviet Russia from 1930. *Denk ich an Deutschland*, a word and picture commentary, was the closest thing to a sensation—though not because of sales—during the year. Its purpose was to point up evil conditions in west Germany, ostensibly to show how the German leaders lost the chances of 1945 to start with a clean slate. The book contains frightful generalizations and looks exclusively on the bad side of the picture. However, it attracted much publicity.

Literature in the German Democratic Republic continued to consist predominantly of translations from the U.S.S.R. and the satellite countries. Not one significant work appeared from the pens of such leading east zone writers as Anna Seghers, Berthold Brecht, Arnold Zweig and Ludwig Renn. Nor did any new writer

succeed in publishing a book of sufficient literary merit to attract attention in the west. (J. C. OR.)

Germany. A country of central Europe, Germany is bounded north by the North sea, Denmark and the Baltic sea, east by Poland, south by Czechoslovakia, Austria and Switzerland, and west by France, Luxembourg, Belgium and the Netherlands. From 1949 Germany was partitioned into two republics with a special provisional regime for Berlin (*q.v.*). Areas and populations of the two states and Berlin are as follows:

	Area (sq.mi.)	Population (1950 census)	(1955 est.)
German Federal Republic	94,905*	47,695,672*	49,995,000
Western Berlin	186	2,146,952	2,100,000
German Democratic Republic	41,380	17,313,734†	16,500,000
Eastern Berlin	155	1,175,979†	1,200,000
	136,626	68,332,337	69,795,000

*Excluding the Saar (*q.v.*): area, 991 sq.mi.; pop. (1955 est.) 996,000. †1946 census.

Language: German, with small admixture of Lusatian (260,000 in the Kottbus-Bautzen area), Polish (150,000, mainly in Westphalia) and Danish (120,000). Religion: (1938 est.) Protestant 62.7%, Roman Catholic 32.5%, Jewish 0.7%, other 4.1%; (1950 census, Federal Republic only) Protestant 52.2%, Roman Catholic 43.8%.

German Federal Republic.—Capital, Bonn (pop., 1953 est., 30,000). Chief cities (with populations of more than 200,000, 1953 est.): Hamburg 1,722,819; Munich 906,497; Cologne 670,091; Essen 660,934; Frankfurt 601,747; Düsseldorf 594,841; Dortmund 580,892; Stuttgart 566,009; Hanover 494,527; Bremen 483,539; Duisburg 454,899; Nuremberg 398,701; Wuppertal 392,804; Gelsenkirchen 355,320; Bochum 326,070; Mannheim 272,304; Kiel 259,462; Wiesbaden 239,961; Brunswick 136,975; Lübeck 230,144; Oberhausen 226,954; Karlsruhe 211,056. President of the republic in 1956, Theodor Heuss; federal chancellor, Konrad Adenauer (*q.v.*).

German Democratic Republic.—Capital, Berlin-Pankow. Chief cities (1953 est.): Leipzig 607,700; Dresden 510,100; Chemnitz (renamed Karl-Marxstadt) 298,500; Halle 278,400; Magdeburg 252,300. President of the republic in 1956, Wilhelm Pieck; premier, Otto Grotewohl. Soviet ambassador, Gheorgy M. Pushkin. Soviet commander in chief, Col. Gen. Andrey A. Grechko.

History.—During 1956 no progress was made toward reunifying Germany. The Soviet Union and the German Democratic Republic remained firm in their demand that Germany should be unified by stages and that the first stage should be all-German talks on reunification. On March 1 the Soviet government proposed to the government of the German Federal Republic the immediate holding of such talks. The proposal was rejected on March 2. On March 5 the (western German) Free Democratic party suggested that the German Federal Republic should withdraw from NATO (the North Atlantic Treaty organization) and leave the German Democratic Republic from the Warsaw treaty in order to hasten a settlement of the German reunification problem. This suggestion was rejected by the Bonn government and ignored by the Soviet Union.

On May 10 another effort was made to break the deadlock, by Sir Winston Churchill, who was receiving the Charlemagne peace prize at Aachen. He proposed the admission, at some future date, to NATO of the Soviet Union. This could pave the way to the creation of a larger European community in which the satellite states also would be given their places. The federal foreign minister, Heinrich von Brentano, rejected this idea when he stated on May 11 that it was far too soon to talk of a "new Russia," ready to co-operate with the western democracies.

On June 9, N. A. Bulganin, Soviet premier, once more advised, by a note to federal chancellor Konrad Adenauer, all-German talks on reunification. On July 22 Adenauer wrote in answer that

MODERN CHURCH completed in 1956 in western Berlin, Ger.

a Germany reunified on the basis of free elections would in no way constitute a menace to Soviet security.

Political pressure at home resulted in Adenauer making one more effort in 1956 to reach agreement with the Soviet Union. On Sept. 7 the Federal Republic ambassador in Moscow, Wilhelm Haas, handed a note to the Soviet government. It asked for bilateral Soviet-German discussions before any conference of the great powers on Germany took place; reunification on the basis of free, all-German elections and the creation of a demilitarized zone in central Europe. The Soviet deputy foreign minister, Andrei Gromyko, told Haas that "rearmament and the suppression of freedom in the German Federal Republic" made reunification impossible at present. On Oct. 23 the official Soviet answer rejected Adenauer's approach and once more called for all-German talks. Under the circumstances the celebration of a Day of National Unity on June 17, 1956, was a somewhat empty gesture.

German Federal Republic.—Probably the most important single event of the year was the final settlement of the Saar problem, which was reached by Adenauer and Guy Mollet, the French premier, on Sept. 29. By this agreement the amounts of coal which France could take out of the Saar or buy at cost price were fixed, financial contributions to the building of the Moselle canal were settled and the decision was made to change the Saar's currency from the franc to the deutschmark within two years. The Saar would become politically part of Germany on Jan. 1, 1957, and would be integrated economically in the German Federal Republic by Jan. 1, 1960. (*See SAAR.*)

Adenauer's coalition difficulties continued during the year, with demands by various parties for the reduction in numbers of his cabinet. On Oct. 7 the four ministers who belonged to the Free Democratic party resigned and on Oct. 16 two of them were reinstated when the cabinet reshuffle had been completed. Hermann Schaefer (Bavarian Social Christian), Fritz Neumayer

SUPPORT FOR SOVIET TROOPS in the German Democratic Republic is provided by the approximately 500,000 members of societies for "sport and technology," such as the group shown in the photograph marching in Leipzig in 1956

(F.V.P.) and Waldemar Kraft (Refugee party) left the cabinet. Theodor Blank, minister of defense, was replaced by Franz Josef Strauss and the latter's ministry of atomic affairs would be taken over in 1957 by Siegfried Balke, minister of posts. Balke's ministry would then be given to Ernst Lemmer, chairman of the C.D.U. in western Berlin.

Toward the end of the year further indications for next year's general election were provided by local elections in five *Länder*. Elections held in North Rhine-Westphalia, Lower Saxony and Hesse on Oct. 28 showed that the S.P.D. was, at least temporarily, the strongest party in the German Federal Republic. In these three *Länder* it gained about 10% more votes than in the previous local elections of 1952. In Baden-Württemberg the S.P.D. gained 8% more votes than in 1952, and in the Rhine-Palatinate 6% more. In all *Länder* the C.D.U. maintained its 1952 vote, while the Free Democrats lost about 3% on the average. It seemed likely that only the three leading parties were likely to poll more than 5% in the 1957 election, and thereby return members to parliament.

Foreign policy absorbed much of Adenauer's time and provided matter for a full-scale *Bundestag* debate on June 29. The government majority on that occasion was 85, with 220 voting for the government and 135 against. On June 28 foreign minister Von Brentano had made a statement of policy that minor differences with the western powers were to be cleared up; NATO was to be strengthened; developments in the Soviet Union and satellite states would be closely observed; and every effort would be made to secure German reunification. The problem of support costs for Allied troops on German soil was settled on June 29, after a four-month negotiation. The German Federal Republic agreed to pay £125,000,000 during the current NATO year, £34,000,000 of this sum to go to the United Kingdom.

In accordance with treaty obligations, the German Federal Republic continued to organize its new armed forces. On March 6 the Soldiers' law for the raising of 150,000 volunteers was approved by the *Bundestag*, and by the end of the year approximately 70,000 men were in uniform. The S.P.D. and Free Democrats continued to oppose the early introduction of conscription. On Sept. 27 the call-up period was reduced from 18 months to 12 months.

A minor triumph was the treaty of friendship signed with Belgium on Sept. 24, under which several small areas annexed by Belgium in 1949 were to be returned to German sovereignty. Less fortunate was Von Brentano when, speaking in London on May 2 on the subject of the Oder-Neisse frontier, he said that

Germany might have to make concessions over this frontier, in order to regain unity. He was bitterly criticized by refugee organizations which staged demonstrations later in the month. No real progress was made in relations with the Soviet Union although Valerian Zorin presented his credentials as Soviet ambassador in Bonn on Jan. 8, and a federal German embassy was established in Moscow on March 1. During the year Zorin protested against the "detention" of Soviet citizens in the German Federal Republic (they turned out to be criminals and lunatics) and the launching of propaganda balloons from German soil, and was withdrawn on July 14. He was replaced in October.

Steady economic progress was made throughout 1956, although German industry had begun to suffer from the effects of the blocking of the Suez canal by the end of the year. On March 1 the Bank of the German *Länder* followed the British example by imposing a modest credit squeeze and raised the bank rate from 3½% to 4½%. On May 18 it raised the bank rate to 5½% and this step was surprisingly criticized by Adenauer in a speech to the Federation of German Industries in Cologne. In June motor car production achieved a new record, with 96,700 vehicles in one month, and unemployment at the beginning of September dropped to its lowest post-World War II figure of 409,427. On Sept. 5 it was possible to reduce the bank rate to 5% and on Sept. 17 all restrictions were removed on the amount of currency carried by Germans travelling abroad.

Other events included the banning of the German Communist party on Aug. 17, the arrival of several contingents of German repatriates from Poland, severe summer floods on the Weser and other central German rivers and the formation on June 17 of the German Social Union party led by Otto Strasser, a former follower and later opponent of Adolf Hitler. On Nov. 12 the trial began in Karlsruhe of Otto John, the former head of the Office for the Protection of the Federal Constitution, who disappeared into the German Democratic Republic on July 20, 1954, and returned to the German Federal Republic on Dec. 5, 1955.

German Democratic Republic.—The German Democratic Republic suffered none of the serious disturbances which affected other Communist satellite states. This could be attributed mainly to the presence of 22 Soviet army divisions on German soil and to memories of the unsuccessful uprising of June 1953. Only during the latter part of 1956 were there any signs of unrest. There were stoppages of work in four Magdeburg factories, and in factories in Erfurt and Chemnitz, in mid-October; some minor demonstrations by university students in Dresden; and sharp and pertinent demands for more information at "discussion group evenings" organized in November by the ruling Socialist Union party (S.E.D.).

Politically, the government attempted to suggest a growing independence and further "softening" of its policies. On March 23 deputy premier Walter Ulbricht promised a milder political climate, closer contact with the western German Social Democrats, increased trade with the western world and a rise in the standard of living. He stated that food rationing would be abolished sometime in 1957, that there would be better entertainments, that production of consumer goods would be stepped up by 40% and that rates of pay would be raised after examination. Ulbricht reiterated these promises on Aug. 1, when he was forced to admit that the second five-year plan, approved by the People's chamber on March 30, was already "814,000,000 DM. in arrears." On March 28 Otto Grotewohl declaimed against the injustices of the legal system and on June 21 he announced that more than 20,000 political prisoners had been released over a three-month period.

The eastern German leaders also attempted to suggest their increased independence from Moscow and emancipation from Stalinist dogma. On March 4 Ulbricht announced the benefits of

a political collective, as opposed to Communist dictatorship. He claimed that such a collective had already been functioning for years in the German Democratic Republic. On March 18 he revealed Stalin's "serious failures," in particular as a wartime commander in chief and because he refused to be forewarned of Nazi aggression. Toward the end of the year various leaders began to preach "the German way to true Socialism."

Foreign policies remained tied to those of Moscow. On Jan. 28 the German Democratic Republic was formally accepted into the Warsaw defense treaty. On May 29 Grotewohl appealed for an "all-German plan to secure German reunification." On July 17 his government reached agreement with that of the Soviet Union in demanding all-German talks, reducing Soviet occupation costs to 800,000,000 DM. a year and agreeing on the general principle of increased Soviet economic aid. As a member of the Warsaw treaty, the German Democratic Republic was given a regular army by converting the people's police into armed forces. About 30,000 of the people's police had been enrolled as soldiers and were organized in seven divisions. Between Jan. 22 and 25 two divisions carried out atomic manoeuvres in the Weisswasser district. In agreement with the Soviet Union, steady progress was made in establishing an atomic research centre on the outskirts of Dresden.

In spite of its fine promises the regime remained a repressive one. On Jan. 16, 30 members of the Evangelical Church railway missions were arrested for alleged spying. A number of the missions were closed down. The Free German Youth continued to propagate pagan "youth initiation" in place of church confirmation but in June it was learned that its campaign had failed for the second year in succession.

Other events of interest were the meeting of the western German Free Democratic party and eastern German Liberals (L.D.P.) leaders in Weimar on Oct. 6; the successful trade mission to the middle east in May; and the efforts of the government to stop Radio Free Europe propaganda balloons from flying over the German Democratic Republic's territory.

The government was extremely perturbed by events in Poland and Hungary at the end of October. The People's chamber postponed its sittings and failed to hear any proper account of the visit of its delegation to Warsaw. The para-military "factory guards" and "societies for sports and technics" were alerted and armed through some towns. The armed forces, including most Soviet army divisions, were also alerted. The government took its line from Moscow regarding Hungary, where "counter-revolutionaries" had attacked the state, and Poland, where Stalinist mistakes had necessitated a change of regime.

(T. PE.)

Education.—*German Federal Republic.*—Schools (May 1955), excluding Hamburg and Bremen: primary 29,465, pupils 4,636,470, teachers 158,053; higher primary 806, pupils 323,409, teachers 13,828; secondary 1,572, pupils 775,320, teachers 41,532; all-age schools (Schleswig-Holstein, Hamburg and Bremen) 487, pupils 299,633, teachers 10,135; vocational, including 7 higher technical institutes (Nov. 1954), 7,866, pupils 2,441,744, teachers 70,574; teacher training (Nov. 1954) 84, students 13,187; universities 17, students (1955) 88,336, teaching staff (1953) 4,908; other institutions of higher education (1955) 29, students 23,260, teaching staff (1953) 1,839. Music, art and physical training colleges (1955) 9, students 5,087.

German Democratic Republic.—Schools (1950): primary 10,900, pupils 1,440,000; secondary 560, pupils 233,000. Institutions of higher education (1955) 46, including 6 universities, students 57,500.

Finance and Banking.—*German Federal Republic.*—Monetary unit: Deutschmark, with an exchange rate of 4.16 DM. to the U.S. dollar. Budget (1955-56 closed account) revenue 32,761,000,000 DM., expenditure 29,788,000,000 DM.; (1956-57 estimate) balanced at 35,022,000,000 DM. Internal debt (March 1955) 10,699,000,000 DM.; external debt 9,432,000,000 DM. Currency circulation (Dec. 1954) 12,780,000,000 DM., (Dec. 1955) 14,090,000,000 DM. Deposit money (Dec. 1954) 13,630,000,000 DM., (Dec. 1955) 14,980,000,000 DM. Gold and foreign exchange, official holdings (Dec. 1954) U.S. \$2,682,000,000, (Dec. 1955) U.S. \$3,121,000,000.

German Democratic Republic.—Monetary unit: Deutschmark with an official exchange rate, high and fictitious, of 45 U.S. cents. In western Berlin

the average free exchange rate in 1956 was 1 westmark=4.80 ostmarks. Budget (ostmarks, 1954 actual; 1955 est. in parentheses): revenue 36,220,200,000 ost. (38,166,900,000 ost.), expenditure 36,142,900,000 ost. (38,138,100,000 ost.).

Foreign Trade.—*German Federal Republic.*—(1955) Imports 24,357,000,000 DM.; exports 25,677,000,000 DM. Main sources of imports: continental E.P.U. (European Payments union countries) 43%; U.S. and Canada 15%; Latin America 11%; U.K. 4%; other sterling area 11%. Main destinations of exports: continental E.P.U. 57%; Latin America 8%; U.S. and Canada 7%; U.K. 4%; other sterling area 9%. Chief exports (1954): motor vehicles 8.3%; electrical machinery 7.6%. Chief imports: raw cotton and cotton products 5.6%; wheat 5.4%.

German Democratic Republic.—(UN Economic Commission for Europe's estimates, in U.S. dollars, 1954.) Trade turnover with all countries: \$2,630,000,000, including \$1,960,000,000 with the countries of the Communist group.

Transport and Communications.—*German Federal Republic.*—Railways (1954) 35,247 km.; passenger-km. (1954) 33,207,000,000; freight, ton-km. (1955) 58,068,000,000. Roads (March 1955): classified 129,238 km., including 2,148 km. of *Autobahnen*; local (unclassified) approximately 120,000 km. Motor vehicles in use (Jan. 1956): cars 1,620,000; commercial vehicles 967,400. Shipping (July 1954): merchant vessels of 100 gross tons and over 1,895; total tonnage 2,652,738. Cargo in western German ports in external trade (metric tons, 1955): loaded 15,360,000; unloaded 35,280,000. Navigable inland waterways (1953) 4,259 km. Telephones (including west Berlin, Jan. 1955) 3,685,950. Radio receivers (Jan. 1955) 12,284,434.

German Democratic Republic.—Railways (1951): 14,400 km. Roads (1950): 54,900 km. Telephones (1951): 332,200. Radio receiving sets (1952): 3,400,000.

Agriculture.—*German Federal Republic.*—Production (metric tons, 1955; 1954 in parentheses): wheat 3,378,000 (2,893,000); rye 3,498,000 (4,100,000); barley 2,079,000 (1,920,000); oats 2,478,000 (2,473,000); potatoes 22,874,000 (26,769,000); milk 16,908,000; butter (from factories) 290,400; cheese (from factories) 154,800; beef and veal 734,000; mutton and lamb 24,000; pork 1,326,000; beet sugar (raw value) 1,300,000; wine 2,210,000 hl. Livestock (Dec. 1955): cattle 11,552,500; pigs 14,593,300; sheep 1,188,000; horses 1,098,500; chickens 52,301,900. Fish landings (1955) 751,300 metric tons.

German Democratic Republic.—Main crops (metric tons, 1934-38; latest estimates in parentheses): wheat 1,553,000 (1955, 1,300,000); rye 2,070,000 (1955, 2,500,000); barley 1,028,000 (1955, 1,200,000); oats 1,587,000 (1955, 1,600,000); potatoes 13,649,000 (1954, 16,753,000); sugar beets 5,467,000 (1954, 5,195,000). Livestock (1938; 1954 in parentheses): cattle 3,647,000 (3,793,000); pigs 5,707,000 (8,367,000); sheep 1,771,000 (1,712,000); horses 811,000 (695,000).

Industry.—*German Federal Republic.*—Fuel and power (metric tons, 1955): coal 130,728,000; lignite 90,360,000; crude oil 3,144,000; coke 43,584,000; electricity 75,780,000,000 kw.hr.; manufactured gas 20,868,000,000 cu.m. Production (metric tons, 1955): iron ore (metal content 30%) 11,376,000; pig iron 16,488,000; crude steel 21,336,000; zinc 195,720; copper 253,560; lead 107,640; aluminum 230,280; cement 18,768,000; cotton yarn 372,720; woven cotton fabrics 259,200; wool yarn 114,600; rayon filament yarn 68,640; rayon staple fibre 148,800; potash (K₂O content) 2,019,719; passenger cars (units, 1955) 705,480; commercial vehicles (units, 1955) 203,160. New dwelling units completed (1954) 542,400. Merchant vessels launched (100 gross tons and over, 1955) 926,800 gross tons. Index of production (Feb. 1956; 1953=100) 130. Index of employment (Sept. 1955; 1953=100) 117.

German Democratic Republic.—Production (metric tons, 1936; 1955 in parentheses): coal 3,525,000 (3,500,000); lignite 101,100,000 (200,000,000); liquid fuel, synthetic 500,000 (1,575,000); electricity 13,900,000,000 kw.hr. (28,750,000,000 kw.hr.); iron ore 300,000 (1,700,000); pig iron 200,000 (1,520,000); steel 1,200,000 (2,500,000); potash salt 1,000,000 (1,571,000); cement 1,700,000 (2,950,000); sulphuric acid 302,000 (483,000); synthetic rubber (1955) 70,000; natural yarns, excluding synthetic fibres 213,000 (250,000); textiles, excluding cloth for sacks and rough-yarn cloths (1955) 505,000,000 sq.m.; leather shoes 15,000,000 (18,000,000) pairs; sugar 618,000 (1954; 733,000).

ENCYCLOPÆDIA BRITANNICA FILMS.—*Germany* (1955).

Gerontology. Perhaps most interesting to all gerontologists during 1956 were the investigations to find out if an increase in the fatlike substance cholesterol in the blood produces disease of the arteries, with a plugging up of these vessels and the production of heart attacks or little strokes.

If blood cholesterol is the offender, how does it work? Why does it pile up in the blood of some persons? Why does it rarely pile up in the blood of others, as for example the Chinese? By measuring some fraction of the fat in the blood of a person, can it be determined what chance he has of getting a heart attack? What can be done to protect those who now have a high blood cholesterol titre?

The answers were being sought by men such as John Gofman, who was studying certain fractions of the blood fats, and Ancel Keys, who was travelling about the world studying the blood cholesterol titres of people such as the Italians, who live mainly on starches, and the Japanese, who eat little fat.

Next in importance might be the work of a number of men who were studying the retirement plans of many companies, the satis-

JAVIER PEREIRA, reported to be 167 years old, arriving at Miami, Fla., in Aug. 1956. The 4 ft. 4 in. Colombian Indian was brought to the U.S. to be studied by longevity investigators

factions and dissatisfactions of retirement, the possibilities of finding work for many retired persons and the problem of finding a good place for retirement.

Howard Rusk and his coworkers had done excellent work in showing that experts can go into a hospital for forgotten old persons and get 97 out of 100 of them out of bed. Some can be taught to walk, some to use crutches and some to get into a wheel chair. They can be taught to get up and take care of themselves and go to meals at table. Some can even be taught to do work that will bring in money.

Surgeons were doing hopeful work in transplanting short segments of artery to replace segments in which the vessel has almost plugged up because of disease. As a result, a man who has been in a wheel chair with weakened and painful legs and the threat of gangrene may get up and take a job as a postman. Artery banks were being established for the helping of such persons.

(W. C. Az.)

Gibraltar. A British fortress colony, city and port, Gibraltar lies on a peninsula from the southwest coast of Spain at the western entrance to the Mediterranean. Area: 2 sq.mi. Pop., excluding armed forces (1951 census) 21,314; (1954 est.) 25,000, mainly of Italian origin. Language: English and Spanish. Religion: mainly Roman Catholic. Governor in 1956: Lieut. Gen. Sir Harold Redman.

History.—Although the restrictions imposed by the Spanish

government in 1954 on the free flow of goods, visitors and labour across the Spanish frontier continued, trade and finances of the colony improved in 1956. A government scheme to build 300 flats over a period of five years at a cost of £1,000 was started. Plans for port development and a new airport terminal building were prepared. New hotel accommodations were being built to cope with the rapid increase in the number of tourists.

The political situation was quiet. The constitution was amended to provide for a majority of elected members in the legislative council and for an equal number of official and unofficial members on the executive council. At the elections held in September, four members of a Labour party, the Association for Advancement of Civil Rights, and three centre and right-wing candidates were returned to office.

Glass. Production and sales of the United States glass industry continued high during 1956. More than 10,000,000 glass containers were made during the first six months of the year, an increase of 4% over the same period in 1955. In the flat glass field, slackening of demand for windshields resulting from the drop in automobile production was offset by increased requirements for building construction and home furnishings. Employment was about 30,000 in the flat glass industry. More than 700,000,000 tumblers and 400,000,000 pieces of table kitchen and household glassware were manufactured and sold during the year.

Glass Container Industry Statistics, U.S.

Year	1956*	1955	1954	1953
Shipments	138,518†	137,228	124,649	127,516
Production	141,367†	138,470	126,898	128,892

*Total for the 12 months ending July 1, 1956.

†Thousands of gross, figures released by Bureau of the Census, U.S. Department of Commerce.

New products made of glass and glass fibres appeared on the market. A heat protective suit of glass fibre fabric, coated with a thin layer of aluminum, enables a man to stay up to two to three minutes in a furnace at 1,200° F. Fiberfrax, a refractory aluminum silicate glass fibre, may be used for insulating furnaces up to 2,300° F. Fibre glass reinforced plastic panels, pipe, padded automotive instrument panels and new sound absorbing insulation appeared along with fibre glass bows, fishing rods, boats and golf club shafts. Solderglass, a superalloy of lead, aluminum, zinc borosilicate, was developed for sealing joints of ordinary glass together to make such things as double paned windows and colour television tubes. Silicone treatment of bottles prevents abrasion of the surface and maintains strength for a greatly extended service life. Precision bore tubing, shaped by a vacuum process on a stainless steel mandrel, was another new development in the glass field.

In the field of artistic glass, a series of 36 crystal shapes engraved from drawings by leading contemporary artists of the near east and far east was produced by Steuben Glass, Inc., entitled "Asian Artists in Crystal." The collection was the result of an unusual form of co-operation between artists of the east and craftsmen of the west.

The fourth International Congress on Glass met in Paris, during the first week of July. Nearly 400 delegates from more than 20 nations were in attendance. A total of 53 papers were

presented, which discussed new types of glasses, the reactions by which glass is made from its raw materials, the behaviour of glass during manufacture, physical properties and control of glassmaking, the structure of glass and the effect of radiations on glass. (C. H. G.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Glass* (from the old to the new through research) (1954).

Gliding. Fifty-eight pilots from 25 countries attended the world gliding championship contest at St. Yan, Fr., June 30 to July 7, 1956. Paul B. MacCreedy, Jr., of the United States won the title of world champion, flying a Breguet 901. Second place went to S. Juez of Spain, flying a Sky, and third place was earned by W. Gorzelak of Poland, flying a Jaskolka. First place in the two-place category went to H. N. Goodhart and F. Foster of Great Britain, flying a Slingsby Eagle.

The international records established in 1956 were: a 300-km. triangular course record of 47.162 m.p.h. by G. A. Goodhart on Jan. 9 in an LO-150; a goal record of 416 mi. by R. Fonteilles on May 13, in a Breguet 901; a feminine record goal flight of 356 mi. on Aug. 10 in a Jaskolka by Mme. Majewska.

Several national records were established in 1956. In Belgium, Mme. Debauche flew a Spalinger on May 15 for a feminine distance record of 65 mi., and J. d'Otreppe set a goal and return record of 149 mi. Four British records were set away from Great Britain: G. A. Goodhart, flying an LO-150, set a goal and return record of 205 mi. on Jan. 9 in Australia; H. N. Goodhart, brother of G. A. Goodhart, and F. Foster set a two-place goal and return record of 141 mi. in a T-42B on June 27 in France; P. A. Wills set a speed record of 33.3 m.p.h. for the 200-km. triangular course on June 28 in the Skylark III in France. In France, P. Lepanse set a speed record on April 23 of 40.4 m.p.h. for the 200-km. triangular course in a Breguet 901; B. Costa and W. Pratt set a 258-mi. goal record for two-place gliders in a Ka-2b Rhonschwalbe on May 13; and on Aug. 21 a goal and return flight of 175 mi. constituted a two-place record by M. Simeoni and M. Fontaine.

In the United States the following records were established: a speed record of 43.94 m.p.h. for the 300-km. triangular course by P. Bikle on July 21 in a Schweizer 1-23; a 340.52-mi. goal flight by L. Maxey on August 1; a 248.07-mi. two-place record on Aug. 4 by H. Hutchinson and B. Denison; 217.04-mi. goal and return two-place record on Aug. 8, and a speed record of 41.023 m.p.h. for the 100-km. triangular course on Aug. 9, by H. Hutchinson and E. Hoggard both in an LK-10A.

The following new sailplanes were designed and built during 1956: in Canada the BKB-1, a flying wing designed by B. K. Bodok; in Germany the LO-150, a high-performance sailplane designed by A. Vogt; in Italy the Vergiate Sailflying Sports section of the SIAI-Marchetti company designed the high-performance sailplane the EOLO 3 V-1; in Finland the PIK-3, a high-performance sailplane was designed by L. Norrmen and I. Louname; in Switzerland A. Markwalder designed the Elfe M, a high-performance sailplane; in the United States W. G. Briegleb designed the BG-12, a high-performance sailplane, and D. S. Mitchell produced the high-performance sailplane, Nimbus III.

The 1956 national championship contest in Belgium was won by Mme. Debauche. The third Brazilian national gliding championship was held from Feb. 12 to 20. The winner in category A was A. Oliveira flying a BN-1, and the winner in category B was P. Santos, flying a Grunau.

Forty-four pilots competed in the 23rd national soaring contest which was held at Grand Prairie, Tex., July 31 to Aug. 9, 1956. A total of 42,200 mi. was flown; 15 flights were longer than 100 mi., and 45 flights were more than 200 mi. long. Lyle Maxey earned the title of national champion, flying a sailplane of his own design. (B. SK.)

Gold. World gold monetary reserves continued to grow throughout 1956 (Chart I). In Sept. 1956, they stood at about \$38,500,000,000 as against \$37,870,000,000 a year earlier (excluding the U.S.S.R.). Of the 1956 total, the United States held \$22,032,000,000 (\$287,000,000 above Sept. 1955); other countries, together with the Bank for International Settlements and the European Payments union, held about \$14,750,000,000 (\$375,000,000 above Sept. 1955), and the International Monetary fund \$1,711,000,000 (\$40,000,000 below Sept. 1955). In Sept. 1956, the United States thus held 57% of the world monetary gold stock, as against 70% in Sept. 1949.

Of the increase in the United States stock, \$82,000,000 was purchased from other countries (the first net purchases since 1952) and \$175,000,000 from the International Monetary Fund. The countries outside the United States added to their monetary stocks chiefly by purchases from new production. New gold output (excluding the U.S.S.R.) was about \$1,000,000,000; the portion of it not absorbed into official reserves—about one-third, as a year previous—went to meet the needs of the arts and industry and private hoarding demand.

The bulk of the newly mined gold was disposed of through the London gold market. The dollar equivalent of the London price remained within the United States buying and selling prices of \$34.9125 and \$35.0875 (\$35 plus or minus 1%), at which the Federal Reserve Bank of New York, acting on behalf of the United States treasury, deals with foreign monetary authorities. Sellers thus received a higher price in London, and foreign monetary authorities found it cheaper to acquire gold in London than from the United States treasury.

Besides gold, countries outside the United States in Sept. 1956 held about \$14,400,000,000 in the form of dollars, on both official and private account (including primarily deposits in United States banks and short-term and certain longer-term United States government securities) or about \$1,600,000,000 more than a year previous (Chart I). This rise was due to the excess of payments made by the United States for imported goods and services, and on account of government grants, military expenditures, and government and private capital outflows, over current and capital payments made by other countries to the United States.

Total gold and dollar holdings of countries other than the United States in Sept. 1956 amounted to \$29,100,000,000. They were \$14,000,000,000, or nearly twice as high as in Sept. 1949,

CHART I.—GOLD AND DOLLAR HOLDINGS OF COUNTRIES OTHER THAN THE U.S., including the Bank for International Settlements and the European Payments union; excluding other international institutions and, as regards gold, the U.S.S.R. Holdings include official gold reserves (reported or estimated), official and private short-term dollar holdings as reported by banks in the U.S., and estimated holdings of U.S. government securities having an original maturity of more than one year

CHART II.—GOLD AND DOLLAR HOLDINGS OF SELECTED AREAS, in billions of U.S. dollars. Holdings include official gold reserves (reported or estimated), official and private short-term dollar holdings as reported by banks in the U.S., and estimated holdings of U.S. government bonds and notes having an original maturity of more than one year. *Includes holdings of Turkey and those of the Bank for International Settlements for the European Payments union as well as for its own account; gold to be distributed by the Tripartite Commission for the Restitution of Monetary Gold is also included. †Excluding sterling, French-franc and Dutch-guilder areas

the date of the general currency devaluations, and \$9,500,000,000, or about 50%, higher than in March 1952, before the current build-up of gold and dollar holdings had begun. These aggregates conceal, of course, important changes in gold and dollar holdings of particular countries and areas (Chart II). During the twelve months ended Sept. 1956, the holdings of continental western Europe increased by \$1,300,000,000 (West Germany and Switzerland were the principal gainers, and France the main loser); those of Latin American and Asian countries, as well as of Canada, showed moderate increases. The aggregate gold and official and private dollar holdings of sterling-area countries showed a small increase, but central gold and official dollar holdings held by the United Kingdom as the area's banker fell by \$17,000,000; they fell further by \$363,000,000 in October and November.

Not only was the rise in gold and dollar holdings unevenly distributed, but in some countries it reflected merely receipts of dollars under defense support and other aid programs of the United States. Another weakness in international payments was the renewed payments difficulties in many countries, due to an inflationary rise in demand (which led to larger imports and smaller exports), price and cost disparities, and other factors, some of a speculative character.

(M. A. K.)

World Production.—The gold output of the world by the principal countries producing it are shown in the table, based on data of the U.S. bureau of mines. Because estimates only were available for the U.S.S.R., the grand total is provisional.

United States.—Domestic output of gold in 1955 was 1,876,800 oz. or 3% greater than in 1954. In 1955 South Dakota, Utah, and California produced 65% of the total. In the first half of 1956, domestic output was about 685,500 oz. The leading gold-producing state was South Dakota, with nearly 40% of the six-month total; together with Utah and California, the three states produced 88%. Some is by-product gold from base metal ores, chiefly copper, but most of it is from straight gold mining—both lode and placer.

Canada.—The second largest world producer of gold increased its output of gold to 2,911,947 oz. in the first eight months of 1956.

Mexico.—Effective Jan. 1, 1956, a decree of the Mexican congress raised the production tax on gold.

Union of South Africa.—The world's largest known producer

World Production of Gold (Refinery Production)

	1949	1950	1951	1952	1953	1954	1955

Gold Coast. Comprising British colonies (Gold Coast colony and Ashanti), protectorate (Northern Territories) and Togoland (under U.K. trusteeship; western part of former German colony), the Gold Coast is located on the west coast of Africa, bounded west, north and east by French territories (Ivory Coast, Upper Volta, Togo). The territories are administered together. Total area: 91,843 sq.mi. Total pop. (1948 census) 4,118,450; (1955 est.) 4,620,000. Capital, Accra. Areas and populations are as shown in the table.

Territory	Area (sq.mi.)	Population (1948 census)	Capital or chief town (1948 census)
Gold Coast colony	23,937	2,050,235	Accra (135,926)
Ashanti	24,379	818,944	Kumasi (59,420)
Northern Territories	30,486	866,503	Tamale (16,164)
Togoland	13,041	382,768*	Ho (5,840)

*This figure is included in the figures for Gold Coast colony and the Northern Territories with which Togoland is administered.

Languages: tribal tongues; Hausa. Religions: pagan; Moslem and Christian minorities. Other chief towns (pop. 1948 census): Sekondi-Takoradi 44,557; Cape Coast 23,346; Koforidua 17,806. Governor in 1956, Sir Charles Arden-Clarke; prime minister Kwame Nkrumah.

History.—On Jan. 1, 1956, the prime minister, K. Nkrumah, leader of the Convention People's party (C.P.P.), invited all parties to a conference to study the Bourne report recommending a major transfer of power from central to regional authorities. In May the *asanteman* council, which had previously boycotted discussion on the constitution, stated that independence was no longer an issue in dispute but that the constitution must be agreed upon and followed by general elections before and not after, the achievement of independence. The National Liberation movement rejected the government proposals on the constitution but reaffirmed its desire for independence and commonwealth membership.

On May 11 the secretary of state for the colonies, A. Lennox-Boyd, announced that because of the dispute about the constitution elections should be held and the U.K. government would then accept a resolution by the house of assembly calling for independence, if passed by a reasonable majority, and declare a firm date for the granting of independence. In July control of the Gold Coast forces was transferred from the war office to the governor. General elections were held on July 12 and 17. The C.P.P. won all seats in the colony and 8 out of 21 in Ashanti. In the Northern Territories the Northern People's party won 15 out of 26 seats.

Meanwhile, on May 9, the Togoland trust territory had voted by plebiscite in favour of integration with the Gold Coast, after the grant of independence, and the UN Trusteeship council advised the general assembly that the result of the plebiscite be accepted.

On Aug. 3 the house of assembly passed a resolution requesting

TOGOLAND RESIDENT amusing fellow tribesmen and officials during registration for plebiscite held May 9, 1956, to determine the political future of the territory presently administered by Great Britain as part of the Gold Coast colony.

The U.K. government for independence (the opposition boycotted the debate, objecting to the request for independence before a constitution had been agreed upon), and on Sept. 18 the secretary of state for the colonies announced that, subject to parliamentary approval, the Gold Coast on March 6, 1957, would become an independent state within the commonwealth under the name of Ghana. If the UN general assembly agreed, the trust territory of Togoland would be included. On Oct. 8 government and opposition agreed to discuss all aspects of the constitution.

(See also TRUST TERRITORIES.)

(W. H. Is.)

Education.—Schools (1955): primary 3,271, pupils 403,201; middle 864, pupils 104,585; secondary 64, pupils 8,602; teacher training colleges 28, students 3,182. Higher education: University college of the Gold Coast, students 471; Kumasi college of technology, students 676.

Finance and Trade.—Monetary unit: West African pound (£W.A.I.=£1 sterling=U.S. \$2.80). Budget (1954-55): revenue £80,567,534, expenditure £79,860,268. Foreign trade (1954): imports £71,154,510, exports £14,673,025. Main exports: cocoa, gold, diamonds, manganese, bauxite.

Golf. There were several thrilling triumphs recorded in United States major golf championships of 1956. One of these saw Cary Middlecoff of Memphis, Tenn., a former dentist, win the U.S. open title at Rochester, N.Y., in a close finish. Middlecoff, who also won this event in 1949, posted 281 for 72 holes. Ben Hogan, trying for an unprecedented fifth U.S. open crown and the only current competitor who had ever won the championship four times, finished in a tie with Julius Boros for second at 282. Hogan seemed about to close in on Middlecoff but at the first hole failed to sink a two-foot putt. Peter Thomson, the Australian, who led at the conclusion of the first 36 holes, finished in a tie at 285 with Ed Furgol and Ted Kroll.

Thomson left for England shortly after this tourney and proceeded to win the British open for the third straight year. At Hoylake, Thomson's golf brought him a winning aggregate of 286. Flory Van Donck of Belgium finished second at 289.

Despite the fact that Kroll had tossed away a golden opportunity in the U.S. open, he later emerged as the leading money player of the year. He met a setback in the Professional Golfers Association (P.G.A.) championship at Canton, Mass., where he bowed in the final to Jack Burke, Jr., of Houston, Tex., by 1 and 2. But Kroll, registered from St. Petersburg, Fla., went on to win the "world's championship," annually sponsored by George S. May at Chicago's Tam O'Shanter course. The first

prize that Kroll won as a result of his score of 273 was \$50,000. This rich plum helped him boost his winnings for the year to more than \$70,000.

Burke, besides winning the P.G.A. title for the first time, enjoyed a noteworthy season by crashing through to bag the Masters tournament at Augusta, Ga., in the spring. Ken Venturi, a 22-year-old amateur from San Francisco, Calif., had set a whirling pace to lead the brilliant field chiefly composed of the nation's top professional players. However, in the fourth and final round, Venturi closed with an 80 while Burke finished with a 71 which brought him the victory at 289. Venturi was next with 290 while Middlecoff trailed by a stroke at 291.

The national amateur championship went to Harvie Ward, Jr., of San Francisco. Ward, who was born in Tarboro, N.C., repeated his 1955 triumph. In the 36-hole final at the Knollwood club, Lake Forest, Ill., he turned back Charles Kocsis of Royal Oak, Mich., by 5 and 4. Thus Ward became the first golfer to win this championship twice in succession since Lawson Little (also of San Francisco) accomplished this feat in 1935, prior to entering the professional ranks.

Ben Hogan appeared on the international scene by competing in the Canada cup matches at Wentworth, Eng., with Sam Snead as his partner. This United States pair won the cup and Hogan scored as the individual star.

The United States, whose amateurs won the Americas cup against Canadian and Mexican men's teams, was not as successful in the biennial Curtis cup matches. The women's amateur team bowed to the British women at Sandwich, Eng., by 5 to 4.

An American girl, 19-year-old Margaret (Wiffi) Smith of St. Clair, Mich., succeeded in capturing the British women's championship in an all-American final. Miss Smith vanquished Mary Patton Janssen of Charlottesville, Va., by 8 and 7 and later added the women's French amateur title as well. In the U.S. women's amateur, Miss Smith lost to Ann Carey Johnstone of Mason City, Ia., in a 19-hole third-round encounter. The tournament was staged at the Meridian Hills Country club, Indianapolis, Ind. The eventual winner was Marlene Stewart of Fonthill, Ont., who became the first Canadian-born golfer to carry off this honour. Miss Stewart defeated 17-year-old JoAnne Gunderson of Kirkland, Wash., 2 and 1, in the final. The U.S. women's open went to Katharine Cornelius after a play-off with amateur Barbara McIntire, 75 to 82, at the Northland Country club, Duluth, Minn.

SWINGING FROM THE CLUBHOUSE ROOF after his tee shot on the 9th hole landed there, Tom Davies of the University of Iowa fired his second shot just short of the green during the Iowa Open golf tournament at Okoboji, Ia., in Sept. 1956

An outstanding achievement was the winning of the British amateur by an unheralded 18-year-old, John C. Beharrell, who defeated Leslie Taylor 5 and 4. (L. A. WN.)

Government Departments and Bureaus, U. S.

The principal departments and bureaus of the U.S. government, and their chief executive officers as of Oct. 1, 1956, were:

Department or bureau	Name	Post
Department of state	*Dulles, John Foster	Secretary
U.S. mission to the UN	Hoover, Herbert, Jr.	Undersec'y.
International Cooperation administration	*Lodge, Henry Cabot, Jr.	U.S. Representative
	Hollister, John B.	Director
Department of the treasury	*Humphrey, George M.	Secretary
	Burgess, W. Randolph	Undersec'y.
Office of the comptroller of the currency	Gidney, Ray M.	Comptroller
Office of the treasurer of the U.S.	Priest, Ivy Baker	Treasurer
Bureau of customs	Kelly, Ralph	Commissioner
Internal revenue service	Harrington, Russell C.	Commissioner
Bureau of narcotics	Anslinger, Harry J.	Commissioner
Bureau of the mint	Brett, William H.	Director
U.S. savings bonds division	Buckley, John R.	Natl. Director
*U.S. coast guard	Richmond, Alfred C.,	
	Vice-Adm.	Commandant
*U.S. secret service	Baughman, U. E.	Chief
Department of defense	*Wilson, Charles E.	Secretary
Joint chiefs of staff	*Radford, Arthur W., Adm.	Chairman
	*Taylor, Maxwell D., Gen.	
	*Burke, Arleigh A., Adm.	
	*Twining, Nathan F., Gen.	
	Pate, Randolph McC.,	
	Gen.1	
Armed Forces Policy council	*Wilson, Charles E.	Chairman
Department of the army	*Brucker, Wilber M.	Secretary
	Finucane, Charles C.	Undersec'y.
Chief of staff	*Taylor, Maxwell D., Gen.	Chief
Women's army corps	Galloway, Irene O., Col.	Director
Department of the navy	*Thomas, Charles S.	Secretary
	Gates, Thomas S., Jr.	Undersec'y.
Chief of naval operations	*Burke, Arleigh A., Adm.	Chief
Asst. chief for women, bureau of naval personnel	Wilde, Louise Kathleen,	
	Capt.	Ass't. Chief for Women
*U.S. marine corps	Pate, Randolph McC., Gen.	Commandant
Women marines	Hamblet, Julia E., Col.	Director
Department of the air force	*Quarles, Donald A.	Secretary
	Douglas, James H.	Undersec'y.
Chief of staff	*Twining, Nathan F., Gen.	Chief
Women in the air force	Gray, Phyllis D. S., Col.	Director
Department of justice	*Brownell, Herbert, Jr.	Att'y. Gen.
Deputy attorney general	Rogers, William P.	Deputy Att'y. Gen.
*Federal Bureau of Investigation	Hoover, J. Edgar	Director
Bureau of prisons	Bennett, James V.	Director

Department or bureau	Name	Post
*Immigration and naturalization service	Swing, Joseph M.	Commissioner
*Post office department	*Summerfield, Arthur E.	Postmaster Gen.
Department of the interior	*Seaton, Fred A.	Secretary
Bureau of land management	Woolley, Edward	Director
Bureau of Indian affairs	Emmons, Glenn L.	Commissioner
*Geological survey	Nolan, Thomas B.	Director
Fish and wildlife service	Farley, John L.	Director
Bureau of reclamation	Dexheimer, Wilbur A.	Commissioner
*National park service	Wirth, Conrad L.	Director
Bureau of mines	Ankeny, Marling J.	Director
Office of territories	Lausi, Anthony T.	Director
Defense Minerals Exploration administration	Mittendorf, C. O.	Administrator
Bonneville Power administration	Pearl, William A.	Administrator
Southwestern Power administration	Wright, Douglas G.	Administrator
Southeastern Power administration	Leavy, Charles W.	Administrator
Department of agriculture	*Benson, Ezra Taft	Secretary
Federal-States relations	Peterson, Ervin L.	Ass't. Secretary
Agricultural conservation program service	Koger, Paul M.	Administrator
*Agricultural Research service	Shaw, B. T.	Administrator
Farmer cooperative service	Knapp, Joseph G.	Administrator
Federal extension service	Ferguson, Clarence M.	Administrator
Forest service	McArdle, Richard E.	Chief
*Soil conservation service	Williams, Donald A.	Administrator
Agricultural Stabilization	McLain, Marvin L.	Ass't. Secretary
Commodity Credit corporation	Morse, True D.	President
Commodity Stabilization service	Berger, Walter C.	Acting Administrator
Federal Crop Insurance corporation	McCartney, Frank N.	Manager
Agricultural Credit services	Scott, K. L.	Director
*Farmers Home administration	Hansen, Kermit H.	Administrator
*Rural Electrification administration	Hamil, David A.	Administrator
Marketing and Foreign Agriculture	Butz, Earl L.	Ass't. Secretary
Agricultural Marketing service	Wells, O. V.	Administrator
Commodity Exchange authority	Kauffman, Rodger R.	Administrator
Foreign agricultural service	Garnett, Gwynn	Administrator
Department of commerce	*Weeks, Sinclair	Secretary
	Williams, Walter	Undersec'y.
	Rohschild, Louis S.	Undersec'y.
		(transportation)
	Mueller, Frederick H.	Ass't. Sec'y.
		(domestic affairs)
	McClellan, Harold C.	Ass't. Sec'y.
		(international affairs)
	Moore, George T.	Ass't. Sec'y.
		(administration)
*Bureau of the census	Burgess, Robert W.	Director
National bureau of standards	Astin, A. V.	Director
*Coast and geodetic survey	Karo, H. Arnold	Director
*Civil Aeronautics administration	Pyle, James T.	Acting Administrator
*Patent office	Watson, Robert C.	Commissioner
Weather bureau	Reichelderfer, Francis W.	Chief
Bureau of public roads	Curtiss, C. D.	Commissioner
Maritime administration	Morse, Clarence G.	Administrator
Business and Defense Services administration	McCoy, Horace B.	Administrator
Department of labour	*Mitchell, James P.	Secretary
	Larson, Arthur	Undersec'y.
Bureau of labour statistics	Clague, Ewan	Commissioner
Bureau of apprenticeship	Patterson, William F.	Director
Women's bureau	Leopold, Alice K.	Director
Bureau of labour standards	Gurske, Paul E.	Director
Wage and hour and public contracts divisions	Brown, Newell	Administrator
Bureau of employment security	Goodwin, Robert C.	Director
Bureau of employees' compensation	McCauley, William	Director
Department of health, education and welfare	*Folsom, Marion B.	Secretary
	Hunt, Herold C.	Undersec'y.
*Public health service	Burney, Leroy E.	Surgeon Gen.
Office of education	Rackley, John R.	Acting Commissioner
*Social Security administration	Schotland, Charles I.	Commissioner
*Food and Drug administration	Larrick, George P.	Commissioner
Office of vocational rehabilitation	Switzer, Mary E.	Director
Independent offices and establishments		
*Atomic Energy commission	Strauss, Lewis L.	Chairman
Civil Aeronautics board	Durfee, James R.	Chairman
*District of Columbia	McLaughlin, Robert E.	President of the Board
*Export-Import Bank of Washington	Waugh, Samuel C.	President and Chairman
*Farm Credit administration	Tootell, Robert B.	Governor
*Federal Civil Defense administration	Peterson, Val	Administrator
*Federal Communications commission	McConaughy, George C.	Chairman
*Federal Deposit Insurance corporation	Cook, H. Earl	Chairman
Federal Home Loan Bank board	Robertson, Albert J.	Chairman
Federal Mediation and Conciliation service	Finnegan, Joseph F.	Director
*Federal Power commission	Kuykendall, Jerome K.	Chairman
*Federal reserve system, board of governors of the	Martin, William McC., Jr.	Chairman
*Federal Trade commission	Gwynne, John W.	Chairman
Foreign Claims Settlement Commission of the United States	Gilliland, Whitney	Chairman
General accounting office	Campbell, Joseph	Comptroller Gen. of the U.S.
General Services administration	Floete, Franklin G.	Administrator
Public buildings service	McConihe, F. Moran	Commissioner
National archives and records service	Grover, Wayne C.	Archivist of the U.S.
Federal supply service	Mack, Clifton E.	Commissioner
Defense Materials Service	Weaver, Elmer H.	Commissioner
Transportation and public utilities service	Goodyear, Clarence J.	Commissioner

Great Britain & Northern Ireland,

United Kingdom of. The United Kingdom, in northwest-ern Europe, comprises the main island of Great Britain (kingdom of England, principality of Wales and kingdom of Scotland) and the six northeastern counties of Ireland, together with many small islands. It is a constitutional monarchy, with a sovereign and a parliament of two houses: the house of lords, which on Sept. 5, 1956, consisted of 4 peers of the blood royal, 826 hereditary peers (21 dukes, 27 marquesses, 35 earls, 106 viscounts and 537 barons; 19 peers, including 2 royal peers, were minors, not sitting), 26 spiritual peers (2 archbishops and 24 bishops [1 seat vacant]), 16 Scottish representative peers, a number of Irish representative peers (5 in 1956; vacancies no longer filled) and 8 life peers (high judicial officers; was also an hereditary peer); and the house of commons, 630 members (including the speaker) elected by universal suffrage. Table I shows areas and populations of the component parts and home dependencies of the United Kingdom of Great Britain and Northern Ireland.

Table I.—The United Kingdom

Division	Area (sq. mi.)	Population (1951 census)	(1955 est.)
England	50,871	41,584,328	44,441,000
Wales	7,474	2,173,560	5,140,000
Scotland	29,795	5,096,415	56,000
Isle of Man*	221	55,253	100,000
Channel Islands*	75	102,776	
Great Britain	88,436	49,012,332	49,737,000
Northern Ireland	5,459	1,370,921	1,399,000
United Kingdom	93,895	50,383,253	51,136,000

*Not part of legislative territory of U.K., but included in it for census purposes.

*Figure for four largest denominations in Northern Ireland represent "professions" (1951 census) rather than full membership or communicant status; they are therefore probably too high in comparison with those for corresponding denominations in the other three countries. †Established Church of England; disestablished Church in Wales, Episcopal Church in Scotland, Church of Ireland; figures are for "persons definitely attached," according to parish records, in 1953. ‡Figures are for full membership. §Calvinistic Methodist Church. ||Communicants, established Church of Scotland; other small Scottish Presbyterian bodies are excluded. ¶Figures are for full membership in 1953, Methodist conference churches only; Independent Methodists (U.K., 1953) 9,000, Wesleyan Reform union (G.B., 1952) 6,000. **Figures are for full membership, 1955 est. ††Mainly Welsh Independents (latest est.). Note: In England, Presbyterians, Methodists (including Independent Methodists and Reform union), Baptists, Congregationalists (including Countess of Huntingdon's Connexion chapels) and Moravians (1955: 3,000 communicants) are linked by the Free Church Federal council. Other important Christian bodies were (1954 U.K. figures): the Brethren (Plymouth Brethren) 80,000; Churches of Christ (164 churches); Salvation Army (132,000); Friends (Quakers) 21,000.

Language: English is almost universally spoken, but in Wales (1951 census) 1.7% of the population spoke Welsh only and 28.9% spoke both languages; in Scotland (1951 census), 2,652 spoke Gaelic only and 91,630 spoke both languages; in the Isle of Man 528 spoke English and Manx. Queen, Elizabeth II (q.v.). Prime minister in 1956: Sir Anthony Eden (q.v.).

The following is a list of cabinet members of Great Britain on Dec. 1, 1956:

Post	Name
Prime minister and first lord of the treasury . .	Sir Anthony Eden
Lord president of the council	Marquess of Salisbury
Lord privy seal and leader of the house of commons	R. A. Butler
Chancellor of the exchequer	Harold Macmillan
Lord Chancellor	Viscount Kilmuir
Secretary of state for foreign affairs	Selwyn Lloyd
Secretary of state for the home department and minister for Welsh affairs	Gwilym Lloyd-George
Secretary of state for Scotland	James Stuart
Secretary of state for commonwealth relations .	Earl of Home
Secretary of state for the colonies	A. T. Lennox-Boyd
Paymaster-general	Sir Walter Monckton
Minister of defense	Antony Head
Minister of housing and local government . . .	Duncan Sandys
President of the board of trade	Peter Thorneycroft
Minister of agriculture, fisheries and food . .	D. Heathcoat Amory
Minister of education	Sir David Eccles
Minister of labour and national service . . .	Iain Macleod
Chancellor of the duchy of Lancaster	Lord Selkirk
Minister of works	Patrick Buchan-Hepburn

History.—The year 1955 ended with a renewal of unfriendly exchanges between Great Britain and the U.S.S.R. The Soviet government leaders, N. S. Khrushchev and N. A. Bulganin, touring India and Burma, angered the British people by many provocative statements, in particular when they blamed the western powers for World War II.

Consideration by parliament of the major problem of inflation began early in 1956 with a declaration (Jan. 18) by the prime minister, Sir Anthony Eden, that price stabilization would be encouraged by all possible means. He also promised a drive against monopolistic practices in industry.

There was at this time much top-level diplomatic activity and discussion on the international situation, with Eden and Selwyn

DUKE OF EDINBURGH (right) talking to his children, Prince Charles and Princess Anne, before taking part in a polo match at Windsor Great Park, Eng., in June 1956

Lloyd, secretary of state for foreign affairs, arriving in Washington, D. C., on Jan. 30 for informal talks with Pres. Dwight D. Eisenhower and the U.S. secretary of state, John Foster Dulles. At home, television gained new devotees; considerably more than 5,000,000 licences were in circulation, and commercial television, which had been inaugurated in Sept. 1955, announced plans for expansion to the midlands, which were put into effect later in the year.

February began with the planned revelation that the former British diplomats D. Maclean and G. Burgess were in Moscow, and continued with further credit restrictions and another increase in the bank rate. The house of commons decided in favour of the abolition of hanging, but a measure to this effect was subsequently rejected by the house of lords, and the year ended with the publication of a government bill proposing to retain the death penalty only in certain exceptional cases.

After the tour of Nigeria by Queen Elizabeth II and the duke of Edinburgh in January and February, March began with sensational and ominous international news which was to continue, with increasing emphasis, throughout the year. The dismissal of Lieut. Gen. J. B. Glubb as commander of the Arab legion on March 2 was followed on March 9 by the deportation of Archbishop Makarios III from Cyprus on the charge that he had actively encouraged terrorists.

The evacuation by British troops of the Suez Canal Zone coincided with visits of Soviet leaders to Britain. First G. M. Malenkov, the former chairman of the council of ministers, made a three-weeks' tour, and then N. S. Khrushchev and N. A. Bulganin paid a visit (April 18-28). The latter was marked by a series of talks with British ministers and by a quarrel with the Labour party following incidents at a dinner given by the Labour party executive at the house of commons.

On this occasion H. T. N. Gaitskell, leader of the Labour party,

had asked the Soviet leaders to use their influence to obtain the release of Social Democrats imprisoned in the U.S.S.R. and east European countries. Khrushchev retorted angrily to this request and attacked the Labour party after his return to Moscow.

On May 15 talks in London on the future of the constitution of Singapore broke down, mainly over the question of internal security, and June saw a worsening of the situation in Cyprus with a great increase in terrorist activity.

On July 26 there occurred the event which was to have the gravest repercussions throughout the rest of the year. Egypt proclaimed its nationalization of the Suez Canal company, a decision which, it was alleged, had been provoked by the U.S. and British announcements that they would not finance the Aswan dam scheme which was to irrigate much of Egypt's parched land.

The British and the French denounced the decision as an act of plunder and took precautionary military measures. British families were evacuated from the Canal Zone and an international conference was convened in London at which only 2 of the 24 invited countries—Egypt and Greece—were not present.

Egypt proposed further discussions through the United Nations aimed primarily at a revision of the 1888 convention and, on Aug. 27, announced the arrest of two Britons and four Egyptians, and then two more Britons in connection with an alleged spying ring. So tension mounted while embassy and oil officials and newspaper correspondents were expelled from Egypt.

On the farms heavy rains in July, August and much of September were responsible for a particularly difficult harvest. The increased number of combine harvesters and drying plants made it possible eventually to rescue almost all the corn crops but drying costs were exceptionally high. Harvesting of potatoes and sugar beets later in the year was also difficult and expensive, but milk production was increased by the excellent growth of grass.

In the late summer and autumn there was no cessation of the cataract of events surrounding the Suez canal dispute. Parliament had been recalled from its summer recess. A second and then a third London conference were held and the decision taken to set up a Suez Canal Users' association, and as the Security council was called upon to consider Anglo-French and Egyptian points of view, the gravity of the situation was increased by news of border friction between Israel and Egypt.

Drama became nearly continuous. Army reservists who had been called up for the emergency held protest meetings in both Cyprus and Malta, and the Labour party conference—at which Aneurin Bevan was elected party treasurer—and the Conservative party conference were inevitably much concerned with international affairs. The U.S.S.R. took the stage with a threat to veto the Anglo-French Suez plan.

On Oct. 17 Queen Elizabeth II opened Britain's first nuclear power station at Calder Hall. This was the first such station to be completed in the world, and aroused widespread interest. On Oct. 15 the duke of Edinburgh started on a world tour, visiting Kenya, the Seychelles Islands, Ceylon, Malaya and New Guinea on his way to open the Olympic games at Melbourne, Austr., on Nov. 22. Thereafter he visited New Zealand and was to return through the south Pacific and the south Atlantic, visiting Gambia in January.

During October great enthusiasm was aroused by the visit to London of the Bolshoi ballet company. Then, while world attention was focused on the first reports of the Hungarian rising, Israel invaded Egypt and Britain and France gave a 12-hr ultimatum to the protagonists to cease fire. This was rejected by Egypt and on Oct. 31 British and French bombers attacked military targets in Egypt.

GREAT BRITAIN, 1956

People made the news. Throughout the summer English cities experienced scenes like that at top, left, in connection with the showing of a U.S. motion picture featuring "rock and roll" music. In April Irish nationalists made a daylight theft of a painting from the Tate gallery, London, after first advising a photographer to be present. Former U.S. president Harry S. Truman was awarded an honorary degree at Oxford (top, right) during his visit to England in the spring. Shown with him in the photograph is Mrs. Truman. In August British paratroops were sent to the mideast (right) and later participated in the Anglo-French invasion of Egypt. Nina Ponomareva (bottom, left), Soviet athlete, was arrested in London on a charge of stealing five women's hats. The ensuing diplomatic difficulties caused a cancellation of the track meet in which she was to appear. The mysterious disappearance of frogman Lionel Crabb (bottom, centre) was the subject of considerable speculation in April. He was reported to have last been seen investigating the waters of Portsmouth harbour where two Soviet warships were anchored during the visit of Premier Nikolai Bulganin and Nikita Khrushchev to England. Bulganin is shown at bottom, right, leaving New college, Oxford, after an inspection of the university

REFINERY FIRE at Essex, Eng., Sept. 24, 1956. Four thousand tons of fuel oil were burned before London firemen checked the blaze

This precipitated an international storm. The Anglo-French action was widely condemned and the UN general assembly called for an immediate cease-fire. In a number of debates in the house of commons the opposition condemned the government's policy in the most vigorous terms; on Nov. 1 there was such uproar that the speaker had to suspend the session for half an hour. The vote of censure moved by the opposition on this date was defeated by a majority of 69. In neither party, however, was opinion unanimous. Two junior Conservative ministers, Anthony Nutting, minister of state for foreign affairs, and Sir Edward Boyle, financial secretary to the treasury, resigned their posts, while one Labour member resigned his seat. Other members on both sides of the house expressed disagreement with their party's policy. Opinion in the country was also sharply divided though Gallup polls showed that a majority supported the action taken by the government.

On Nov. 5-6 Anglo-French air-borne and sea-borne forces landed at and captured Port Said and Port Fuad and, after first attempts at a local cease-fire had proved abortive, Egypt, Israel, Britain and France agreed to a cessation of hostilities and the United Nations immediately planned the formation of an international police force.

As a result of the blocking of the Suez canal it was announced on Nov. 20 that motor fuel rationing would come into force on Dec. 17. Ration books would, in the first instance, be issued for a four-month period and the allowance for motorists would be for 200 mi. a month.

On Nov. 23 the prime minister, who was suffering from the effects of severe strain following months of anxiety and overwork, left upon medical advice for a three-weeks' rest in Jamaica. During his absence R. A. Butler, lord privy seal and leader of the house of commons, presided over cabinet meetings.

Sympathy for the Hungarians, whose revolt was ruthlessly suppressed by Soviet troops, was widely expressed throughout Britain. There were many resignations from the Communist party; dockers refused in some cases to load Soviet ships in British ports, and the National Union of Mineworkers condemned the

U.S.S.R. and wrote to the Soviet miners' union stating that British trade unionists could see little hope for successful co-operation in these "more than tragic circumstances." The lord mayor of London, Sir Cullum Welch, opened a Hungarian relief fund which in ten days received contributions of more than £400,000, and Hungarian refugees were welcomed and cared for.

Education.—*England and Wales* (1955): grant-aided, direct grant and recognized independent schools: nursery 495, pupils 24,272, teachers 1,052 primary (including 390 with secondary departments and 3,528 all-age schools) 24,763, pupils 4,796,763, teachers 160,909; secondary (including 307 technical and 55 with technical departments) 5,562, pupils 2,077,816 teachers 702,102; special (for physically or mentally handicapped children) 743, pupils 58,034, teachers 4,381. Further education (including art schools, 1955): full-time 504, students 63,149; part-time (day) 688 students 402,239; evening 9,796 (including 9,138 evening institutes), pupils 1,901,463; all teachers 11,555. *Scotland* (1955): public and grant-aided schools: nursery 75, pupils 4,540, teachers 150; primary 2,237 pupils 598,011, teachers 17,736; secondary (including 634 with primary departments) 809, pupils 227,077, teachers 11,203; special 88, pupils 10,117, teachers 632. Independent schools, pupils 21,069. Approved schools: pupils 1,330. Further education (1955): pupils 236,024 of which 27,471 in central institutions and 208,553 in further education centres. *Northern Ireland* (1954-55): grant-aided schools: primary 1,635, pupils 207,393, teachers 6,340; intermediate (including technical intermediate) 53 pupils 16,721, teachers (excluding technical intermediate, who are also employed in institutions of further education) 429; secondary (grammar 81, pupils 30,899, teachers 1,765; special 14, pupils 1,072, teachers 70 centres of further education 154 (of which 95 permanent), student 32,331, teachers 1,500. Universities (1955-56): *England* 15, full-time students 62,557; *Scotland* 4, full-time students 14,058; *Wales* 1, full-time students 4,714; *Northern Ireland* 1, full-time students 2,179. University colleges: *England* 2, full-time students 1,292; *Scotland* (technical) 1,315; *Wales* 1, full-time students 140; *Northern Ireland* 1, full-time students 83.

Finance and Banking.—Official exchange rate, £1 = U.S. \$2.80. Budget (1955-56 actual) revenue £4,893,100,000, expenditure £4,496,000,000 (1956-57 est.) revenue £5,197,500,000, expenditure £4,757,700,000. *Northern Ireland*: (1955-56 actual) revenue £67,023,027, expenditure £66,950,379; (1956-57 est.) revenue £74,262,000, expenditure £74,207,000. Total public debt: (March 1955) £26,933,000,000; (March 1956) £27,774,000,000. Currency circulation (April 1955): £1,640,000,000 (April 1956) £1,740,000,000. Deposit money: (April 1955) £5,440,000,000; (April 1956) £3,630,000,000. Gold, U.S. and Canadian dollar holdings: (April 1955) U.S. \$2,686,000,000; (April 1956) U.S. \$2,328,000,000.

Foreign Trade.—Imports (1955) £3,886,000,000; exports £3,024,000,000 re-exports £119,000,000. Main sources of imports (1955): sterling area 40%; continental E.F.U. (European Payments union countries) 22%; U.S. and Canada 20%; Latin America 6%. Main destinations of exports (1955): sterling area 48%; continental E.P.U. countries 25%; U.S. and Canada 11%; Latin America 4%.

Transport and Communications.—Railways (1955): *Great Britain*, route length 32,400 km.; *Northern Ireland* (1954) 749 km. Passenger journeys originating (British railways, 1955) 967,200,000. Freight traffic (excluding *Northern Ireland*, 1955) 34,932,000,000 ton-km. Roads (March 1954): *Great Britain* 187,040 mi. Motor vehicles licensed (Nov. 1955): passenger 3,472,000; commercial 1,045,100. Air transport (1955): passenger-km. 2,875,716,000; freight, ton-km. 100,656,000. Shipping: merchant vessels on British Commonwealth registers, 500 gross tons and over (Aug. 1956): nontankers 15,416,000 gross tons; tankers 5,518,000 gross tons. Shipping movements at U.K. ports (net tons registered, 1955): entered with cargo, mail only 648,000, others 78,576,000; entered in ballast with passengers only 5,892,000, calling for bunker only 324,000, other 11,316,000. Telephones (March 1955): 6,483,040 (76.3% with automatic dial). Radio licences (Sept. 1955): sound only 9,271,000, sound and television licences 4,884,000.

Agriculture and Fisheries.—Production (long tons, 1955): wheat 2,599,000; barley 2,936,000; oats 2,709,000; rye, threshed, 19,000; mixed corn 510,000; potatoes 6,278,000; sugar beets 4,556,000. Livestock (June 1956): cattle 10,915,000; sheep 23,607,000; pigs 5,522,000; poultry 92,731,000. Fisheries (total landings, 1954) 76,200 tons. Meat (metric tons, 1955): beef and veal 663,000; mutton and lamb 175,000; pork 693,000.

Industry.—Establishments employing 11 or more persons 58,921. Total working population: (April 1956) 23,975,000, of whom 16,128,000 were men; (Dec. 1955) 24,018,000, of whom 16,122,000 were men. Armed forces: (April 1956) 770,000, of whom 16,000 were women; (Dec. 1955) 773,000, of whom 17,000 were women. Registered unemployed (excluding temporarily stopped) 235,000 in Dec. 1955, 218,000 in April 1956. Index of production: total (1948 = 100) 130 in 1954, 137 in 1955; manufacturing (1954) 133, (1955) 142. Industrial production (1955): coal 211,000,000 long tons; gas (available at gas works) 600,600,000 cu.ft.; electricity generated 80,148,000,000 kw.hr.; iron ore (28% metal content) 16,172,000 long tons; pig iron 12,480,000 long tons; crude steel 19,812,000 long tons; phosphatic fertilizers (P₂O₅ content) 324,000 long tons; cement 12,516,000 long tons; motor cars 897,560; tractors (10-belt h.p. and over) 136,944; trucks 268,716; steam locomotives 469; diesel locomotives 760; railway coaches 2,211; freight cars 63,859; aircraft (excluding military types except those for export) 555, of which 527 for export; merchant

vessels completed, 100 gross tons and over, 1,282; permanent houses and flats completed 324,023; woven cotton cloth 1,783,600,000 yd.; woven woolen and worsted fabrics 410,040,000 sq.yd. (excluding 28,080,000 sq.yd. of blankets); rayon filament yarn 232,560,000 lb.; rayon staple fibre 239,280,000.

ENCYCLOPÆDIA BRITANNICA FILMS.—*British Isles* (1948); *Canals of England* (1952); *England* (1955); *Picture of Britain* (1955).

Great Lakes Traffic: see CANALS AND INLAND WATERWAYS.

Greece. The kingdom of Greece occupies the southern part of the Balkan peninsula. Area: 51,182 sq.mi.; the mainland accounts for 41,328 sq.mi.; the islands, of which the largest is Crete (3,235 sq.mi.), for 9,854 sq.mi. Pop.: (1951 census) 7,630,587; (1955 est.) 7,973,000. Language (1940): Greek 93%; Turkish 3%; Macedonian Slav 1.4%; Albanian 0.9%; Macedo-Rumanian 0.8%. Religion (1940): Greek Orthodox 96.5%; Roman Catholic 0.4%; Moslem 1.9%; Jewish 0.7%. Chief towns (1951 census, municipal area only): Athens (cap.) 65,084 (pop. of greater Athens 1,378,586, including Peiræeus and suburbs); Peiræeus 186,014; Salonika (Thessaloniki) 217,449; Patras 79,014. Ruler, King Paul I; prime minister in 1956, Konstantinos Karamanlis.

History.—Parliament was dissolved on Jan. 10, 1956, and general elections were held on Feb. 19 on the basis of a new and somewhat complex electoral system consisting of a combination of majority voting and proportional representation. The elections were contested by two main political groupings: the National Radical union, a new party formed by the prime minister, Karamanlis, and comprising most of the elements of the defunct Greek Rally together with some Liberals; and the Democratic Union, a loose electoral coalition of most of the other parties, ranging from the right-wing Populist party to the near-Communist E.D.A. (Union of the Democratic Left). The elections were won by the National Radical union, with 165 seats out of 300, and the new Karamanlis government took office on Feb. 29. The period which followed was marked by an intensification of party strife, the crown itself becoming involved as a result of bitter controversy as to whether the king's civil list should be increased and whether senior palace officials should be allowed to hold business appointments as well. The inability of the anti-government parties to co-ordinate their activities, however, rendered their opposition somewhat ineffectual, and the government's parliamentary majority remained unimpaired, despite a few individual defections.

The president of the German Federal Republic, Theodor Heuss, paid a state visit to Greece on May 14, the visit being returned by King Paul and Queen Frederika on Sept. 17. The king and queen also paid a state visit to France on June 5. Diplomatic relations with Rumania were re-established for the first time after World War II on Aug. 25, when an agreement was also signed in Athens regulating various economic matters outstanding between the two countries.

Relations with Turkey continued to be strained as a result of the Cyprus dispute. Inevitably, the tripartite alliance between Greece, Turkey and Yugoslavia became virtually dormant because of lack of contact and mutual consultation between two of its members; in contrast, relations between Greece and Yugoslavia became more cordial, and President Tito and his wife spent several days in Corfu in July as guests of King Paul and Queen Frederika. Karamanlis and Evangelos Averoff, the foreign minister, paid a visit to Belgrade on Dec. 4 for discussions with President Tito aimed at reactivating the tripartite treaty.

The political and diplomatic scene continued to be dominated by the Cyprus question, relations with Great Britain becoming progressively worse during the year to the extent that Greece declined the invitation to the London conference on Suez in August "in view of the conditions under which the Conference

is being convoked and the well-known circumstances prevailing in Greece today."

The deportation of Makarios III (*q.v.*), the archbishop of Cyprus, to the Seychelles Islands on March 9 led to demonstrations in Athens, Salonika and other cities, where clashes occurred with troops and police; and the Greek ambassador to London, Vasilios Mostras, was recalled on March 13. A nation-wide strike in protest at the deportation culminated in a half-hour "silent protest" during which all streets were deserted, traffic stopped and church bells tolled throughout the country. The first execution of Cypriots by the British authorities on May 10 and the deportation from London to Greece of a Greek priest, the Rev. Kallinikos Machairiotis, on June 12 produced further manifestations of popular resentment, and three persons were killed and 124 injured (59 of them police) in rioting which broke out in Athens. Athens radio broadcasts, the tone and contents of which had already drawn representations from the British government, began to be systematically "jammed" by the British authorities on March 5.

Spyros Theotokis, the foreign minister, was obliged to resign on May 27 following violent attacks by the parliamentary opposition—echoed to some extent by the Cyprus Ethnarchy council—to the effect that he was not pressing the case for Cypriot self-determination with sufficient vigour. He was succeeded by Averoff, who declared on taking office that the government would continue to give the fullest support to the vindication of the Cypriot people's struggle and would spare no effort to secure the release of the exiled archbishop of Cyprus.

Karamanlis led the Greek delegation to the UN general assembly in November, and while in the United States had talks with Pres. Dwight D. Eisenhower. Greece's recourse to the United Nations with regard to Cyprus was countered by a British complaint on the same subject, and on Nov. 14 the general assembly decided, by unanimous vote, to include the following item on its agenda: "Question of Cyprus. (a) Application, under the auspices of the United Nations, of the principle of equal rights and self-determination of peoples in the case of the population of the Island of Cyprus. (b) Complaint by the United Kingdom of support from Greece for terrorism in Cyprus."

The island of Santorini (Thera) was shaken by an earthquake on July 9, when 55% of the houses were destroyed or badly damaged, 48 people were killed and 64 were injured. The neighbouring islands of Kalymnos and Amorgos were also affected.

(See also CYPRUS; TURKEY.)

(S. L. H.)

Education.—Schools: primary (1953) 9,298, pupils (1955–56) 918,909, teachers (1953) 20,164; secondary (1955–56, including technical, 148 extension and 40 commercial schools) 469, pupils 186,556, teachers (1952–53) 6,078. Teachers' training colleges (1952–53) 14, students (average since 1950) 3,000. Institutions of higher education (1953–54) 7, students 11,711, of which 6,658 at 2 universities.

Finance and Banking.—Monetary unit: drachma (introduced on May 1, 1954, and equal to 1,000 old drachmas), with an exchange rate of dr. 30 to the U.S. \$1. Budget (1952–53 final): revenue dr. 7,020,900,000, expenditure dr. 6,632,000,000; (1954–55 est.) revenue dr. 12,069,000,000, expenditure dr. 10,361,000,000. Internal debt (June 1954) dr. 6,432,900,000; external debt dr. 2,403,000,000. Currency circulation: (March 1955) dr. 3,770,000,000, (March 1956) dr. 3,970,000,000. Deposit money: (March 1955) dr. 6,360,000,000, (March 1956) dr. 7,030,000,000. Gold holdings, central bank, (Dec. 1954) U.S. \$10,800,000, (Dec. 1955) U.S. \$10,900,000.

Foreign Trade.—(1955) Imports dr. 11,465,000,000; exports dr. 5,484,000,000. Main sources of imports: Germany 17%; Italy 11%; other continental E.P.U. (European Payments Union countries) 23%; U.S. and Canada 19%; U.K. 11%. Main destinations of exports: Germany 25%; Italy 15%; other continental E.P.U. 20%; U.K. 10%; U.S. and Canada 13%. Main exports (1955): tobacco 42%; raisins 16%.

Transport and Communications.—Roads (1953) 22,900 km. Motor vehicles in use (1954): passenger 16,600; commercial 25,600. Railways (1955) 2,700 km.; passenger-km. (1954) 874,000,000; freight, ton-km. (1954) 387,600,000. Shipping, merchant vessels of 100 gross tons and over (July 1955) 350; total tonnage, 1,245,388. Telephones (Jan. 1955) 109,700. Licensed radio receivers (1954) 507,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 1,336,000 (1,219,000); barley 224,000 (231,000); oats 156,000 (149,000); maize 288,000 (258,000); potatoes 438,000 (442,000); rice 61,000 (86,000); olives 496,000 (553,000); tobacco 99,500 (67,400); oranges etc. 145,000 (153,000); lemons 39,000 (41,000); cotton, lint

35,000 (42,000); cottonseed 116,000 (85,000); figs 118,000 (117,000); olive oil 115,000 (124,000); wine 3,750,000 hl. (4,230,000 hl.); raisins 100,500 (112,500); currants (1953) 77,000; sultanas (1953) 38,000. Livestock (Sept. 1955): cattle 917,000; sheep 8,738,000; pigs 603,000; horses 117,000; mules 203,000; asses 501,000; buffaloes 73,000; goats (Sept. 1954) 4,510,000.

Industry.—Fuel and power: lignite (1955) 900,000 metric tons; electricity (1954) 1,057,000,000 kw.hr.; manufactured gas (1954) 17,800,000 cu. m. (1953) 17,800,000 cu. m. (1954): bauxite 354,000; magnesite 103,000; pyrites 10,000; chromite ore (metal content) 10,800; iron ore (50% metal content) 77,160; cement 804,000; cotton yarn 23,880. Index of production (Feb. 1956; 1953=100) 125. Cost-of-living index (March 1955; 1953=100) 100.

Picture: BRITANNICA FILMS.—Greece (1955); *People of Greece* (1955).

Greenland. A large island (840,000 sq.mi., more than four-fifths covered by an ice cap), Greenland is part of the kingdom of Denmark, in the North Atlantic ocean, north-west of Iceland. Pop.: (1951 census) 24,159, distributed in settlements along the west coast except for 1,697 on the east coast; 1,269 Europeans (mostly Danes), the rest native Greenlanders (Eskimoes); (1955 est.) 26,000. Languages: Danish and Eskimo. Religion: Lutheran. Capital, Godthaab (1945 census) 970 (second governor's seat, Godhavn). Governor general in 1956, Poul Hugo Lundsteen.

History.—Difficulties in getting the necessary capital for the fishing industry and for sheep farming caused Augo Lyng, the Greenland member of the *folketing*, to propose (Oct. 18, 1956) that the United States pay an annual rent for its use of the Greenland air bases and that these payments be used as capital investment in Greenland industry. The proposal was rejected by H. C. Hansen, the Danish premier. Lyng also called for representation in the Greenland *landsraad* (local council) of the small, distant settlements of Angmagssalik and Scoresbysund on the eastern coast.

The exploitation of the lead and zinc deposits at Mestersvåg in northeast Greenland resulted in 1956 in increased shipments valued at about 10,000,000 Kr.

(See also DENMARK.)

(H. LN.)

Education.—Infant and primary schools (1953-54): 162, pupils 4,698, teachers 302. Other schools (1951): postprimary 3, pupils 71, teachers 12; technical 1, pupils 43, teachers 6; evening schools 15, pupils 500, teachers 48. Institutions of higher education 3, students 35, lecturers 6.

Finance.—Monetary unit: Danish krone, valued in 1956 at 14.477 cents U.S. Budget (1953-54; 1954-55 in parentheses): revenue 4,813,000 Kr. (4,733,000 Kr.); expenditure 35,021,000 Kr. (35,421,000 Kr.).

Foreign Trade.—(1955) Imports 78,256,000 Kr., including 64,664,000 Kr. from Denmark, 4,254,000 Kr. from the U.S. Exports 37,232,000 Kr., including 25,094,000 Kr. to Denmark, 4,157,000 Kr. to the U.S.

Agriculture and Fisheries.—Livestock (1954): sheep 21,258; poultry 2,449; horses 144; goats 14; cattle 61. Exports (metric tons, 1955): fresh fish 1,360; salted, dried and smoked fish 7,171; fish preparations 131; whale and fish oil 1,240; hides and skins 143.

Mining.—Exports (metric tons, 1955): cyrolite, crude, 41,792, including 33,512 to Denmark and 8,279 to the U.S.

Grenada: see WINDWARD ISLANDS.

Gronchi, Giovanni (188-), Italian statesman, was born at Pontedera, It., near Pisa, It., Sept. 10, the son of a bookkeeper. He was educated at Pisa university and joined the Christian Democratic movement founded in 1902 by Romolo Murci. He served in the Italian army in World War I and in 1919 he helped Luigi Sturzo to found the Partito Popolare Italiano. From 1919 he sat in the chamber of deputies and was also the secretary-general of the (Christian) Confederazione Italiana dei Lavoratori. In the first Mussolini cabinet, formed in Oct. 1922, Gronchi was undersecretary for industry and commerce. He resigned when in Aug. 1923 the P.P.I. went over to the opposition. In 1927 he retired to private life and devoted his energies to industry. Returning to politics in 1943, he represented with Alcide de Gasperi the underground Partito Democratico Cristiano in the National Liberation committee. From June 1944 to June 1946 he was minister for industry and commerce in four successive cabinets. Elected in June

PRESIDENT EISENHOWER greeting President Gronchi of Italy in Washington, D.C., during the latter's visit to the U.S. in 1956. Others shown in the photograph are Mrs. Eisenhower (second from left), U.S. ambassador to Italy, Clara Boothe Luce (centre) and U.S. secretary of state, John Foster Dulles (next to Gronchi).

1946 to the constituent assembly, he became the leader of the P.D.C. group. In April 1948 he was elected to the new chamber of deputies and on May 8 was elected speaker. He was re-elected to the chamber in June 1952, and continued to serve as speaker. On April 29, 1955, on the fourth ballot, he was elected president of the republic, receiving 658 votes out of a possible 843. From Feb. 27 to March 2, 1956, he paid an official visit to the United States and addressed the joint session of the U.S. congress; during March 3-6 he was the guest of Canada; and during April 25-27 he paid an official visit to France.

Group Insurance: see INSURANCE.

Guadeloupe. This French overseas *département* in the Lesser Antilles consists of two main and five smaller islands. Total area: 687 sq.mi. Pop. (1946 census) 278,464; (1954 census) 229,120, mainly coloured (Negro or mixed). Language: French and creole French. Religion: Roman Catholic. Chief towns (pop., 1954 census): Basse-Terre (cap.) 11,837; Pointe-à-Pitre 26,160.

Prefect (from May 1956) Guy Malines.

History.—In the elections to the French national assembly held on Jan. 2, 1950, the successful candidates were two Communists and a Radical (Pierre Monnerville).

On Aug. 11, Gen. Charles de Gaulle arrived in Guadeloupe on a visit.

On Aug. 12 a violent cyclone hit the island, laying waste the plantations and severing communications by road. Casualties amounted to 6 killed and 22 injured, with 600 houses destroyed (Hu. De.)

Foreign Trade.—(1955) Monetary unit: metropolitan French franc valued at 350 fr. to U.S. \$1. Imports 13,000,000,000 fr., including 10,000,000,000 fr. from France. Exports 11,800,000,000 fr.; almost all to countries of the French union. Principal exports: bananas 4,700,000,000 fr. sugar 5,800,000,000 fr.

Guam. Guam is the largest and southernmost island of the Marianas, lying in the Pacific ocean at 13° 26' N. lat. and 144° 39' E. long., about 5,100 mi. W. of San Francisco, Calif. 3,340 mi. W. of Honolulu and 1,500 mi. E. of Manila. Area: 206 sq.mi. Pop.: (1950 census) 59,498; (1955 est.) 36,000, excluding U.S. military and administrative personnel. Agaña is the capital with a population in 1950 of 1,330. Other important towns are

Sinajana and Inarajan. The Guamanians are Chamorros, and their religion is predominantly Roman Catholic.

History.—The platform of the U.S. Democratic party adopted at the Chicago, Ill., convention in Aug. 1956 included a plank favouring increased self-government for Guam.

Governor Ford Q. Elvidge, who was appointed in April 1953, resigned in June 1956. William T. Corbett, secretary of Guam, served as acting governor until Oct. 2, 1956, when Pres. Dwight D. Eisenhower appointed Richard Barrett Lowe, governor of American Samoa since 1953, to the office.

In 1955 and 1956 the economy of Guam continued to expand with increases in agricultural production and the establishment of new commercial and industrial enterprises. To a large extent this expansion was the result of the development of Guam as an important U.S. military base. The government played an important role in the economy through the establishment of the Guam Finance and Development agency, which makes loans to farmers and businessmen for development purposes. Out of a total of \$900,000 authorized for this purpose as of June 30, 1955, \$542,000 had been loaned.

In 1956 Guam served as the headquarters of the government of the Trust Territory of the Pacific Islands and of the U.S. air force's strategic air command in the Pacific.

Education.—In 1955 there were 22 public elementary and junior high schools with 8,707 pupils and 290 teachers; 1 high school with 1,966 students and 72 teachers; and the territorial college at Agaña with 282 students. There were also 8 parochial schools, and a missionary junior college. Instruction is given in English. About 84% of the population was literate according to the 1940 census. About 22% of the island's expenditures went for educational purposes during the 1954-55 fiscal year.

Finance.—During the fiscal year ending June 30, 1955, Guam's expenditures amounted to \$9,872,600 and revenues totalled \$10,789,700. The Bank of America operates a branch on Guam and in 1954 the Guam Savings and Loan association, formed by a group of local businessmen, began operations.

Production and Trade.—Agricultural production on 2,036 planted acres in the year ending June 30, 1954, included (in pounds): corn 665,140; citrus fruit 8,350; muskmelon 162,040; bananas 550,661; taro 196,440; sweet potatoes 63,030; cassava 142,275; pineapple 24,680; yams 32,895; watermelon 36,275; papaya 258,340; sugar cane 33,040; avocado 37,270; mango 42,335; green beans 56,426; eggplant 47,911; tomatoes 21,770; cucumber 57,820; squash 13,810; and rice, grown for the first time in many years, 13,735. The fish catch in the year ending June 30, 1955, totalled 16,000 lb. In 1954 Guam had 11,895 hogs, 6,136 cattle and 171,840 chickens.

In 1955 there were 14 industrial establishments which in the 12 months ending June 30, 1955, produced 891,437 cases of soft drinks, 5,983 tons of oil, 3,800,000 cu.ft. of oxygen gas and 48,000 cu.ft. of acetylene gas. In the fiscal year ending June 30, 1955, imports totalled \$23,131,132 and exports \$4,597,348. Guam's imports came in descending order of importance from the United States, Japan, the Philippines and the Trust Territory. Its exports went in order of importance to the Trust Territory, the U.S. and Japan.

Transportation and Communications.—There are about 80 mi. of paved highways in Guam, about 60 mi. of improved secondary roads and about 100 mi. of village streets. There are no railways, but five military airfields, two of which are major air bases.

Guam's first commercial radio station, WKUAM, began operations in 1954. Radio facilities also exist through the U.S. armed forces radio network and the Andersen field radio station. There are three newspapers, of which one is an English daily and the other two an English and a Chamorro weekly. There are 12 motion-picture theatres. (S. NR.)

Guaranteed Annual Wage: see LABOUR UNIONS.

Guatemala. A Central American republic, Guatemala is bounded by Mexico, British Honduras, Honduras and El Salvador. Area: 42,042 sq.mi.; pop.: (1950 census) 2,185,122; (1955 est.) 3,325,000. Capital: Guatemala city (1950 census) 284,276; (1953 est.): 319,379. Other urban centres (1950 census, with 1953 est. in parentheses) are Antigua Guatemala 10,996 (12,545), Chiquimula 8,840 (12,146), Cobán 7,911 (11,765), Escuintla 9,760 (12,380), Mazatenango 11,067 (13,175), Puerto Barrios 15,155 (18,193), Quezaltenango 27,672 (31,352), Retalhuleu 9,304 (11,436) and Zacapa 8,260 (11,652). Language: Spanish. Religion: predominantly Roman Catholic. President in 1956, Col. Carlos Castillo Armas.

History.—Guatemala in 1956 was faced with continuing social and economic problems and political unrest. New Year's day was marked with the police pursuing plotters who had attempted to overthrow Pres. Carlos Castillo Armas. About 4,000 leftist-led

students criticized Castillo Armas for deporting various plotters. He soon readmitted them. The year was marked by constant accusations that communists were conspiring inside the government and the armed forces. All year liberals and anti-clericals, disgruntled with the results of the complete victory the regime handed itself in the Dec. 1955 congressional and municipal elections, expressed fears that the president would become a dictator.

A new constitution and government-dominated congress began functioning on March 1, which was declared a national holiday.

The president made democratic concessions during the troubled year. Foreign and domestic criticism led congress to pass a new and more liberal press law. Castillo Armas signed the long-awaited agrarian reform law, although the distribution of public lands to peasants was slow and small-scale as in 1955. Castillo Armas also approved a new anti-communist labour code containing various grounds for firing unsatisfactory workers.

Labour remained weak and dissatisfied after two years of "liberation" government. The Inter-American Regional Organization of Workers accused the regime of misusing restrictive laws drafted to curb communists, encouraged by companies hostile to free, strong unions. In two years, only six collective bargaining agreements had been signed, five with U.S. companies. Nevertheless, despite the anti-labour climate and a two-month state of siege in mid-1956, the utility union in Guatemala City and the port workers in Puerto Barrios won pay increases from the foreign-owned companies.

Student rioting flared up in June with four killed, followed by a state of siege. Urban labour, peasants and liberals attacked upper-class clericalism and arbitrariness and government favours to the few. Guatemala continued to claim British Honduras, assailing "colonialism."

Castillo Armas inaugurated the first meeting of the Central American Committee of Industrial Organizations of the United Nations to promote regional economic development and low tariff walls. Cotton exports rose and sugar again balanced national consumption. Extraordinary activity began in oil exploration, as Guatemala approved 22 of 29 applications for oil leases in the northern wilderness. U.S. oil companies and banks showed great interest in Guatemala's petroleum prospects. In the same jungle area, the government signed contracts to sell to two U.S. companies mahogany and cedar stands on 2,800,000 ac. of rain forest; according to the contracts, five seedlings had to be planted for every log sawed. The mills were to furnish their workers with schools, housing and hospitals.

A missing link in the Inter-American highway was completed late in the year with U.S. help. The U.S. granted additional defense funds and another \$5,000,000 of economic aid. The government and the U.S. utility serving the capital jointly planned to add 50,000 kw. of hydroelectric power.

(See also HONDURAS.)

(R. HN.)

Education.—In 1953 there were 3,537 primary schools with 7,809 teachers and 191,330 pupils and 125 postprimary schools with 2,234 teachers and 17,251 pupils. University education was available at the University of Guatemala, which had 8 faculties and matriculation of 4,005 in 1954. The 1950 census showed that 72.2% of those 7 yr. and over were illiterate.

Finance.—The monetary unit is the quetzal, at par with the U.S. dollar. The 1956-57 budget (July 1-June 30) balanced revenue and expenditure at \$77,875,723. In 1954-55 revenue totalled \$76,157,900 and expenditure \$74,274,900. The national debt was said to total \$41,000,000 on June 30, 1954. Currency in circulation (Jan. 31, 1956) totalled \$51,800,000; demand deposits, \$36,100,000. National income (gross national product at market prices) was estimated at \$569,100,000 in 1954. The cost-of-living index (Guatemala city) stood at 112 in May 1956 (1953 = 100).

Trade and Communications.—Exports in 1955 (unadjusted for banana undervaluation) totalled \$98,699,900; imports, \$104,316,000. Leading exports were coffee (76%), bananas (10%), chicle (1%), essential oils (1%) and lumber. Leading customers were the U.S. (74%), the Netherlands (7%), Belgium (5%) and Germany (3%); leading suppliers, the U.S. (64%), Germany (7%), the Netherlands Antilles (6%) and Mexico (5%).

In 1953 there were 725 mi. of main line railway; freight carried totalled 980,000 metric tons in 1955. Surfaced highways totalled about 3,470 mi. In 1951. On Jan. 1, 1955, there were 9,658 automobiles, 7,646 trucks and 1,712 buses. Telephones (Jan. 1, 1955) numbered 9,043, of which 80.5% were automatic.

Agriculture.—Exports in 1955 included coffee 970,000 bags of 132 lb. each, bananas 5,298,335 stems, chicle 2,231,000 lb., essential oils 709,800 lb., lumber 7,330,000 sq.ft. Preliminary production estimates for 1955-56 included coffee 1,080,000 bags, cotton 42,000 bales of 500 lb. gross weight, centrifugal sugar 36,000 short tons, noncentrifugal sugar 60,000 tons, maize 510,000 tons. In 1954 there were 1,218,000 cattle, 435,000 pigs, 865,000 sheep and 189,000 horses.

Manufactures.—The 1953 industrial census (preliminary figures) showed 943 industrial establishments with five or more employees; they had a total of 17,637 employees. Most important were beverages, textiles, foodstuffs and clothing. Cement production totalled 79,000 metric tons in 1955, beer 11,056,100 l., plywood 6,282,716 sq.ft. Installed electric energy capacity in 1954 was 40,200 kw., about 60% hydroelectric; production (public use only) was 101,000,000 kw.hr. in 1955. (J. W. Mw.)

Gymnastics. The national Amateur Athletic union championships for men and women were combined with final Olympic tryouts in 1956 and provided one of the most colourful gymnastic meets ever seen in the United States. The 15-event program held at Penn State university at University Park, Pa., April 27-28 attracted 465 entries. Competition in the men's division was so keen that only two of the 1955 champions were able to repeat. They were Abe Grossfeld, unattached of Champaign, Ill., on the horizontal bar and James Sebbo of the Jersey City (N.J.) department of recreation in tumbling. John G. Beckner of the Los Angeles (Calif.) Turners captured the men's all-around laurels, scoring 105.90 points; Karl K. Schwenzfeier

of the U.S. air force was second with 102.40 points. All-around honours in the women's contests were won by Sandra Ruddick representing the Athenaeum Turners of Indianapolis, Ind. She scored 71.85 points, while Joyce Racek of the Lincoln Turner of Chicago, Ill., was runner-up with 68.10 points.

Men selected for the United States Olympic squad were John Beckner and his brother Richard Beckner; Karl Schwenzfeier Abe Grossfeld; Joseph Kotys, Cleveland (O.) Swiss Turners Armando Vega, Penn State university; Gene Wettstone, Penn State, manager-coach. Selected as alternates were William Tor Los Angeles Turners; John M. Miles, Florida State gymkhana and Charles Simms, Los Angeles Turners. Women chosen were Sandra Ruddick; Joyce Racek, Judy Hult Howe, Rocheste (Pa.) Turners; Doris Fuchs, Rochester (N.Y.) C.Y.O.; Jacquelyn Klein, Lincoln Turners, Chicago; Muriel Davis, Indianapolis Athenaeum Turners; Erna Wachtel, Chicago, manager. Alternates chosen were Ingeborg Fuchs, Cleveland Swiss Turners Louise W. Wright, Roxborough (Pa.) Turners; and Marie Hoesly Madison (Wis.) Turners. The A.A.U. championship winner were as follows:

Men's Events

All-around—John G. Beckner; calisthenics—Chick Cicio, Florida State gymkhana; long horse—Charles Simms; side horse—Joseph Kotys; parallel bars—John G. Beckner; horizontal bar—Abe Grossfeld; still rings—Richard A. Beckner; flying rings—Frederick Hoerner, U.S. Naval academy; tumbling—James Sebbo; rope climb—Robert Manning, unattached; trampoline—Ronald Munn, Nards Trampoline Club, Tex.

Women's Events

All-around—Sandra Ruddick; calisthenics—Joyce Racek and Muriel Davis; balance beam—Sandra Ruddick; side horse vaulting—Sandra Ruddick; uneven parallel bars—Sandra Ruddick; tumbling—Barbara Galleher, Dallas (Texas) A.C.

In college gymnastics, the University of Illinois (Urbana) won the Western conference team championship, and the Big Ten rulers went on to triumph in the National Collegiate Athletic association tournament at Chapel Hill, N.C., March 23-24, 1956. The Illini scored 123½ points, and Penn State, runner-up, finished with 67½ points. Army gained honours in the Eastern intercollegiate league by winning all eight of its dual meets during the season. In the Eastern individual championships, Armando Vega of Penn State won gold medals on the parallel bars and as top scorer in the all-around competition.

Haiti. The western third of the island of Hispaniola is occupied by the republic of Haiti; the rest of the island comprises the Dominican Republic. Haiti's area of 10,748 sq.mi consists chiefly of mountains, some rising above 8,000 ft., with large stands of mahogany and other hard woods, and pine at the higher altitudes. Arid plateaus and slopes are sparsely settled, but the fertile valleys have the densest population anywhere to be found in the western hemisphere. The population was estimated to be 3,305,000 in 1955. The census of 1950 gave the population of the larger communities as follows: Port-au-Prince, the capital 142,840; Cap-Haïtien 24,957; Gonaïves 13,534; Jérémie 11,138; Les Cayes 11,835; and St. Marc 10,485. The population is predominantly of African stock, and only about one-twentieth are chiefly of European origin. French is the official language, and the majority speak it; but dialects of the various African tongue mixed with French are used in the villages.

President in 1956 to Dec. 6, Paul E. Magloire.

History.—President Magloire attended the meeting of American presidents at Panamá in July, and visited the United States and other countries during the year. By the winter of 1955-56 the setback caused by the great hurricane of Oct. 1954 had been overcome. For 10 years before the hurricane the average produc-

SOVIET GYMNAST Albert Azaryan posing with his medals and cups in 1956. Azaryan was proclaimed by the U.S.S.R. as the "world's gymnastic champion"

tion of coffee had been about 334,000 bags of 176 lb. each. In 1954-55, production fell to 245,000 bags; but for 1955-56, it rose to 350,000 bags. The great Artibonite irrigation project, which by 1956 had cost more than \$30,000,000, was nearing completion, calculated to be achieved early in 1957. The Frederick Snare company expected to export large quantities of bauxite in 1957. A flour mill was established with the help of the International Cooperation administration of the United States. The International Bank for Reconstruction and Development loaned Haiti \$2,600,000 to build or improve highways; the Royal Bank of Canada participated to the extent of one-sixth of the loan.

Paul E. Magloire was president until Dec. 6, 1956, completing the six-year term he began in 1950. Relinquishing the presidency on that day, although a specific provision of the constitution authorized his tenure of the presidency until May 15, 1957. Magloire turned over the office to the chief justice of the supreme court, Joseph Nemours Pierre-Louis. Acting under legislation which designated him commander of the armed forces. General Magloire attempted to quell the disorder incident to a general strike, but on Dec. 12 he left Haiti in voluntary exile, proceeding to Jamaica. The new provisional regime prepared the ground for elections in 1957 and for the termination of martial law, which in some parts of the republic had been in effect since May 1956.

(C. E. Mc.)

Education.—In 1953 urban primary schools were reported to have 2,001 teachers and 79,859 pupils and rural schools 1,514 teachers and 92,833 pupils. In addition, there were 14 national *lycées*, 19 private secondary schools and 15 professional schools with a total of 8,869 pupils. In the 1950 population census only 7.9% claimed to have more than two years of schooling, and estimates of illiteracy ranged from 85% to 95%. In the 1954-55 fiscal year 10.4% of government expenditures was for education.

Finance.—The monetary unit is the gourde, valued in 1956 at 20 cents U.S. currency, official rate. Actual government revenue in the fiscal year ending Sept. 30, 1955, was \$38,194,600 (including nonrecurring credits); expenditure was \$34,718,700. The public debt totalled \$43,360,732 on Oct. 31, 1955; the deficit in treasury general funds was \$5,548,835. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$18,000,000. The cost-of-living index (Port-au-Prince) stood at 100 in March 1956 (1953=100).

Trade and Communications.—Exports in the trade year 1955 (Oct. 1, 1954-Sept. 30, 1955) were \$34,864,000; imports were \$39,196,000. The chief exports were coffee (66%), sisal (16%), sugar (4%), cacao (3%) and essential oils (3%); leading imports, cotton textiles (15%), wheat flour (13%), iron and steel and manufactures (8%), machinery and apparatus (7%) and vehicles (6%). Leading customers were the U.S. (49%), Belgium (14%), France (14%), Italy (10%) and the Netherlands (3%); leading suppliers, the U.S. (66%), Canada (6%), Germany (4%), the U.K. (4%) and the Netherlands Antilles (4%).

At the end of 1952 there were upward of 2,000 mi. of roads, more than half of which were unimproved earth and unsurfaced roads. There were 88 mi. of public railway and about 75 mi. of industrial trackage. On Jan. 1, 1955, there were 4,970 automobiles, 2,921 trucks and 233 buses. Telephones (Jan. 1, 1955) numbered 4,293, 91% of which were automatic and 84% of which were located in Port-au-Prince.

Agriculture.—Coffee production totalled about 735,000 bags of 132 lb. each in the 1955-56 season. Exports in the trade year 1955 included coffee 327,400 bags; sisal 31,189 metric tons; cacao 1,474 tons; raw cotton 1,351 tons; bananas 49,288 stems. Exports of essential oils included vetiver 117,530 lb.; lemon grass 52,350 lb.; and oil of lemon 2,350 lb. In 1950 there were an estimated 582,000 cattle, 1,139,000 pigs and 892,000 goats.

Manufactures.—Sugar production totalled about 65,000 short tons in 1956. In 1955, 2,890,000 yd. of cotton fabrics were produced. Installed electric energy capacity (Dec. 31, 1955) was 25,000 kw. (J. W. Mw.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Caribbean Sky Cruise* (1955).

Hall, Leonard Wood (1900—), U.S. attorney and political leader who as chairman of the Republican national committee directed the Republican campaign in the national election of 1956, was born Oct. 2 at Oyster Bay, N.Y. He took a law degree at Georgetown university in Washington, D.C., in 1920, beginning practice the next year in New York city. Hall first entered politics in 1926 as a Republican worker and was a member of the New York state assembly from 1927 to 1928, and again from 1934 to 1938. Between these terms he was sheriff of Nassau county, N.Y., for two years. From 1939 to 1952 he was a member of the U.S. house of representatives for the second New York district. As congressman he voted with his fellow Republicans on most domestic issues but frequently supported the Truman administration in its requests for additional

NATIONAL POLITICAL CHAIRMEN Paul Butler (left), Democrat, and Leonard Hall, Republican, meeting in Washington, D.C., Sept. 10, 1956, after being summoned to appear before the senate elections subcommittee to give reports of campaign contributions and spending

foreign military and economic assistance. With Sen. William F. Knowland of California he advocated stepped-up assistance for Chiang Kai-shek and his Chinese Nationalist regime. Hall resigned his congressional post in 1952 to campaign for surrogate (probate judicial officer) of Nassau county and was elected. On April 10, 1953, he was elected chairman of the Republican national committee by unanimous vote.

As Republican chairman, Hall strove to avert disunity in the party ranks and supported Sen. Joseph R. McCarthy as an "asset" to the Republicans, though deploring his tactics and his attack on Pres. Dwight D. Eisenhower after the senator's censure by the senate in 1954. Issuing frequent verbal blasts against the Democrats, Hall particularly scored their attacks on Vice-Pres. Richard M. Nixon and Secretary of Agriculture Ezra T. Benson during the 1956 election campaign.

Hammar skjöld, Dag (1905—), Swedish economist and statesman and United Nations official, was born at Jönköping, Swed., July 29, the son of a former Swedish prime minister. He graduated from Uppsala university in 1925, receiving a law degree in 1930. During 1930-34 he was secretary to the Swedish government committee on unemployment, and in 1933 became associate professor of political economics at Stockholm university. From 1936 to 1945 he was undersecretary of the Swedish department of finance, from 1941 to 1948 chairman of board of governors of the Bank of Sweden, and during 1940-48 he was a member of the Board of Foreign Exchange. He became chief Swedish delegate to the Organization for European Economic Cooperation in 1948 and was vice-chairman of its executive committee, 1948-49. Becoming assistant foreign minister in 1949, he entered the cabinet as deputy foreign minister in 1951. On April 7, 1953, he was elected secretary-general of the United Nations.

In Jan. 1956, he visited the middle eastern capitals and announced (Jan. 24) that Gamal Abdel Nasser had accepted proposals put forward by him for reducing tension in the demilitarized zone at El-Auja, on the Egyptian-Israeli border. From June 28 to July 10 Hammar skjöld visited Warsaw, Stockholm,

Helsinki, Moscow, Minsk, Kiev, Prague, Vienna and Belgrade. On his second mission to the middle east (July 19-23) he visited Jerusalem, Amman and Cairo.

The Anglo-French ultimatum to Egypt over the problem of the Suez canal began a period of intense activity and responsibility for Hammarskjöld. He had at short notice to make arrangements for the formation of a UN police force and for its transport to Egypt. On Nov. 16 he again visited Cairo and had talks with President Nasser in connection with the arrival of the force in the Suez canal area.

Hammer Throw: see TRACK AND FIELD SPORTS.

Handball. For the first time since the schism of 1951, the singles champion and other leading players of the U.S. Amateur Handball union participated in a National Amateur Athletic union tournament. The U.S. Amateur Handball union tournament was held in St. Louis, Mo., April 6-14, 1956, and the National Amateur Athletic union tournament at the New York Athletic club May 14-19. Winners of the two tournaments were as follows:

National Amateur Athletic Union

Singles

First	Jim Jacobs, Los Angeles, Calif.
Second	John Sloan, Chicago, Ill.
Third	Victor Hershkwitz, Brooklyn, N.Y.

Doubles

First	John Sloan and Phil Collins, Chicago, Ill.
Second	J. Abate and J. Ingrassia, New York, N.Y.
Third	Harry Heide and Harry Beattie, New York, N.Y.

U. S. Amateur Handball Union

Singles

First	Jim Jacobs, Los Angeles, Calif.
Second	Victor Hershkwitz, Brooklyn, N.Y.
Third	Phil Collins, Chicago, Ill.

Doubles

First	Sam Haber and Ken Schneider, Chicago, Ill.
Second	H. Dreyfus and J. Gordon, St. Louis, Mo.
Third	M. Singer, Los Angeles, Calif., and A. Stickler, St. Louis, Mo.

Harness Racing: see HORSE RACING.

Harriman, Averell (1891-), U.S. political leader, was born on Nov. 15 at New York city and was graduated from Yale university in 1913. Two years later he was a vice-president of the Union Pacific railroad, becoming chairman of the board of directors in 1932. During World War I he organized a shipbuilding and operating company, and in 1920 he helped found a firm of investment bankers. During the Franklin D. Roosevelt administration he was an officer of the National Recovery administration and during 1940-41 served with the National Defense Advisory commission and its successor agency, the Office of Production Management. In 1941 President Roosevelt named him lend-lease expeditor to Great Britain and later to the U.S.S.R. He was U.S. ambassador to the U.S.S.R. from Oct. 1943 to Feb. 1946, and ambassador to Great Britain from April to October 1946, when Pres. Harry S. Truman named him secretary of commerce. From 1948 to 1950 he was special U.S. representative in Europe to supervise administration of the European Recovery program; in the latter year he was named special assistant to the president and in 1951 director of the Mutual Security agency.

He was an early leading contender for the Democratic presidential nomination at Chicago, Ill., in July 1952, following President Truman's decision not to run again for the presidency. On the first ballot of the convention he received 123½ votes, and on the second 121; he then withdrew and transferred his support to Adlai E. Stevenson.

Harriman was elected governor of New York on the Democratic ticket Nov. 2, 1954. He was again considered a major can-

didate for the Democratic presidential nomination of 1956 and was in fact the principal contender with Stevenson at the Democratic convention at Chicago in August. Despite the support of former President Truman, however, his bid for the nomination failed, and he received only 210 votes to Stevenson's 905½ on the first and only ballot of the convention, Aug. 16.

Hawaii. Hawaii is an incorporated, organized territory of the United States. The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean between latitudes 18° 55' and 22° 15' N. and between 154° 50' and 160° 30' W. long. The total area of the group is 6,423 sq.mi. From southeast to northwest, the islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai and Niihau. In addition, stretching northward beyond Niihau more than 1,100 mi., is an archipelago of rocks, reefs and shoals. Also 960 mi. south of Honolulu and included as part of the city and county of Honolulu lies Palmyra, a coral atoll consisting of 55 islets, 5 mi. long and 2½ mi. wide. The largest island in the territory is Hawaii, with an area of 4,021 sq.mi. The capital of the territory is Honolulu, situated on the island of Oahu. Honolulu is a modern city with a population of 275,393 as of July 1, 1956.

The population of the entire territory was approximately 523,359, as of July 1, 1956, exclusive of military and naval personnel. The Japanese and Caucasian groups are the largest. Other groups include native Hawaiians and part-Hawaiians, Chinese, Filipinos, Koreans, Puerto Ricans and Samoans.

History.—As a result of a citizen suit seeking to force the legislature to reapportion itself as mandated by the Hawaiian Organic act, federal Judge J. Frank McLaughlin ruled on July 20, 1956, that Hawaii would hold territory-wide elections in 1956. This decision was rendered moot when the U.S. congress enacted a law, to take effect with the 1958 elections, reapportioning Hawaii's legislature as provided by the proposed state constitution. Statehood legislation again failed to pass the U.S. congress.

A special session of the legislature, called in Sept. 1956 by Gov. Samuel Wilder King, passed a bill giving salary increases to government employees and teachers.

Employment in the territory reached its highest level in ten years with more than 200,000 persons working in the month of July. Mainland dollar earnings again showed a favourable balance of income (\$745,000,000) over expenditures (\$707,000,000). The construction industry displaced the tourist trade as third-ranking industry with a value of \$94,000,000 in 1955. Increased construction of homes, public works and hotel facilities accounted for the sharp rise in the industry. In the fiscal year 1955, 109,798 tourists spent \$55,009,000.

A new weather observatory, above the 11,000 ft. level on the slopes of Mauna Loa on the island of Hawaii, was used to study Mars in its September transit. It was expected that the observatory would be utilized for scientific observations during the International Geophysical year in 1957-58.

As a result of the Nov. 6, 1956, election, John A. Burns, Democrat, was elected delegate to the U.S. congress. In the 1957 session of the legislature there would be 12 Democrats and 3 Republicans in the senate and 18 Democrats and 12 Republicans in the lower house.

Education.—As of Sept. 1956 there were 205 public schools including kindergartens and schools through the 12th grade. These public schools had an enrolment of 124,873. The number of teachers and principals in the public schools was 4,495. Expenditures for public instruction for the 1955-56 fiscal year amounted to \$28,979,897.

The territory operated one prison system with three units, two of which were minimum security projects. In addition, there were two training schools. In 1955-56, the average number of inmates of the prisons was 573; training schools, 151. Expenditures for the same period were \$984,950 for the former and \$406,759 for the latter.

Public Assistance.—Table I shows the average number of cases assisted monthly and expenditures, exclusive of administrative costs, during the

Table I.—Public Assistance in Hawaii

Type of assistance	Average number of cases assisted monthly during 1955-56	Average monthly payment, 1955-56
Old age	1,731	\$ 37.21
Blind	108	48.37
Dependent children and their parents	3,211	87.82
Children under foster care	782	43.71
Disabled persons	1,309	49.59
General assistance	3,488	54.20
Total expenditures for assistance.		\$6,676,161

fiscal year 1955-56 by the territorial department of public welfare.

During the same period, the territorial department of health allocated \$956,434 to the counties for hospital and medical aid to the indigent and medically indigent.

Gross unemployment benefit payments, including those to veterans and federal employees, totalled \$3,586,962. Claims allowed numbered 183,815.

Transportation and Communications.—There were 151,707 taxable passenger cars in the territory on Dec. 31, 1955. The federal aid highway system covered 1,139 mi. in 1956. During the year ended June 30, 1956, 1,045 overseas vessels arrived and departed from Honolulu harbour. Overseas incoming freight at this port was 2,753,591 tons; outgoing freight, 1,075,103 tons. There were 13 airports in operation in the 1955-56 fiscal year. In Dec. 1955, 143,063 telephones were in use in the territory. There were 3 commercial radio stations in the territory and 3 television stations in Honolulu with 3 satellite stations on neighbouring islands.

Banking and Finance.—In the calendar year 1955, bank clearings amounted to \$2,838,904,247. Five banks, operating 50 branches, had deposits totalling \$395,392,311 and their assets were \$428,471,221. Territorial government general fund expenditures for the fiscal year 1955-56 amounted to \$60,189,667; the bonded indebtedness of the territory was \$59,911,000. The net assessed valuation of real property was \$1,017,598,990 for the calendar year 1956; the average, unweighted rate of real property tax was \$2.88 per \$1,000. For the fiscal year 1955-56, territorial general fund revenues were \$62,129,506 including transfers and repayments.

Production.—Sugar is Hawaii's principal industry and the value of 1,140,122 tons of sugar produced in 1955 was approximately \$145,500,000 including the value of by-products. About 218,819 ac. were utilized for sugar-cane production. In 1954-55 pineapples were grown on 77,000 ac. of land to produce a pack of 29,413,000 cases of canned fruit and juices valued at more than \$110,000,000. The 1954-55 coffee crop was 9,940,000 lb. valued at \$6,411,000. The value of fruits, vegetables and other commercial crops produced in 1955 was about \$7,153,000, while the value of livestock and poultry products was \$26,065,000. During the fiscal year 1955-56, the commercial fish catch totalled 14,807,076 lb. valued at \$8,959,425. (S. W. K.)

Mineral Production.—The accompanying table shows tonnages and value of those mineral commodities produced in Hawaii in 1953 and 1954 whose values exceeded \$100,000.

Table II.—Mineral Production of Hawaii

	1953		1954*	
	Quantity	Value	Quantity	Value
Total		\$3,332,000		\$3,596,000†
Gold	7,431	223,575	8,000	252,000
Lead and gravel	111,000	157,000	119,000	319,000
Iron ore	1,300,000	2,654,000	1,485,000	2,993,000
Other nonmetals	190,002	...	58,000

Hay and Pastures. The 1956 U.S. hay crop of 110,383,000 tons was the second largest on record, exceeded only by the 112,782,000 tons of 1955, but 6% above the 103,648,000-ton average for 1945-54. Yields averaged 4.46 tons per acre as compared with 1.49 tons in 1955 and 1.39 tons for the previous decade.

Total acreage, somewhat reduced by diversion to the acreage reserve of the soil bank, was 107,707,000 ac. as compared with 112,782,000 ac. in 1955 and an average for 1945-54 of 103,648,000 ac. A record 61,031,000 tons of alfalfa were harvested as compared with 59,195,000 tons in 1955 and 41,315,000 tons average for 1945-54. Lespedeza provided 4,670,000 tons as compared with 4,708,000 tons in 1955 and an average crop of 6,354,000 tons. The crop of clover, timothy and mixed hays was 20,624,000 tons as compared with 24,174,000 tons in 1955 and an average of 29,509,000 for 1945-54. Wild hay, primarily a product of the Dakotas and Nebraska, was 8,537,000 tons, down from 10,977,000 tons in 1955 and 11,849,000 tons for 1945-54.

Wisconsin was the leading producer (8,036,000 tons), followed by Minnesota and California. Prices strengthened as the

season advanced, but in September averaged \$20.70 per ton, only slightly more than in 1955. Substantial amounts were utilized in the government-subsidized hay program for nearly 500 drought-stricken counties.

Pasture.—Forage crops made a slow and disappointing start in most sections under restraint of cold and dry weather; in May the average condition was 68%, as compared with 79% a year earlier and 82% for 1945-54. Grazing was delayed, but ample midsummer rainfall provided lush pasturage for a prolonged season in portions of the midwest and mountain area. West of the Mississippi, the season was unfavourable in many areas from the beginning and deteriorated into stark and extreme drought over wide areas late in the summer and autumn. In October pasture condition averaged 61% of normal, as compared with 66% at the same time in 1955 and an average 74%. Emergency grazing of soil bank acres contracted to the government was permitted in about 700 counties in 12 states.

Hay and Pasture Seeds.—Production of 26 legume and grass seeds in 1956 was estimated at 675,000,000 lb., 22% less than in 1955 and 19% below average. Carry-over stocks of 38 legume and grass seeds in off-the-farm positions produced prior to 1956 amounted to 244,566,000 lb. on June 30, 20% more than in 1955 and 18% above the 1947-51 average. Alfalfa approximated the 1955 level, which was 3¼ times the average level. Clovers and grasses as groups were about one-third larger than in 1955 and twice the average.

The 1956 harvest of several fescues was smaller than in 1955, but the bent grass seed crop was a record large one. The alsike-clover seed crop of 9,260,000 lb. was the smallest on record; about 3,475,000 lb. were imported from Canada in 1955-56. The red-clover seed crop of 78,917,000 lb. was 4% less than in 1955 and 16% below average; 6,063,000 lb. were imported in 1955-56.

European grass seeds were in surplus supply in 1955-56, the result of 52% larger production in 1955 over 1954. Prices declined sharply.

(J. K. R.)

Heald, Henry Townley (1904-), U.S. educator, resigned as chancellor of New York university in 1956 to accept the presidency of the Ford foundation. Born at Lincoln, Neb., on Nov. 8, Heald graduated from the State College of Washington in 1923 and took a master's degree in engineering at the University of Illinois two years later. From 1923 to 1927 he was a practising engineer, and in 1927 joined the staff of Armour Institute of Technology in Chicago as an assistant professor of civil engineering, advancing to dean of the college and then to president in 1938. When Armour was merged with Lewis institute in Chicago to form the Illinois Institute of Technology in 1940, Heald became president of the consolidated institution.

His administration was noted for a great increase in enrolment and physical assets, and for his personal leadership of slum clearance projects on Chicago's south side.

In 1951 Heald was elected the ninth chancellor of New York university, taking office the following February. Under his four-year administration, the university's endowment funds increased by approximately \$5,000,000; Heald also continued his activities for better housing in New York city and on a national basis. On July 10, 1956, trustees of the Ford foundation elected him president of that organization to succeed H. Rowan Gaither, Jr., effective Oct. 1, 1956.

Hearing. Progress in the field of hearing is considered under three headings: research, therapy and rehabilitation. In basic research the studies on neurophysiology of hearing were of particular interest during 1956. The bundle of nerve fibres which had been traced from the brain stem of the opposite side out to the region of the sense organ was studied further and appeared to terminate in the region of the sensory cells. Evidence indicated that this bundle carries impulses to the cochlea, probably to the sensory or hair cells.

The sensory cells are stimulated by the sound waves entering the inner ear and in turn initiate the nerve impulses which pass along the afferent nerves to the brain. The presence of nerves which carry impulses to these sensory cells poses the question as to their function.

There was improvement in the surgical treatment of conduction deafness resulting from otosclerosis and in the surgical repair of defects of the conduction mechanism in the middle ear caused by inflammatory disease.

The fenestration operation continued to be a reliable and predictable means by which the hearing in cases of stapes ankylosis caused by otosclerosis could be brought up to a practical level. In less than 5% undesirable results, such as annoying dizziness or failure to obtain hearing gain or possibly a depression of hearing, occurred. In 15% to 20% the improvement following operation receded to an unsatisfactory level within a two-year period.

Progress was made in improvement of the operation for mobilizing the stapes in cases of ankylosis resulting from otosclerosis. The simplicity of this procedure from the patient's point of view had been mainly responsible for its popularity despite the lower percentage of satisfactory results than obtainable by fenestration. This operation, which was performed before the year 1900 and was given up for indefinite reasons but probably because of the danger of infection, was further improved. In carefully selected cases the mobilization operation now gave a satisfactory improvement in hearing in more than 50% in the hands of some operators. The duration of this improvement was still uncertain, but the usefulness of the procedure seemed to be further established. The increasing percentage of good results was attributed partly to new techniques but also partly to skill developed by the operators. More time was required to evaluate this operation.

The surgical procedures under the name "tympanoplasty," by which defects of the conducting mechanism in the middle ear can be partly restored to function and at the same time inflammatory disease eradicated, were further developed. This type of therapy resulted mainly from the impetus given to exact surgery on the ear by the work of J. Lempert. Further developments demonstrated possibilities for improving by surgical means many cases in which hearing had been damaged by inflammation and which formerly were considered as beyond any possibility of improvement.

The methods which were developed for this work entailed time-consuming and painstaking care on the part of the surgeon, but possibilities for improvement in hearing were well demonstrated. These advances in the surgical treatment of deafness made it possible for hearing to be restored in large numbers of persons who in the past would have been forced to depend upon the electrical hearing aid.

In the field of rehabilitation, advances were made in the design of hearing aids and in facilities for educating those with permanent severe hearing loss. With the increase in these facilities it seemed possible that in the near future all children with incurable hearing defects could receive adequate education and rehabilitation. (See also EAR, NOSE AND THROAT, DISEASES OF.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Ears and Hearing* (1950).

Heart and Circulatory Diseases.

Congenital heart disease continues to receive intensive study during 1956, and techniques of diagnosis were further refined and perfected so that a precise appraisal of varied complicated structural congenital abnormalities of the heart and great vessels could be attained. Only a few years before such precision in diagnosis would have been impossible. Surgery for congenital heart conditions continued likewise to forge ahead. No longer did surgeons have to rely only upon blind methods of repair and correction of defects within the heart, attempted while the heart was still beating and full of blood. Instead, there was increasing resort to the use of mechanical pumps of varying design to take over the work of the heart so that empty of blood, it could be opened, inspected directly and suitable repair of defects accomplished. This technique was often accompanied by cooling of the body to reduce the demand for circulating blood while the heart itself was being by-passed. In some instances, the heart had been stopped briefly as the result of the injection of solutions containing potassium (alone or in combination with other substances) or of the drug acetylcholine. Not all patients with congenital heart disease could be helped despite this perfection of diagnostic methods and operative techniques, but it was clear that more and more cases previously considered hopeless were within the reach of help or cure.

Rheumatic Fever.—The prevention of rheumatic fever also received great emphasis. The American Heart Association supported a vigorous national program in the United States to prevent patients known to have had one attack of rheumatic fever from having recurrences by preventing streptococcal infections, particularly sore throats and tonsillitis caused by the haemolytic streptococcus bacteria. It had long been known that the daily long-term use of sulfa drugs would effectively keep most of these patients free from such infection, and it appeared that penicillin was even superior to the sulfa drugs as a prophylactic agent. Clinics and private physicians were urged to co-operate in this program. The prevention of even a first attack of rheumatic fever by prompt and adequate treatment with penicillin of all haemolytic streptococcal infections was under study. A difficulty here was the fact that not all such infections could be clinically recognized, some being relatively mild and difficult to detect. It appeared that much had been done to minimize the threat of rheumatic fever, but it was much too early to say that the disease was on the verge of extinction.

The treatment of cases of acute rheumatic fever with hormones was reported by May G. Wilson and Wan Ngo Lim to decrease the incidence of residual heart damage significantly as compared with that encountered in patients treated with conventional methods. In this regard, the importance of prompt use of such agents early in the course of the disease was stressed.

Surgeons were increasingly active in searching for new ways to improve the function of hearts already damaged by rheumatic fever. There was no operation suggested or available to make the weakened heart muscle itself stronger, but by opening up heart valves which were partially fused closed, the muscle could be relieved of the burdens of mechanical blocks. The operation for relieving the block of one valve, the mitral valve, had been shown to be of established value, and this could be done by the surgeon's inserting his finger into the beating heart to open the valve and allow more normal function. A similar partial closure of another valve, the aortic valve, had usually resisted the vari-

techniques proposed, but during the year C. W. Lillehei and his associates proposed correcting the difficulty by opening the valve under direct vision, much as was being done for congenital heart conditions. This method was found promising and received further trial during the year.

High Blood Pressure.—The treatment of high blood pressure was the subject of many clinical and laboratory investigations, but there was no radical change from the previous few years. Surgery continued to be reserved for a relatively small group of patients, and those who needed treatment in most instances were advised to try one or more of the drugs known to have some favourable moderating influence. The most powerful drugs had their drawbacks and their hazards, and no easy or invariably satisfactory means of controlling elevated blood pressure levels and the basic process which produced them was yet at hand.

J. J. Genest and his associates measured the amount of one hormone from the adrenal gland, aldosterone, appearing in the urine of patients with high blood pressure and concluded that the adrenal glands of such persons seemed to secrete relatively large amounts of aldosterone as compared with normal subjects. Aldosterone seemed to be one of the most important factors involved in the handling of salt in the body.) This finding by Genest, which must be confirmed, served as another useful clue to the eventual understanding of the nature of the common ("essential") type of high blood pressure, the cause or causes of which still remained a mystery.

Coronary Heart Disease.—Coronary heart disease, one type of arterial blood vessel disease of atherosclerosis, was also approached from many angles. Subjects under study were numerous, among them heredity, body build, body fatness, diet, hormones and particularly the importance of sex-linked differences, high blood pressure, physical activity, the psyche, local factors in blood vessel walls and the role of blood clotting. In the past 30 years, much investigative work had been done using various species of animals to reproduce a counterpart of human atherosclerosis. The year 1956 saw increasing attention paid to the study of this problem, especially coronary artery disease, in large population groups all over the world. It was hoped to establish a better understanding of the differing incidence of coronary disease in various countries and economic groups. The preliminary data collected hinted strongly that one key element was the amount of fat taken in the diet over a period of years. However, there was as yet no convincing evidence that coronary

disease could be prevented by a low fat diet or its course modified by adopting such a routine. The possibility of altering blood fats, notably cholesterol, by adding to the diet a particular vegetable fat, sitosterol, was investigated and offered some promise of effectiveness in this regard.

The diagnosis of coronary heart disease could not be established in human beings without the appearance of symptoms or typical changes in the electrocardiogram. The diagnosis in actual cases of coronary thrombosis with death of heart muscle cells was made easier, though, by the development of a blood test for an enzyme, transaminase, released from the damaged heart, and numerous reports confirmed the usefulness of such a method.

Methods of caring for patients with attacks of coronary thrombosis did not change greatly, although there was a tendency to allow such persons to spend a shorter time in bed than hitherto. The over-all duration of convalescence was not significantly altered, however. Attempts by surgeons to improve the blood supply to the hearts of such patients by operation continued to be controversial. Harold Feil and his associates reported an evaluation of 63 patients operated upon by techniques devised by Claude Beck and concluded that more control studies and long-term follow-up would be necessary before such procedures could be accepted for general use.

Hinschelwood, Sir Cyril Norman (1897–), British chemist, was born at London, June 19. He was awarded the 1956 Nobel prize for chemistry, jointly with Nikolai Semenov (*q.v.*), for his work on the kinetics of chemical reactions.

He was educated at Westminster City school and at Oxford, where he held in succession fellowships at Balliol, Trinity and Exeter colleges. From 1937 he was Dr. Lee's Professor of Chemistry in the University of Oxford, and his other appointments included those of chairman of the Fuel Research board, membership of the Scientific Advisory council of the ministry of fuel and power and of the Advisory Council on Scientific Policy. Elected a fellow of the Royal society in 1929 at the age of 31, he was awarded its Davy (1942) and Royal (1947) medals and was elected president of the society in 1956. During 1946-48 he was president of the Chemical society.

Hinschelwood's early studies dealt with the kinetics of molecules, but from about 1946 onward he investigated the chemical changes of the bacterial cell and sought to explain in physico-chemical terms the biological responses of bacteria to changes in their environment. He claimed to show that more or less permanent changes in resistance to a drug could be induced in bacterial cells by prolonged exposure to a drug, as a result of a change in the enzyme patterns of the cell impressed upon them by the drug. These researches were of great practical as well as theoretical importance, especially in regard to the development of "re-

PRINCIPAL CAUSES OF DEATH, 1900 and 1955, shown in percentage of total deaths for each year. (Source: National Office of Vital Statistics)

sistance" in bacteria which are subjected to the action of chemotherapeutic agents and antibiotics. His publications include *The Kinetics of Chemical Change* (4th ed., 1940) and *The Chemical Kinetics of the Bacterial Cell* (1946). Hinshelwood was knighted in 1948 and honoured by many universities and scientific societies.

Hockey, Field. Men's interest in the sport gained considerably in the United States during the Olympic year of 1956. The Field Hockey Association of America enjoyed its busiest campaign in many seasons and the title was shared by Westchester, N.Y., and New York, N.Y., after the teams battled to a 3-3 draw in the championship play-off at Greenwich, Conn., June 10. The second annual two-day invitation tournament was held at Greenwich May 19-20. The Toronto gymkhana representatives won the event by beating the Westchester club, 3-1. The American Olympic squad of 16 members was chosen on Sept. 17. The roster included four players from the 1948 team, Kurt Orban of the North Jersey team, Harry Marcopolos and Bill Stude of Baltimore, Md., and Felix Ucko of New York city.

A highlight of the women's season was the tour made by a United States squad through Australia and New Zealand. The group made a creditable showing in the international tourney held at Sydney (Austr.) university. The U.S. Women's Field Hockey association, at the conclusion of its tournament held Nov. 24-26 in 1955, picked its All-America teams. The first 11 was made up of Betty Shellenberger, Anne Volp, Beth Ralph, Joan Edendoron, Rosemary Denniken, Alice Willetts, Ruth Heller, Mary Fetter and Jennifer Price, all from the Philadelphia, Pa., area,

CLUTCHING THE SCREEN. referee Frank Udvari attempts to stay out of the way as players converge on the puck during action in the semifinal game of the Stanley cup play-offs between the Detroit Red Wings and the Toronto Maple Leafs, March 20, 1956. In the final play-offs, the Montreal Canadiens beat Detroit to win the cup

Hockey, Ice. The long reign of the Detroit Red Wings professional hockey rulers came to an end in 1956. The Wings, who had won the National league title for seven consecutive seasons, finished second to the Montreal Canadiens in the regular season, and then were routed by Montreal, 4 games to 1, in the final play-offs for the Stanley cup. The Canadiens rallied for four goals in the last period to capture the series opener, 6-4, on their home ice on March 31. A crowd of 13,977 saw Jean Beliveau pace the winners' attack with a pair of goals. Montreal won the second contest, 5-1, at the Forum on April 1 as Jacques Plante, goalie, starred. When the play-offs shifted to Detroit on April 5 the Red Wings triumphed 3-1, with deciding third-period goals by Ted Lindsay and Gordie Howe. With Beliveau scoring two goals and Plante again shining on defense, the Montreal six shut out their rivals, 3-0, on April 10 to move within one victory of hockey's biggest prize. The play-offs shifted back to Montreal on April 10 and the Canadiens won the cup that Detroit had held for two straight seasons by beating the Wings, 3-1. Beliveau, Maurice Richard and Bernie Geoffrion scored goals for the victors. Plante again starred defensively, blocking 25 of 26 shots fired at him.

Montreal, coached by Hector (Toe) Blake, advanced to the cup finals by eliminating the New York Rangers, 4 games to 0, in the semifinal round. The scores were 7-1, 2-4, 3-1, 5-3, 7-0. Detroit reached the ultimate round by taking its series with the Toronto Maple Leafs, 3-2, 3-1, 5-4 in overtime, 0-2 and 3-1.

The National league's tenth annual All-Star game, played at Montreal on Oct. 9, 1956, resulted in a 1-1 tie. The contest brought together the Canadiens and an all-star group chosen from the other five teams in the league. A crowd of 13,097 paid

28,261, a record sum for the All-Star game, to see the exhibition. Maurice Richard scored for the league champions at 14 min. 38 sec. of the second period, and Ted Lindsay of Detroit evened the count for the All-Stars at 18 min. 48 sec. of the same session.

Beliveau, the Canadiens' outstanding centre, won the Art Ross trophy as leading scorer during the regular league campaign. Beliveau set two records—most goals for a centre, 47, and most points for a centre, 88. Bert Olmstead of Montreal established a new record for assists with 56. The Canadiens' goalie Jacques Plante was awarded the Vezina trophy, given annually to the regular goalie least scored on. Glenn Hall, young goal tender of the Detroit Red Wings who recorded 12 shutouts during the season, was named as the outstanding rookie for the 1955-56 campaign and received the Calder Memorial trophy. Doug Harvey of Montreal won the James Norris trophy for the second straight year. The prize was presented to the regular defense man who throughout the season demonstrated the greatest all-around ability at his position. Earl (Dutch) Reibel, Detroit centre, received the Lady Byng award given each year to the player who best combined sportsmanship and playing ability.

The National Hockey league made one rule change in 1956, adopting a regulation providing for the immediate return to the ice of a man serving a minor penalty if the opposing team scored a goal. Under the former rule the penalized man sat out his minor penalty for the full two minutes.

The New Haven (Conn.) Blades defeated the Clinton (N.Y.) Comets, 4 games to 1, in the Eastern leagues cup play-offs. It marked the first time in the hockey history of the Connecticut territory that a New Haven team won the league title and the play-offs. The postseason series in the American league was annexed by Providence (R.I.), champion in the regular campaign, which beat out Cleveland (O.), 4 contests to 0.

National Collegiate Athletic association laurels were retained by the University of Michigan sextet when it conquered Michigan Tech, 7-5, at Colorado Springs, Colo., on March 17. The victory marked the fifth time in the last eight tournaments that the Wolverines took the title final. Harvard captured Ivy league honours for the third season in a row, winning seven of its eight games. Bill Harrison of Clarkson (Potsdam, N.Y.) received the Spencer Penrose trophy as 1956 College Coach of the Year. His team went through a 21-game schedule undefeated. The Detroit Arrowsmiths won the national junior championship of the United States by defeating Sault Ste. Marie (Mich.), 3-1.

(T. V. H.)

Hoffman, Paul Gray (1891-), U.S. industrialist, was born on April 26 at Chicago, Ill., and studied at The University of Chicago. In 1911 he became a salesman for a Studebaker automobile dealer in Los Angeles, Calif., and later was sales manager and then district branch manager for the Studebaker corporation in that city. After serving in World War I as an artillery officer, he bought the Studebaker tail branch in Los Angeles and in 1925 became vice-president of the Studebaker corporation at South Bend, Ind. In 1933 he had another vice-president successfully reorganized the corporation as receivers, and he was president from 1935 to 1948. One of the founders of the Committee for Economic Development, Hoffman was chairman of that organization's board of trustees from 1942 to 1948. On April 5, 1948, Pres. Harry S. Truman appointed him administrator of the Economic Cooperation administration, and he supervised the European Recovery program until his resignation on Sept. 30, 1950. Shortly thereafter he was named president of the Ford foundation.

Hoffman was one of the earliest supporters of Dwight D. Eisenhower for the Republican presidential nomination in 1952.

On Feb. 4, 1953, he resigned as president of the Ford foundation to return to the Studebaker corporation as chairman of its board of directors. When Studebaker merged with the Packard Motor Car company in 1954, Hoffman was named board chairman of the new company. On July 13, 1956, Pres. Eisenhower named him a delegate to the United Nations general assembly, convening in Nov. 1956.

Home Economics. Membership in the American Home Economics association in 1956 included 23,520 professional memberships, 435 college clubs, 114 homemaker groups and 4 affiliated foreign associations. The association granted 2 fellowships for graduate study and 12 fellowships and scholarships to assist students from abroad to study home economics at U.S. colleges and universities.

During the year the association conducted its annual meeting and exposition and, in co-operation with the Canadian Home Economics association, began to make plans for the ninth International Congress on Home Economics which was to be held on the campus of the University of Maryland in the summer of 1958.

The members of the association kitchen-tested and edited recipes for *Favorite Recipes From the United Nations*, published by the United States Committee for the United Nations.

Home Economics Research.—Space requirements for efficient home canning and for storage of household textiles were determined at the Beltsville laboratories as part of a co-ordinated housing research program with the state agricultural experiment stations. Experiments to determine the most energy-saving heights for ovens were completed. Results from this research on energy and space requirements were incorporated in an energy-saving kitchen-workroom designed and built at the Agricultural Research centre.

Research was completed on the ability of detergents to remove soil from various kinds of fabrics under different laundering conditions and the effect of the detergent on certain fabric properties. A guide to homemakers in selecting detergents was issued.

Findings were brought together from surveys of family clothing practices made in three types of communities—a northern and a southern city and a northern farming area. The report gave information on clothing practices such as number of garments owned, bought ready-to-wear in a year, acquired as gifts, hand-me-downs, made over or made at home, and amounts spent for clothing. Estimates were included of the extent to which income, age of person and size of family affect clothing practices.

Nutritionists developed a reference publication for nutrition teachers. The daily food plan contained in this publication accounted for most recent research findings on human nutritional needs, nutritive value of foods and food consumption habits.

Preliminary findings from a nation-wide food consumption survey made in 1955 were issued and additional reports were planned for 1957.

Agricultural Experiment Stations.—The research program at the agricultural experiment stations in the 48 states, Alaska, Hawaii and Puerto Rico in 1956 served many interests of the home and family.

Foods of better quality resulted from research to improve production and marketing practices. New and improved food products were developed, as well as guides for preservation and utilization of foods in the home. Nutrition investigations provided basic information on human nutritional requirements, on the role of nutrients in serving the body's needs and on the value

and interrelationship of different foods in supplying essential nutrients. Studies of farm family spending provided a background toward improving family diets and levels of living at various incomes.

Guides for the improvement of rural housing were developed through researches on space standards and functional designs and arrangements for home storage and activities; construction methods and utilization of materials; farm home utilities and safety; influence of geography and environment on housing design; and housing needs in relation to family composition and economic means.

Research on home equipment design and performance and on work simplification in household tasks provided help in problems of home management. Co-operative regional researches dealt with homemakers' problems in the selection, use and care of clothing.

Home Economics Extension Service.—A major emphasis in home economics extension work throughout the country in 1956 was the field of family economics. Extension teaching emphasized managing time, energy, money and the skills of family members to encourage growth of each family member and aim toward a happy and healthful home life.

Approximately 3,586 white and 421 Negro home demonstration agents estimated that their work reached more than 6,133,846 families in 1956. Of these, more than 2,285,000 were farm families, about 1,438,400 were nonfarm and 2,410,400 were urban. The number of volunteer leaders actively engaged in forwarding the home demonstration program was 720,000. There were 66,459 home demonstration groups with a membership of 1,443,000.

Nearly 4,362,000 families were helped to improve their family food and nutrition and more than 7,954,000 were assisted with consumer information on agricultural products. The program helped 1,649,000 families to adopt better health and sanitation practices. Families assisted with housing totalled 1,625,000, and those assisted with home furnishings and equipment numbered more than 2,351,000.

Land-Grant Colleges.—Those persons in charge of resident instruction, research and extension home economics in the land-grant colleges comprise the membership of the home economics division of the American Association of Land-Grant Colleges and State Universities. During 1956 the division concentrated on the home economics curriculums in land-grant colleges. It discussed home economics implications of the program of the Commission on the Education of Women of the American Council on Education, and of research studies on college curriculums under way in several institutions. The extension section of the home economics division studied the training of personnel for extension work.

Since many of the land-grant colleges have co-operative programs with institutions in other countries, the division studied the problem of international co-operation as it relates to home economics.

Public Schools and Colleges.—Enrolment in home economics classes in junior and senior high schools during 1955-56 remained about the same as in 1954-55. Part-time and evening classes for adults continued to be in demand as a part of the public school homemaking program. A wide variety of courses was offered in the secondary schools both for adult groups and for boys and girls in the day school program. In many localities where special adult classes could not be conducted, informal help was provided through homemaking problems clinics or workshops, open house days at school and educational programs for homemakers on radio and television.

Membership in the Future Homemakers of America and New Homemakers of America, national organizations of high school home economics pupils, increased about 5%. In 1955-56 there

SOLAR STOVE used in Japan in 1956 utilizes the sun's rays by concentrating them in the manner of a magnifying glass onto a central point. As long as the sun shines, the stove, built of 36 mirror plates and weighing 250 lb., produces enough heat to cook a meal

were 482,987 F.H.A. and N.H.A. members in 10,750 local chapters. Throughout 1956 the F.H.A.-N.H.A. chapters sponsored activities to promote individual development, better family living, school and community improvement and international good will.

There were approximately 500 colleges granting degrees in home economics. Approximately 81,000 major and nonmajor students were enrolled in home economics courses in colleges, universities and junior colleges. The number of degrees granted to home economics majors were: bachelor's, 7,426; master's, 809; and doctor's, 54. Special attention was given during the year to improvement of college teaching in textiles and clothing and in foods and nutrition, and to planning for space and equipment for colleges.

Teacher supply in secondary schools and colleges continued to be below the demand.

Home economics graduates found employment and professional careers in such fields as nursery school work, school lunch management, fashion and merchandising, dietetics and home service work with the utility companies as well as in teaching extension service and research.

Honduras. A republic of Central America, Honduras is bounded by Guatemala, El Salvador and Nicaragua. Area: 43,277 sq.mi. Pop. (1950 census): 1,368,605, including approximately 35,000 tribal Indians; (1955 est.) 1,660,000. Capital: Tegucigalpa, pop. (1950 census) 72,385. Other principal cities (1950 census) are San Pedro Sula, 21,139; La Ceiba, 16,645; Tela, 12,614; and Puerto Cortés, 12,228. Language: Spanish. Religion: predominantly Roman Catholic. President in 1956: Julio Lozano Díaz (until Oct. 21).

History.—On Oct. 21, 1956, Honduras experienced its 135th revolution, fortunately without bloodshed. A junta composed of three officers, Gen. Roque J. Rodríguez, Col. Héctor Caraccioli, and Maj. Robert Gálvez Barnes, quietly took control of the government after inducing *de facto* Pres. Julio Lozano Díaz to resign.

Lozano Díaz had assumed power when a formula was conceived to govern the country following the indecisive elections of 1954 in which no candidate received the required majority. He had assumed the title of chief of state and ruled with dictatorial authority. He met with an advisory council, but congress had been dissolved.

Lozano Díaz had encountered little opposition during 1955. Plans were made to elect a constituent assembly which was to choose a president, rewrite the constitution and serve as an interim congress. Early in 1956, however, it became apparent that Lozano Díaz intended to succeed himself. At first, he seemed to have the support of all parties, but the Liberal party headed by Ramón Villeda Morales soon took an independent course. By May, the Nacionalistas had also shown opposition. The two parties finally induced Lozano Díaz to set the date for the election of the constituent assembly for Oct. 7. In June, the Liberals and the Nacionalistas protested that representatives of their parties had been excluded from the all-important electoral boards which would count the votes. They demanded that Lozano Díaz resign. As protests continued during July, Lozano Díaz summarily exiled Villeda Morales, Oscar Flores, editor of the Liberal daily *El Pueblo*, and Francisco Milla Bermúdez, another Liberal leader. The reaction to this was student strikes and general unrest throughout the country, increasing to such volume that they prevented Lozano Díaz from attending the conference of American presidents held in Panamá on July 21 and 22. On Aug. 2 a state of emergency with all the attendant repressions was stamped on Tegucigalpa, following an unsuccessful uprising. In the growing excitement, Lozano Díaz's health failed and he

went to Miami for treatment. However, he came back by the end of September to assume personal charge of the elections. These took place on Oct. 7 as scheduled, and the Lozano Díaz forces promptly announced that they had won all 56 seats in the constituent assembly. This would have assured his being named president, and probably the naming of Abraham Williams Calderón, who had supported him, as vice president. It was widely believed that, once in power, ailing 70-year-old Lozano Díaz would turn over the presidency to Williams Calderón. This was not to be, however, as the whole country considered the elections to be a gigantic fraud. In addition to wholesale threats and intimidations, there had been violence and 11 deaths. The military feared open rebellion if Lozano Díaz attempted to stay in power, and when the three-man junta took over on Oct. 21, there was popular feeling that serious trouble had been averted. Villeda Morales returned from exile on Nov. 12, requesting full support for the junta.

The economic development of Honduras suffered serious setbacks during the political insecurity of 1956. The government curtailed the public works program and one \$12,500,000 project of the United Fruit Co. was postponed. The International Bank for Reconstruction and Development did, however, conclude a \$4,200,000 loan to improve highways. Preliminary studies were begun on the 230-mi. Tegucigalpa-Puerto Cortés highway and also on the 106-mi. San Pedro Sula-El Salvador route. Banana production increased because the industry was recovering from the effects of the winds, floods and strikes of the last few years. Labour disputes of the banana workers were settled in part by arbitration; in some cases, however, the government arrested labour leaders who were advocating strikes.

A survey was under way to study final aspects of the Río Lindo hydroelectric project near Lake Yojoa, and oil concessions were being sought in the departments of Santa Barbara and Olancho. (R. Hn.)

Education.—In the 1953-54 school year there were 2,214 public and private primary schools with 4,007 teachers and 117,292 pupils. Secondary, normal and commercial schools had 884 teachers and 6,847 students. The National university at Tegucigalpa had 843 students. According to the 1950 census, 64.8% of those 10 years of age and over were illiterate.

Finance.—The monetary unit is the lempira, officially valued at 49.5 cents U.S. currency in 1956. Government expenditure (cash transactions) in the fiscal year ending June 30, 1955, totalled 52,900,000 lempiras; revenue, 47,700,000 lempiras. The 1955-56 budget balanced revenue and expenditure at 76,327,358 lempiras; about one-third of the proposed expenditure was allocated to public works under the five-year plan. The internal debt was 11,480,000 lempiras on Oct. 31, 1955; there was no external debt. Currency in circulation (June 30, 1956) totalled 40,580,000 lempiras; demand deposits, 30,380,000 lempiras. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$101,000,000. The cost-of-living index (Tegucigalpa) stood at 112 in Sept. 1956 (1953=100). National income (gross national product at market prices) was estimated at 588,000,000 lempiras in 1955.

Trade and Communications.—Exports in 1955 totalled 100,700,000 lempiras (adjusted for banana undervaluation); imports were 108,600,000 lempiras. Chief exports were bananas (57%), coffee (12%) and silver (3%). Leading customers were the U.S. (68%), El Salvador (8%), Germany (5%), the Netherlands (4%) and Cuba (3%); leading suppliers, the U.S. (66%), Germany (6%), Netherlands Antilles (5%), Japan (5%) and El Salvador (3%).

Railway mileage totalled 816, confined to the northern banana area. Highway mileage (1952) was 1,124. On Oct. 1, 1954, there were 2,260 automobiles and 3,376 trucks. According to *Lloyd's Register of Shipping*, 117 vessels (100 tons and over) aggregating 431,995 gross tons were registered under the Honduran flag on June 30, 1955. Telephones (Jan. 1, 1955) numbered 7,200, 59.7% of which were automatic.

Production.—Banana exports in 1955 totalled 10,929,000 count bunches (50 lb. each). Coffee production in the 1955-56 crop year was estimated at 287,000 bags of 132 lb. each. Production in the crop year 1954-55 included tobacco 4,200 metric tons; sugar cane 668,900 tons; cotton 1,900 tons. Cattle (Dec. 1954) numbered 1,192,000; pigs (1952) 521,000. Installed electric energy capacity (Dec. 31, 1955) totalled 20,000 kw.; production (public use only) was 62,000,000 kw.hr. in 1955. Gold exports in 1955 were only 855 troy oz. (J. W. Mw.)

Hong Kong. This British colony on the southeast coast of China consists of Hong Kong Island, the ceded territory of Kowloon, etc., and the New Territories (the rest of Kowloon peninsula and numerous islands, leased from China in 1898 for 99 years). Area: colony 36 sq.mi. (Hong Kong Island 32 sq.mi.); New Territories 355 sq.mi. (incl. Lantau Island 58 sq.mi.). Total pop. (1955 est.) 2,340,000 (including about 13,000 permanently resident British subjects from the United Kingdom and Commonwealth). Language: Chinese (Cantonese); about 5% speak English. Chief towns: Victoria (cap.), pop. (1955), about 1,000,000; Kowloon (1955), about 1,000,000. Governor in 1956, Sir Alexander Grantham.

History.—Relations with mainland China continued friendly during the greater part of 1956, but controversy developed again after the outbreak of riots which began on the Kuomintang national day (Oct. 10), when Nationalist paper flags were removed from walls in Kowloon. In rioting which lasted for two days in Kowloon Nationalists attacked Communist sympathizers and their establishments and foreigners. Military forces had to be called in to assist the police and casualties were estimated at 56 killed and 477 injured. The Peking government lodged a strong protest blaming the authorities for failing to check the disturbances, but their protest was rejected.

In Feb. 1956, quota restrictions on the entry of Chinese into Hong Kong were removed but were reimposed when it was found that about 73,000 or 81% of those who had entered the colony had remained despite the expiration of their permits. The governor, Sir Alexander Grantham, stated that more than 200,000 refugees would have been resettled in fireproof buildings by Sept. 1956, but that 300,000 more had to be rehoused.

Other notable events during 1956 were a report on broadcasting which recommended the creation of a public corporation, stronger transmitters and commercially sponsored programs in both English and Chinese, and the rejection by the government of proposals for building a tunnel under the harbour and a bridge over it in favour of the expansion of the existing ferry services.

Revenue for 1954-55, according to final official figures, was \$434,400,000 and expenditure \$373,300,000 (in Hong Kong dollars). The 1956-57 budget forecast revenue at \$449,800,000 and expenditure \$493,300,000. The colony's total trade in 1955 amounted to \$6,253,000,000, 7% higher than in 1954. Exports to China fell to \$181,500,000.

(W. V. PL.)

Education.—Schools (1955): 1,150, pupils 262,050, teachers 9,445. Teachers' training colleges 3, students 233. University of Hong Kong: students 900, academic staff 130.

Finance and Trade.—Monetary unit, Hong Kong dollar: HK\$5.7=U.S. \$1. Budget (1955 est.): revenue £25,855,000; expenditure £28,065,000. Foreign trade in Hong Kong dollars (1955): imports \$3,718,917,585; exports and re-exports (excluding bunkers) \$2,534,423,746. Main sources of imports 1955: China \$897,646,396; Japan \$525,994,315; U.K. \$441,036,467; U.S. \$324,855,713; Malaya \$151,429,690. Main destinations of exports (1955): Malaya \$375,365,533; U.K. \$251,539,596; Indonesia \$193,388,155; China \$181,560,144; Japan \$146,255,000; U.S. \$87,869,362. Main exports: entrepôt trade, chiefly textiles; also enamelware, plants and seeds for medicines and perfumery; sulphate of ammonia.

Horse Racing. Swaps, owned by Rex C. Ellsworth of Columbus, O., was chosen handicap champion of 1956 by the Thoroughbred Racing association. The selections board of the association gave the Pacific coast racer 25 votes, his rivals being Nashua, Summer Tan, Bardstown and Needles. Breaking four world records and tying another, the California-bred colt brought

his earnings to \$848,900 and gained fourth place on the list of the world's all-time money winners. A fractured left hind leg injured in a workout on Oct. 9, forced him out of competition and, although his life was spared, the accident was believed to have ended his racing career. Other champions chosen were Marion du Pont Scott's Shipboard, steeplechase; Calumet farm's Barbizon, two-year-old colts; Freeman Keyes's Romanita, two-year-old fillies; Arthur B. Hancock's Doubledogdare, three-year-old fillies; and the D. and H. stable's Needles, three-year-old colts.

Nashua was retired to stud in October after running his earnings to a new all-time high of \$1,288,565 to surpass the record of \$1,085,760 set by Citation.

Johnny Longden broke the world jockey's mark set by Sir Gordon Richards of England when he won three races at Del Mar, Calif., Sept. 3, bringing his total to 4,871. Richards' lifetime mark was 4,870. Willie Shoemaker became the first jockey in U.S. history to earn \$2,000,000 in purse money in one year. Victory in the sixth race at Garden State on Oct. 18 brought his 1956 winnings to \$2,001,165.

Betting and attendance were both up in most states where racing is legal. New York led the way with an unofficial total of \$381,706,245 bet as against \$355,717,545 waged in 1955. Attendance increased about 2%.

High lights of some of the major races of 1956 follow:

Broward Handicap.—Swaps ran 1 mi. 70 yd. in world record time of 1 min. 39 $\frac{3}{4}$ sec. at Gulfstream.

Californian.—Porterhouse achieved an unexpected victory by a nose over Swaps in \$109,800 event at Hollywood Park. Triumph was worth \$63,700.

Argonaut Handicap.—Swaps won in world record time of 1 min. 33 $\frac{1}{2}$ sec. for mile handicap at Hollywood.

Inglewood Handicap.—Crowd of 50,000 at California track saw Swaps race 1 $\frac{1}{4}$ mi. to universal record of 1 min. 39 sec.

American Handicap.—Swaps flashed to easy victory over Mr. Gus at Hollywood Park to add \$57,000 to earnings.

Hollywood Gold Cup.—Swaps set track mark of 1 min. 58 $\frac{3}{4}$ sec. for 1 $\frac{1}{4}$ mi. in winning \$162,100 test.

Sunset Handicap.—Swaps set world mark of $\frac{1}{2}$ min. 38 $\frac{1}{2}$ sec. for 1 mi. 5 furlongs in winning \$110,500 handicap.

Arch Ward Memorial.—Hasty House farm's Mahan took handicap over grass course as Swaps ran seventh in field of eight.

Washington Park Handicap.—Swaps established track mile mark at 1 min. 33 $\frac{1}{2}$ sec. in defeating Summer Tan in \$142,700 run.

Widener Handicap.—Nashua, making first start in four months, defeated Social Outcast by head in \$129,800 handicap; \$92,600 first money brought his earnings to \$1,038,015.

Gulfstream Park Handicap.—Nashua, carrying 129 lb., met stunning setback, running fifth in field of seven in \$112,900 contest. Brookmeade's Sailor triumphed.

Grey Lag.—Nashua won \$37,100 in handicap at Jamaica, N.Y., with Find second.

Camden (N.J.) Handicap.—Nashua became top money winner of all time on May 19. He took \$22,750 prize to lift total to \$1,100,365. Eddie Arcaro rode victor, who passed Citation's world high of \$1,085,760.

Metropolitan.—Nashua ran fourth as Midafternoon, 9-1, captured 63rd running of handicap at Belmont.

Carter.—Nashua turned in poorest race of career, running seventh in \$58,500 handicap at Belmont. Red Hannigan of Woodley Lane farm, 14-1, was victor.

Suburban.—Belmont's \$55,900 handicap went to Nashua carrying 128 lb. Dedicate (111 lb.) was second.

Monmouth.—Nashua added \$78,200 to earnings at Oceanport (N.J.) track. Runner-up in handicap was Castle Rock farm's Mr. First.

Woodward.—Mr. Gus beat Nashua in \$80,300 stakes at Belmont.

Jockey Club Gold Cup.—Nashua closed racing career on Oct. 13 by setting American record of 3 min. 20 $\frac{1}{2}$ sec. for two miles at Belmont. Winner's purse of \$36,600 brought Nashua's life-time earnings to \$1,288,565. Bold Ruler captured the Futurity, on same program, for purse of \$91,145. Eddie Arcaro rode both victors.

Kentucky Derby.—Needles, owned by Jackson Dudley and Bonnie Heath, finished with rush to beat 16 rivals in 82nd running of the classic at Churchill Downs, Louisville, on May 5. Ridden by Dave Erb, the D. and H. stable colt defeated Calumet farm's Fabius by $\frac{3}{4}$ length. Helen Kellogg's Come on Red was third and Dino Lozzi's Count Chic was fourth. Needles paid \$5.20 for \$2 to win and earned \$123,450 of the gross purse of \$167,550. More than 100,000 persons saw the race at 1 $\frac{1}{4}$ mi.

Preakness.—Fabius won the 80th running of Preakness at Pimlico, Baltimore, Md., May 19, beating Needles by 1 $\frac{1}{4}$ lengths. Willie Hartack rode the Calumet star in the run of 1 $\frac{3}{4}$ mi. Calumet won \$84,250 of the \$132,800 purse. W. E. Britt's No Regrets finished third.

Belmont Stakes.—Needles earned \$33,600 for owners on June 16 with a stirring victory at Belmont Park. Ridden by Dave Erb, the victor came from last to win from C. V. Whitney's Career Boy by a neck, with Fabius 1 $\frac{1}{2}$ lengths back. The 88th running of the stakes, at 1 $\frac{1}{2}$ mi., grossed \$119,650.

Pimlico Special.—Mrs. J. W. Galbreath's Summer Tan, 9-10 favourite, annexed \$50,000 event. Midafternoon was second.

Arlington Handicap.—The Langollen farm's Mr. Gus defeated Summer Tan

by a length, setting U.S. record of 1 min. 54 $\frac{1}{16}$ sec. for 1 $\frac{3}{16}$ -mi. grass course in Chicago. Race grossed \$154,850.

American Derby.—Swoon's Son, owned by E. Gay Drake and ridden by Eddie Arcaro, beat Needles and six others at 1 $\frac{3}{16}$ mi. at Washington Park, Chicago. The Warrior was second, Toby B. third, while Needles ran fifth. Swoon's Son collected \$102,600.

Alabama Stakes.—Tournure from Foxland Hall won one of nation's top races for three-year-old fillies at Saratoga, beating Dotted Line and Levee. Eric Guerin rode 13-1 victor.

Washington Park Futurity.—Willie Hartack rode Greek Game to victory in \$43,510 race. Favoured California Kid, Willie Shoemaker up, finished first but was disqualified for rough riding and given second. The penalty cost California Kid \$87,070 prize.

Atlantic City Handicap.—With an ailing Nashua sidelined, the \$100,000 contest was won by Blue Sparkler, Woodland farm filly.

Wood Memorial.—Crowd of 39,673 at Jamaica, N.Y., saw new racing foul while applied as Golf Ace, after finishing first, was moved down to second and victory given to Head Man and Eddie Arcaro. The interference cost Golf Ace \$42,400 purse.

Leonard Richards Stakes.—Christiana's Ricci Tavi, 22-1, surprised with 1 $\frac{1}{2}$ -length triumph over favoured Fabius at Delaware.

Coaching Club American Oaks.—Longest race in America for three-year-old fillies, test of mile and three furlongs was taken by Levee. Princess Turia was second, Lady Swords third in photo finish at Belmont.

Delaware Handicap.—World's richest race for fillies and mares, carrying gross value of \$156,500, was won by Flower Bowl, 16 to 1 shot from the brookmeade stable.

Arlington Classic.—Swoon's Son drove to 1 $\frac{1}{2}$ -length triumph over Ben A. Jones in \$158,825 mile test to earn \$102,000.

Garden State Stakes.—Calumet's Barbizon, with Willie Hartack up, won world's richest race at Camden, N.J., on Oct. 27. Beating Federal Hill by a nose, Barbizon gained \$168,565 from purse of \$319,210. Amarullah finished third in field of 19.

Santa Anita Derby.—Terrang, stablemate of Swaps, 1955 victor, defeated Social Climber, with More Glory third in \$158,800 race at Arcadia (Calif.) track.

San Juan Capistrano Handicap.—Bobby Brocato took \$115,000 handicap. New Castle.—Calumet's Miz Clementine won from 11 rivals at Delaware park.

Campbell.—Bowie (Md.) handicap, grossing \$110,750, was won by Sailor with Joe Jones second. Sailor injured ankle in muddy going and was forced out of racing for more than six months.

Gardenia Stakes.—\$136,275 race at Garden State Park, world's richest for two-year-old fillies, went to Magic Forest, who won \$93,550 for C. V. Whitney. Romanita finished first but was disqualified and moved down to third. Light'n' Lovely was given second.

Florida Derby.—Needles, with Dave Erb up, led 13 rivals at Gulfstream to earn \$95,200 of \$145,400 purse. Count Chic was second.

Flamingo Stakes.—Needles and jockey Dave Erb won \$111,600 of \$148,000 purse at Hialeah. Golf Ace ran second.

Santa Anita Handicap.—Bobby Brocato won \$135,000 race by six lengths.

Santa Anita Maturity.—Trackmaster defeated Traffic Judge by head in \$55,960 event for four-year-olds.

Washington (D.C.) International.—Master Boing, French colt owned by André Lombard, beat Mr. Gus by five lengths in 1 $\frac{1}{2}$ -mi. turf course test. Laurel, Md. Victor earned \$70,000 of \$100,000 purse.

United Nations Handicap.—Career Boy won the \$100,000 handicap at Atlantic City, N.J. Find was second, Mr. Gus third.

Delaware Oaks.—Dotted Line, 10-1, captured winner's share (\$40,325) neck from Levee.

Kent.—Happy Hill farm's Kingmaker beat favoured Head Man at Delaware.

Westerner.—\$87,250 test at Hollywood Park taken by Count of Honor.

Arlington Futurity.—Greek Game defeated Colonel Jet by five lengths in \$40,850 contest in mud at Chicago.

Hawthorne Gold Cup Handicap.—Dedicate, owned by Jan Burke and ridden by Bill Boland, won \$80,750, beating Summer Tan in photo finish. Find was next in \$129,850 run.

International Steeplechase.—Lawrence Troiano's King Commander, 1-10-2 favorite, won 59th running of jumping classic at Belmont by seven lengths.

Harbor Hill Steeplechase.—Frank D. Adams set modern record when he scored his 300th triumph over the jumps at Belmont on Sept. 13. Adams aboard Ancestor.

Michigan Mile.—Nonnie Jo set track mark of 1 min. 36 $\frac{1}{16}$ sec. in winning \$58,450 test at Detroit. James Paddock, owner, sold half share of his horse to P. L. Grissom as field of 11 was going postward.

Harness Racing.—Adios Harry, property of J. Howard Lyons

Greenwood, Del., was top money winner of 1956 with \$129,912.

United States Trotting association champion of 1956 won 18

30 starts, including the \$75,000 Eastern title pace at Yonkers

(N.Y.) raceway. Dottie's Pick, owned by C. E. and J. E. Arm-

strong of Brampton, Ont., was runner-up with \$101,142 in purses.

ae Intruder scored one of the year's major surprises by winning

the \$100,604 Hambletonian trotting stake at Good Time Park,

Orhshen, N.Y., on Aug. 8. The winner, owned by L. J. Buck of

Or Hills, N.J., and driven by his trainer, Ned Bower, earned

\$9,155. The Intruder finished 11th in the first heat, won by

Valiant Rodney, and then took two straight. Valiant Rodney was

confd and Nimble Colby third in the final standing.

Add Hanover won the Yonkers Futurity and a purse of \$38,199,

and Noble Adios took the William H. Cane Futurity Pace and a

KENTUCKY DERBY field of 17 horses breaking from the starting gate at the May 5, 1956, running at Churchill Downs, Ky.

\$35,427 prize at Yonkers. Belle Acton, champion filly of 1955, added \$34,320 to her earnings by winning the Messenger Stake at Westbury, L.I. Another major race, that for the \$52,666 Little Brown Jug at Delaware, O., was won by Noble Adios. Nimble Colby took the \$53,731 Kentucky Futurity.

Devotees of harness racing were more numerous and bet more in 1956 than in any previous year. With major tracks at Yonkers and Westbury, New York state headed the list with unofficial figures of \$325,420,967 bet by 10,069,959 customers. Wagering rose more than \$42,000,000 over 1955, while attendance broke the old record of 9,852,991 set in 1953. (T. V. H.)

Canada.—At the second session of the 22nd parliament in 1955, legislation was enacted to provide for the person or association conducting a race meeting to deduct from the total amount wagered a levy of 0.5%. This levy is payable to the receiver general of Canada for the purpose of financing by the federal government an adequate and uniform system of supervision at all race tracks. As a consequence, in addition to providing supervision staff to each racing association, as was done in the past, the federal department of agriculture (the department charged with race track supervision) further arranged to provide a photo finish camera service as a greater protection for the betting public.

Before the start of the 1956 racing season, the Ontario provincial government announced a reduction of 1% in the Ontario race track tax. This reduced the total percentage deducted from the total monies wagered in that province to 15 $\frac{1}{2}$ %, made up of 9% to the racing association (which percentage is governed by section 178 (4) of the criminal code), 6% to the provincial government, and the 0.5% supervision levy. The pari-mutuel tax collected by each provincial government is a set percentage

fixed by act and varies from 5% to 10% depending on the province concerned. (J. D. HN.)

Great Britain.—In the 1955-56 National Hunt season Limber Hill won the King George VI steeplechase at Kempton park before going on to win the Gold cup at Cheltenham. Doorknocker became the new champion hurdler. The Grand National steeplechase would go down in racing history not for its winner, the not undeserving E.S.B., but for the cruel stroke of luck that deprived Queen Elizabeth the queen mother's Devon Loch of certain victory: ten lengths clear and only 50 yd. from the winning post, the horse unaccountably slipped and came down spreadeagled.

The 1956 flat racing season was disastrous for the number of important races lost to French (£96,000 in stakes) and Italian (nearly £24,000) owners. For England, Gilles de Retz won the Two Thousand Guineas and Honeylight the One Thousand Guineas. But Lavandin of France won an undistinguished Derby from his compatriot Montayal and from Roistar of Ireland; three French fillies (Sicarelle, Janiari, Yasmin) filled the places in the Oaks. The Ascot Gold cup went to the French horse Macip. Later the St. Leger went to the Frenchman Cambremer.

The richest prize of English racing, the King George VI and Queen Elizabeth stakes at Ascot, was won by the unbeaten Italian four-year-old Ribot. In October Ribot won Europe's richest race, the Prix de l'Arc de Triomphe at Longchamp, Paris. The greatest horse in Europe since World War II and among the greatest of the century, Ribot had won all his 16 races. Sired by Tenerani out of Romanella and bred at the Dormello stud near Lake Como, Italy. Ribot was reckoned to be worth upward of £500,000 to his owners, Donna Lydia Tesio and the Marchese Incisa della Rochetta.

Zarathustra, French Beige and Donald were top-class stayers. Hugh Lupus, somewhat luckless as a three-year-old, had a fine season, taking the March stakes, Hardwicke stakes, Scarborough stakes and Champion stakes. Matador was a brilliant sprinter. Talgo improved steadily through the season and won the Irish Derby and finished second in the Prix de l'Arc de Triomphe.

(R. M. GN.)

Horse Shows: see SHOWS.

Horticulture. Storms of almost unprecedented violence swept over much of Europe early in 1956, causing damage which was reported as catastrophic. Six inches of snow fell overnight in Rome, It., the temperature fell well below zero in France and the government lifted all import restrictions on potatoes and other vegetables, and Germany had the worst winter since 1879. The loss in trees, shrubs, flowering plants and especially vineyards in these and neighbouring countries was too great to be estimated. The perfume flower trade, which usually shipped hundreds of thousands of blooms each year, was at a standstill. Bulb growers in the Netherlands sent 1,000,000 gladiolus corms (bulbs) to nurserymen and florists of southern France, following the disastrous storms, to help them resume business. Later the Netherlands itself suffered loss estimated at about \$52,000,000 because of spring and early summer floods.

The National Rose society in England, with 43,000 members, observed its 80th anniversary and celebrated the occasion by presenting 300 rose trees to Queen Elizabeth II. George Taylor of the British Museum was appointed director of the Royal Botanic Gardens at Kew, succeeding Sir Edward Salisbury. The Netherlands government sent 10,000 trees and shrubs to the states of Massachusetts, Connecticut, Pennsylvania and Rhode Island to replace those lost in the great flood of 1955. Twenty-five countries were represented at the convention of the International Seed Testing association in Paris in June. W. A.

SHOTGUN POLLINATION of a hybrid apple which cannot fertilize itself was tried by Washington state apple growers in the spring of 1956 to overcome the time-consuming process of hand pollination

Davidson of the U.S. was elected president, and Norway was selected for the next convention, to be held in 1959.

The first large flower show in Moscow, U.S.S.R., since World War II was held in April and May 1956. There were reliable reports that the Soviet Union was developing a very large area in Siberia for horticultural purposes, particularly for the cultivation of fruits and vegetables. The Russians began a ten-year experiment with copper wires stretched across fields to direct cosmic rays into the soil. The purpose was to determine if the growth and ripening of fruits and vegetables could be hastened in this way.

The fruit companies in Nova Scotia announced that the British government had allocated £1,250,000 for the purchase of North American apples. This was of great assistance to Canadian growers. Great flocks of starlings, originally imported into the U.S. to eat caterpillars, continued to push their way into western Canada, causing heavy losses to fruit growers as well as to general farmers. It was announced at the National Shade Tree conference in Toronto, Ont., Aug. 20, 1956, that a system of fungicide injections through holes bored in trees having the Dutch elm disease would be available commercially by 1958. Until this fungicide, no means of checking this fast-spreading disease had been found. Thousands of infected trees had been destroyed in eastern parts of the U.S.

The gladiolus industry in Florida was found to be the largest flower-producing group in the U.S., with reported \$8,000,000 annual gross receipts and 10,000 ac. under cultivation. The Orchid Growers association of America was formed in Santa Barbara, Calif., in April with Arthur F. Freed of Malibu, Calif., as president. The second world orchid conference was held in Honolulu, T.H., Sept. 19-23, 1956. A \$1,000,000 wholesale flower

market was opened in San Francisco, Calif., in July. Announcement was made that the International Flower show in New York would be resumed March 31–April 6, 1957, on a large scale in the huge new Coliseum. Emphasis would be laid on exhibits from foreign countries.

Florists throughout the U.S. were forced to recognize a growing trend toward omitting flowers at funerals. If continued, it would cause a serious financial blow to florists. Supermarkets were appearing as a new medium for the sale of garden supplies. Approximately 2,500 buyers were reported as attending a four-day garden supply show at the Coliseum in New York.

John H. Walker of the staff of the National Geographic society in Washington, D.C., was appointed to the office of secretary of the Society of American Florists at the 72nd annual meeting in St. Paul, Minn., in July 1956. The George Robert White medal of honour was awarded by the Massachusetts Horticulture society to Harold L. Lyon of Honolulu, who was given credit for much of the horticultural development of that island. Two new roses, White Bouquet, a floribunda, and a climber, Golden Showers, were announced as the All-America rose selections for 1957. The rapid introduction of climbing roses capable of producing flowers throughout the season created a new appeal to amateur gardeners.

The cranberry crop in the U.S. was smaller in 1956 than in recent years, but the use of mechanical pickers was much more general. Birds and Japanese beetles threatened the rapidly growing cultivated blueberry industry in New England.

Although wet weather late in the summer of 1956 delayed the digging and curing of bulbs in the Netherlands, it improved the quality of the bulbs and there was a satisfactory yield. However, bad weather caused shipments of paper white narcissi from France and Italy to be very short. European-grown tuberous begonias were losing out in some degree to the superior stock grown in California. The Netherlands, however, was sending some particularly good regal lilies to the U.S.

(See also BACTERIOLOGY; FRUIT; VEGETABLES.) (E. I. F.)

Hospitalization Insurance: see HOSPITALS; INSURANCE.

Hospitals. Hospitals in the United States during 1955 and 1956 followed the general pattern of recent years toward constant expansion of services, with the goal of improved patient care. These expanding services included the trend for the general hospital to care for patients in such specialized areas as psychiatry and tuberculosis which were formerly treated only at special hospitals; development of home care programs and out-patient services; advances in physical therapy and rehabilitation services; and increased use of new medical diagnostic and therapeutic aids such as radioactive isotopes.

More and more patients were being admitted to hospitals, the number of hospitals and hospital beds was rising, more babies were being born in hospitals, and the total number of hospital personnel had risen sharply. In 1955 there were more than 21,000,000 hospital admissions in the United States, and, in addition, more than 73,000,000 out-patient visits were reported. There were 9.8 hospital beds per 1,000 population.

Utilization and Finances.—In 1956 the American Hospital Association completed its first decade of reporting basic data on the hospitals of the United States. These statistics for the years from 1946 to 1955 offered further evidence of the tremendous expansion in hospital services which was still under way.

By 1955 the total assets of the nation's hospitals amounted to nearly \$12,000,000,000. With the growth in hospital services and the increased use of hospitals by the public, there was a corresponding increase in the nation's expenditure for hospital care.

Table I.—Hospital Plant and Utilization, 1946-55

Item	1946	1955	Per cent increase
Hospitals reporting	6,125	6,956	14
Hospital beds	1,435,778	1,604,408	12
Admissions during year	15,674,602	21,072,521	34
Average number of patients in hospitals each day	1,141,864	1,363,024	19
Births	2,135,327	3,476,753	63
Total hospital personnel	829,571	1,300,733	57
Average number of personnel for each 100 patients	73	95	22

Table II.—Hospital Expenditures, 1946-55

Item	1946	1955	Per cent increase
Total hospital expenses during year	\$1,963,355,000	\$5,594,304,000	185
Total payroll expenses during year	1,102,772,000	3,581,784,000	225
Average total expense per patient per day	5.21	11.24	116
Average payroll expense per patient per day	2.93	7.20	146

The averages shown in the tables conceal great variation among hospitals of different types. Seventy-five per cent of all hospitals in 1955 were short-term nonfederal hospitals providing general and special services, and these hospitals accounted for nearly 91% of all admissions. The average length of stay in these hospitals was 7.8 days. On the other hand, while only 8% of all hospitals were devoted exclusively to psychiatric service, more than half of all patients being cared for in hospitals each day were in psychiatric institutions, which offered predominantly long-term care.

Of the nearly \$6,000,000,000 expended by the nation's hospitals in 1955, 61% was expended by the short-term nonfederal hospitals, 17% by nonfederal psychiatric hospitals, 15% by federal hospitals and the remainder by nonfederal long-term hospitals.

Personnel.—The average number of personnel per patient was highest in the group of short-term hospitals operated by non-profit organizations, with 210 employees for every 100 patients, and was lowest in the nonfederal psychiatric hospitals, which averaged 28 employees for every 100 patients. These two groups of hospitals also were at the extremes in cost per patient day. In the short-term nonprofit hospitals the average cost of each day of patient care was \$24.15, of which \$14.76 was for payroll; while the average daily cost per patient in the nonfederal psychiatric hospitals was \$3.73, of which \$2.17 was for payroll.

Although the total number of personnel employed in hospitals rose 57% from 1946 to 1955 (see Table I), the increase failed to keep pace with the expansion of hospital facilities and the increasing number of patients. In short-term general hospitals in 1955 there were approximately 50 more hospital employees per 100 patients than there were ten years before, yet more were still needed in every area. There had been a marked trend toward reduction of working hours and an increase in salary rates in the hospital field to levels more nearly comparable with those in other fields. Training programs for highly skilled technical personnel had also grown, but not in proportion to the demand.

Hill-Burton Program.—The year 1956 marked the tenth anniversary of the Hospital Survey and Construction act of 1946 (the Hill-Burton program). This act and its subsequent amendments authorized federal grants to states to pay part of the cost of constructing public and other nonprofit hospitals and related health facilities. By June 30, 1956, more than 3,000 medical and hospital construction projects had been approved under the Hill-Burton act, and two-thirds had been completed and were in operation. Total estimated cost of all the projects was \$2,467,333,207, of which the federal share was \$781,421,267. These included more than 550 new general hospitals built in communities where a hospital never before had been located, and more than 600 new public health centres.

Another important objective of the Hill-Burton program was the development of more adequate training programs for medical and hospital personnel. Funds were granted for the construction of teaching hospitals in university medical centres in 20

states and for aid to more than 200 hospitals approved for training interns and residents in various medical specialties.

Accreditation.—During 1955 the Joint Commission on Accreditation of Hospitals surveyed, at the request of the hospitals themselves, 1,204 hospitals in the United States, bringing the total of accredited hospitals in the United States to 3,259.

Hospital Insurance.—During 1955 the number of persons in the United States with some type of hospital expense protection reached 108,000,000, an increase of 7,000,000 over 1954. The 86 hospital-sponsored nonprofit Blue Cross plans in 1955 observed the 25th anniversary of the inauguration of prepaid hospital care in the U.S., and in 1956 passed their 50,000,000 point in membership. (See also INSURANCE.)

The American Hospital association, as part of its program of services to hospitals, sponsors National Hospital week, which in 1956 was on the theme of the hospital's role as a community centre in disaster planning and the provision of emergency services. (E. L. CY.)

Great Britain.—The cost of the hospital service in Great Britain for 1955-56 was originally estimated at £345,500,000, but a supplementary estimate submitted in Feb. 1956 provided for a total net expenditure of £354,600,000. The cost for 1956-57 was estimated at £373,200,000. The minister of health announced a further expansion of the hospital building program. New building projects would cost £18,000,000 in 1957 and £20,000,000 in 1958-59, as compared with £13,000,000 in 1956.

The report of the committee of inquiry into the cost of the national health service was published in Feb. 1956. Evidence which had been submitted did not support allegations of widespread extravagance in the national health service, including the hospital service, whether in respect of the spending of money or the use of manpower.

The ministry of health instituted during the year a national scheme for the postentry training and further education of hospital administrative and clerical staffs, for improved standards of recruitment for junior staffs and for special selective training. The Hospital Administrative Staff college of King Edward's Hospital Fund for London and the University of Manchester agreed to participate in the scheme. Sixteen trainees were selected and began their training in the autumn.

(A. G. L. I.)

Hotels, U.S. Gross sales of hotels in the United States for 1955 were approximately \$2,653,000,000, an increase of nearly 3% over 1954, according to the American Hotel association, which represents 6,000 of the leading hotels in the U.S. Gross income for 1954 was \$2,575,802,000. Sales were divided as follows: room sales, 47.6%; meals, 33.7%; beverages, 12.6%; telephone, 3.5%; and other income, 2.6%.

Hotel room occupancy for 1955 held at 73%, which was the same as 1954. The gain in dollar volume was accounted for by a 3% rise in hotel and dining room and restaurant receipts, and by some increases in room rates.

Construction of new hotels was at a higher rate during 1955 than in the previous year, with 83 built or under construction, representing 17,500 additional guest rooms valued at an estimated \$186,000,000. Approximately 20,000 more guest rooms were added to existing buildings. In 1954, 54 new hotels, valued at \$146,000,000 and representing approximately 10,097 new guest rooms, were built or started in the U.S.

In 1955, nearly \$210,000,000 worth of business was accounted for by Universal Travelcards, the hotel credit card approved by the American Hotel association and recognized by hotels throughout North America for charging of rooms, food and other services, as well as for cashing checks. This was a substantial increase over 1954, when approximately \$165,000,000 worth of credit

was extended to holders of Universal Travelcards.

Universal Travelcards are issued by the American Hotel Credit corporation, Greenwich, Conn., which guarantees American Hotel association member hotels against losses arising from nonpayment of bills or bad checks. Altogether, hotels reported and recovered \$206,115 in 1955 on delinquent accounts and for bad checks, of which \$24,000 was paid to hotels by the American Hotel Credit corporation on hard-to-collect accounts. Of this amount, approximately \$11,000 was written off as uncollectable, leaving \$13,000 as claims receivable.

To provide the hotel industry with more factual information and data on an endless variety of new products and materials used by hotels in the normal course of operation, an expanded program of scientific research and product testing was undertaken by the American Hotel association in 1955. At the same time, minimum product performance requirements and standards were developed by the association to aid member hotels in the purchase of equipment and materials.

A survey by the American Hotel association indicated that U.S. hotels had spent nearly \$3,000,000,000 in the last five years on modernization and renovation. New hotel facilities for motorists included adjoining parking lots, lighted, paved and fenced; adjoining or underground garages, including many with direct entrances to the hotel; and special motor entrances, provided in some cases with separate registration desks and direct elevator service to guest-rooms floors. Among the special arrangements for family groups were "family units" designed to accommodate as many as four members of a family in beds, cots or cribs; baby-sitting services; special dining facilities for family groups with children; and nurseries equipped with toys and cribs.

According to the 1955-56 edition of the *Hotel Red Book* there were more than 15,582 hotels in the U.S., with a value in excess of \$6,000,000,000 (land, buildings, furniture, fixtures). Their 1,440,000 rooms could accommodate more than 2,000,000 guests each night. During the calendar year 1955, the nation's hotels were host to more than 260,000,000 room guests.

Founded in 1910, and official spokesman for the hotel industry, the American Hotel association is a federation of 80 state and regional associations in the United States, Canada, Mexico, Bermuda, Hawaii, Alaska, Puerto Rico and the Virgin Islands. Its membership in 1956 was comprised of approximately 6,000 leading hotels representing about 75% of the nation's hotel rooms. (C. A. HH.)

Housing. In 1954-55, there was much concern in the United States about the excess of new housing units over net household formation and the inflationary implications of a high volume of new construction. In 1955-56, residential builders and others were greatly disturbed by the decline in home building. In 1954-55, the rate of new construction was 1,300,000 units a year, and in 1955-56 it was 1,100,000 units. Although this was a shift of only 15%, the fluctuations in the volume of residential construction had been so violent in the past that a consistent movement in either direction that persisted for any length of time was considered to have the real possibility of soaring out of sight or plummeting to zero. Because of its great potential volatility, every attempt was made to keep the volume of residential construction from dropping below 1,100,000 units or rising much over 1,400,000 units per year.

In 1956, the government was faced with the necessity for supporting a sagging market. In a period of 18 months, the annual rate of private nonfarm dwelling units placed under construction dropped from 1,458,000 to 1,070,000 and gave every indication of continuing downward. The contraction in the volume of new construction was largely attributed to the growing shortage of mortgage money and to rising interest rates. But the softening

of consumer demands, although of lesser importance, was a significant contributing factor, and one that was largely overlooked or minimized in the analysis of the housing market.

The Mortgage Money Crisis.—As early as the fall of 1955, mortgage money problems had attracted governmental attention to such an extent that the senate banking and currency committee organized and conducted a round-table discussion on the importance of federal credit policies on residential construction and mortgage financing, in which leading government officials and specialists in the field participated. Although the problems were clearly stated at that time and the trends identified, no governmental action was taken until the summer of 1956, and funds available for home financing continued to become more scarce.

The dearth of mortgage money was not due to conspiracy on the part of lending institutions, but rather to the hard objective developments in the general money market. Although residential construction had slowed down, other types of building activity continued at an unprecedented rate, and the demand for money to finance new plants and equipment rose to an all-time high. Total expenditures for new private domestic investment of all types during the first quarter of 1955 was at an annual rate of \$54,700,000,000. By the second quarter of 1956, it had reached \$64,200,000,000, an increase of 17%. During the same period, expenditures for new plants and equipment rose by 43%. This enormous additional pressure on the money supply occurred in a period in which savings remained virtually constant, and the demand for money rapidly outstripped the available supply. Under such circumstances the cost of money, *i.e.*, the interest rate, inevitably rose. In an attempt to curtail an inflationary expansion of credit, the Federal Reserve board repeatedly increased the rediscount rate, which served to drive the interest rate even higher, a development consistent with the tight money policy of the administration. As the rate rose, the Federal Housing Administration (FHA) and the Veterans administration (VA) mortgages with interest rates fixed at 4½% became less and less attractive to financial institutions which could obtain a minimum of 5% on alternative types of investments.

The government-insured or government-guaranteed home loans with their low down payment requirement and long terms had been a highly significant means of broadening the market and placing homes within the reach of most U.S. families. During the first six months of 1956, as a result of developments in the mortgage market, the number of new dwelling units financed by FHA and VA mortgages declined 31% and 28% respectively from the levels of a comparable period of the previous year.

In addition to the contraction in demand for housing resulting from higher interest rates, the shortage of mortgage funds also reduced the supply of new dwellings by fostering a more cautious and restrained attitude on the part of builders.

Administrative Action.—In late Sept. 1956, the government took several steps to ease the mortgage market. The Federal National Mortgage association, an agency that purchases home loans from private lending institutes which then use the money to make new loans, reduced the amount of stock that lenders were required to purchase in the agency from 2% to 1%. "Fannie Mae," as the association is known, was authorized to issue commitments in advance to buy mortgages on housing projects not yet begun at a price of six points under par instead of the previous discount of eight points. The advance commitment guaranteed the mortgage holder a market for his loan after the home was built, and the smaller the discount the more valuable the commitment. In another action, the Home Loan Bank board, through which savings and loan associations can expand their credit facilities, increased the amount that member associations could borrow from 10% to 12% of their assets.

To help the home buyer and the builder of small homes, the

MODEL RELAXING in the living room of an entirely plastic house exhibited at the Paris, Fr., domestic fair of 1956. All furnishings and construction are plastic. Bookshelves (as shown), beds, sinks and closets are moulded from the same plastic sheets used for walls and floors

FHA reduced its down payment requirement on insured mortgages from 7% to 5% on homes selling for \$9,000 or less. For higher-priced homes, the required down payment was unchanged.

Many observers maintained that the government's actions would have only a minimal effect on the market. They pointed out that few savings and loan associations had borrowed up to the previous 10% limit of the Home Loan Bank board. In addition, they found that only 16% of the new homes financed with FHA mortgages sold for \$9,000 or less, and in some high-cost areas like New York and Chicago virtually no new homes were available in that price range. Government officials, however, were reluctant to administer stronger measures because of general inflationary tendencies in the economy, and the desire to reserve such actions for periods when it would become necessary to stimulate investment and employment.

The Housing Act of 1956.—The Housing act of 1956 was an omnibus bill whose many provisions amended existing legislation to facilitate its operation, and with one major exception—housing for older persons—contained little that was new. It was in line with the administration's policy of conservatism in this field and satisfied neither the militant advocates of extended governmental construction activity nor those who sought greater aid to private industry.

Public housing, as usual, caused the greatest difficulty. In the previous year, congress had authorized 45,000 units and virtually all of these were put into some stage of construction. In each of the next two years the new law provided for only 35,000 units, a reduction in public housing at the same time that it appeared that the number of new private units would also decline. The senate had passed its own bill calling for 135,000 units in one year, but the house of representatives forced a compromise at 70,000 units for two years, which was accepted in order to obtain any housing legislation at all.

The act also liberalized the loans eligible for FHA insurance for financing home improvement and repair, construction of rental housing and the purchase of single-family homes. The maximum amount of improvement loans eligible for insurance was raised from \$2,500 to \$3,500 in single-family homes and \$10,000 to \$15,000 on apartment buildings. In addition, the repayment period was extended from three years to five years.

Multifamily rental housing, which had declined to negligible levels in the FHA program in recent years, was given a boost in the new act. Permissible loan-to-value ratio for section 207 units was raised from 80% to 90% and the loan limits were also increased. For co-operative housing, loan commitments could be issued for developments to be sold to a co-operative group after completion of construction, which meant that actual construction could get under way before all the future co-operators had become members. The loan-to-value ratio was increased and the \$8,900 limit per dwelling unit on mortgages could be raised by \$1,000 per room in areas where building costs were high. The act also equalized the mortgage terms of old and new housing. Thus, loans on existing structures could cover 95% of the \$9,000 of value and 75% of the balance.

Existing urban renewal legislation was strengthened in many ways including authorization for the payment of moving expenses of families displaced by renewal projects. Families would be compensated up to \$100 and business establishments up to \$2,000, entirely out of federal funds.

The only innovational feature of the act of 1956 was the provision made for housing of elderly persons. It was the first time that legislation had considered the needs of a specific age group. Persons who had passed their 60th birthday could secure an FHA-insured mortgage for the purchase of a home with a third person or corporation making the down payment. Nonprofit groups such as churches, labour unions or fraternal organizations were eligible to secure insured mortgages to build rental housing for older families. These loans might provide up to 90% of cost and as much as \$8,100 per dwelling unit. The projects might include special construction features such as central dining halls, reading rooms and safety equipment in the bathroom and elsewhere. The development might be elevator apartments, garden-type structures, row houses or separate dwellings if they were grouped in a contiguous project.

The Ladies Had Their Day.—Early in the spring, Albert M. Cole, administrator of the Housing and Home Finance agency, called a conference to which 100 housewives from all over the country were invited to Washington, D.C., to express their views on the features that they desired in a home. The women felt that space was the most important single item and insisted that 1,200 sq.ft. should be the minimum size of a dwelling. They also wanted at least one-and-a-half, but preferably two bathrooms; three bedrooms so that the children would not have to double up; and a family room for television, games and childrens' activities. Sufficient space in the kitchen was desired for breakfast and between-meal snacks, but a full-scale dining room large enough to accommodate the family and guests was needed for more formal meals. The women also wanted a separate utility and laundry room on the ground floor next to the kitchen. And of course they expressed the need for more closets and other storage space.

There was considerable objection to some of the postwar architectural clichés, including picture windows that had no view, excessive emphasis on gadgets and the lack of variety in tract houses. The women also felt strongly about the unnecessary removal of large shade trees and about unrelieved rectangular street patterns.

Governmental studies of the characteristics of new construction indicated that the house-building industry had been provid-

ing only a portion of what the consumer desired. In part, on account of current levels of building costs, it was economically impossible to include all of the desired features and still keep the selling price in lower ranges. In part it was due to the builders' propensity to include "selling features" that might attract customers, but that had little enduring functional value. More than two-thirds of the homes in the \$10,000-\$15,000 price range had less than 1,200 sq.ft. of space, and the majority had less than three bedrooms. Only one-third had utility rooms and these were usually designed to accommodate little more than the furnace and water heater.

The Average G.I. Home Purchaser.—Since the end of World War II, millions of veterans had been aided in the purchase of homes by the G.I. Bill of Rights. The bill provided for guarantee of mortgage loans, offered low interest rates, long periods of repayment and required little or no down payment on the purchase price. In 1954 and 1955 alone, 1,050,000 purchasers availed themselves of the benefits offered under this program.

There had been much speculation on the characteristics of the G.I. home buyer. Should he prove to be more susceptible to economic reverses, or more likely to overextend his credit position, the government might find itself responsible for all or a major portion of his mortgage debt.

In order to obtain the facts of the case, the Veterans administration, the federal agency in charge of the program, studied both the purchaser and the purchase. As in the case of most studies of this sort, they found that the typical purchaser was a statistical fiction. The ages of purchasers ranged from 20 to 72 and their incomes fell anywhere between \$1,800 and \$90,000 a year. The average, but by no means typical, purchaser of either a new or existing house was 32 years of age, earned \$494 per month and purchased a home that cost \$11,800. His monthly housing expenses, which included mortgage payments, taxes, insurance, maintenance and repairs, totalled \$97 or about 20% of his income. The average veteran purchaser was quite solvent, considering his age, possessing close to \$1,900 in liquid assets such as cash, savings accounts, stocks and bonds.

Regarding the terms of purchase, the VA found that 40% of the acquisitions in 1955 were made without down payment, and nearly one-half had mortgages with maturities of 26 to 30 years. Veterans who borrowed 100% of the purchase price tended to have incomes that were 8% lower than those who made down payments. Those who made down payments, however, did not strip themselves, retaining liquid reserves equivalent to about 10% of the price paid for the home. (CH. RA.)

Canada.—Expenditures on new residential housing during the first half of 1956 amounted to \$712,000,000, an increase of 12% over the corresponding period of 1955. Of this increase about one-third resulted from higher prices; the rest represented a greater volume of work in process. Expenditures on privately initiated housing accounted for almost all of the increase.

The volume of house-building activity was higher during the first seven months of 1956, despite a decline in mortgage lending for this purpose. Although starts of new dwelling units were virtually at the same level as in 1955, the number of dwellings completed was greater and there were also more units under construction. While the annual rate of housing starts had been declining moderately since the third quarter of 1955, the decline in National Housing act lending in 1956 had not yet made its full effect on housing starts by mid-1956.

Lending under the N.H.A. continued to decline in the second quarter of 1956, and the number of units for which loans were approved during the first six months was 19% lower than during the same period in 1955.

Throughout the period, Canada's economy continued to expand

at a high rate, and the banks were under heavy pressure to increase their loans to business and other clients. In the spring of 1956 they faced additional seasonal demands for business credit and some of the banks began to cut back on their mortgage loans to builders. In the second quarter of the year, bank mortgage lending was down much more than that of life insurance companies, whereas the reverse had been true in the first quarter. The volume of bank mortgage lending under the act during the second quarter was 37% below the same 1955 period. Also contributing to the decline in mortgage lending under the act was the fact that builders in some localities faced difficulties in providing land for residential housing. These developments resulted in a drop of 6,000 units in the total number of dwellings for which loans were approved under N.H.A. during the first half of 1956.

The combined index of residential building materials and wage rates of construction workers in 1956 stood at 136.6 in July as compared with 135.8 on April 1. The increase was reflected in the higher cost of dwellings financed under the act. Average estimated construction costs for all single-family dwellings went up from \$9.72 per square foot in the second quarter of 1955 to \$10.08 per square foot in the second quarter of 1956. Over the same period, the average floor area for this type of dwelling increased from 1,106 sq.ft. to 1,132 sq.ft. The cost of lots also continued to rise. The average price of lots for all single-family dwellings under the act increased from \$1,197 in the second quarter of 1955 to \$2,004 in the corresponding period of 1956. (C. Cy.)

Great Britain.—During 1956 the single factor which most influenced housing in Great Britain was the economic situation of the country as a whole. In spite of this, in the 12 months ended June 30, 1956, 273,519 houses were built, 146,539 of these being erected by local authorities, 117,284 by private builders and the remainder by housing associations and government departments. During the first two full quarters of 1956, private builders slightly increased the number of completions compared with 1955, and had more houses under construction at the end of the period than at any time since World War II. The number of completions by local authorities tended to fall slightly. Private builders, who were beginning to get into their stride after being freed from licensing, did not appear to be noticeably affected by the high interest rates or credit restrictions. Many local authorities made efforts to get approvals for new building through before Nov. 1955, when the subsidies were reduced, so that no very marked decrease in their output was yet apparent. Slum clearance work was the only field in which there was a decided increase in activity. More than half as many houses as were dealt with in the whole of 1955 were covered by figures for the second quarter of 1956, which showed 11,641 houses in clearance areas submitted, 1,802 in clearance orders confirmed and 6,273 in compulsory purchase orders confirmed. The number of persons moved from houses demolished or closed was 20,892 during the first quarter of 1956 as against 75,918 during the whole of 1955.

The Housing Subsidies act, 1956, became law in March 1956. By this act rates of subsidy were reduced from £22 1s. for normal housing to £10 for 60 years. Moreover, the minister of housing, Duncan Sandys, was given power to reduce or cease paying this subsidy, although he was expected to continue it only for a term of two years. The act fixed a subsidy of £22 1s. a year for 60 years for dwellings provided by a local authority for the purposes of slum clearance and redevelopment, or for the rehousing of persons coming from camps or other unsatisfactory temporary accommodation. A subsidy of £24 a year for 60 years was fixed for houses provided in the course of a scheme of town development under the Town Development act, 1952, or

for persons coming from outside an area to meet the urgent needs of industry. It also applied to houses provided by the local authority of a congested or overpopulated area as part of a comprehensive development in some other area and houses provided by a development corporation.

Europe.—Throughout most European countries, house production was maintained at a comparatively high level. The municipality of Vienna was able to invite delegates to the 23rd International Congress on Housing and Town Planning to witness the handing over to the tenants of the 100,000th dwelling built by the municipality. A survey of the European housing situation, prepared by the Economic Commission for Europe and published by the United Nations in Jan. 1956 showed that broadly, taking dwellings per 1,000 inhabitants as a measure of quantity, western and central Europe were the best provided, with 270 dwellings per 1,000 persons. Southern Europe followed with 224 per 1,000, and eastern Europe, including the whole of the U.S.S.R., had 219 per 1,000. The U.K. at the latest census available, compared favourably with most other European countries in the percentage of dwellings possessing electricity, inside running water and baths. The percentage of obsolescent dwellings in the older industrial countries, however, was high, and after France with about 40% of all dwellings around 100 years old, the U.K. with more than 20%, together with Austria, Portugal and Spain, had the oldest housing stock. Humour of 1956. Television performances of the situation comedy or rapid-fire gag varieties continued in 1956 to provide history's biggest forum for the display of that brand of humour thought of as typically United States. The following are some examples:

GARRY MOORE (CBS-TV)

(Participating: Garry Moore, Denise Lor and Durward Kirby)

MOORE: For some time now, we've been interested in a campaign to liven up our daily conversation by substituting new words for the old commonplace ones we've got tired of.

After all, things get pretty dull after you say them a couple thousand times . . . as regular watchers of this show can testify. However, new words would change all this. Take the old nursery rhyme, "Mary Had a Little Lamb." You know it, don't you, Durward?

KIRBY: Sure. (Recites coyly)

Mary had a little lamb,
Its fleece was white as snow;
And everywhere that Mary went,
The lamb was sure to go.

MOORE: Isn't he a doll? There's something of the Liberace in him. Anyway, with new words, "Mary Had a Little Lamb" becomes new and interesting all over again, like this:

Mary had a blicken oof,
It's prooze was white as werf;
And glutendot that Mary gleat,
The oof was sure to gerf.

Isn't that fascinating?

We were going to have entertainment today, but we decided to do this instead. Anyway, we got to wondering what some of our television shows would sound like if they were done with new words. For instance, we might have Warren Hull in "Strike It Rozbort" . . . or Ralph Edwards in "This Is Your Grammenfloof" . . . then on Saturday nights you could hear "Your Snork Parade," starring Giselle McGlozbar and Snooky Goofnik. And when you want to find out what kind of a day it's been, you tune in on John K. M. McSnidlit and the 11 o'clock swen.

Yuh know, you're sitting there looking at me as if I were a darn fool . . . but you're understanding every word I'm saying . . . and to prove it, suppose we do a television show with new words and show you how they improve things. The one we've selected to do is an old favourite of ours. . . . "Dragnet."

BAND: ("Dragnet" theme)

MOORE: This is the flanagan . . . A teeming bortisneed of 10,000,000

snidbits. My job is to keep law and grifts. I'm a Floop.

BAND: ("Dragnet" theme)

MOORE: My name is Sergeant Fozmerlude . . . I'm a Floop. The orken you are about to hear is plut. It was taken from the files of the Berken-daddie. Only the girls have been changed to protect the zabgan. It all began on Friday, April the zneep . . . zup p.m. I was in the grammenfloog oiling my dootenforzer. A report came in from headquarters that a woman with two mozniks had been jidnicked and glagened by a man carrying a .38-calibre dootenforzer . . . model M-1. It was the fourth jidnicking in three days . . . My job, to find this glagener . . . I'm a Floop!

BAND: (Theme and suspense)

MOORE: My name is Sergeant Fozmerlude, ma'am . . . I'm a Floop, ma'am . . . I'd like you to tell me all you can about the jidnicking.

DENISE: There's not much to tell. I was jidnicked and glagened, that's all. Happened last night. Man walked in carrying a .38-calibre dootenforzer . . .

MOORE: Did he say anything?

DENISE: Not much. Just said, "Okay, lady, stick 'em up . . . this is a jidnick." He wore a mask so I knew he was a glagener. Do you think you can find him, Sergeant . . . Sergeant . . .

MOORE: Sergeant Fozmerlude, ma'am.

DENISE: Fozmerlude?

MOORE: That's right, ma'am . . . Sergeant Fozmerlude . . . I'm a Floop. Tell us exactly what happened.

DENISE: I was upstairs with my two little mozniks. It was their bed time. I was reading them a story about Little Red Stootniggin and the Three Snorks . . .

MOORE: Go on.

DENISE: Suddenly the doorbell rang.

MOORE: The doorbell?

DENISE: Yeah, you know . . . the nafienshpiel. It was this man with the .38-calibre dootenforzer.

MOORE: After he told you it was a jidnick, did he glagen anything?

DENISE: A little Mama-Shlumpie that belonged to my oldest moznik.

MOORE: Her Mama-Shlumpie?

DENISE: Yeah. Gave it to her for Christmas. Pretty little Mama-Shlumpie. Nice one, too . . . looked just like her, too.

MOORE: Looked just like who, ma'am?

DENISE: You know, that movie actress, Pozbo. Her picture's playing downtown now.

MOORE: The Mama-Shlumpie looked like Ava Pozbo?

DENISE: That's right. Just like Ava Pozbo. Funny a big man should glagen a Mama-Shlumpie from my little moznik. Why should he do a thing like that, Sergeant . . . Sergeant . . .

MOORE: Friday, ma'am. Is that all you can tell us?

DENISE: That's all. Except for one thing.

MOORE: One thing?

DENISE: I pushed him down the stairs.

MOORE: Ma'am?

DENISE: I pushed him down the stairs.

MOORE: Was he hurt?

DENISE: Fractured his yokniddle.

BAND: ("Dragnet" theme)

MOORE: We were looking for a man with a fractured yokniddle and a Mama-Shlumpie. A man answering this description was seen on Sixth avenue, lingering near the subway blinken. A further check showed that he had gone into a movie theatre . . . the feature picture . . . Ava Pozbo in *Bhowani Masbortle*. . . We found him in the balcony with his fractured yokniddle in a sling and the Mama-Shlumpie in the seat beside him.

BAND: ("Dragnet" opening)

MOORE: As a result of tonight's orken, the prisoner was found mentally gemixed. He was sent to the State Home for Chronic Poopniddles.

BAND: (Theme and payoff)

OSZIE AND HARRIET (ABC-TV)

(The scene is in the Nelson bedroom. Harriet is at her dressing table. She is just putting on the finishing touches and looks beautiful. David comes in. He is all dressed except for his coat, which is on his arm.)

DAVID: Gee you look beautiful, Mom. Everybody'll think you're my sister for sure.

HARRIET: Thank you, dear. Do you really mean that or are you practicing up for Cathy's mother?

DAVID: Oh, are you kidding, Mom? I don't think I'd have the nerve to say anything like that to a girl's mother.

HARRIET: Oh, and don't worry about tonight.

DAVID: Oh, I'm not. I'm sure everybody'll have a good time.

HARRIET: No, I mean about your father and Ricky and me. As soon as we meet all your friends we'll get right out of the way and let you have your own party just as you want it.

DAVID: Well, gee, you don't have to rush right off. After all it is *your* house.

HARRIET: It's *our* house and it's *your* party—say, I hate to rush you dear, but hadn't you better get going pretty soon?

DAVID: Yeah, I was just looking for my plaid vest. Have you seen it around any place?

HARRIET: It was in your closet this afternoon. I saw it.

DAVID: So did I, but it isn't there now. I wonder what happened to it (Ozzie comes in wearing David's plaid vest)

OZZIE: Has anybody seen my brown cashmere coat?

DAVID: Oh, yeah, I have it right here. I was wondering if I could borrow it for tonight.

OZZIE: Oh, yeah, sure . . .

DAVID: (Hesitates) Gee . . .

OZZIE: Is something the matter?

DAVID: I was kinda figuring on wearing my plaid vest with it.

OZZIE: Oh, sure. Here you are, Dave. (Takes vest off and hands it to him)

DAVID: Gee, I hate to do this.

OZZIE: Oh, don't be silly, I'll wear my gray suit. It's a little more conservative anyway.

DAVID: Well, I've gotta go and pick up my date. I hope her mother likes me.

OZZIE: Well, remember what I said, Dave. Just tell her how young she looks and you're all set.

DAVID: (Laughs) I'm afraid I haven't got the nerve, Pop. I'll see you later.

OZZIE: Goodnight.

HARRIET: Goodnight, Dave.

(David exits)

OZZIE: I hope my gray suit is pressed.

HARRIET: Now remember, dear.

BOTH TOGETHER: This is David's party.

HARRIET: And I want you to promise me you won't try to organize a bunch of games and start tackling practice in the living room.

OZZIE: Hey, that's right. There'll be quite a few football players here tonight, won't there?

HARRIET: Yes, and they get all the practice they need on the field.

OZZIE: For goodness sakes, Harriet, I'm not gonna play football in the living room.

HARRIET: And no card tricks.

OZZIE: Please, I may be corny, but I'm not *that* corny.

(David comes to doorway)

DAVID: Hey, Pop. Did you want these for something?

OZZIE: What's that?

DAVID: This deck of cards. They were in my vest pocket.

(Scene: Nelson living room. Ozzie looks out bay window)

OZZIE: (Calls upstairs) Harriet!

HARRIET: What do you want?

OZZIE: Come down, will you, the crowd is starting to arrive.

(A little later, Ricky is halfway down the stairs, struggling with his drums. They are stuck)

RICKY: Hey, Pop. Help me with these drums, will you?

OZZIE: Ricky, you know what David said. Now take those drums back upstairs.

RICKY: That's what I'm trying to do. I'm stuck.

(Ozzie starts up to help him. The doorbell rings)

OZZIE: (Calls) Just a second. (To Ricky as he frees it) Careful now! Don't scratch up the banister.

(He rushes downstairs and opens the door. It is Don and a girl and two other couples)

OZZIE: Oh hello, Don, come on in.

DON: H'ya, Mr. Nelson. I don't know if you know everybody or not

OZZIE: Well, they all look familiar. (They exchange greetings) How's your kid brother with the measles?

DON: Oh, he's coming along fine, thanks.

(Some more couples arrive)

OZZIE: Come on in, fellahs and girls. I'm Dave's father. (They exchange greetings) Don't give me the grip by mistake, fellahs, I'm not a Kappa Sig

(Don sees Ricky struggling with the drums)

DON: H'ya, Rick. Are we gonna have some music tonight?

RICKY: I don't know. I was just gonna take the drums upstairs.

DON: Are you kidding? Come on, let's get 'em down here. I'll give you a hand.

NANCY: Do you have a record player?

RICKY: Yeah, it's right in the den.

NANCY: Oh, good, maybe we can have some dancing.

(More couples have come in the front door, including Dave and Cathy)

DAVID: Pop, I want you to meet Cathy Williams. This is my father (They exchange greetings) Where's Mom?

OZZIE: Here she is. (As Harriet comes down the stairs.)

(Harriet and Cathy exchange greetings. More couples come in the front door. Shortly afterward, three couples come in through dining room. One of the guys is Chuck)

CHUCK: We came in the back way. I hope it's okay.

(Harriet moves toward them)

HARRIET: Sure it is.

CHUCK: How have you been, Mrs. Nelson?

HARRIET: Fine, thanks, Chuck.

CHUCK: Do you know everybody?

HARRIET: I think so. But don't ask me to call off their names.

(She takes their coats)

CHUCK: I hope you don't mind. I couldn't help but notice a lot of food as I came through the kitchen. Does that mean we're going to eat tonight?

OZZIE: It sure does.

(David steps up)

DAVID: I thought you guys said you just wanted Cokes and potato chips

CHUCK: Not me, I'm on a diet. I can't eat potato chips. Do you have any hamburgers?

DAVID: About 50 pounds of them.

GIRL: I'll help you cook them, Mrs. Nelson. I'm really a good cook.

CHUBBY: Stop bragging.

(Scene: In the Nelson den. Ricky has his drums set up and is looking over the records)

RICKY: What kind of a tempo do you like?

NANCY: Anything smooth and dreamy. (She picks one up) How's this one? "Cuban Fantasy."

RICKY: That's real good.

(The music starts. It is a Latin tempo. Ricky picks up the bongo drum and plays with the record)

(Scene: Living room. In this and following scene some of cast have Cokes. Ozzie is standing there with several football players. They all have their coats off)

OZZIE: In my opinion, the basic principles of defensive end play are the same now as they were 25 years ago. You get across that line of scrimmage, get those hands in front of you. Then you've gotta determine whether you're gonna turn the play in or float out with it.

DON: Tell Bob about the point of weakness, Mr. Nelson. (Bob is a big strong guy)

OZZIE: Well . . . no matter how strong a position you take you can be pushed off balance with two fingers at your point of weakness.

DON: Take a strong position, Bob.

BOB: (Does) How's this?

OZZIE: That's good. (Demonstrates) Now look, your two feet are your positives. If I draw a line perpendicular to *that* line, that is your point of weakness and I can push you off balance with my two fingers. (He does) (Meanwhile, we hear music from the den)

BOB: How about that? I knew my geometry would come in handy one of these days.

(Nancy enters)

NANCY: Hey, come on in the den, everybody. Ricky and Betty are doing a terrific dance.

(Scene: Den. A crowd is standing around encouraging Ricky and his partner, who are doing a fast-tempo dance. They finish to much applause)

(Scene: Nelson bedroom. Several girls are standing with Harriet admiring the curtains)

GIRL: I think these curtains are just beautiful.

HARRIET: Thank you.

GIRL: They match the curtains on your dressing table, don't they?

HARRIET: Yes, they do.

(David comes to the door)

DAVID: Hey, Mom, I hate to interrupt this, but some of the guys were wondering when we were gonna eat.

HARRIET: Okay. Put on the coffee, Dave, and I'll be right down.

(Scene: Den. Couples are dancing. It is a medium-tempo fox trot. Ozzie is dancing with Cathy)

OZZIE: It was very thoughtful of you to ask me to dance with you, Cathy.

CATHY: Oh, I'm enjoying it. You know, it's so hard for me to think of you as being David's father. You look young enough to be his brother.

OZZIE: (Laughs) Oh, thank you very much. It's probably this bow tie I'm wearing.

(Scene: Backyard. A group of boys and girls are playing basketball. Others playing badminton. Others are watching. All are having fun)

(Scene: Nelson kitchen. Harriet is cooking hamburgers. Eager boys are surrounding her, lending helping hands)

(Scene: Nelson living room. Some kids are playing pin the tail on the donkey. One boy is blindfolded but when a pretty girl sashays by, he follows her. Harriet appears in dining room and rings a dinner bell)

HARRIET: Come and get it.

(They do)

(Scene: Nelson hall. The party is breaking up)

GIRL: It was a wonderful party.

DAVID: Gee, Mom, Pop, I don't know how to thank you. Everybody said this was the best party the Kappa Sigs ever had.

HARRIET: I'm glad they had a good time, dear.

DAVID: Gee, you and Pop sure made a big hit with everybody. Even Ricky was less obnoxious than usual.

RICKY: I thought I was quite charming, myself.

HARRIET: (To Ricky) You were wonderful, dear.

OZZIE: They're a nice bunch of kids and that Cathy is just about the cutest girl you've ever been out with, Dave.

HARRIET: She sure is.

DAVID: I'm glad you like her.

OZZIE: Don't keep her out too late now.

DAVID: Oh, I don't have to worry about that. Her mother seemed to take a liking to me right away.

HARRIET: Oh, that's nice.

OZZIE: Goodnight, son. (They shake hands and David goes out the front door)

(Scene: Boys' bedroom. Ricky is dressing for a date. David is sitting on the bed)

RICKY: Now let me get this straight. As I meet her mother, I say, "This can't be your mother. It *must* be your sister."

DAVID: That's right, and believe me, it works like a charm.

(Scene: Ricky is on Betty's front porch practising)

RICKY: (To himself) You can't be Betty's mother, you don't look a day over 30.

(He is satisfied so he confidently rings the bell. Betty answers the door)

BETTY: Come on in, Ricky. I'll get my coat.

RICKY: Thanks.

(As Betty goes to get her coat, Ricky sees a young woman reading a magazine)

RICKY: I'm Ricky Nelson.

WOMAN: Hello, Ricky.

RICKY: This is impossible.

WOMAN: Is something the matter?

RICKY: You look so young. You look more like Betty's sister than her mother. You can't possibly be more than 30 or 31.

WOMAN: I am Betty's sister. I'm 23 years old, and if you don't bring her home by 11 o'clock I'll phone the police.

(Fade)

SID CAESAR ("People to People" from "Caesar's Hour," NBC-TV, written by Sid Caesar, Mel Tolkin, Larry Gelbart, Mel Brooks, Sheldon Keller; © 1956 by Shellric Corp.)

CARL: Ladies and gentlemen, we have just visited Dr. John Wilkins . . . the noted scientist and author . . . and now "People to People" takes you to the apartment of the noted jazz musician and recording artist . . . Mr. Cool Cees. Mr. Cees is considered the world's greatest exponent of rock and roll jazz. He lives in this modest apartment in midtown Manhattan.

(Sid in chair; he turns around, and we see his glasses for the first time)

CARL: Good evening, Mr. Cool Cees.

SID: Good evening, Daddy.

CARL: Do you mind if I call you Cool?

SID: Is that my name?

CARL: Yes.

SID: Then go ahead, man, call me that name.

CARL: That's certainly a nice apartment you have there, Cool.

SID: Yeah, man, like it's home . . . or somewhere.

CARL: Would you care to show us around the room?

SID: Yeah, man . . . like that would be solid. (He gets up) This is a wall. (Other side) And this is the other wall. And these other two match. It's a set.

CARL: I notice there's a hole in the middle of the floor. What is that for?

SID: Oh, man, that's the latest. You see I had this hole put in the room . . . so now the whole room can be played as a record. It's in a new album, called "Rooms to Spin By."

CARL: I notice you've got quite an art collection . . .

SID: Yeah, man, I dig painting.

CARL: But all the pictures seem to be upside down.

SID: No, man, them pictures ain't upside down. I'm just standing this way for the show. When you leave . . . I revert! Say, man, maybe you'd like to pick up on this?

CARL: What's that, Cool?

SID: My baby pictures.

CARL: By the way, when were you born?

SID: I was born 1927 . . . on Feb. 38.

CARL: And where were you born?

SID: In Birdland. My mother was playing bongos with Herbie Hi Fi.

CARL: May we get a closeup of that baby picture, Cool?

SID: Yeah, sure, Pops. (Shot of Sid as baby with hair and glasses, lying on rug) . . . This was when I was a little baby making the Pablum scene.

You notice the bearskin rug . . . I had it made into this jacket.

CARL: Would you play any of your records for us, Cool?

SID: I like I'd admire to, Pop. Let's segue to the joy box and we'll lay some sound on you. (And he holds up a record) . . . Here it is, my latest release on the Prescription label. Now dig this, man. . . This is a wild sound . . . (Spins record. No sound. Sid snaps fingers to music) . . . Do you like it?

CARL: I can't hear it.

SID: Nobody can hear it. But do you like it?

CARL: Is that some special sort of hi-fi?

SID: Oh, this is the highest they've ever fied. If they fi any higher than this, they'll foo.

CARL: Cool . . . The world is becoming increasingly jazz conscious. I understand you yourself have just come back from a world-wide tour of jazz concerts.

SID: Well, I didn't actually go around the world. I just stood a foot off the ground for a while, and watched it roll under me. (Carl laughs)

CARL: Well, tell me, Cool, what was your impression of Europe?

SID: Well, man . . . Europe's okay . . . but Asia swings!

CARL: Cool . . . what advice do you have to young musicians?

SID: Well, I would advise them to eat a solid breakfast, then klezmurize . . . then eat a healthy lunch, then klezmurize, then you eat a great dinner, then klezmurize.

CARL: Excuse me, Mr. Cees. . . What does the word klezmurize mean?

SID: What do you care? You're eating, ain't you?

CARL: Cool, I hope we won't be imposing on you too much if we ask you to play something for us. I'm sure our audience is very anxious to hear you play.

SID: Well, I'd be progressively honoured to wail for the cats watching in. . . Please, step into the music room. (They go into the music room, where a band is set up)

CARL: Is that your orchestra, Cool?

SID: Yes, I got tired of changing the records so I just brought the boys down here.

CARL: How many in your orchestra?

SID: How many is 16?

CARL: Sixteen.

SID: That's it. Okay, one, two. . . (Into music)

ERNIE KOVACS ("Welcome Transients," NBC-TV)

(Setting: Simple living room; two chairs set at 45° to each other; small table in between. Pete Hanley should have plain, dark clothing, hair wet down flat, parted in middle, rimless glasses)

BILL: The television programs that have interviews with out-of-town guests are particularly interesting when the guest has a sincere and personal experience to talk about. . . . And here is Ernie Kovacs as the M.C. in television's moving daytime interview show, "Welcome Transients."

KOVACS: We knew that the listeners of "Welcome Transients" would be interested in the fascinating and exciting story that Mr. Albert Gridley has to tell. . . . Mr. Gridley's story is one he will never forget. . . .

PETE: Yes, it is etched into my mind forever. . . . It is as if it happened yesterday. . . .

KOVACS: Tell us your story, Mr. Gridley.

PETE: Well, I was one of . . . (Pause)

KOVACS: One of five children.

PETE: Yes, one of five children who went out . . . (Pause)

KOVACS: West. . . . With your father and mother.

PETE: With my father and mother. We were out in the middle of the desert. I'll never forget what happened that day. . . . It was on the . . . (Pause)

KOVACS: Fifth day.

PETE: Fifth day after we left . . . (Pause)

KOVACS: And wasn't the sun beating down?

PETE: Yes, the sun was beating down and it was hot.

KOVACS: And did your 1918 Ford have motor trouble?

PETE: Yes, our 1918 Ford had motor trouble. It was . . . (Pause)

KOVACS: Terrible.

PETE: Terrible. I'll never forget what Dad said. Dad said . . . (Pause)

KOVACS: Did he tell you to go to the nearest town to get a new fan belt?

PETE: Yes, he told me to go to the nearest town to get a new fan belt. My four sisters . . . (Pause)

KOVACS: They were: Alice, Mabel, Myrtle and Bessie?

PETE: Yes, Alice, Mabel, Myrtle and Bessie.

KOVACS: Bessie.

PETE: Yes, Bessie.

KOVACS: What did your sisters do?

PETE: They . . .

KOVACS: Did they stay behind in the car while you went in for the fan belt?

PETE: They stayed behind in the car while I went in for the fan belt.

KOVACS: And what happened while you were in town getting the fan belt? . . . What happened to Myrtle?

PETE: Myrtle?

KOVACS: Your sister.

PETE: Oh yes, Myrtle my sister. . . . I'll never forget it. . . . A wolf . . . (Pause)

KOVACS: Did a rattlesnake bite your sister Myrtle?

PETE: Yes, a rattlesnake bit my sister Myrtle . . . on the arm?

KOVACS: Leg.

PETE: Yes, on the leg. I'll never forget it. . . . It was terrible.

KOVACS: And then your father killed the snake and when you came back from town with the fan belt you fixed the car, and you drove off to settle in California and everything went well after that. . . .

PETE: Yes. . . . Like you said.

KOVACS: Thank you for coming on "Welcome Transients," Mr. Gridley. . . . You had a wonderful and exciting story to tell . . . one that lived with you every moment.

PETE: Yes, I'll never forget it. . . . It is etched in my memory.

**GEORGE GOBEL** (NBC-TV)

There's been a rash of elopements breaking out lately. I read of one family where the butler eloped with the maid, the gardener eloped with the cook and the dish ran away with the spoon. That's how Alice and I got married; we eloped. It was a carefully planned elopement. She planned it. I didn't even know about it. See, what happened was we were out on a date one night, and we were sitting around a dark little soda fountain and the soda jerk said, "Do you like chocolate malteds?" And Alice said, "I do." Then he said to me, "Do you like chocolate malteds?" And I said, "I do." And the soda jerk said, "You may now kiss the bride." Now that

I look back on it, I shoulda figured there was something kinky when we walked into that drugstore and the pharmacist was singing "O Promise Me." But I'm not sorry it happened, because Alice and I have been happily married for 14 years now. Well, Alice has been happily married for 14 years. I figure if I get six or seven happy years out of it, I'm ahead of the game. See, I go along with the great philosopher Plato, who said—and I quote: "Marriage is like a hanging. It leaves you blue in the face and you break your glasses."

SAM LEVENSON (CBS-TV: © 1957, by Sam Levenson)

Papa's second cousin owed him \$50. He couldn't pay, so he gave Pop his car. Mama threw a fit: "What are we going to do with a car?" "Foolish question," said Pop.

The old gent got a learner's permit, and his son Harry, who didn't have a licence, took him out for instruction.

Pop came back from his first lesson white as a ghost. Mom said: "Don't tell me! I know. You killed somebody." Mom began to faint. Pop went right into his address to the jury: "That blind horse! I am going like this, he is coming like that. . . . So I make like this. . . . He makes like that. . . . So what are you looking at me for? All right. The car's in the garage. A

couple of scratches." Pop secretly borrowed \$50 from the cousin who owed him money and had the car repaired.

The night before his road test, Pop was delicious. He drove Mom out of bed four times and kept braking the bed post till it actually broke.

The inspector gave Pop his licence out of deference for his age and determination. This is what happened.

When Papa saw the inspector who was going to give him his road test his mind went blank. "Well," said the inspector. "Let's get going." And Papa said, "I forgot how to open the door."

When Papa got into the car he had more knee action than the car.

"Okay, first back up," said the inspector.

That was one thing Papa could do perfectly. He backed up slowly, quietly, right onto the sidewalk, flush against the side of a building.

The inspector told Papa to keep calm and go forward. Papa calmly shifted into reverse again and stepped on the gas. The motor raced like mad, but the building wouldn't budge.

By this time there were at least 100 people watching him. Two guys were selling balloons, and four kids got lost.

Papa put the car into reverse, stepped on the gas, but the car still wouldn't move. Papa finally wiped his brow meekly and apologized to the inspector: "I'm sorry. I must be out of gas!"

**Humphrey, George Magoffin**

(1890—), U.S. government official.

was born on March 8 at Cheboygan, Mich., and received his law degree from the University of Michigan, Ann Arbor, in 1912. Until 1918 he practised law in Saginaw, Mich., and in that year he was appointed general counsel of the M. A. Hanna company, steel and coal manufacturers, at Cleveland, O. In 1925 he was named vice-president and in 1929 president of the company, which he expanded into a large and profitable industrial enterprise. He became chairman of the board in May 1952. During the administration of Pres. Harry S. Truman, Humphrey accepted two quasi-federal posts—chairman of the U.S. department of commerce's business advisory council in 1946, and head of a survey of German industrial plants conducted by the Economic Cooperation administration in 1948-49.

Humphrey was selected by Dwight D. Eisenhower to be U.S. secretary of the treasury in the administration that took office in Jan. 1953. He shortly thereafter let it be known that the administration's fiscal policy would be to balance the national budget before cutting taxes; he blamed the mounting federal debt on the preceding Democratic administrations. On Aug. 27, 1953, however, he declared that the "turning point" had been reached on the road toward balanced budgets.

In 1955 Humphrey successfully opposed a Democratic move to grant flat tax reductions of \$20 to each U.S. income taxpayer and dependent. His name was mentioned sporadically in 1956 as a possible running mate for President Eisenhower, but he disclaimed any intention of seeking the Republican vice-presidential nomination.

Hungary.

A people's republic of southeastern Europe, Hungary is bounded west by Austria, north by Czechoslovakia, east by Rumania and south by Yugoslavia. Area: 35,905 sq.mi. Pop.: (1949 census) 9,204,799; (1955 est.) 9,861,000. Languages (1949 census): Hungarian 98.7%; German 0.2%; Slovak 0.3%; others 0.6%. Religion (1949 est.): Roman Catholic 70.6%; Calvinist 22.8%; Lutheran 3.3%; Orthodox 0.4%; Jewish 1.9%. Chief towns (pop., 1949 census; 1954 est. in parentheses): Budapest (cap.) 1,612,287 (1,781,085); Szeged 87,878 (88,590); Debrecen 112,955 (113,248); Miskolc 109,301 (135,780). First secretaries of the Hungarian Workers' (Communist) party (renamed on Nov. 1 Hungarian Socialist Workers' party) in 1956: Matyas Rakosi, Erno Gero (from July 18), Janos Kadar (from Oct. 25). Chairman of the presidential council of the national assembly, Istvan Dobi. Chairman of the council of ministers in 1956: Andras Hegedus, Imre Nagy (from Oct. 24) and Janos Kadar (from Nov. 4).

History.—At the end of 1955 two tendencies had characterized the situation in Hungary. On the one hand, a policy of liberalization was pursued within the Communist party, or through its agency, despite resolutions adopted denouncing Imre Nagy and his group; on the other, the Warsaw treaty was strengthened. The controlled press made it obvious that a very relative liberalization was contemplated as the price of Hungary's closer association with the Warsaw collective security system. The real character of the system became clearer by references in the press and over the radio to "British colonialism," and by the support given to the pan-Arabic tendencies of Gamal Abdel Nasser in an extreme version unknown perhaps even in Egypt. On Oct. 24, 1955, Hungary had established "closer relations" with Egypt, and this step was hailed in the controlled press as a sign of the firmer siding of the people's democracies against imperialism." The political consultative committee of the signatories of the Warsaw treaty met in Prague on Jan. 27-28, 1956, and sent out instructions on this policy to the Communist parties of each country concerned.

On Feb. 21 the rehabilitation of Bela Kun was announced. For years his name had been suppressed in the school textbooks, which otherwise praised the "proletarian dictatorship" of 1919 as a glorious event. For the first time it was said that Matyas (Roth) Rakosi, Gyorgy Lukacs and other representatives of Moscow who had played a part in Hungary since 1945 had been in their youth collaborators of Bela Kun, now presented as a victim of Stalinism.

Further denunciation of Stalinism came in March, when Laszlo Rajk, hanged in 1949, was solemnly rehabilitated; he was subsequently reburied in the presence of the government. Hungarians seemed, however, hostile to all forms of communism. This was almost openly stated by many who had the opportunity to approach foreign observers on this occasion. On May 18 Rakosi made a speech admitting "mistakes" committed in the recent past and announcing the imminent release of several "left" Socialists, collaborators of his party in the early phase of the regime. A universal refusal to comply with party instructions and the failure of the regime to carry out its aims any longer became clearer from week to week. In June the party press published many apologies to Marshal Tito, during his visit to Moscow, and also published denunciations of the past. Although the leading note in all this was the contrast between the good Marxist-Leninist communism and the Stalinist "cult of personality," little remained of anything that people had ever associated with communism. The collectivization of agriculture was condemned in theory as well as in practice; the low quality of industrial production was denounced; and the absence of any artistic value in Soviet propaganda plays, shows and books was admitted. The argument that communism was nevertheless a great forward step in history sounded less and less convincing.

Such was the position in the middle of the year when the Poznan events occurred in Poland. The Hungarian workers' solidarity with the Poznan rising took the form of spontaneous manifestations, while the police, the party organizations and trade-union officials who tried to prevent them were ignored in the factories. On July 1 the party central committee once more denounced and this time expelled Imre Nagy "for openly taking stand against the party," but on July 18, Rakosi resigned and at this time, going beyond the generalities of May 18, accused himself personally, while enumerating "past faults." On July 22 Mihaly (Wolf) Farkas, former minister of defense and for some time Rakosi's close associate, was expelled from the party, but Ernő (Singer) Gero, more hated even than Rakosi by most Hungarians, took over the general secretariat of the party and declared: "A Hungarian Poznan must and will be avoided."

The crisis was prolonged throughout August, with increasing,

although minor anticommunist manifestations. These included open discussions at the Petofi circle, the writers' and journalists' association, which refused to elect the communist list of candidates, electing instead notable anticommunists, such as the writer Lajos Kassak, recently released from prison, to its presidium. Gero stayed in Belgrade in September and met Tito again during the latter's trip to the U.S.S.R. at the end of that month. No disclosure of undoubted authenticity had been made by the end of 1956 concerning the aim of this trip.

On Oct. 23, the students of Budapest university demonstrated in the gardens of the National museum. They demanded the return of full national independence. The movement spread spontaneously and rapidly. The Soviet command was at first completely disconcerted and reacted only on Oct. 25, the day on which Gero's resignation was announced. Soviet emblems throughout Budapest were removed, Stalin's statue was destroyed, the army joined the popular movement and the civilian police opened the Austrian frontier and shot members of the previously dreaded secret police, the A.V.O. (Allam Vedelmi Osztaly, or state security department).

By Oct. 28 the country was almost completely liberated. Imre Nagy, who had been restored to membership in the party on Oct. 13, became prime minister on Oct. 24; he promised the withdrawal of Soviet troops, first for Jan. 1, 1957, but, by the next day, "immediately," Anna Kethly, former Socialist deputy released from prison, and Zoltan Tildy, head of the state in 1946-48, were said to have joined the government. In reality no government functioned fully and the membership of the government was changed three times within a week. The name of Bela Kovacs, former Smallholder deputy, was published in each of the lists of ministers but in fact reliable reports state that he did not join any government, refusing to collaborate with the communists. The attempt to return to the coalition basis of 1945 (Peasants, Socialists and Communists) did not succeed despite the fact that the names of members of these parties appeared in the lists of ministers. The total rejection of communism by the insurgents became increasingly obvious. By Oct. 31 Gen. Pal Maleter and Gen. Bela Kiraly seemed to be in control of Budapest and the western half of the country. The situation was less clear in the east, where Soviet troops were more numerous. Fighting, intense between Oct. 25 and Oct. 30 and costing about 10,000 lives, died down between Oct. 30 and Nov. 4. Joseph Cardinal Mindszenty, liberated from prison, made a triumphal entry into Budapest on Oct. 31. Hungarian delegations were sent to Vienna to explain events and ask for immediate food relief. On Nov. 1 Imre Nagy declared Hungary to be neutral and urged immediate recognition of this status by the United Nations.

Although fighting had ceased, new Soviet units were moved into Hungary. Negotiations began, on the Soviet request, concerning "modalities of withdrawal." On Nov. 4 the negotiators were arrested. Imre Nagy withdrew to the Yugoslav embassy, from where, in circumstances not yet explained, he was recaptured on Nov. 23 and deported to Rumania. Janos Kadar, Nagy's minister of the interior, was nominated acting prime minister by the Soviet command on Nov. 4. He promised withdrawal of Soviet troops as soon as "normal life and production" were restored. Cardinal Mindszenty took refuge in the U.S. legation, foreign correspondents and delegates in other diplomatic premises.

The food situation became alarming in November. Relief reached the western towns Sopron, Szombathely and Gyor but seldom went farther east. This fact partly explained the movement westward of a great number of persons from all over the country; in many cases they crossed the Austrian frontier. By Nov. 30 about 100,000 refugees had reached Austria.

Severe fighting occurred after the Soviet counterattack of Nov. 4 at Dunapentele, Tata, Dorog and Gyor, costing thousands

more lives. From Nov. 12 fighting was sporadic, but a general strike continued in factories and mining districts. Incomplete but not unfounded reports told of numerous deportations to the Soviet Union. The clear fact emerged that Hungary had developed a national movement which unanimously rejected any co-operation with the U.S.S.R. Reliable witnesses said that serious dissension began within the Soviet ranks, and the duration of the unequal struggle was widely attributed to this circumstance. (See also COMMUNISM; UNITED NATIONS.) (B. Mr.)

Education.—Schools (1954): nursery, pupils 144,000, teachers 4,300; primary 6,185, pupils 1,208,000, teachers 46,100; secondary 405, pupils (including those enrolled for evening courses) 162,500, teachers 7,500; vocational, pupils 57,000; institutions of higher education 21 (including 5 universities), students 47,500, teaching staff 7,200.

Finance.—Budget (1955 est.; 1956 est. in parentheses): revenue 46,961,000,000 (43,300,000,000) forints; expenditure 45,458,000,000 (42,100,000,000) forints, including 25,200,000,000 (22,439,000,000) forints invested in the national economy. Monetary unit: forint with official exchange rate, high and fictitious, of 11.74 forints to the U.S. \$1.

Foreign Trade.—(UN Economic Commission for Europe's estimates, in U.S. dollars, 1954.) Trade turnover with all countries \$950,000,000, including \$660,000,000 with the countries of the Communist group.

Transport and Communications.—Highways (1955): 39,569 mi. Licensed motor vehicles (Dec. 1955): cars 15,000, commercial 27,300. Railways (1951): 7,100 mi. Air transport (1948): flights 4,447; mileage flown 625,000; passengers carried 36,111. Danube shipping (Dec. 1947): merchant vessels 514, gross tonnage 118,700. Telephones (1954 est.): 122,000. Radio receiving sets (1953): 887,000.

Agriculture.—Main crops (metric tons, 1934-38 average; 1955 in parentheses): wheat 2,220,000 (2,130,990); maize 2,306,000 (2,911,710); rye 697,000 (544,270); barley 608,000 (794,380); oats 270,000 (1948-50 average) 265,000; potatoes 2,133,000 (2,467,030); sugar beets 960,000 (2,240,760); rice (1948-51 average) 44,000. Wine production (1938; 1948-50 average in parentheses): 3,259,000 hl. (3,120,000 hl.). Livestock (1939; 1955 in parentheses): cattle 1,882,000 (2,128,000); pigs 5,224,000 (6,000,000); sheep 1,868,000 (1,857,000); horses 939,000 (550,000).

Industry.—Production (metric tons if not otherwise stated, 1938; 1955 in parentheses): coal 1,042,000 (1,920,000); lignite 8,306,000 (20,800,000); crude petroleum 43,000 (1,600,000); electricity 1,280,000,000 (5,442,000,000) kw.hr.; pig iron 335,000 (854,000); steel 648,000 (1,923,000); bauxite 540,000 (1,290,000); aluminum 1,300 (37,000); cement 343,000 (1,175,000); sulphuric acid (1955) 124,000; cotton fabrics (1955) 278,000,000 sq.yd.; leather shoes (1955) 13,900,000 pairs; sugar 27,000 (248,000).

Hutchins, Robert Maynard (1899—), U.S. educator, was born on Jan. 17 in Brooklyn, N.Y. He left Oberlin college, Oberlin, O., in 1917 to serve in the U.S. ambulance corps during World War I. Entering Yale university, New Haven, Conn., in 1919, he received his A.B. in 1921 and his LL.B. (*magna cum laude*) in 1925. In 1923 he was appointed secretary of Yale university and in 1927 dean of its law school. In 1929, at the age of 30, he became the fifth president (and, in 1945, the first chancellor) of The University of Chicago.

Hutchins resigned in 1950 (effective June 30, 1951) as chancellor of the university and as a member of its board of trustees to join the Ford foundation as an associate director. He continued as chairman of the board of editors of Encyclopædia Britannica, Inc.

On May 24, 1954, the Fund for the Republic, an independent organization established in 1953 with a grant of \$15,000,000 outright from the Ford foundation, announced the election of Hutchins as its president. The purpose of the fund was to help remove restrictions on freedom of expression and thought in the United States. On Jan. 13, 1955, the fund announced a \$250,000 survey of the influence of communism on all phases of U.S. life. Seaborn P. Collins, national commander of the American Legion, attacked this survey as an attempt to show that communism was no particular menace to democracy. Other members of the Legion, however, defended the fund's objectives.

Replying to a request from Chairman Francis E. Walter of the House committee on un-American activities that directors and officers of the Fund for the Republic declare whether they were "friend or foe" of U.S. anticommunist campaigns, Hutchins wrote

Walter on July 11, 1956, that the congressman had unjustly questioned their patriotism.

Iceland. An island republic of the North Atlantic, Iceland has an area of 39,768 sq.mi. and a population of (1950 census) 144,263; (1956 est.) 160,000. The capital, Reykjavik, is the only large town (pop. 1953 estimate 60,024). Religion: Lutheran Christian. President in 1956: Asgeir Asgeirsson. Prime minister, Olafur Thors until July 1956, thereafter Hermann Jonasson.

History.—The long simmering problem of U.S. troops at Keflavik air base boiled over in 1956. The restlessness of the Icelanders was rooted deeply in national sensitivity, and economic difficulties also played a powerful role. Inflation accompanied prosperity, and even the funds brought in for construction at the air base seemed to some persons merely to raise prices and enhance troubles. The fishing fleet, mainstay of the country's economy, refused to go out for the winter season until promised a government subsidy. By June the wage-price spiral had risen 22 points in a year. Furthermore, neither the United States nor Great Britain would buy Iceland's fish, the country's only important export. The U.S.S.R. took the fish and provided petroleum and other products in return.

Political ambitions and rivalries exacerbated problems and controversies. The government had been a coalition of the Independence (conservative) and Progressive (centre-to-left) parties. Foreign Minister Kristinn Gudmundsson and his Progressive colleagues came increasingly to feel their affinity with the Social Democrats and to join the left parties in opposition to the presence in the country of foreign troops. The authorizing treaty, signed in 1951 during the Korean conflict, was part of Iceland's co-operation in the North Atlantic Treaty organization (NATO),

"SPLOSH!" a 1956 cartoon by Dobbins of the Boston Post (Mass.)

but provided for United States troops at Keflavik only in time of war. Four thousand soldiers just outside a city of 60,000 population inevitably created tensions. Were these troops necessary? Most Icelanders thought not, and the Communists were bitterly antagonistic. In March 1956 the Progressives joined with the parties of the left, including the isolationist National Preservation party, to vote 38-18 in the *althing* to demand withdrawal of the U.S. forces. This decision split the coalition and led to an election on June 24, one year earlier than normal.

In the hotly debated contest 90% of the voters went to the polls. The representation of the National Preservation party was wiped out, but the Progressive-Social Democrat alliance won 25 of the 52 seats in the *althing*; the Independence party won only 19 seats, although polling 43% of the popular vote. Eight Communists were elected, and in the post-election manoeuvring they joined with the Progressives and Social Democrats to form a new coalition (July 21), each party having two posts in the six-member cabinet. Hermann Jonasson, Progressive, became premier, and Gudmundur I. Gudmundsson, a right-wing Social Democrat, became foreign minister.

Despite the recommendation of the NATO council, Iceland made formal request on Aug. 1 for the withdrawal of the United States forces. The government professed continuing solidarity with NATO, but no one outside Iceland seemed to think Iceland was capable of defending itself. (F. D. S.)

Education.—In 1954 there were 224 elementary schools with 15,566 pupils and 708 teachers, 56 secondary schools with 4,586 pupils and 367 teachers, 3 grammar schools with 841 pupils and 55 teachers and 49 other schools with 3,507 pupils and 339 teachers. The University of Iceland had 692 students and 61 professors and lecturers.

Finance.—The monetary unit is the króna, valued at 6.14 cents, U.S. currency, official rate, in 1956. The 1956 budget balanced revenue and expenditure, current and capital, at 661,696,000 kr. The national debt (Dec. 31, 1954) was 473,108,000 kr., including external debt of 214,006,000 kr. Currency in circulation (June 30, 1956) was 335,590,000 kr. National income (gross national product at factor cost) was estimated at 2,460,000,000 kr. in 1954. The cost-of-living index (Reykjavik) stood at 115 in June 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled 847,833,000 kr.; imports, 1,264,294,000 kr. Leading exports were fish and fish products (93%), hides and skins (3%) and wool (2%); leading imports, petroleum products (12%), wood (4%), iron and steel (4%) and cement (2%). Leading customers were the U.S.S.R. (18%), the U.S. (12%), the U.K. (8%) and Italy (8%); leading suppliers, the U.S. (23%), the U.S.S.R. (14%), the U.K. (11%) and western Germany (10%).

Motorable roads (1956) totalled about 5,500 mi. Registered motor vehicles (Jan. 1, 1956) included 7,812 automobiles, 5,471 trucks and 328 buses. In Oct. 1955 the merchant marine had 686 vessels aggregating

97,975 gross tons, including the fishing fleet of 44 trawlers and 597 other vessels aggregating 54,531 tons. Telephones (1955) numbered 25,457; radios (1956), 50,000.

Fisheries and Livestock.—In 1955 the sea fisheries yielded 408,952 metric tons, including 170,254 tons of frozen fish and 141,193 tons of salted fish. Livestock (Jan. 1, 1956) included 635,080 sheep, 47,328 cattle and 37,181 horses. Wool production (1955) was 600 metric tons. (J. W. Mw.)

Ice Skating. Hayes Alan Jenkins of Colorado Springs, Colo., scored a grand slam in international competition in 1956 when he won the Olympic, world and United States championships. Jenkins captured his fourth straight world title at Garmisch-Partenkirchen, Ger., in February. Ronald (Ronnie) Robertson of Long Beach, Calif., was a close second and Jenkins' younger brother David was third. The same trio finished first, second and third at Cortina d'Ampezzo, It., in January for the best United States showing in the 1956 Winter Olympic games. (See also OLYMPIC GAMES.) Carol Heiss, 16-year-old skater from Ozone Park, N.Y., who was second to Tenley Albright of Newtown Center, Mass., in the Olympics, dethroned her American rival in the world competition. Miss Albright was second and Ingrid Wendl of Austria was third. The pairs championship went to the Austrian team of Elisabeth Schwartz and Kurt Oppelt with the defenders, Frances Dafoe and Norris Bowden of Toronto, Can., a close second.

Misses Albright and Heiss met in competition for the ninth time in three years in the national championships at Philadelphia, Pa., March 14-17. Miss Albright won her fifth consecutive United States crown after a close contest with Miss Heiss. Hayes Alan Jenkins carried home the men's senior national prize for the fourth straight time, with Ronnie Robertson again his closest adversary and David Jenkins third. Other winners included Carole Ann Ormaca and Robin Greiner of the St. Moritz Skating club of Berkeley, Calif., senior pairs; Bob Hubbard of Sacramento, Calif., men's novice singles; Barbara Roles of Pasadena, Calif., women's novice; Robert Lee Brewer of Pasadena, men's junior; Joan Schenke of Tacoma, Wash., women's junior; Aileen Kahre and Charles Phillip, Jr., of Berkeley, silver dance prize; Joan Zamboni and Roland Junso of Paramount, Calif., gold dance title; and Nancy Rouillard and Ronald Luding-

ICE HURDLER Leo LeBel attempting unsuccessfully to clear 15 barrels at Lake Placid, N.Y., Jan. 7, 1956. On a later try he jumped over 16 barrels to set a world's record and retain the title he had won in 1955

ton of Boston, Mass., junior pairs.

At the close of the national meet, Ronnie Robertson joined the professional ranks; Hayes Jenkins turned professional in May.

Speed Skating.—Ken Bartholomew of Minneapolis, Minn., and Pat Gibson of Madison, Wis., starred in the national outdoor championships at St. Paul, Minn., Jan. 28–29. By defeating Dick Wellbank of Chicago, Ill., by 2 yd. in the final event of 5 mi., Bartholomew was able to win his seventh consecutive men's senior title. In addition to taking the 5-mi. test, Bartholomew led home the fields in the 2 mi. and 880-yd. races. Miss Gibson gained her fourth national title with a sweep of the senior women's five contests. Kathleen Harrington of Syracuse, N.Y., was juvenile girls' champion and Paul Nelson of Minneapolis led the juvenile boys. Bartholomew and Miss Gibson had previously retained honours in the Great Lakes championships at Milwaukee, Ken winning six events while Miss Gibson swept five races for feminine competitors. The same winners led their respective divisions in the North American title meet at West Allis, Wis., Feb. 4–5. Kenneth LeBel of Lake Placid, N.Y., triumphed in the men's senior group at the United States indoor meet at Flushing Meadow Park rink in New York, the women's title going to Mickey Finch of Ozone Park, N.Y. LeBel also took North American honours indoors, the senior women's title being won by Pat Underhill of Dawson Creek, B.C.

The U.S.S.R. dominated the men's world speed-skating championships at Oslo, Nor., and the women's international title tests held in Sweden. (T. V. H.)

Idaho. One of the far northwestern states of the United States, belonging to the group regionally designated as the Pacific northwest and part of the original Oregon territory, Idaho was admitted as a state on July 3, 1890; it is popularly known as the "Gem state." Area: 83,557 sq.mi. Pop. (1950 census): 588,637, of whom 57.1% were rural, 42.9% urban; 61,988 native white, 19,407 foreign born white; 1,050 Negro, 1,192 other races. The provisional population estimate of the census bureau as of July 1, 1956, was 625,000.

The largest cities with their populations (1950 census) are: Boise (cap.) 34,393; Pocatello 26,131; Idaho Falls 19,218; Twin Falls 17,600; Nampa 16,185; Lewiston 12,985; Coeur d'Alene 12,198; Moscow 10,593; and Caldwell 10,487.

History.—Hydroelectric power and natural gas probably drew more headlines in Idaho during 1956 than any other items.

The hydroelectric power problem centred around the efforts of a privately owned, taxpaying electric utility to go forward with its efforts to build three dams in Snake river canyon between Idaho and Oregon, in the face of persistent efforts by advocates of federal dam construction to thwart these efforts. Appeals from the award of the Federal Power commission of a licence for construction of one of the dams were carried to the courts, while the company, after posting a bond, proceeded with the building of power-generating facilities needed to meet the growing demands of the area. A bill in congress for authorization of the federal Hells Canyon dam was defeated in the senate.

Idaho, along with other northwestern states, received its first natural gas during 1956. A unique attempt was made by a dozen Idaho cities to set up co-operative associations to supply the pipeline gas to consumers. This procedure was resorted to because of statutory restrictions against issuing revenue bonds for financing such municipal enterprises and because the cities could not otherwise finance the operations. The highest state court was called upon to pass judgment on the proposal.

The 1955 Idaho legislature created three interim study committees, with instructions to bring to the 1957 session recommendations on revision of the state tax structure, the teacher

training facilities of the state and the status of the minimum education program in Idaho. In each instance the committee was made up of both nonmembers and members of the legislature, and small appropriations were provided.

In the Nov. 6, 1956, election in Idaho, Pres. Dwight D. Eisenhower polled a majority of about 60,000 votes over Adlai E. Stevenson. Frank Church (Dem.) was elected to the U.S. senate and Mrs. Gracie Pfost (Dem.) and Hamer H. Budge (Rep.) were re-elected to the house of representatives.

Incumbent state officials, whose terms were to expire Jan. 1, 1959, were: governor, Robert E. Smylie (Rep.); lieutenant governor, J. Berkeley Larsen (Rep.); attorney general, Craydon Smith (Rep.); secretary of state, Ira Masters (Dem.); treasurer, Mrs. Ruth Moon (Dem.); auditor, N. P. Nielson (Rep.); mine inspector, George McDowell (Rep.); superintendent of public instruction, Alton P. Jones (Rep.).

Education.—Enrolment in Idaho schools of approximately 150,000 students in the 1956–57 school year in 486 elementary and 158 secondary schools represented an increase of approximately 26% over the number enrolled in 1940. There were approximately 5,000 teachers employed in the state.

In addition to the Lewis and Clark Normal school at Lewiston, the state maintains the University of Idaho at Moscow (it is also the state agricultural college) and the Idaho State college at Pocatello. Junior colleges in Idaho are operated under statutes creating districts and receive some state as well as local support. There are such colleges at Boise, and at Coeur d'Alene. Private colleges are Ricks college at Rexburg, College of Idaho at Caldwell and Northwest Nazarene college at Nampa.

Social Insurance and Assistance, Public Welfare and Related Programs.—At the end of the fiscal year, June 30, 1956, the number of old-age assistance recipients totalled 8,367 compared with 8,729 in July 1955, while average payments in June 1956 were \$55.53 compared with \$54.92 in July 1955. It was estimated that 16.7% of the population of Idaho aged 65 and over was receiving old-age assistance.

Average weekly benefit payments under unemployment compensation during the year ending June 30, 1956, were \$26.30 compared with \$22.85 during the preceding year, for a total of \$4,027,201 compared with \$4,549,844 in the preceding fiscal year. Total receipts to the fund during the year amounted to \$5,322,421, of which \$815,123 represented interest. The fund balance stood at \$35,757,620 at the end of the fiscal year compared with \$34,454,222 at the previous year end, or an increase of \$1,303,398. The number of covered employers remained practically stationary during the year at slightly more than 13,100.

Communications.—The state highway system, administered by the Idaho Highway board, covers approximately 5,000 mi. of roads and has a normal annual program of about \$28,000,000. Four transcontinental railroads, with a combined mileage within Idaho of 2,738 mi., serve the state. Air transportation is furnished by United, Western and West Coast air lines. Telephones in service exceed 161,000, a gain of more than 85% since 1945.

Banking and Finance.—Ten national banks with 56 branches reported total deposits of \$393,353,855.85, and 25 state banks with 9 branches reported deposits of \$121,414,083.70 at the beginning of 1956.

The Idaho state budget for the fiscal biennium ending June 30, 1957, totalled \$134,094,107, including \$49,552,169 from the state general fund and \$84,541,938 from other funds and sources. This was an increase of \$15,584,756, or 13% over the \$118,509,351 appropriated for the biennium which ended June 30, 1955. Major expenditures authorized were highways \$51,850,000, education \$33,300,000 and public welfare \$24,425,000.

Agriculture.—Final figures for the 1955 Idaho farm income were: live-stock and livestock products marketed \$141,003,000, crops \$192,829,000,

Table I.—Principal Crops of Idaho

Crop	Indicated 1956	1955	Average, 1945–54
Wheat, bu.	38,980,000	38,165,000	38,985,000
Corn, bu.	3,776,000	3,410,000	1,633,000
Oats, bu.	8,272,000	9,700,000	7,934,000
Barley, bu.	16,315,000	19,584,000	12,345,000
Sugar beets, short tons	1,540,000	1,433,000	1,296,000
Beans, 100-lb. bags.	2,052,000	2,370,000	2,194,000
All hay, tons.	3,187,000	2,971,000	2,460,000
Potatoes, cwt.	33,115,000	31,200,000	24,684,000
Apples, bu.	1,650,000	1,630,000	1,583,000

Table II.—Mineral Production of Idaho

(Short tons, except as noted)

Mineral	Quantity 1953	Value 1953	Quantity 1954*	Value 1954*
Total		\$67,000,000		\$69,693,000
Antimony ore.	2,000	†	5,000	†
Copper	3,000	1,800,000	5,000	2,849,000
Gold (oz.)	18,000	617,000	13,000	464,000
Lead	75,000	19,548,000	69,000	18,989,000
Mercury (flasks, 76 lb.)	†	†	609	161,000
Phosphate rock	†	4,150,000	†	5,687,000
Pumice and pumicite	85,000	160,000	94,000	184,000
Sand and gravel	3,776,000	2,841,000	6,718,000	4,569,000
Silver (oz.)	14,640,000	13,250,000	15,867,000	14,361,000
Stone	1,142,000	2,261,000	2,309,000	3,013,000
Tungsten concentrate.	441	1,666,000	471	1,774,000
Zinc	72,000	16,595,000	62,000	13,290,000
Other minerals	—	4,112,000	*	4,352,000

*Preliminary †Value included with other minerals.

Source: U.S. Bureau of Mines.

government payments \$4,804,000, home consumption \$11,099,000; total \$349,735,000, compared with \$350,931,000 income in 1954.

Manufacturing.—Value added by manufacturing in the forest products industry in the amount of \$79,200,000 in 1954 led all types of manufacturing, out of a total of approximately \$188,000,000 added in that year. Mine production totalled about \$70,000,000 in 1954, and there were 250,700 freight cars loaded in 1954. Out of a total of 23,658 nonagricultural employment in 1954, lumbering accounted for 12,133, food processing 6,533 and other manufacturing 4,992.

Mineral Production.—Table II shows the tonnage and value of Idaho's minerals in 1953 and 1954 whose value exceeded \$100,000. Almost all antimony produced in the U.S. in 1954 came from Idaho. The state has been first among the states in silver output since 1943 and was also first in zinc output in 1954, second in ilmenite and in lead mined, third in phosphate rock, fifth in pumice, and ranked 29th in the value of its mineral output, with 0.50% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Northwestern States*, 2nd ed. (1956).

Illinois. A north central state of the United States, admitted to the union in 1818 as the 21st state, Illinois is nicknamed the "Sucker state" and is sometimes called the "Prairie state." The official state slogan is "Land of Lincoln." Total area: 56,400 sq.mi., of which 55,935 sq.mi. are land. Population (1950 census): 8,712,176, an increase of 10.3% or 814,935 over 1940. The 1950 census showed 4,319,251 males and 4,392,925 females; 8,046,058 white, 666,118 nonwhite. Population classed as urban in 1950 was 6,759,271 or 77.6%; as rural, 1,952,905 or 22.4%.

The July 1, 1955, population estimate was 9,361,000. The provisional estimate by the U.S. census bureau for July 1, 1956, was 9,432,000. Chicago (1950 population, 3,620,962) is the largest city, followed by Peoria (111,856), Rockford (92,927), East St. Louis (82,295) and Springfield, the capital (81,628).

History.—Orville E. Hodge, state auditor (elected for a four-year term expiring Jan. 1957), was ousted from office when investigation proved that he had misappropriated more than \$1,000,000 in state funds. He was sentenced in Aug. 1956 to serve 12 to 15 years at the Menard state prison. Lloyd Morey, former president of the University of Illinois, was appointed by Governor Stratton to fill Hodge's unexpired term as auditor.

A special census conducted by the Population Research and Training centre of The University of Chicago for the Illinois department of public health showed that the state population was 9,361,000 as of July 1, 1955. This was an increase of 648,000 or 7% over the 1950 census. The census also showed that the median age of the population advanced from 32.7 years in 1950, to 33.2 years in 1955; that the nonwhite population increased from 7.7% of the state's population in 1950, to 9% in 1955; that the number of cities of 10,000 or over increased from 72 in 1950, to 86 in 1955; and that 91% of the state's 1950-55 population increase occurred within 13 metropolitan counties.

The Nov. 6, 1956, general election in Illinois was a landslide when Pres. Dwight D. Eisenhower led the state Republican ticket to complete victory.

President Eisenhower won Illinois' 27 electoral votes when he ran up more than a 800,000 vote plurality over the Democratic candidate Adlai Stevenson. Illinois voters elected Everett M. Dirksen (R.) over Richard Stengel (D.) for the U.S. senate and gave the Republicans 14 out of 25 seats in the U.S. congress. Republican candidates won all state offices, a 38 to 19 majority in the state senate and a 94 to 83 majority in the state house of representatives. State officers elected (all Republican) were: William G. Stratton, governor; John W. Chapman, lieutenant governor; Charles F. Carpentier, secretary of state; Elbert S. Smith, auditor of public accounts; Elmer J. Hoffman, treasurer; Latham Castle, attorney general; Mrs. Earle B. Searcy, clerk of the supreme court; Wayne A. Johnston, Timothy W. Swain and Earl M. Hughes, trustees of the University of Illinois.

Education.—Estimated enrolment in the state's 2,242 public school districts for the 1956 fall term was 1,506,221 as compared with 1,502,727 in 1955. Enrolment was divided between 1,604 elementary school districts,

ORVILLE E. HODGE, former state auditor of Illinois, entering prison in Aug. 1956 to begin a 12-15 yr. sentence for the theft of state funds

306 secondary school districts and 332 unit school districts. There were 38,042 teachers for 1,136,865 pupils in the first eight grades, and 16,440 teachers for 369,356 students in the secondary grades. In addition to the public school districts, there were 973 private elementary schools with an enrolment of 355,789; 178 private secondary schools with an enrolment of 71,428; and 69 institutions of higher education in Illinois in 1956. The legislative appropriation for state aid to schools in the 1955-57 biennium was \$224,300,000. This increase of \$56,915,374 over the previous biennium increased the aid per pupil from \$173 to \$200 per school year. Vernon L. Nickell was the superintendent of public instruction in 1956.

Social Insurance and Assistance, Public Welfare and Related Programs.—Gross expenditures under the state's public assistance programs totalled \$157,710,000 in the fiscal year ending June 30, 1956, an increase of \$3,745,000 over the preceding year. The number of persons dependent upon public aid decreased from 282,220 to 274,821 in the same period. In the fiscal year closing June 30, 1956, the Illinois public aid commission reported the following average monthly number of recipients of public assistance and the average payments to each (preceding year's figures in parentheses): old-age pensions, 92,758, \$60.80 (97,801, \$58.66); aid to dependent children, 88,619, \$34.24 (80,017, \$33.43); blind assistance, 3,491, \$67.40 (3,600, \$63.92); disability assistance, 6,908, \$81.55 (5,872, \$79.04); general assistance, 83,816, \$37.34 (94,952, \$34.40). In addition the state expended \$6,486,000 in the 1955-56 fiscal year for burials of public assistance recipients and medical aid to the indigent.

The average weekly number of unemployment compensation claimant, during 1956 through the week ended Aug. 31, 1956, was 63,325 as compared with 107,200 during the corresponding period of the preceding year.

In the state's five penal institutions the average daily population during Aug. 1956 was 9,389, an increase of 321 over the same month of 1955. On Sept. 1, 1956, 21 state welfare institutions showed an average daily population of 49,472, a decrease of 505 from the Sept. 1, 1955, figure. These institutions, and their populations were (Sept. 1, 1955, figures in parentheses): 13 mental hospitals, 47,415 (47,808), 8 educational institutions and homes, 2,057 (2,169). Three correctional institutions and four forestry camps under the supervision of the Illinois youth commission had an average daily population of 1,259 during Aug. 1956, as compared with 1,210 during Aug. 1955, when there were three correctional institutions and only two forestry camps.

Communications.—Contracts for highway construction work in the first nine months of 1956 totalled \$68,932,206. Illinois, with a 12,000 mi. primary highway system, contains 125,000 mi. of roads, 104,000 mi. rural. Construction of the state's 193 mi. toll road network began in Sept. 1956.

There were 65 railroads (58 steam and 7 electric) operating in Illinois during 1956. These trains ran on 11,542 mi. of track through 80% of the state's communities. In 1956 there were 17 scheduled airlines and 97 bus companies serving the various communities in the state. On Sept. 1, 1956, there were 3,447,572 motor vehicles (all types) registered in Illinois. Navigable waterways, internal and bordering, totalled 1,147 mi.

Banking and Finance.—There were 924 banks operating in the state on June 30, 1956, 10 more than on the same date of the preceding year. Of this number, 532 were state banks and 392 national banks. State banks on June 30, 1956, showed total deposits of \$4,428,739,317 and total resources of \$4,753,818,762. National banks on the same date had total deposits of \$10,792,745,000 and total resources of \$11,732,409,000.

For the biennium ending June 30, 1957, Gov. William G. Stratton approved legislation appropriating \$1,736,250,557 to operate the state government. As of June 30, 1956, \$838,670,272 was expended, leaving a balance of \$897,580,285.

In the first eight months of 1956, major sources of state income produced the following amounts (1955 comparative figures in parentheses): sales tax, \$184,730,887 (\$146,737,909); motor fuel tax, \$97,982,381 (\$94,372,292); motor vehicle registrations, \$78,969,975 (\$69,160,994)

cigarette tax, \$22,134,296 (\$20,679,154); public utility tax, \$22,757,294 (\$20,923,407); liquor gallonage tax, \$17,324,740 (\$16,075,254).

Agriculture.—Almost 86% of the total land area of Illinois is in farms; its 179,341 farms were valued in 1955 at more than \$7,121,000,000. The average farm size was 172.6 ac.

Illinois grows 43 different field crops on 30,963,309 ac. Corn is the largest crop; hog production provides the greatest income to the farmer.

Table I.—Principal Crops of Illinois

Crop	Indicated 1956	1955	Average, 1945-54
Corn, bu.	586,674,000	523,992,000	467,584,000
Soybeans, bu.	135,632,000	98,325,000	83,096,000
Oats, bu.	139,886,000	177,408,000	141,595,000
Wheat, bu. (all)	58,108,000	52,008,000	36,561,000
Barley, bu.	3,924,000	4,760,000	1,022,000
Rye, bu.	1,365,000	1,700,000	759,000
Hay, tons (all)	4,699,000	4,690,000	4,254,000
Apples, bu.	2,550,000	1,430,000	1,300,000
Peaches, bu.	1,100,000	130,000	1,597,000
Pears, bu.	200,000	90,000	199,000

Manufacturing.—The value added by manufacturing to Illinois products in 1954 was \$9,641,592,000 as compared with \$10,111,624,000 in 1953. Manufacturing industries employed an average 1,183,381 workers during 1954 as compared with 1,316,089 during 1953. Salaries and wages of manufacturing workers totalled \$5,155,944,000 in 1954 as compared with \$5,668,441,000 in 1953.

Total nonagricultural employment in Illinois stood at 3,412,200 in Aug. 1956, as compared with 3,314,200 in Aug. 1955. (D. F. H.)

Table III.—Principal Industries of Illinois

Industry	Value added by manufacturing 1954	1953
Machinery (except electrical)	\$1,659,111,000	\$1,726,156,000
Food and kindred products	1,307,841,000	1,276,711,000
Electrical machinery	1,017,756,000	1,146,879,000
Fabricated metal products	927,676,000	964,487,000
Primary metal industries	816,449,000	945,776,000
Printing and publishing industries	752,288,000	713,386,000
Chemicals and allied products	656,886,000	654,975,000
Transportation equipment	503,372,000	528,636,000
Miscellaneous manufactures	348,713,000	389,248,000
Paper, clay and glass products	258,351,000	289,988,000
Instruments and related products	240,327,000	256,704,000
Textile and allied products	224,133,000	251,034,000
Apparel and related products	232,017,000	249,247,000
Petroleum and coal products	215,244,000	225,605,000

Mineral Production.—Table IV shows the tonnage and value of mineral commodities in Illinois in 1953 and 1954 whose value was \$100,000 or more. In 1954 Illinois was first among the states in fuorspar output, second in asphalt, fourth in pig iron and stone and fifth in fire clay and pumice. A substantial quantity of coke was produced, as well as an important quantity of zinc. Illinois was seventh in value of its mineral output, with 39% of the U.S. total in 1954.

ENCYCLOPEDIA BRITANNICA FILMS.—*Illinois* (1955); *The Middle West*, 2nd ed. (1955).

Immigration, Emigration and Naturalization.

Total arrivals in the United States reached an all-time high of 63,024,943 U.S. citizens and 71,115,577 aliens during the year ended June 30, 1956. As in past years, 97% of all arrivals were alien and citizen border crossings over the Canadian and Mexican borders. The remainder included immigrants, crewmen and other nonimmigrants admitted for temporary visits, as well as citizens arriving from countries other than Mexico and Canada.

United States Immigrants.—During the year ended June 30, 1956, there were admitted to the United States 321,625 immigrants for permanent residence, the highest number admitted since 1927 and an increase of 35% over the 237,790 admitted during the preceding year.

Factors that in part accounted for the rise in immigration include the refugees admitted under the Refugee Relief act of 1953 and a 32% increase in the admissions of natives of western hemisphere countries.

Table I shows the major countries of birth of the immigrants admitted.

Table I.—Immigrant Aliens Admitted to the United States by Classes and Principal Countries of Birth, Year Ended June 30, 1956

Country or region of birth	Total admitted	Quota immigrants	Spouses and children of U.S. citizens	Natives of western hemisphere countries, their spouses and children	Refugees	Other non-quota immigrants

A total of 89,310 quota immigrants, chiefly from Europe, were admitted and charged to the established quota of 154,657. While quota immigration was 9% higher than during the preceding year, it was still only 58% of authorized quotas, partly because only 26,939 quota immigrants admitted in fiscal year 1956 were charged to the quotas of the United Kingdom and Ireland, which had a combined quota of 83,117.

Thus, 83% of the unused quotas for fiscal 1956 were those available to these two countries. Unused quotas for all other countries totalled 11,160.

Quota immigration continued to be low from countries of southern and eastern Europe, such as Czechoslovakia and Poland, which had mortgaged their quotas heavily under the Displaced Persons act of 1948, as amended.

Of the 89,310 quota immigrants admitted during 1956, 15,296, or 17%, were admitted under preference as established under the Immigration and Nationality act. During the year, 3,366 selected immigrants of special skill or ability were admitted as first preference quota.

Nonquota immigration in 1956 (232,315) was the highest since the passage of the Immigration act of 1924. The largest class of nonquota immigrants were natives of western hemisphere countries, their spouses and children (124,032). For the third consecutive year Mexico was the chief source of immigration, with 65,047 immigrants admitted during 1956.

Table II.—Maximum Visas Authorized and Immigrant Aliens Admitted to the United States Under the Refugee Relief Act of 1953, Through June 30, 1956

Class	Maximum Visas authorized	Number admitted
Total number	209,000	104,803
German expellees	55,000	16,758
Escapees	45,000	14,013
Italian refugees and relatives	60,000	50,118
Greek refugees and relatives	17,000	13,853
Dutch refugees and relatives	17,000	2,358
Orphans	4,000	2,290

The second largest class of nonquota immigrants admitted were 75,473 refugees admitted under the Refugee Relief act of 1953. Since passage of the act and through June 30, 1956, a total of 104,803 refugees had been admitted.

Nonimmigrants.—Nonimmigrants are aliens who enter the United States for temporary periods or resident aliens returning from temporary visits abroad. The figures in Table III do not include such groups as agricultural labourers, border crossers and crewmen.

An all-time high of 686,259 nonimmigrants were admitted to the United States during the year ended June 30, 1956, an increase of 11% over the preceding year. Temporary visitors for pleasure, who numbered 399,704 during 1956, accounted for most of this increase.

The principal countries or regions of birth of the nonimmigrants admitted during 1956 were the West Indies (108,419), Mexico (96,866), England, Scotland and Wales (69,205), South America (50,502), Germany (45,307), Asia (44,111) and Italy (34,038).

Emigrants and Nonemigrants.—Emigrants are, by definition, aliens who depart from the United States after a residence of a year or more in the United States, with the intention of remaining abroad. During the year ended June 30, 1956, a total of 22,824 emigrants departed, including 2,784 to England, 2,599 to Canada, 2,995 to Asia, 1,930 to South America, 1,639 to Germany and 1,231 to the West Indies.

Nonemigrants are either resident aliens who depart for temporary visits abroad, or temporary visitors in the United States who return home after a stay abroad of less than one year. Of the 692,376 nonemigrants who left the U.S. during the year ended June 30, 1956, 69,189 were resident aliens leaving for temporary visits abroad, and 623,187 were aliens who entered as tourists, students, transit aliens, foreign government officials and others who had been in the United States for less than one year.

Apprehensions and Expulsions of Aliens.—In 1954 a concentrated drive was begun to apprehend and expel the increasing number of Mexicans illegally living in the United States. Control of the Mexican border was maintained from that time, and was a major factor in the relatively low number of apprehensions and expulsions during 1956. The number of apprehensions dropped from more than 1,000,000 in 1954 to 90,122 in fiscal year 1956.

Deportations during the year ended June 30, 1956, numbered 7,297, less than half of the 15,028 deportations in the preceding year, and included 16 aliens deported on subversive grounds, 818 deported on criminal, immoral or narcotic charges and 6,463 others. In addition, 80,891 aliens, principally Mexican illegal entrants, were granted voluntary departure.

Aliens in the United States.—Section 265 of the Immigration and Nationality act requires that in January of each year all aliens must notify the immigration and naturalization service of their current addresses.

A total of 2,622,462 aliens reported their addresses in January 1956, a gain of more than 100,000 over the preceding five years. Included in this total were 224,325 nationals of Mexico, 505,729 Canadians and British, 187,888 nationals of Poland and 76,089 nationals of the U.S.S.R.

Naturalizations.—In 1956 naturalizations numbered 145,885, which was 24% higher than the figure for 1954. Eighty per cent (117,161) of the naturalizations in 1956 were under the general provisions of the naturalization laws, 7,204 were military naturalizations, 18,224 were spouses of United States citizens and 3,296 were naturalized under other special provisions.

Included in the military naturalizations were 6,554 persons naturalized under public law 86, which provided for the naturalization of persons serving in the armed forces of the United States between June 24, 1950, and July 2, 1955. This act expired on Dec. 31, 1955.

During 1956, 798 persons who had lost their United States citizenship reacquired citizenship by repatriation. The majority were native-born women who lost citizenship through marriage to aliens. In addition, 20,264 certificates of citizenship were granted to persons who derived citizenship, usually through the naturalization of their parents. Certificates of citizenship were also issued to 7,748 persons who were born abroad to United States citizen parents and thereby acquired citizenship at birth.

Petitions of naturalization were denied in 3,935 cases during the year. The chief grounds were, as in the past, withdrawal of the petition by the petitioner and lack of prosecution.

The citizenship of 288 persons was revoked during 1956. In 276 cases the persons became residents of foreign states with-

VIET SEAMEN leaving U.S. Immigration building, Washington, D.C., April 27, 1956, after seeking asylum in the U.S. following the interception of their ship by Chinese Nationalist forces

five years after naturalization. A total of 4,987 persons lost citizenship through expatriation.

New Legislation.—During the fiscal year 1956, six bills affecting laws administered by the immigration and naturalization service were enacted into law, including the following:

Public law 149, approved July 12, 1955, extended for two years until June 30, 1957, the authority for enlistment of aliens in the regular army authorized by the act of June 30, 1950, as amended by title ii of the act of June 19, 1951, and section 402 (e) of the Immigration and Nationality act. These statutes authorize enlistment of not to exceed 12,500 aliens in the regular army. Each enlisted alien is entitled to certain benefits if they apply for naturalization after completion of five or more years in military service.

Public law 165, the Atomic Weapons Rewards act of 1955, approved July 15, 1955, authorized awards to persons furnishing original information to the United States concerning atomic weapons and nuclear material which has been introduced, manufactured or acquired in the United States contrary to law. Section 4 of the act provides that if such information leading to an award is furnished by an alien, the secretary of state, the attorney general and the director of central intelligence, acting jointly, may determine that the entry of such alien into the United States is in the public interest and, in that event, such alien and the members of his immediate family may receive immigrant visas and be admitted for permanent residence, notwithstanding the requirements of the Immigration and Nationality act.

Public law 319, approved Aug. 9, 1955, amended title v of the agricultural act of 1949, as amended. The new statute extends three and a half years, or until June 30, 1959, the authority for the recruitment and importation of Mexican agricultural workers. The act also provides for the relief of employers from liability to the United States for workers' transportation and subsistence costs when such costs have once been paid or pro-

vided to the workers by the employers. The amended act also requires consultation by the secretary of labour with agricultural employers and workers for the purpose of obtaining facts relevant to the supply of domestic farm workers and the wages paid such workers engaged in similar employment.

Public law 430, approved March 16, 1956, granted the benefits of section 301(a)(7) of the Immigration and Nationality act to certain children of United States citizens. It extends the provisions of that section to all cases involving children born to one alien parent and to one parent who is a citizen of the U.S. who served in the armed forces of the United States after Dec. 31, 1946, and before Dec. 24, 1952, if the child was born outside of the United States and its outlying possessions after Jan. 12, 1941, and before Dec. 24, 1952, and if the child's case does not come within the provisions of section 201(g) or (i) of the Nationality act of 1940.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Immigration* (1947).

Imports: see INTERNATIONAL TRADE; TARIFFS. See also under various countries.

Income, Distribution of: see WEALTH AND INCOME, DISTRIBUTION OF.

Income and Product, U.S. For the first three quarters of 1956, the U.S. national income was at an annual rate (seasonally adjusted) of \$338,500,000,000 and the gross national product amounted to an annual rate of \$408,500,000,000. Both of these comprehensive measures of the value of the nation's output were at record highs. They were 4½% above the totals for calendar year 1955. Following small declines from 1953 to 1954, national income and gross national product had registered increases of about 8% from 1954 to 1955.

(The annual rate data represent the average of estimates for the first three quarters which have been adjusted for seasonal influences and multiplied by four to facilitate comparison with previous annual totals.)

As measured by the gross national product adjusted to eliminate the effects of price changes, the physical volume of goods and services produced in the United States in the first nine months of 1956 was at a rate larger than in any other year. It was two-fifths higher than in 1946, the first full postwar year, and more than twice as large as in 1929. On a per capita basis (that is, after allowance for population increase over the period), real national output in 1956 was three-fifths greater than in 1929.

The flow of personal income, which had increased slightly in 1954 despite the dip in national output and then risen 6½% in 1955, showed a further expansion. In the Jan.—Sept. 1956 period, personal income aggregated \$322,500,000,000 on an annual rate basis, 5% above the 1955 calendar-year total of \$306,100,000,000.

Meaning of Income and Product Measures.—National income, as defined by the U.S. department of commerce, measures the nation's output of goods and services in terms of its factor cost—the aggregate earnings of labour and property which arise from current production. Earnings are measured in the forms in which they accrue to residents of the nation, before deduction of taxes on those earnings. As such, they consist of the compensation of employees, the profits of corporate and unincorporated business enterprises, net interest and rental income of persons.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. It differs from national income by the inclusion of transfers (such as relief,

veterans' pensions and government interest disbursements) which are not in return for current productive services, and by the exclusion of earnings (social insurance contributions and undistributed corporate income) which are not actually received by persons in the current period.

Gross national product or expenditure measures the nation's output of goods and services in terms of market value. It is "gross" in the sense that no deduction is made for depreciation charges and other allowances for durable capital goods used up in the productive process. Other business products used up by business in the accounting period are excluded. Gross national product comprises the purchases of goods and services by consumers and government, gross private domestic investment (including the change in business inventories) and net foreign investment.

Broad Patterns of Change.—As measured by the gross national product, over-all economic activity rose to \$367,000,000,000 (annual rate) in the second quarter of 1953 and then declined to a level of about \$359,000,000,000 in the spring and summer of 1954. There followed an upturn and vigorous expansion which by the last quarter of 1955 had carried the national economy beyond the \$400,000,000,000 mark. The recorded annual rate of gross national product in that period amounted to \$402,000,000,000.

In 1956 the value of national output registered further increases, though generally smaller than those in the previous upsurge. The gross national product attained the annual rate of \$414,000,000,000 by the third quarter of the year, and early in the last quarter it was evident that the momentum of economic forces was still upward.

Rising prices were mainly responsible for the advance in gross national product from the fourth quarter of 1955 to the third quarter of 1956. In contrast, the substantial growth in the value of gross national product from the fall of 1954 through 1955 had reflected very largely an expansion in the real volume of goods and services. The over-all price level in that period had been relatively stable.

Apart from the automobile and housing components, the quarterly advances in gross national product during 1956 matched those which had occurred in the upsurge that followed the 1953-54 business recession. The broad areas of continuing rise in 1956 encompassed, in the main, business investment, consumer expenditures other than for automobiles, foreign trade and state and local government purchases.

Gross National Product.—Personal consumption expenditures, which account for about two-thirds of the gross national product, were of record dollar volume in 1956. Their annual rate for the first three quarters of the year, \$264,000,000,000, exceeded the 1955 total by \$10,000,000,000 or 4%. (See Table I.)

Because of reduced outlays for automobiles, consumer expenditures for durable goods in the first nine months of 1956 were at a rate \$2,000,000,000 below the 1955 total of \$35,700,000,000. On the other hand, expenditures for nondurable goods and for services advanced appreciably. Consumer spending for the great bulk of individual items comprising these broad and diversified categories was larger in the 1956 period.

Gross private domestic investment—comprising the change in business inventories and "fixed" investment in construction and producers' durable equipment—was at the record annual rate of \$64,300,000,000 in the first three quarters of 1956. This category of gross national product had declined moderately in 1954 and then expanded by one-fourth in 1955 to a total of \$60,600,000,000.

Outlays for producers' durable equipment and nonresidential construction mounted steeply in 1956. For the first nine months of the year they were at a combined annual rate of close to

Table I.—Gross National Product or Expenditure

Source: U.S. Department of Commerce.

\$46,000,000,000, about \$6,000,000,000 above the 1955 total. These increased outlays for business plant and equipment contributed one of the largest expansions in the nation's productive capacity for a peacetime year. Both residential building and business inventory accumulation, on the other hand, were somewhat lower in the first three quarters of 1956 as compared with the full year 1955.

Government expenditures for goods and services in the first three quarters of 1956 were at an annual rate of \$79,100,000,000, almost \$2,500,000,000 above the total for 1955. With purchases by the federal government stable at approximately \$46,600,000,000, this increase was concentrated in the state and local segment. Continuing a steady postwar uptrend, purchases by state and local governments advanced from \$30,100,000,000 in 1955 to \$32,600,000,000 (annual rate) in the first three quarters of 1956.

Expenditures for purposes of national security comprised nine-tenths of total federal government purchases in 1956. Such expenditures reached a postwar peak rate of \$53,300,000,000 in the second quarter of 1953, dropped by one-fourth over the next year and a half and changed relatively little throughout 1955 and the first three quarters of 1956. At an annual rate of about \$42,000,000,000, national security outlays in the third quarter of 1956 absorbed 10% of the total gross national product, as compared with 14½% in the second quarter of 1953 and 6% in the second quarter of 1950, just prior to the attack on South Korea.

National Income.—Nearly all industrial divisions of the economy contributed to the expansion of national income from 1953 to the first three quarters of 1956. (See Table II.) The only exception was agriculture, where income in the 1956 period, at a rate of about \$16,000,000,000, was virtually unchanged from the previous year. This stability, however, checked a four-year decline from the 1951 farm income total of \$20,000,000,000.

After having paced the sharp economic expansion during 1955, income originating in manufacturing levelled off in 1956. Income in this industry, which comprises almost a third of national income, was at an annual rate of \$105,000,000,000 in the first

Table II.—National Income by Industrial Origin

Source: U.S. Department of Commerce (except 1956).

three quarters of 1956—about the same as that which prevailed in the second half of 1955, although \$6,500,000,000 above the figure for Jan.-June 1955. In wholesale and retail trade and in farming, too, income in the first three quarters of 1956 was at a level differing little from that for the latter half of 1955.

With the stabilization of activity in these three sectors—manufacturing, trade and farming—the further uptrend of national income within the year 1956 was derived from a wide array of other industrial divisions. Principal among these were the services, government, finance, transportation and contract construction.

Most distributive shares of national income showed improvement in 1956. The main exception was corporate profits, which in the first three quarters of 1956 were at a level moderately below 1955. (See Table III.) Total corporate sales were higher in 1956, but costs rose somewhat more; in many industries, the

and net interest showed a further sizable advance.

Disposition of Personal Income.—Continuing the 1955 uptrend, personal income in the United States climbed to an annual rate of \$328,500,000,000 by Sept. 1956.

For the first nine months of 1956 the annual rate of personal income, as already noted, was \$322,500,000,000. Disposable income—personal income less personal taxes—was at a rate of \$284,400,000,000 as compared with \$270,600,000,000 in 1955. (See Table IV.)

Personal saving in the 1956 period amounted to an annual rate of \$20,400,000,000, considerably above the 1955 total of \$16,600,000,000. The rate of saving out of disposable income in 1956 was 7%.

ratio of profits to sales in 1956 was lower than in the previous year. This situation contrasted with that of 1955, when corporate profits rebounded strongly from the 1953-54 business recession.

Wages and salaries, the largest component of national income, had shown a less volatile movement than corporate profits from 1953 to 1955 and continued to advance during 1956. The total for the first three quarters of the year was at an annual rate of \$223,000,000,000 as compared with \$210,400,000,000 for the calendar year 1955. This rise, 6%, stemmed about equally from increased employment and higher wage rates, with the average work week in 1956 little changed from the previous year.

With reference to the other types of earnings comprising the national income, the net income of noncorporate business and professional enterprises rose 6% from 1955 through the first nine months of 1956; the net income of farm operators held about even; the net rental income received by persons declined slightly;

Income Tax: see TAXATION.

India. This republican member of the Commonwealth of Nations in southern Asia consists of a union of 14 states, with 6 centrally administered territories. Areas and populations (based mainly on the 1951 census) as of Nov. 1, 1956, are as shown in the table.

Language in India falls into two main groups: (1) Indo-Aryan or northern, including Western Hindi (spoken by 47% of the population), Bengali (8%), Marathi (7%) and Gujarati (5%); Western Hindi occurs as (a) literary Hindi, with Sanskritized vocabulary and the Devanagari script, used by educated Hindus, (b) Urdu, with Persianized vocabulary and the Perso-Arabic script, used by educated Moslems, and (c) the widely understood colloquial lingua franca (before partition generally called Hindustani), much used in commerce, the military services, etc., written in Perso-Arabic, Devanagari or Roman characters, and with many technical words of English origin. (2) Dravidian or southern, including Telugu (9%), Tamil (7.5%), Kannada (Kanarese) (4.4%) and Malayalam. English is used for all official purposes, but is to be replaced by 1965 by Hindi in the

COMMUNIST SYMPATHIZERS parading in India in 1956

Devanagari script. Religion: Hindu (about 85%), Moslem (10%), Christian (2%), Sikh (2%), Jain, Buddhist, Parsee, Jewish, etc.

Chief towns other than the union capital and provincial capitals (pop., 1951 census): Ahmedabad 788,333; Cawnpore 705,383; Poona 480,982; Nagpur 499,099; Howrah 433,630; Amritsar 325,747; Agra 375,665; Madura 361,781; Benares 355,777; Allahabad 332,295; Indore 310,859. President in 1956, Rajendra Prasad; prime minister, Jawaharlal Nehru.

History.—Foreign Affairs.—There was no improvement in relations with Portugal and Pakistan during 1956. The Portuguese government had complained in Dec. 1955 to the International Court of Justice that India had denied to Portugal rights of passage through Indian territory to the Portuguese enclaves of Daman, Dadra and Nagar Haveli. Acknowledging the notice received from the court, the government of India announced that it proposed to challenge the court's jurisdiction. On the frontier with Pakistan there were frequent incidents. Agreements in August regarding flood control in East Pakistan and in September regarding the allocation of the Indus waters on an *ad hoc* transitional basis were hopeful signs; but there was no change in the impasse over Kashmir. On Nov. 2 the Kashmiri constituent assembly passed the clause in the draft constitution incorporating the whole of Kashmir into India. The validity of this legislation was not recognized by Pakistan.

In January the United States agreed to supply 100,000 tons of steel for railroads and 6,000 tons of insecticide; in February a civil aviation agreement was concluded; and in March five agreements providing for technical co-operation to the value of \$26,000,000 were signed. In August the United States agreed to deliver agricultural surplus commodities, mainly wheat, worth \$305,900,000 and to pay \$54,200,000 toward shipping charges. Of this total outlay, \$54,000,000 would be a gift to India, \$72,000,000 would be spent by the U.S. government inside India for its own purposes and \$234,000,000 would be a loan to aid Indian economic development, the duration and rate of interest being settled later.

India played an active part in the negotiations following the nationalization of the Suez canal by Egypt. At the London conference (Aug. 16–23), convened to discuss the desirability of international control of the canal, V. K. Krishna Menon, India's delegate, opposed the majority view that control should be in the hands of an international body and led a small group of nations that favoured control of the canal by Egypt, aided by

an international body with advisory powers only. Throughout the crisis Nehru repeatedly stated that a peaceful settlement must be reached on the basis of the sovereignty and dignity of Egypt.

When Israel, France and Great Britain invaded the Sinai peninsula and the canal zone of Egypt the Indian government condemned their action as a flagrant violation of the UN charter. In the meeting of the UN general assembly on Nov. 2 India voted with the majority of nations urging an immediate cease-fire, and after the cease-fire accepted an invitation to send a contingent to join the UN police force. On Nov. 7 India voted with the Afro-Asian group which had sponsored a resolution in the general assembly calling for the immediate withdrawal from Egypt of all Israeli, French and British forces. This demand was renewed on Nov. 14 by the prime ministers of India, Indonesia, Burma and Ceylon at a meeting in Delhi. On Nov. 23 India with other nations of the Afro-Asian group sponsored a further resolution in the general assembly urging the assembly to note with grave concern that Britain, France and Israel had not yet withdrawn their forces and that they should be called upon to do so forthwith. Subsequently, India contributed a contingent to the UN police force in Egypt.

Home Affairs.—The major problem was the implementation of the report of the states reorganization commission. In January the government of India decided to accept all the recommendations except those regarding Bombay and Hyderabad. Instead of one bilingual Bombay state the government proposed to create Maharashtra and Gujarat, with Bombay city under central administration. This decision to separate Bombay city, where there was a Maratha majority, from Maharashtra state caused considerable dissatisfaction, and Sir Chintaman Deshmukh, the union finance minister, resigned in July. Thereafter the government revised its policy and favoured the incorporation of all the Marathi- and Gujarati-speaking areas into one large Bombay state.

As regards Hyderabad, it was decided to merge the Telugu districts, which the commission had wished to retain as a separate entity, in Andhra. On Nov. 1 India became a union of 14 states and 6 centrally administered areas. The office of *rajpramukh* was abolished, all the states being under governors.

Apart from the above-mentioned territorial changes the main effects of the reorganization were: Mysore state absorbed the whole Kannada-speaking area including the former state of Coorg, the greater part of four districts from Bombay state, three districts from Hyderabad and one district from Madras. Madhya Pradesh, having ceded eight predominantly Marathi-speaking districts to Bombay, absorbed the former states of Bhopal, Vindhya Pradesh and Madhya Bharat (excepting part of one district). The new state of Kerala (comprising the majority of Malayalam-speaking peoples) was formed from the former state of Travancore-Cochin with a small area taken from Madras. Patiala and the East Punjab States union were included in the Punjab; Kutch and Saurashtra in Bombay, and Ajmer in Rajasthan. Hyderabad state ceased to exist.

Planning and Production.—The first five-year plan was completed. It increased food grain production by 20%, and the index of industrial production (base 1951) was 130. The national income increased by 18%. In June power in the second powerhouse on the Nangal Hydel canal in Kotla was switched on; this marked the completion of the first stage of the Bhakra-Nangal project. In August a 1,000-kw. atomic reactor of the "swimming-pool" type, the first in Asia, began to function at Trombay.

The second five-year plan for the years 1956–61 was published and approved by parliament. It provided for a total expenditure of Rs. 72,000,000,000, of which Rs. 18,000,000,000 would be spent in the public sector of engineering and industry and

s. 9,000,000,000 in the private sector. Of the total outlay, 19% would be on mining and industry. Three steel plants were to be completed, lignite mining was to be developed and work was to begin on three fertilizer factories, an insecticide plant, a heavy electrical equipment project, heavy foundries and structural shops. The index of industrial production was expected to rise to 194 by 1961.

(See also PAKISTAN; TIBET.)

(S. GL.)

Education.—Schools (1952-53): primary 222,014, pupils 19,523,003, teachers 586,712; secondary 24,059, pupils 6,007,516, teachers 249,333; colleges to intermediate standard 158, pupils 284,594; vocational (including 151 schools of fine arts and 3,104 schools of oriental studies) 4,970, pupils 341,517, teachers 30,449. Adult education centres (1951-52) 43,333, pupils 1,066,437; teacher training 901, students 88,975. Universities (1955) 32. Other institutions of higher education (1952-53, including fine arts, oriental studies and physical training) 741. Total number of students (1954-55) 595,400.

Finance and Banking.—Monetary unit: rupee, with an exchange rate of Rs. 4.7 to the U.S. dollar. Budget (1955-56 est.): revenue Rs. 4,690,000,000, expenditure Rs. 4,990,000,000. Internal debt (March 1956) Rs. 1,003,300,000, external debt Rs. 1,294,400,000. Currency circulation (Dec. 1954) Rs. 12,190,000,000, (Dec. 1955) Rs. 13,850,000,000. Deposit money (Dec. 1954) Rs. 6,240,000,000, (Dec. 1955) Rs. 6,740,000,000. Gold and foreign exchange (Dec. 1954) \$1,885,000,000 U.S., (Dec. 1955) \$1,901,000,000 U.S.

Foreign Trade.—(1955) Imports Rs. 6,483,000,000; exports Rs. 6,055,000,000. Main sources of imports: U.K. 25%; other sterling area 22%; continental E.P.U. (European Payments union countries) 21%; U.S. and Canada 15%. Main destinations of exports: U.K. 27%; other sterling area 22%; U.S. and Canada 18%; continental E.P.U. 11%. Main exports: jute and bagging (1954) 22%; tea 20%.

Transport and Communications.—Roads (1953) 432,800 km. Motor vehicles (1954): passenger 168,200, commercial 136,300. Railways (1955) 5,300 km.; traffic (April 1953-54): passenger-km. 60,429,000,000, freight (1954-55) 50,016,000,000 ton-km. Shipping (July 1955): merchant vessels of 100 gross tons and over 221; total tonnage 569,718. Air transport (1954): passenger-km. 440,400,000; cargo 28,284,000 ton-km. Telephones (March 1955) 245,799. Radio receiving sets (1953) 680,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 8,676,000 (8,017,000); rice 39,446,000 (37,387,000); barley 2,311,000 (2,951,000); maize 2,559,000 (2,986,000); tea 300,400 (291,000); peanuts 3,865,000 (3,884,000); linseed 382,000 (388,000); cottonseed 1,326,000 (1,528,000); cotton, lint 659,000 (764,000); jute 751,000 (31,000); dry beans 1,189,000 (1,197,000); chick-peas 5,207,000 (4,320,000); sugar (raw value) 1,960,000 (1,814,000); rubber 22,800 (21,000); millet 5,327,000 (5,148,000); sorghum 7,051,000 (9,239,000); rapeseed 254,700 (260,000); rapeseed 845,000 (1,035,000); sesame 465,000 (598,000). Other production (metric tons, 1954; 1953 in parentheses): potatoes 1,790,000 (1,997,000); sweet potatoes and yams 1,272,000 (919,000); cassava 1,278,000 (1,255,000). Livestock (1951): cattle 155,099,000; sheep 38,829,000; pigs 4,420,000; buffaloes 43,351,000; goats 47,000; horses 1,514,000; asses 1,239,000.

Industry.—Fuel and power (1955): coal 38,832,00 metric tons; electricity 8,472,000,000 kw.hr. Production (metric tons, 1955): iron ore 5% metal content 4,320,000; pig iron 1,920,000; crude steel 1,728,000; copper (refined) 7,440; lead (refined) 2,280; aluminum 7,320; cement 776,000; cotton yarn 745,200; woven cotton fabrics 4,680,000,000 m.; other manufactures (1954) 946,500 metric tons. Miscellaneous production (metric tons, 1954): sulphuric acid 153,300; caustic soda 29,800; gold 88 kg.; manganese ore (metal content, 1953) 897,000 metric tons; bicycles (units, 1954) 372,360.

India, Portuguese: see PORTUGUESE OVERSEAS TERRITORIES.

Indiana. An east north central state of the United States, popular name "Hoosier state," Indiana was admitted to the union Dec. 11, 1816, as the 19th state. Total area of the state is 36,291 sq.mi., including 86 sq.mi. of inland lakes and rivers. Pop.: (1950 census) 3,934,244, (July 1, 1956, provisional) 4,413,000; 59.9% of the 1950 population was defined as urban. Capital and largest city: Indianapolis (pop. 1950) 427,173. Other large cities: Gary 133,911; Ft. Wayne 133,607; Evansville 83,636; South Bend 115,911; Hammond 87,594; Terre Haute 22,144; Muncie 58,479; East Chicago 54,263; Anderson 46,820. **History.**—Construction of a new toll road across northern Indiana, dedicated at South Bend, Sept. 17, 1956, marked the completion of a chain of connected toll highways extending from New York to the outskirts of Chicago. There was no session of the state legislature in 1956.

In the Nov. 6, 1956, election in Indiana, Pres. Dwight D. Eisenhower polled almost 400,000 more votes than his opponent, Elai E. Stevenson. Homer Capehart, Republican, was re-elected

INDIANA VISITOR, Harold Macmillan, British chancellor of the exchequer, peering into a window of the home in which his mother was born at Spencer, Ind. Macmillan was in the U.S. in 1956 to attend a meeting of the World Bank and visited Spencer at the invitation of the townspeople.

to the U.S. senate. As the result of the election, state officials for the term beginning in 1957 were: Harold W. Handley, governor; Crawford W. Parker, lieutenant governor; Frank A. Lenning, secretary of state; Edwin K. Steers, attorney general; Roy T. Combs, auditor; Adolph L. Fossler, treasurer; Wilbur Young, superintendent of public instruction.

Education.—The number of public schools in the state in 1956 was 2,368. Enrolment in the elementary schools was 633,140 with an estimated 25,355 teachers. Enrolment in the high schools (grades 9-12) was 202,603 with an estimated 6,982 teachers. Parochial schools had an enrolment of about 81,000. For the year 1955-56 the state appropriated \$76,818,200 for the support of schools, in addition to the sums provided by local units of government, which brought total school expenditures to an estimated \$255,000,000. About 77,500 students were enrolled in 35 Indiana colleges and universities in Sept. 1956.

Social Insurance and Assistance, Public Welfare and Related Programs.—In 1955-56 the state's welfare program cost \$39,966,341, of which \$19,433,588 was furnished by federal funds, \$9,562,785 by state funds and \$10,969,968 by county funds. Old-age assistance cost \$21,246,299, blind assistance \$1,313,964 and aid to dependent children \$9,353,297. In addition, child welfare cost \$2,866,581 from state and county funds, while hospital commitments cost \$1,122,699 from county funds. Receipts of the state for unemployment insurance for the year ending June 30, 1956, were \$36,779,191. Benefits paid out were \$28,158,567.

In 1956 the state maintained ten institutions for mental patients, in-

cluding an epileptic village; eight homes, hospitals and schools; and six penal and correctional institutions. As of June 30, 1956, inmates of mental institutions totalled 17,666 and of penal and correctional institutions 6,998.

Communications.—The total mileage of state highways in 1956 was 10,717, with county roads totalling an additional 76,371 mi. The state highway expenditure for roads amounted to \$63,235,795 during the fiscal year 1955-56. Steam railroad first-line trackage measured approximately 6,682 mi. There were 90 mi. of electric railways. The estimated number of telephones in the state on Jan. 1, 1955, was 1,450,000. There were 73 commercial airports, 34 municipal airports, 4 military airports, 77 personal landing fields, 2 seaplane bases and 1 helicopter landing area in the state as of Oct. 1, 1956.

Banking and Finance.—On June 30, 1956, there were 354 state banks and trust companies with 91 branches. On the same date the total resources of these banks were \$1,830,404,761. Deposits totalled \$1,688,996,074. Three were 123 national banks and 85 branches on Dec. 31, 1955. Their resources amounted to \$2,562,579,000 and deposits totalled \$2,368,508,000 as of April 10, 1956. State savings and loan companies numbered 154 and their assets were \$429,026,568 as of Dec. 31, 1955. The state's 74 federal savings and loan associations listed assets amounting to \$663,912,000 as of Dec. 31, 1955.

State expenditures for the fiscal year 1955-56 were \$179,456,649 general fund, \$165,369,542 dedicated funds, total \$344,826,191. Receipts were \$160,620,484 general fund, \$170,547,102 dedicated funds, \$331,167,586 total. At July 1, 1956, there was a balance in the state treasury of \$54,000,000. The state constitution prohibits any long-term borrowing and Indiana therefore has no state debt.

Table I.—Principal Crops of Indiana

	Indicated 1956	1955	Average, 1945-54
Corn, bu.	234,929,000	276,136,000	234,929,000

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Indiana in 1953 and 1954, whose value was \$100,000 or more. The state was third among the states in output of phosphate rock; it produced large quantities of coke and consumed one-third of the national total of coke for its iron and steel works; it stood third in output of steel, fourth in production of fire clay, and ranked 19th in value of its minerals, with 1.18% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Indiana* (1955); *Middle States* 2nd ed. (1955).

Indians, American. The election year of 1956 saw a decided slackening of federal government efforts to shift to other jurisdictions its 167-year-old responsibility to American Indians. The earlier pell-mell rush toward termination of federal responsibility came almost to a dead halt in congress.

Many of the bills opposed by Indians which had been given serious consideration in previous congresses did not appear again. Missing were the so-called Competency bill, the bill to sell fractional heirship lands, the joint resolution to strike the Indian commerce clause from the constitution (the clause that originated federal responsibility for Indians) and the California Flathead, Seminole and Turtle Mountain termination bills.

The congress did pass termination laws for three Indian tribes—the Wyandottes, Peorias and Ottawas, all located in north eastern Oklahoma—but each of these tribes had asked for termination. They had no trust or allotted lands and had long ceased to have bureau of Indian affairs supervision.

Congress passed two bills of major importance to Indians generally. One, public law 959, authorized the appropriation of up to \$3,500,000 annually for a program of vocational training for adult Indians. Another, public law 767, extended the life of the Indian Claims commission for another five years without changing any of the basic provisions of the act.

Other bills affecting Indians generally were:

Public law 702, directing the secretary of the interior to conduct a study of Indian education in the United States.

Public law 450, authorizing Indians to obtain mortgage loans on their land, subject to the approval of the secretary of the interior. This law could result in improved credit opportunities for Indians.

Public law 857, authorizing the subsurface storage of oil or gas on restricted Indian land. This law would permit Indians in certain areas to obtain revenue by leasing land for subsurface storage, a purpose not previously authorized.

Public law 871, making it a federal offense to embezzle or steal from an Indian tribe. Hitherto the Indian bureau had justified its refusal to turn tribal funds over to tribal officials on the ground that they would go unpunished if they stole from the tribe. Embezzlement from an Indian tribe is a crime for Indians as well as non-Indians.

Public law 188, setting up a procedure which would enable the Yakima to solve the problem of fractional heirship tracts on their reservation. Many Indians favoured bills which would extend to all Indian reservations the principle of this Yakima bill.

Public law 348, extending the trust status of land owned by members of the Five Civilized tribes beyond the expiration date of April 26, 1956.

Public law 485, authorizing the construction of the upper Colorado river storage and power projects, including the Navajo dam.

Public law 592, authorizing the partition or sale of heirship interest in allotted land on the Tulalip reservation in Washington. It was expected that this law might result in the liquidation of this reservation. It was enacted with tribal consent.

Public Law 717, settling certain claims of the Uintah and White River Utes by restoring to them subsurface rights in certain lands formerly part of the Uintah reservation.

Public law 718, amending the Menominee Termination act by providing for the drawing up of a plan for the future control of tribal property which plan must contain provisions for the protection of the Menominee forest on a sustained yield basis.

Public law 736, conveying an interest in about 27,000 ac. of land to the Seminole tribe of Florida.

Public law 769, providing for the payment of removal compensation of \$3,500 to each of 125 Pine Ridge Sioux families who were displaced in 1942 by the creation of the Pine Ridge aerial gunnery range.

Public law 772, restoring undisposed ceded land on the Colville Indian reservation to the tribe.

Public law 926, placing about 77,500 ac. of public land in New Mexico in trust for the Pueblos of Zia and Jemez.

Public law 830, providing hospitalization for the mentally ill of Alaska (including Indians, Eskimos and Aleuts).

All the bills that were passed by the congress were intended to benefit the Indians *where they live*, on their reservations. In one way or another, the reservation problem had been at the centre of the controversy over Indian affairs for many years. It was at the centre of the attempt to integrate the Indian into the larger non-Indian way of life. While the drive to "emancipate" the Indians came largely to a standstill on the congressional front, the year's developments may be said to have revolved around policies shaped on the executive front. These concerned four main areas: education, land, relocation policies and public

health.

The most striking progress in the educational field was achieved on the Navajo reservation, where enrolment of children in school increased nearly 7% over the preceding year and reached a record of 25,287 students. This total included not only children enrolled in schools on the reservation but those in mission schools, public schools of the peripheral communities and federal boarding schools located throughout the western states.

Another significant step in education was the initiation of a pilot program of adult education in five tribal areas. Under the readjustment or "termination" laws enacted in 1954, members of tribes such as the Menominee of Wisconsin and the Klamath of Oregon were afforded an opportunity for adult education and vocational training to prepare them for the assumption of full citizenship responsibilities which would come with the ending of federal trusteeship. The new program, however, went beyond this and affected tribes not covered by such legislation. Its principal purpose was to provide English language skills for Indians who had enjoyed little or no formal schooling in their youth.

The development of reservation resources was pressed forward through continued extension of Indian irrigation projects, further expansion of soil and moisture conservation work and other similar activities. Sales of Indian timber were sharply stepped up in the calendar year 1955 and produced about a third more income to the Indian owners than in the preceding year. Combined Indian income from oil, gas and other minerals reached an all-time high of more than \$41,000,000.

In addition to this heightened activity in the resource field, the bureau of Indian affairs also took steps to increase the opportunities for industrial employment of Indians in the vicinity of reservations. A program to foster and encourage the establishment of manufacturing or processing plants in these areas was set up under the direction of an assistant to the commissioner, and numerous contacts were made with industrial firms throughout the country. By the end of the fiscal year, plants of this type were either established or definitely in process at Kingman, Ariz., near the Hualapai reservation; at Cherokee, N.C., near the Cherokee reservation; and at Gallup, N.M., near the Navajo reservation.

Meanwhile the bureau continued its voluntary relocation program of financial help and community adjustment service for the benefit of Indians seeking employment opportunities away from the reservations. The number of persons receiving such assistance increased to 5,316 as compared with 3,461 the preceding year. This included 1,051 family groups, 732 unattached men and 573 unattached women. For the fiscal year beginning July 1, 1956, funds available for relocation assistance were more than tripled to a level of approximately \$3,500,000, and plans were made for a substantial expansion in the range of community adjustment services and in the staff both on the reservations and in the city offices.

At the five tribal areas covered by "termination" or readjustment laws enacted in 1954—Menominee of Wisconsin, Klamath of Oregon, Uintah-Ouray of Utah and western Oregon, and the four Paiute bands of Utah—steady progress was made throughout the year in preparing for the "termination date" when the Indians would take over full responsibility for their own property without further federal trusteeship. In the case of the western Oregon and Paiute groups, this date was scheduled for the late summer of 1956, and preparations were well advanced at the end of the fiscal year.

At Klamath a contract was signed for a complete appraisal of the tribal property which was scheduled for completion in the spring of 1957. For both the Klamath and Menominee the termination was set for 1958. For the "mixed blood" people at Uintah-

Ouray it was scheduled for 1961.

Indonesia. Indonesia is an Asian republic consisting of three groups of islands: (1) Major Sunda Islands (Java, Sumatra, Borneo, Celebes); (2) Lesser Sunda Islands (Bali, Lombok, Sumba, Sumbawa, Flores, part of Timor); (3) Molucca archipelago (Halmaheira, Ceram, Ambon, etc.). Area: 575,893 sq.mi. Pop. (1955 est.): 81,900,000. Large indigenous groups on Java: Javanese 41,250,000, Sundanese 13,260,000, Madurese (including the inhabitants of the island of Madura) 6,580,000 and Jakartans 3,960,000; on Sumatra: Menangkabaus 3,050,000, Bataks 1,820,000; on the Lesser Sunda Islands: Balinese 1,720,000; on Celebes: Buginese 2,350,000. Nonindigenous groups: Chinese 3,000,000, Europeans (mainly Dutch) 60,000. Language: as well as the Indonesia official language (Bahasa Indonesia), an adaption of Malay, 25 major languages and about 250 dialects were spoken. Religion: Moslem (Shafi'i) about 90%; Christian 4.3%; Buddhist 3%; Hindu 2.2%. Chief towns (pop., 1951 est.): Jakarta or Djakarta (cap.) 2,800,000; Jogjakarta or Djokjakarta 1,800,000; Surabaya 715,000; Bandung 800,000; Semarang 311,000; Surakarta or Solo 266,000; Medan 260,000. President, Achmed Sukarno. Premiers in 1956: Burhanuddin Harahap and (from March 20) Ali Sastroamidjojo.

History.—The first general elections for the house of representatives were held on Sept. 29, 1955, and those for a constituent assembly on Dec. 15, 1955. Both chambers were elected by proportional representation and were composed of no fewer than 28 political parties. Out of 43,100,000 constituents about 35,000,000 recorded their votes, but only four parties received more than 6,000,000 votes. The strongest was the Nationalist Party of Indonesia which collected 8,434,653 votes. It was followed by the so-called Masjumi or Council of Indonesian Moslem organizations with 7,903,886 votes. Another, more conservative Moslem party, the Nahdlatul Ulama (Religious Teachers' party), received 6,955,141 votes. The Communist Party of Indonesia, led by Dipa Nusantara Aidit, claiming a membership of 500,000, secured 6,176,914 votes.

Two days after the publication of the composition of the house of representatives the government presided over by Burhanuddin Harahap (Masjumi) resigned and on March 20, 1956, Ali Sastroamidjojo (Nationalist) presented a new coalition cabinet based on nine parties, the most important being the Nationalists, the Masjumi and the Nahdlatul Ulama.

President Sukarno paid a state visit to the United States in May. He was afterward officially received in Rome, where he had an audience with the pope; at Bonn, Hamburg and western Berlin, Ger.; and at Zürich, Berne and Geneva, Switz. He returned to Jakarta on July 3. In August and September he made a two-weeks' tour of the Soviet Union, where in all his public utterances he was lavish in his endorsement of the professed Soviet desire of peace. Sukarno next visited Yugoslavia, Austria and Czechoslovakia and then spent a fortnight in China. Speaking in Canton on Oct. 14, he said that the imperialists and colonialists were trying to create discord among Asians, instigating one Asian nation to fight another.

The Indonesian-Dutch negotiations that had started at Geneva on Dec. 10, 1955, broke off on Feb. 11, 1956, because the Netherlands delegation refused to discuss the issue of "Irian Barat" (West Irian) and because no agreement could be found as to financial and economic settlements linked with the dissolution of the Indonesian-Netherlands union desired by the Indonesian government. On Feb. 15 and 21 the Indonesian government signified

to the Netherlands government its withdrawal from the union and the fact that it considered itself no longer bound by the union statute and the agreements attached to it. On Aug. 4 the Indonesian government announced its decision no longer to recognize or make any further payment of Indonesia's debt to the Netherlands "as imposed by the Round Table conference agreements of 1949."

According to official Indonesian sources, this debt amounted to 4,081,000,000 gulden.

At the beginning of August Sjafruddin Prawiranegara, governor of the Bank of Indonesia, said in his annual report that production was decreasing, that the budgets continued to show deficits and that inflation was a real danger. The budget deficit in 1955 amounted to 2,090,000,000 rupiah but that of 1956 would be about 2,800,000,000 rupiah. On Aug. 1 the International Monetary fund granted Indonesia a \$55,000,000 loan to strengthen the country's foreign exchange position. On Sept. 15 it was announced at Jakarta that the Soviet Union had granted Indonesia a loan of \$100,000,000 repayable over a period of ten years in deliveries of Indonesian goods, mostly raw materials.

A draft of a five-year development plan was submitted in August to the house of representatives for approval. It would cost 30,000,000,000 rupiah; i.e., about 6% of the national income during the planned period.

(See also NETHERLANDS.)

Education.—(1954) Schools: primary 32,223, pupils 6,285,432, teachers 109,864; secondary 2,737, pupils 404,981, teachers 21,986; vocational 925, pupils 101,205. Teacher-training colleges 540, students about 45,000. Universities (1955) 5, students 18,534.

Finance and Banking.—Monetary unit: rupiah, with an export exchange rate of 11.36 rupiah and principal import rates of 11.48, 17.21 and 22.95 rupiah to the U.S. dollar. Budget (1954 est.; 1956 est. in parentheses): revenue 8,163,000,000 rupiah (8,653,595,679 rupiah); expenditure 10,754,000,000 rupiah (10,653,595,679 rupiah). Internal debt (Dec. 1954) 5,027,000,000 rupiah; external debt 5,237,000,000 rupiah. Currency circulation: (Dec. 1954) 7,542,000,000 rupiah, (Dec. 1955) 8,820,000,000 rupiah. Deposit money: (Dec. 1954) 3,420,000,000 rupiah, (Dec. 1955) 3,960,000,000 rupiah. Gold and foreign exchange, central bank only (Dec. 1954) U.S. \$248,000,000, (Dec. 1955) U.S. \$307,000,000.

Foreign Trade.—(1955) Imports 6,888,000,000 rupiah; exports 10,620,000,000 rupiah. Main sources of imports: Japan 14%; Netherlands 12%; other continental E.P.U. (European Payments Union) countries 21%; U.K. 6%; other sterling area 21%; U.S. and Canada 16%. Main destinations of exports: Malaya and Singapore 23%; other sterling area 13%; Netherlands 16%; other continental E.P.U. 7%; U.S. and Canada 18%. Chief exports: rubber 46%; petroleum products 23%; tin 6%; coconut products 4%.

Transport and Communications.—Roads (1954) 75,000 km. Motor vehicles in use (Jan. 1954): passenger 58,393, commercial 40,821. Railways (1954): 6,681 km.; freight 900,000,000 ton-km. Shipping: merchant vessels of 100 gross tons and over (July 1955) 142; total tonnage 101,044. Air transport (1955): 239,376,000 passenger-km.; freight 7,944,000 ton-km. Telephones (Jan. 1955) 67,054. Radio receiving sets (Dec. 1953) 377,026.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): rice (Java and Madura) 6,900,000 (7,225,000); rubber 745,500 (750,900); sugar, raw value, 840,000 (718,000); tea 43,400 (35,300); copra (exports) 159,200 (201,600); soybeans 410,000 (400,000); coconut oil (est.) 470,000 (486,000); palm oil (est.) 170,000 (168,600). Other crops (metric tons, 1954; 1953 in parentheses): maize 2,738,600 (1,815,000); peanuts 355,000 (406,000); cassava 9,443,000 (8,953,000); sweet potatoes and yams 2,038,000 (2,176,000); coffee (exports) 37,200 (32,000). Livestock: (Sept. 1953) cattle 4,624,000; sheep 2,381,000; (Sept. 1954) horses 621,000; buffaloes 2,911,000; (Sept. 1952) pigs 1,100,000; goats 5,615,000. Fisheries (1954): sea and inland landings 628,000 metric tons.

Industry.—Production (metric tons, 1955): crude petroleum 11,796,000; coal 814,800; tin concentrates (metal content) 33,840; bauxite (1954) 166,000; electricity (1954) 812,000,000 kw.hr.

Industrial Health. The United States public health service contracted, in 1956, with three federal agencies for studies in air pollution. The national bureau of standards was to study analytical methods for determining common pollutants, and was to attempt to develop means of identifying various pollutant combinations. The bureau of mines was to study waste incineration, stack effluents and the exhaust of internal combustion engines. The weather bureau was to study dilution of atmospheric contaminants, and to investigate methods of predicting weather conditions that might aggravate air pollution.

The first Inter-American Conference on Occupational Medi-

cine and Toxicology was held in Miami, Fla., in Sept. 1956. A joint project of the University of Miami school of medicine and the University of Havana school of medicine, the conference discussed, among other subjects, "Establishment of a Medical Department in Industry," "Work and Fatigue" and "Occupational Heart Disease."

In March 1956, 22 members of the Industrial Medical association participated in the first Menninger Foundation Seminar for Industrial Physicians, held in Topeka, Kan. Entitled "Maintaining Emotional Health," the week-long seminar focused on the practical application of psychiatric knowledge and skills in industrial medicine, and was designed to help the industrial physician further his understanding of psychological motivation; improve his skills in assessing the emotional aspects of medical problems; familiarize himself with techniques of brief psychotherapy; enlarge his knowledge of psychiatric treatment methods, criteria for referral, and processes of rehabilitation; develop a systematic point of view with respect to emotional influences on the health of employees.

The Central Institute of the Deaf and the School of Aviation Medicine at Pensacola, Fla., started a joint study of the effects of high-intensity noise on aircraft carriers. The study focused on the exposure of flight-line maintenance men and carrier deck crews who operate in the immediate neighbourhood of the exhaust of a modern jet engine.

Possibly the most important industrial health publication of 1956 was the *Encyclopedia of Instrumentation for Industrial Hygiene*. The encyclopedia was the result of a three-year co-operative effort between the University of Michigan Institute of Industrial Health and the Occupational Health program of the United States public health service.

A meeting was held in Denver, Colo., in April 1956 to review preliminary findings and recommendations resulting from a five-year research project on radon and its daughter products in the uranium mines and mills of that state. The findings had shown no medical effects attributable to working in the uranium industry, but there was insufficient information on enough men exposed in uranium mines for a long enough time to draw any conclusions.

Medical examinations were to be repeated at three- to five-year intervals, with an annual census of and consistent follow-up of workers.

In March 1956 the New York state departments of labour and of health put into effect regulations to protect workers most likely to be exposed to radiation hazards. Described as the first comprehensive safety code in the field, the Industrial Code Rule no. 38 covered about 150,000 workers, and the Health Department Sanitary code protected personnel in hospitals, clinics, dental offices, etc. The codes were intended to cover most of the peacetime uses of radiation.

A broadscope study of the possible biological dangers of exposure to atomic radiation on both present and future generations was begun by the National Academy of Sciences in Washington, D.C. Aided by a \$250,000 grant from the Rockefeller foundation, the study was designed to clarify some of the biological issues and problems created by the use of atomic energy. Six panels were to carry out the study, one panel devoted to each of the following areas: genetic effects; short- and long-range pathological effects; disposal and dispersal of radioactive wastes; meteorological aspects; oceanographic aspects; and aspects related to food and agriculture. (F. A. CE.)

Canada.—During 1956, the occupational health division of the department of national health and welfare, in co-operation with provincial counterparts in Ontario, Quebec, Manitoba and British Columbia and health departments in the other six provinces, continued programs designed to assist in the development

of sound health practices in relation to industry and other occupations throughout Canada.

An important development of the year was related to the problem of atmospheric pollution. The department of national health and welfare assumed additional responsibilities in this field and appointed a consultant to assist in the development of the departmental atmospheric pollution program. There was a radical increase in requests for information and advice, particularly from health departments of the western provinces. Also, during the summer, a hospital study was carried out to determine whether fluctuations in air pollution levels exert any direct effect on the severity of symptoms of patients suffering from some form of chronic respiratory or cardiovascular disease.

In the field of radiation, the division's radiation services directed increased attention toward investigation of the implication to the general population of an increased radiation background from the use of diagnostic X-ray equipment and other radiation sources.

In occupational health nursing there was a trend toward increased use of the services of nursing consultants employed by the federal and certain provincial divisions. Recognition of the value of services of this type was evidenced in the fact that a number of larger companies in Canada were now employing nursing consultants on their health staffs. In addition, there was a concerted move toward national co-operation of occupational health nurses throughout the country.

Most large industries in Canada were now operating health services for their employees within their own organizations, and some smaller industries, through a co-operative scheme or direct "purchase" plan, were also providing similar services.

Industrial Production: see BUSINESS REVIEW.

Infantile Paralysis: see POLIOMYELITIS.

Infant Mortality. Among babies in the United States in their first year of life there were 26.3 deaths per 1,000 live births during the first eight months of 1956. This was slightly under the record low rate of 26.4 for the corresponding period of 1955. There were altogether 107,000 infant deaths during the entire year 1955, with a rate of 26.5 per 1,000 live births. This rate is almost one-quarter that of 109 recorded for 1915, the earliest year for which such data are available.

White infants in the United States have a much lower mortality than the nonwhite. According to the latest available data, which relate to 1954, deaths under one year of age per 1,000 live births were: white males, 27.0; nonwhite males, 47.1; white females, 20.6; and nonwhite females, 38.6. A number of other countries experienced a decline in infant mortality between 1955 and 1956, according to provisional data. Rates for the first half of each year showed that in England and Wales the reduction amounted to nearly 7%. For the first quarter, the reduction was about 3% in Australia; in New Zealand and in Sweden it was about 5%; in Northern Ireland, 8%; and in Scotland, 14%.

Infant mortality varies widely from one country to another, as evident in the accompanying table. In 1954 rates exceeding 100 per 1,000 live births were recorded in Costa Rica, Columbia, Chile, Peru, India and Yugoslavia. The rate for Chile, namely 125 per 1,000 live births, means that one in eight children born fail to survive to the first birthday. In contrast, infant mortality in Sweden in 1954 was only 19 per 1,000 live births; in New Zealand (Europeans), it was 20; the Netherlands rate was 21 and for Australia (excluding aborigines), 22.

The leading causes of death among infants in the United States

during 1955 were: immaturity (unqualified), 5.6 per 1,000 live births; postnatal asphyxia and atelectasis, 4.4; congenital malformations, 3.6; birth injuries, 2.9; influenza and pneumonia, including pneumonia of newborn, 2.7.

IX (1956); Canada, Dominion Bureau of Statistics, *Preliminary Annual Report of Vital Statistics* (1955).

There is a close association between the factors responsible for the death of babies soon after birth and during the later stages of pregnancy. Because of this, it is becoming common practice to group together stillbirths of 20 or more weeks of gestation and deaths within the first week of infancy. This is known as "perinatal mortality." In 1954, there were 137,462 such deaths in the United States, 67,353 of which were live-born children who died before they were one week old. (See also DEATH STATISTICS.)

Insurance. Life Insurance.—At the beginning of 1956 approximately 103,000,000 persons in the United States owned \$372,000,000,000 of life insurance in legal reserve companies, an increase of more than 11% in one year and about 145% in ten years. This insurance was composed of \$216,000,000,000 ordinary, \$101,000,000,000 group, \$40,000,000,000 industrial and \$15,000,000,000 credit. The amount of credit insurance on the lives of debtors increased 44% over the previous year. It assures full payment of loans covered in the event of death, leaving survivors free of this indebtedness. About four-fifths of credit insurance was provided by group plans and the remainder by individual policies. At the beginning of 1956 about half of all instalment credit outstanding in the United States was covered by this type of life insurance. By the end of 1956 the total amount of life insurance in force was well over \$400,000,000,000. In Canada at the beginning of 1956 approximately 6,500,000 policyholders owned about \$26,600,000,000 of life insurance, made up of \$18,400,000,000 ordinary, \$6,400,000,000

group and \$1,800,000,000 industrial. Credit insurance accounted for about 10% of the Canadian group insurance.

Since 1954 the U.S. government had provided for its civilian employees group life insurance and group accidental means insurance for death or dismemberment. The amount of group life insurance provided by the program approximated \$10,000,000,000.

During 1955 legal reserve life insurance companies made benefit payments to United States families of \$5,383,000,000, which was more than double the total of 1945. Beneficiaries received \$2,241,000,000 of this in the form of death benefits, while living policyholders received \$3,142,000,000 as matured endowments, annuity payments, surrender values, policy dividends and the like. Benefit payments to Canadian families in 1955 amounted to \$337,000,000, of which \$124,000,000 represented payments to beneficiaries and \$213,000,000 payments to living policyholders.

United States veterans and servicemen held about \$43,000,000,000 of national service and United States government life insurance. There was also \$13,000,000,000 of life insurance in force in fraternal societies, assessment associations and savings banks. The survivor benefits provided by the Social Security act afforded death benefits to certain members of the families of persons covered by the law.

(See also VETERANS ADMINISTRATION, U.S.)

Assets of United States and Canadian life insurance companies continued to grow rapidly, reaching about \$93,500,000,000 for United States companies and about \$6,500,000,000 for Canadian companies as of July 31, 1956. United States companies had about 3% of their assets invested in Canada, while Canadian companies had about one-quarter of their assets invested in the United States.

Investments by United States life insurance companies in industrial and miscellaneous bonds of United States corporations rose to \$18,250,000,000 on July 31, 1956, and in addition about \$970,000,000 was held in foreign industrial bonds, chiefly Canadian. Likewise, investments in public utilities grew to a new high of \$13,800,000,000 in the United States, plus another \$450,000,000 in Canada. United States life companies had only recently begun to expand mortgage holdings in Canada. Their loans outstanding on United States properties amounted to \$31,300,000,000 on July 31, 1956, compared with about \$300,000,000 on Canadian properties. Although ownership of government securities had declined since World War II, the United States companies still held \$9,950,000,000 in the United States and nearly \$1,030,000,000 in Canada.

The net interest rate earned on total assets of the United States companies, after deducting investment expenses but before federal income tax, rose from 3.46% in 1954 to 3.51% in 1955. However, because company income taxes were higher in 1955, the rate earned by the companies after such taxes resulted in little actual change from the 3.24% rate earned in 1954.

(L. A. L.)

Property Insurance.—The year 1955 was a sharply competitive one in property insurance. Despite rate reductions in several important lines, over-all premium volume made a gain of about 5% in 1955, in contrast to a 2% gain in 1954. An estimated premium volume of \$10,500,000,000 for the entire industry was produced in 1955.

Higher expenses, coupled with higher loss ratios in a few lines of insurance, portended a less favourable year at the start, but the last quarter of the year showed some excellent experience. The result was a combined loss and expense ratio just slightly higher than the 93.6% combined ratio for 1954.

There was a small increase in premium volume for the first six months of 1956, but the underwriting results were disastrous. Taking a representative sample of companies writing a sub-

stantial portion of the total property insurance premiums, their loss ratio was 62.2%. This was a 7-point increase over the corresponding period in 1955 for the same group of companies. Even expenses displayed a slight increase, moving up 1 point to 36.7%. Thus the combined loss and expense ratio for this group of companies amounted to 98.9%. For the same period in 1955 the combined ratio for this sample of companies was 91.3%. Virtually every type of property insurance contributed to the bad showing.

Fire Insurance.—Straight fire insurance in 1955 reversed the declining premium trend of prior years. There was a small increase in premium volume of about 3%–5%. This increase, joined by a decrease in fire losses, presented the companies with a modest underwriting profit in 1955. All of this changed during the first half of 1956. Few companies showed any underwriting profit.

Extended coverage premiums continued to climb to new heights in 1955, the increase over 1954 approximating 10%. The estimated volume for stock companies alone in 1955 was \$470,000,000. As recently as 1945, the volume was less than \$100,000,000. The rapid growth of this form of protection reflected the inflation in property values, an increase in the number of properties insured and substantial rate increases.

From a loss standpoint, 1955 and the first half of 1956 showed an improvement in the extended coverage area over the hurricane, tornado and windstorm-ridden period of 1954.

The serious floods of 1955 led to widespread demands for flood and disaster insurance. Since this risk is catastrophic in character and therefore not susceptible to private underwriting techniques, congress passed a flood insurance bill providing indemnification against those hazards.

Marine Insurance.—The year 1955 produced a 5% increase in volume in the inland marine field. A total of \$344,000,000 in premiums was the new peak in this area of coverage. This increase occurred despite the diversion of considerable personal property insurance premiums to the new homeowners' policies. Losses increased primarily because of thefts of goods in transit, and wind and flood. Nevertheless, this type of coverage remained profitable.

Premium volume in ocean marine reached a new level of \$150,000,000. Competition had resulted in a lowering of rates and a broadening of coverage. The sinking of the "Andrea Doria" was expected to have a marked effect on the 1956 loss ratio.

Casualty Insurance.—The scourge of the property insurance business was automobile insurance. Premiums ran in excess of \$4,000,000,000 and represented 40% of the entire premium volume in property insurance. Premiums continued to increase, but loss ratios mounted at a faster rate. In this field there are three categories of coverage: automobile liability, automobile property damage and automobile physical damage. The first two categories protect the automobile owner and operator for personal injury and property damage to the person and property of third persons. The last division refers to protection for damage or loss to the owner's car itself. Automobile liability experience went into the red in 1955 and sank even deeper in loss in the first half of 1956. Automobile property damage was profitable in 1955 and somewhat less so in 1956. The physical damage area had been the saviour of the automobile insurance line for a number of years, but rate reductions had squeezed much of the profit margin out of this type of coverage.

Workmen's compensation premium volume had remained relatively static for the past three years, at about \$1,200,000,000. Rate reductions and benefit increases in 35 states had kept the profit margin at a low level. As of Dec. 31, 1955, 23 states had approved a program to reduce the cost of handling the small workmen's compensation risk. It provided for a three-year fixed

rate policy for risks with an annual premium of \$100 or less. This plan would affect about 60% of all workmen's compensation policies, but only 6% of the total compensation premiums.

Accident and sickness insurance showed steady growth in 1955 and 1956. There had been a 12% increase in the premium volume. It was estimated that three out of every five Americans, or approximately 64% of the U.S. population, had some form of voluntary health insurance against the hazards of accident and sickness.

Fidelity premium volume, which rose about 28% in 1954, fell off in 1955 because of the three-year premium cycle. The underwriting experience was favourable.

In the surety field, premiums were up nearly 10%, primarily because of record construction activities in the country. Loss ratios were higher because of lower rates and a higher failure rate among contractors.

(L. J. A.)

Hospital, Medical and Surgical Insurance.—In the United States, health insurance was not a campaign issue in the 1956 presidential election. Essentially, both parties supported federal assistance to private insurance organizations, designed to stimulate expansion of the scope of coverage. No legislation proposing national compulsory insurance received attention in Congress during the year. However, the administration's reinsurance proposals were again introduced and received mild attention by congressional committees. The conclusion persisted among private companies that the proposal would be of little practical effect.

Following the large increase in health insurance in 1955, the growth in the number of persons in the United States covered by voluntary health prepayment slackened off somewhat during 1956. By the end of the year more than 113,000,000 persons held some form of coverage against hospital expense, more than 88,000,000 had surgical protection and more than 65,000,000 had some regular medical expense protection. Rates of growth indicated that the latter two coverages were becoming more available, and it was expected that by 1960 all three forms would cover relatively equal numbers.

Coverages providing high levels of service benefits in any area of health need, termed "major medical" or "extended" programs, continued their popularity. It appeared that by the end of 1956 such coverage in the United States and Canada would have reached 10,000,000 persons. Usually superimposed on "basic" programs, such programs typically provided for \$5,000 or \$10,000 of unallocated expense, with the insured paying a portion of all costs. Frequently there was a "corridor" between basic and extended coverages, in which all costs were met by the insured. Some programs were being written without a "basic" coverage, without corridor and with relatively low first-dollar deductible provisions.

Legislation providing comprehensive hospital-medical-surgical benefits for dependents of members of the U.S. armed services went into effect on Dec. 7, 1956. Care was made available in civilian hospitals and by civilian doctors, at virtually full cost to the federal government, with administration provided by private carriers. Blue Cross became the hospital agent in two-thirds of the states, and insurance companies in the remaining third. Medical societies, operating almost entirely through Blue Shield, assumed responsibility for administration of medical-surgical benefits.

Both the nonprofit and commercial industries in the U.S. strengthened their national organizations during the year. The insurance companies formed the Health Insurance Association of America; Blue Cross reorganized its Blue Cross association to expand interplan operations.

Canada moved slowly toward a national hospital insurance program, with federal and provincial leaders seeking to work

out a program to satisfy diverse demands of the provinces. Provincial insurance hospital programs in British Columbia, Saskatchewan and Alberta continued to expand coverage.

(A. G. S.)

Great Britain.—The 1956 reports of British insurance offices showed a substantial increase in business transacted. An improved level of premiums reflected the financial and economic buoyancy of 1955, although the expected benefit in the nonlife sections was diminished by enhanced competition.

Ordinary life sums assured written in 1955 approximated £1,150,000,000 against £1,000,000,000 in 1954, an increase of 15% following an increase of 17% in 1954 over 1953. The aggregate new industrial sums assured written by eight leading companies, at £221,307,000, compared with £209,589,000 in 1954, the average sum assured per policy being £57.7 against £54 in 1954, £53.6 in 1953 and £48 in 1952.

The combined fire and accident premium revenue of 24 representative British offices was £475,714,000 in 1955, compared with £447,434,000 in 1954 and £428,943,000 in 1953. The combined trading surplus of these two departments fell from £22,090,000 in 1954 to £17,524,000 in 1955, the ratio of profit to premium income being 3.7% following 4.9% and 6% in the two preceding years.

Table I.—Fire, Accident and General Insurance in Great Britain

(in £000)					
Year	Premiums	Claims	Profit and loss credit	% of Premiums	
Fire					
1953	181,346	83,454	15,462	8.5	
1954	184,582	89,828	9,635	5.2	
1955	192,913	90,480	10,259	5.3	
Accident and General					
1953	247,597	137,653	10,224	4.1	
1954	262,852	146,449	12,455	4.7	
1955	282,801	162,252	7,265	2.6	

A slight upturn in both premium income and profit transfer was recorded in the marine account.

Table II.—Marine Insurance in Great Britain

(in £000)					
Year	Premiums	Profit and loss credit	Fund	% of Premiums	
1953	44,130	3,317	70,167	159.0	
1954	40,304	4,416	67,875	168.4	
1955	41,668	4,671	68,121	163.5	

The Finance act, 1956, considerably affected the year's activities. The relevant sections of the act granted some relief from income tax and surtax in respect of premiums paid by self-employed persons, controlling directors and nonpensionable employees to provide a deferred annuity on retirement, and a more favourable basis of tax assessment on ordinary purchased annuities, with tax levied only on the interest content of each annuity payment. Provision was made for payment of annuities to widows and for reasonable payment of premiums and interest on premature death, but it was enacted that there must be no surrender value to the annuity which must also be noncommutable and nonassignable. Despite these limitations the life offices devised plans giving full effect to the concessions.

Whole-life, endowment and short-term life assurance business was maintained at a high production level. Much business was placed under the provisions of the Married Women's Property acts, and the "family income" type of policy assuring income for dependents, again in demand.

India's biggest nationalization measure, the government-owned Insurance corporation, was completed, taking over all life assurance business, 11 of the 17 foreign companies being British.

Losses on the world-wide fire account continued heavy, and a slowing down of economic activity combined with increased competition added to the underwriting problems of insurers. Inflationary pressure was mostly of the "slow" variety and made

little impact on the premium revenue. The deteriorating situation in the middle east revived demands for riot coverage, and this became increasingly difficult and costly to obtain as the year proceeded.

Motor vehicle insurance presented accident underwriters with a major problem both in the United Kingdom and overseas. Although rating adjustments alleviated the unfavourable trend somewhat, the increase in accidents and cost of repairs weighed heavily upon an otherwise profitable accident account.

The sinking of the Italian luxury liner "Andrea Doria" off the United States coast, involved British marine underwriters in the heaviest total loss ever experienced, and a payment exceeding £4,000,000. The insured amount was placed with underwriters in Italy, but 65% of the value was reinsured in London in approximately equal proportions with Lloyd's and company markets. By the Joint Hull agreement a degree of rating stability was maintained in the hull market, where the main problem again was delayed hull repairs and rising costs. In the cargo market, where capacity greatly exceeded business, competition led to a reduction in rates and a tendency to extend coverage at no extra premium to embrace trading risks not normally insurable.

Interior Decoration. The typical well-decorated American living room of 1956 featured pale-toned walls, deeper and more intense colours on upholstered pieces which were lower than formerly, and a striking area rug defining one particular furniture grouping.

There were no important innovations in interior decorating, but rather intensifications or modifications of existing trends.

Mahogany and walnut were about evenly matched as favourite woods, with cherry following; similar warm brown finishes were applied to all three. A new process made veneers more resistant to damage. The plastic wood-grain reproductions were more skillfully handled and found their way into better grades of furniture.

Upholstered pieces emphasized extremely slim, tight tailoring, made possible through the use of foam rubber and, for the first time, the less expensive flexible foam plastics. Many types of modern furniture and some traditional styles displayed a trend toward lower-height tables and seating pieces, exemplified by "conversation tables" intermediate in height between coffee and dining tables and large enough to accommodate four to six chairs.

Modern furniture had almost entirely departed from its rigid angularity. In general, such details as legs, stretchers and chair arms were most often gracefully but complexly shaped and curved; hardware was frequently an important design element; tables and case pieces showed considerable use of parquetry, brass insets and, more rarely, fairly elaborate marquetry. There was a revival of interest in stainless steel for table tops and as an accent material. Mosaic tile tables were popular, and some tables were topped with a new material, marble chips embedded in plastic, which gives the effect of terrazzo.

Turquoise, a bit more intense than the favourite aqua of recent years, was the outstanding colour in all fabric categories. The neutral earth tones continued high in favour. Deep, intense blues were popular, and there was increased use of various shades

of gold in both drapery and upholstery fabrics.

In printed fabrics the most popular patterns were geometrics, simple abstractions and oriental-inspired compositions of grasses and leaves, which could be used with modern or traditional furniture.

Synthetic fibres continued to be used, particularly in curtains and draperies, but the furor over "miracle fabrics" had largely died down, along with many of the claims made for them. A new technique for making an infinite variety of textured fabrics involved the use of polyethylene fibres with other yarns; the fabric is woven flat and later processed to shrink the polyethylene, which puckers the rest of the material into a texture pattern determined by the arrangement of the polyethylene fibres.

Textured wall coverings, grass cloth and simulated brick and stone that had been high in favour for several years, were apparently dying out. The most favoured patterns of 1956 were extremely light, open and airy, spaced wide apart and with infrequent repeats. Relatively a rare occurrence in the history of wallpaper, white and off-white grounds were at or close to the top in use, along with very light, soft pastels. This trend to pale walls held true in paint also, and represented a sharp reversal from the deep colours of only a few years before.

The revival of patterned-to-size rugs was perhaps the outstanding development in floor coverings. Allover figured rugs and carpeting had dominated the field for so many years that rugs with borders and central design seemed quite fresh once more. In some cases patterns were done in colours, but rather more frequently a geometric border or central figure was achieved through various heights of pile. Carpeting generally emphasized colourful random tweedy effects with a trend toward lighter, brighter colours. There were many representational patterns suggesting such things as cobblestones or mosaics. Small area rugs emphasized contrasting stripes and figures and sometimes combined leather or other materials with wool. Nylon, a relatively inexpensive material, was widely used.

Copper highlighted the kitchen in 1956 with such items as copper-coloured ranges, canisters, breadboxes and wastebaskets.

Lamps and decorative accessories grew in scale while silvery metals increased in importance. Three-dimensional wall ornaments, candelabra, sconces, lavabos, bas-reliefs and planters were high in favour.

(G. M. J.)

International Bank for Reconstruction and Development.

The International Bank for Reconstruction and Development (World bank) is an international co-operative financial institution owned and operated by its member nations. It makes loans for productive projects in member countries, either to governments or to private enterprises with government guarantee. The bank was established in July 1944 at the United Nations Monetary and Financial conference at Bretton Woods, N.H., and by 1956 had 60 member countries and subscribed capital of \$9,263,200,000. It had operated at a profit and built up reserves amounting to approximately \$240,000,000.

Lending Operations.—During the fiscal year ended June 30, 1956, World bank loans were maintained at a high level. The equivalent of \$396,000,000 was lent out in 26 loans to 20 different countries or territories. The year's lending followed the pattern of recent years and was mainly for improvement in basic services. Loans for electric power generation and distribution totalled \$175,000,000 and all together were contributing to an addition of more than 1,000,000 kw. of capacity in the borrowing countries. In the world as a whole, demand for power

had increased since World War II at an average of nearly 10% a year and this expansion, which reflected a rise in living standards as well as continued growth of economic activity, was expected to continue.

The largest loan ever made by the bank for a single project was that of \$80,000,000 for the Kariba project to develop the power potential of the Zambesi river in the Federation of Rhodesia and Nyasaland. Within the next 16 years, this project would bring about a more than threefold increase in power capacity in the federation. The facilities being built included the construction of a 500,000-kw. power plant at Kariba gorge, and nearly 1,000 mi. of transmission lines to bring the power to the copper belt in Northern Rhodesia and to industrial and other consumers in the principal cities of Southern Rhodesia. There was also a \$10,000,000 loan in Algeria for an expansion program that would add 135,000 kw. to present capacity and complete important links in Algeria's transmission network.

Two loans were made for power development in Europe. Norway received \$25,000,000 for the Tokke project, which would exploit the power potential of two of the country's rivers and several lakes. The 400,000-kw. plant being financed would serve the southeast, an area which consumed more than half the power produced in Norway. The Bank of Finland borrowed \$15,000,000 and was relending the funds to five public and private enterprises to increase electric generating capacity by 344,000 kw., and to complete a transmission system to bring power from plants in Lapland to the more populous and industrialized south of Finland.

Four power loans were made in Latin America. A loan of \$5,000,000 was expected to nearly triple the supply of power to the area of Quito, the capital of Ecuador; two loans totalling \$7,500,000 would increase supplies of power to Managua and 15 outlying towns in Nicaragua; and a \$5,500,000 loan in Uruguay would finance the expansion of a thermal power station in Montevideo. In Lebanon, \$27,000,000 was lent for the Litani river multipurpose project, which would relieve the country's acute power shortage, particularly in the Beirut area, and provide some irrigation along the coast.

The \$127,000,000 of loans for roads, railroads and ports during the 12-month period reflected the increasingly important place improvements in transport services had occupied in bank lending in recent years. Roads took the largest share during the year, with six loans totalling \$52,000,000 in Colombia, Guatemala, Haiti, Honduras, Panamá and Peru.

Other transport loans included \$25,200,000 to the Union of South Africa to continue an expansion program being carried out by the South African Railways and Harbours administration; \$2,000,000 to rehabilitate and improve the efficiency of Thailand's railways; and two loans totalling \$19,350,000 in Burma to reconstruct transport facilities badly damaged during World War II—one to improve railway services and the other to increase the capacity of the port of Rangoon. Other port loans were \$4,800,000 to reconstruct the East Wharves at Karachi, West Pakistan's only port; and \$3,200,000 to improve Corinto, Nicaragua's principal port on the Pacific.

Four loans totalling \$92,600,000 were made during the year, all in Asia, to develop industry. A \$75,000,000 loan to the Tata Iron & Steel Company, Ltd., in India was the largest industrial loan yet made by the bank. It was assisting an expansion program which would increase the capacity of the company by 60% and make possible the production of 1,500,000 tons of finished steel annually. Two loans totalling \$13,300,000 were made in Japan for the construction of a modern steel plate mill and a seamless tube mill, and for the modernization of an automotive plant and two shipbuilding companies. A loan of \$4,200,000 would help finance a pulp and paper mill at Chandraghona in East Pakistan. One loan was made for agricultural development during 1956 of \$1,500,000 to Nicaragua for the purchase of imported equipment and breeding cattle.

During the period July 1, 1956, to Oct. 15, 1956, the bank made five further loans, amounting to \$112,028,000. Two of these, totalling \$31,000,000, were for electric power development in Austria. The Cassa per il Mezzogiorno received \$74,628,000 for the agricultural and industrial development of southern Italy. A \$3,000,000 loan in Costa Rica was expected to help agricultural development, and \$3,400,000 was for dredging equipment for the port of Bangkok in Thailand.

By Oct. 15, 1956, the number of loans made since the bank started operations had risen to 155 in 44 countries and territories. The gross total of loan commitments stood at \$2,832,000,000.

Financial Operations.—Net earnings of the bank reached the record level of \$29,200,000 during the fiscal year 1956. Because of the general tightening of money markets, the bank raised its interest rates toward the end of the year. Of the capital subscribed to the bank in the domestic currencies of its members, the bank was able to lend or set aside for lending an additional \$129,000,000, or three times as much as in the previous year. A total of \$72,000,000 was raised by sales of parts of bank loans, and private banks participated in two-thirds of the loans made during the year. There was a slight reduction in the bank's funded debt which stood at the equivalent of \$850,000,000 on June 30. Two new issues of bonds amounting to the equivalent of \$22,000,000 were floated in the Netherlands and Switzerland; and \$23,000,000 of previous issues were retired. Disbursements amounted to \$284,000,000, of which borrowers spent approximately half in the United States and 40% in Europe. Borrowers met all payments of principal and interest during the year and loan repayments and prepayments amounted to \$48,000,000.

Advisory Services.—During the year the bank continued its advisory services to member countries, chiefly by means of advisory missions on particular aspects of development. The bank also continued to station resident representatives in several countries, and helped member countries to obtain specialists for economic development work.

The effectiveness of the bank's general survey missions, 14 in all, was becoming more apparent. Although total results could not be assessed, a number of specific accomplishments could be attributed in whole or in part to the work of the missions, such as highway programs in Colombia and Honduras, railway rehabilitation in Jamaica, the passage of income tax legislation in Nicaragua, changes in the education program in Malaya and the preparation of a five-year investment program in Guatemala. One of the most important results of the general survey missions was the influence they exerted in favour of a co-ordinated long-term approach to development problems.

The Economic Development institute, sponsored by the bank with the financial support of the Ford and Rockefeller foundations, held its first six months' course during the year. The purpose of the institute is to contribute to an improvement in

the quality of economic management in government. The first course was attended by 14 senior economic officials from 14 member countries or territories in Latin America, Asia, Africa and Europe. (See also BANKING; INTERNATIONAL MONETARY FUND.) (E. R. BL.)

International Geophysical Year, 1957-58.

During the International Geophysical year, 1957-58, the world's scientists were scheduled to conduct the most comprehensive study of the earth ever undertaken. Intensive investigations throughout the world were to be carried out in meteorology, latitude and longitude determinations, geomagnetism, gravity measurements, ionospheric physics, aurora and air glow, solar activity, cosmic rays, glaciology, oceanography, seismology and through rocket and satellite explorations of the upper atmosphere. Fifty-five nations were participating in the program: Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, Chinese People's Republic (Communist China), Colombia, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, Ethiopia, Finland, France, German Democratic Republic, German Federal Republic, Greece, Hungary, Iceland, India, Indonesia, Iran, Ireland, Israel, Italy, Japan, Mexico, Morocco, Netherlands, New Zealand, Norway, Pakistan, Panamá, Peru, Philippines, Poland, Portugal, Rumania, Spain, Sweden, Switzerland, Tunisia, Union of South Africa, United Kingdom, United States, U.S.S.R., Uruguay, Venezuela, Vietnam and Yugoslavia. Each country would plan and execute its own program, under a general plan developed by the co-operating countries through a co-ordinating international committee.

The United States National Committee for the International Geophysical Year, established by the National Academy of Sciences, was in charge of planning, directing and executing the U.S. program. Federal sponsorship and support for the program was obtained by the committee through the National Science foundation, the government agency charged with responsibilities for federally supported basic research. Congress appropriated \$39,000,000 for the U.S. effort.

Because the sun dominates activities on the earth, continuous measurements were to be made of changes in solar radiations over the whole range of wave lengths or colours, not only visible light, but down to the invisible X-rays and up to the radio waves. Solar flares would be studied and correlated with changes in cosmic rays, ionospheric and auroral disturbances and meteorological phenomena.

Measurements of temperatures, pressures, humidities and winds during the period would provide information about weather patterns. Emphasis had been placed on high-altitude meteorological observations (up to 100,000 ft.) along four lines of stations (10° E., 75° W. and 110° and 140° E.) extending from the north pole to the south pole. These observations would be useful in studies of the movements of air masses around the world.

Problems having to do with the nature of oceanic currents,

ARTIST'S VERSION OF THE LAUNCHING of the space satellite planned as part of the contribution of the U.S. to the activities of the 1957-58 International Geophysical year. The satellite, housed within the nose of the rocket, is calculated to assume an elliptical orbit around the earth after the propulsion stages have driven it beyond the atmosphere of the earth

temperatures, composition, sea-level fluctuations and total water content would be studied by oceanographers. Emphasis would also be given to glacier studies, particularly in the arctic and antarctic.

The ionosphere, a region of rarefied ionized gas between 50 and 250 mi. above the surface of the earth, is a complex region of the atmosphere, fluctuating in height and depth and varying in ionization. It is affected by solar activity, geomagnetic disturbances, the aurora and perhaps by meteors. Predicting its effect on radio transmission is one of the major problems in ionospheric physics. Investigations planned by the U.S. involved the arctic, antarctic and equatorial Pacific regions as well as the Americas.

Both aurora and air glow, known to affect radio communications, are optical phenomena of the upper atmosphere and appear as light emitted by atoms and molecules of the atmosphere at about 37 mi. and higher. The aurora, which is the terminus of the path of ionized particles from the sun and the only visible portion of this path, enables theoretical geophysicists to learn a great deal about this stream of particles, its path through space, its capture in the equatorial ring and its subsequent bombardment of the atmosphere in the auroral zones about 23° from the magnetic poles. Spectroscopic, visual and photographic observations of the aurora would show its distribution. Radar would provide a record of the ionization associated with the aurora.

Geomagnetism has broad and basic implications in the study of the ionosphere, radio-wave propagation, aurora and cosmic rays, as well as other fields of science. U.S. scientists were to explore the physical mechanism causing geomagnetic storms which frequently cause strong aurora displays and radio black outs and also the ionospheric disturbances. The U.S. was to establish stations in Alaska, Antarctica and the equatorial Pacific

and an east-west chain of five stations stretching about 750 mi. across the western states, with a shorter north-south cross chain of three stations.

There are clear connections between cosmic rays and solar activity and the earth's magnetic field and magnetic storms. Cosmic rays represent a powerful tool with which to investigate magnetic phenomena many thousands of miles from the earth. Studies of cosmic rays require simultaneous measurements widely made over the earth, and parallel studies of solar activity, geomagnetism, aurora and ionospheric physics.

New techniques permit direct measurement of the upper atmosphere by means of large, ground-launched rockets with an altitude range of about 200 mi. Small rockets, launched from balloons and aircraft, were to be used during the International Geophysical year for measurements up to approximately 60 mi. U.S. rocket studies would be co-ordinated with those of other nations, particularly at crucial times of unusual solar activity. Rockets would measure atmospheric pressure, temperature and density; the earth's magnetic field, especially during auroral displays; night and day air glow; solar and ultra-violet lights and X-rays; auroral particles; ozone distribution; ionospheric charge densities; and cosmic radiation. More than 200 instrumented rockets were to be fired from stations in the United States, Canada, the Pacific and the Antarctic. A multimillion-dollar rocket-launching facility had already been constructed at Fort Churchill in co-operation with Canada.

Observations over a longer period of time would be possible when the U.S. launched satellites which would circle the earth in elliptical orbits at a distance of 350 to 1,500 mi., telemetering scientific data back to the earth. The satellites were expected to remain aloft many weeks, circling the earth approximately once every 90 minutes. Design and construction of the three-stage rocket which would place the satellite in orbit was well underway during 1956. Programs for optical and radio tracking and measurements of the satellite were initiated, and several experiments for inclusion within satellite vehicles were in design and instrumentation stages.

Seismic soundings were to be used for measurement of the depth of ice in Antarctica and mapping of the buried rock surfaces. Geophysicists would study the earth's deeper structure, locations of earthquake rifts or zones of instability in the antarctic continent and various types of microseisms and their relation to meteorological conditions. This work would be co-ordinated with that of an international network for study of the earth's crust and of the deep interior.

The United States planned activities in the arctic, subarctic, middle latitudes of the northern and southern hemispheres (including the United States, Central America, South America and adjacent parts of the Atlantic and Pacific oceans), equatorial Pacific and antarctic and subantarctic regions. In 1954-55 a preliminary reconnaissance of the Ross sea was made by the U.S.S. "Atka." In 1955-56 several icebreakers, cargo ships and tankers established the Little America station and an aircraft facility at McMurdo sound. Reconnaissance of the Knox Coast and of inland sites including the south pole and Marie Byrd Land were conducted by ship and aircraft preparatory to the establishment of interior stations, and during 1956-57 stations were established in the Weddell sea and at the Knox Coast by ship, at the south pole by aircraft and in Marie Byrd Land by tractor trains and aircraft. Scientific observations were begun at all six stations early in 1957.

International Labour Organization.

With record attendance of more than 800 delegates, advisers and observers, the 39th ses-

sion of the International Labour conference met in Geneva, Switz., June 6-28, 1956; 73 member countries and 9 territories were represented. Chief interest centred in discussion of the report of the director-general, David A. Morse (U.S.), on the rural-urban employment relationship in which 140 speakers participated, including 27 ministers of labour.

At the request of the governing body the conference devoted two days to an exchange of views on freedom of employers and workers from government control, on which the governing body was to act in Nov. 1956. The ensuing debate dealt chiefly with the advantages and disadvantages of the tripartite principle as opposed to universality in the I.L.O. organization.

The employers at the conference were dissatisfied with the decision to put employer delegates from socialistic and communistic countries on employer committees as deputy members without vote, regarding them as not independent of their governments.

The conference adopted two recommendations, one on vocational training in agriculture, and the other on welfare facilities for workers, applicable to manual and nonmanual workers but not in agriculture or sea transport. There was a first discussion on outlawing forced labour; a series of conclusions on the need for action for the protection and integration of indigenous populations in independent countries; and preliminary action on weekly rest in commerce and offices.

Other resolutions, some of which confirmed action already taken by the conference, urged members to ratify the Forced Labor convention of 1930, pending its revision, and to put the abolishment of forced labour on the agenda for a second discussion and final vote on a convention at the 1957 conference. Among the points to be considered in framing the convention was the U.S. substitute proposal to ban international commerce in goods produced by forced labour, which was to be considered as an alternative to the proposal to abolish it. The employers were on record in opposition to the convention as a regulation of the internal affairs of a state but they hoped that a suitable convention could be framed for a treaty with penalties to encourage compliance. The result of the discussions was inconclusive as to the final action. However, the conference voted to adopt conclusions with respect to forced labour in accordance with its committee's report and to reject the proposals of the Soviet government.

Resolutions were made to abolish wage discrimination based on sex, and to approve the report of the committee not to consider the application of international conventions to nonmetropolitan territories or other measures with the same intent. A resolution to reduce the hours of work was opposed by employers but finally adopted with the observation that technical scientific progress would justify its consideration, and the governing body was directed to consider placing it on the agenda of an early conference; also the director was asked to study existing differentials in wages where the principle of equal remuneration was recognized and where it was not. The conference also voted to put on the agenda of the 1957 conference a final decision on a convention on the protection and integration of indigenous populations in independent countries.

The budget voted for 1957 was \$7,617,708, compared with \$7,400,000 in 1956, but the ceiling imposed by the U.S. senate would have to be amended or the U.S. would remain in debt for part of its share.

The total number of ratifications at the close of the conference was 1,562, and included 4 ratifications of the Forced Labor convention, 1930, and 2 Honduras ratifications (the first received) of the important Freedom of Association (1948) and Right to Organize (1949) conventions.

The committee of experts had more than 3,700 documents to

examine, and found its task most difficult because of increased membership and expansion of its work. The total of 1,200 reports as compared with 800 the previous year indicated the change.

An over-all study of two conventions was made, and the experts concluded from a summary of conditions in 50 member states that the Right to Organize convention (1949) had all its provisions applied in 12 countries in addition to those that had ratified it, and the Equal Remuneration convention (1951) had been ratified, or was about to be, by 16 countries, and its flexible approach was established. The experts felt strongly that the office should give more technical assistance if members were to fulfil their constitutional duties.

International Law. The year 1956, following ten years experience with the United Nations, some relaxation in the "cold war," and a rising belief in the possibility of prolonged co-existence of different types of states, witnessed a revival of optimism among the international jurists. Avoiding extreme positions, many jurists sought to formulate the actual influence of the changed conditions on the traditional corpus of international law. Among such efforts especial attention may be called to the articles by W. Friedmann on "Some Impacts of Social Organization on International Law"; by C. Wilfred Jenks on "Craftsmanship in International Law"; and by Majid Khadduri on "Islam and the Modern Law of Nations" (*American Journal of International Law* [A.J.], vol. 50, pp. 32, 358, 510 [Jan., April, July 1956]). These articles respectively throw light on the actual effect of the socialization of the economy in many states on rules of international law; on the influence of juristic thought, international practice, treaty drafting and judicial activity in accommodating traditional rules of international law to new conditions; and on the process by which the ideology of early Islam after many centuries accommodated itself to the need for co-existence with states of different ideologies.

Status.—A long deadlock on admission of new states to the United Nations was broken in the Security council meeting in Dec. 1955, when 16 states, most of which had been applicants for many years, were admitted by the general assembly. The list included Albania, Austria, Bulgaria, Cambodia, Ceylon, Finland, Hungary, Ireland, Italy, Jordan, Laos, Libya, Nepal, Portugal, Rumania and Spain. Japan and Outer Mongolia on the original list failed of admission because the Nationalist government of China cast a veto. In Feb. 1956 the Security council recommended the admission of Sudan and in July, Morocco and Tunisia. The admission of these five states would raise the number of members of the United Nations to 81. With that achievement, the only important states remaining outside the UN would be the divided states of Germany, Vietnam and Korea; Switzerland, which had not applied for membership because of its traditional policy of neutrality; and Communist China, whose large territory and vast population was still theoretically represented by the Nationalist Chinese government occupying the island of Formosa.

The territory of Southwest Africa remained theoretically under the mandate system, but the general assembly's committee declared in its report of 1956 that the South African administration after four decades "was still far from meeting in a reasonable way the standards implied" by that system. The International Court of Justice gave a third advisory opinion on this territory, maintaining the right of oral petition by the inhabitants of the area to the assembly's committee.

A Netherlands court held that Lithuania had been incorporated in the Soviet Union, that Soviet law applied even during the period of German occupation, and that the court was incompetent

to pass upon the methods by which this incorporation took place (*Lesser v. Rotterdamsche Bank, A.J.*, vol. 50, p. 441 [April 1956]). A Netherlands court also had held in 1954 that the Saar was not a part of Germany and a native of that territory could not benefit by provisions in the Netherlands-German treaty (*Mrs. W. v. T. S., A.J.*, vol. 50, p. 440 [April 1956]).

There was extensive juristic discussion of the status of Formosa. Opinions differed as to whether it remained juristically part of Japan, had become part of China, was a condominium of the states party to the Japanese peace treaty, or was an independent entity (D. P. O'Connell, "Status of Formosa and the Chinese Recognition Problem," *A.J.*, vol. 50, p. 405 [April 1956]). The status of Tibet under Chinese occupation also raised questions, although juristic opinion leaned to the view that it was part of China (Tieh-Tseng Li, "The Legal Position of Tibet," *A.J.*, vol. 50, p. 395 [April 1956]).

The vigorous claims of Argentina and Chile to portions of the Antarctic continent induced the United Kingdom to attempt to bring the issue before the International Court of Justice, and also led to considerable juristic discussion concerning the actual status of this area. The Soviet Union, along with many other states, had made claims on the basis of prior discovery to portions of this continent, and proposals were made for establishing a condominium or placing the area under the sovereignty of the United Nations (Robert D. Hayton, "The 'American' Antarctic"; Peter A. Toma, "Soviet Attitude Toward the Acquisition of Territorial Sovereignty in the Antarctic," *A.J.*, vol. 50, pp. 583, 611 [July 1956]).

The progress toward launching earth satellites and outer space missiles induced the International Civil Aviation organization to initiate discussion upon jurisdiction over such missiles and responsibility for damages which might result. The annual meeting of the American Society of International Law in April 1956 also devoted attention to the matter.

Rights of States.—The nationalization of the Suez Canal company by Egypt in July 1956 raised issues concerning the right of a state to expropriate, on payment of compensation, a corporation performing on its territory such public services of general international interest as were performed by the Universal Suez Canal company. The dispute also raised legal issues concerning the interpretation of the Suez Canal treaty of 1888 and the appropriate guarantees to assure free and open passage to vessels of all countries in accord with the obligations of Egypt under that treaty.

A number of cases concerning the right of expropriation under international law arose in national courts during the year. Thus a British court held, in accord with the well-known opinion in *Luther v. Sagor*, that, in general, a foreign law even though confiscatory must be recognized in so far as it affects property or contracts in the territory of the foreign state. It thus cast doubt on the case of *The Rose Mary* in which a judge of the colony of Aden refused to recognize title to oil which the defendant had purchased from Iran after that company had nationalized the Anglo-Iranian Oil company. The Aden court asserted that international law forbade expropriation without compensation and that it must apply international law. The British court, however, after citing that case, held that the German moratorium law of 1933 was a proper foreign exchange control act and consequently a German firm which complied with it and deposited with the German government its debt to a British company was properly discharged from the latter liability (*In re claim by Helber and Wagg*, 2 W.L.R. 183 [1956]).

Among other cases concerning the extraterritorial effect of laws was that of *Zwack v. Kraus Brothers & Co.* (133 Fed. supp. 929 [1955]) in which a United States court held that Hungarian confiscation of the partnership of plaintiff could not have ex-

extraterritorial effect upon property of the plaintiff in the United States. Another United States court held that criminal action under the antitrust laws against a United States corporation could be sustained, even though the acts creating liability were committed partly in foreign territory, because they affected the foreign commerce of the United States (*Sanib Corporation v. United Fruit Company*, 135 Fed. supp. 764 [1955]). A federal court held, however, that it could not order a Canadian corporation to stop using a trade-mark in Canada said to infringe the rights of a United States corporation to the trade-mark. The court stated that only Canadian law applied in Canada and that the international convention for protection of industrial property was not self-executing (*Vanity Fair Mills v. Eats Company*, 133 Fed. supp. 522 [1955]).

In *U.S. v. Baker* (136 Fed. supp. 546 [1955]) a United States court held that international law in general does not permit a state to exercise criminal jurisdiction over aliens for offenses committed abroad although it recognized some exceptions as when the crime was against the prosecuting state itself. Similarly, a British court held that it had no jurisdiction over acts of aliens committed abroad unless there were express statutory provisions to the contrary. In the case before it, prosecution was for violation of the dangerous drugs regulations by possessing opium in a British aircraft over foreign territory. A statute gave jurisdiction over offenses in British aircraft, but the court held that this would apply only to acts which were criminal *per se* because in violation of moral law, and would not apply to violations of regulations intended to be applicable only in British territory (*Rex v. Martin*, 2 All Eng. L.R. 86 [1956]).

A number of cases dealt with immunities of states and their agencies in foreign territory. A United States federal court held that property of the Republic of Korea in a New York bank was immune from attachment in an action arising out of damages by a Korean ship to the libellants' vessel. A note from the department of state was interpreted as supporting the immunity of all property of a recognized state, thus qualifying the department's memorandum in 1952 supporting the restrictive theory of immunity (*New York & Cuba Mail S.S. v. Republic of Korea*, 132 Fed. supp. 684 [1955]).

The high court of Calcutta held that Indonesia as a sovereign state was immune from jurisdiction and so was its property. But since that state's title to certain property in India was uncertain and it had submitted to the court to determine title, it had waived its immunity (*Indian National Steamship Company v. Maux Faulbaum*, A.J., vol. 50, p. 435 [April 1956]). United States courts have held that the initiation of a suit by the Republic of China did not have the effect of waiving the immunity of the Chinese ambassador from subpoena (*Pang Tsu Chow v. Republic of China*, 225 Fed. 2nd [1955]); that an attaché of the Belgium embassy was liable to taxation on his salary as vice-president of a United States corporation (*Van der Ekt v. Commissioner of Internal Revenue*, 223 Fed. 2nd 771 [1955]); and that a British consul had no immunity from subpoena except so far as provided in the British-United States treaty. This treaty extended immunity only to consular archives and official letters so did not prevent subpoena of the consul to determine whether the information wanted came within these exemptions (*Samad v. The Etivebank*, 134 Fed. supp. 529 [1955]). An Indian court held that rules of international law concerning sovereign immunities could not be applied if in conflict with the definite terms of an Indian statute (*Indrajitsinghji v. Rajendrasanghji*, A.J., vol. 50, p. 694 [July 1956]).

Treaties.—Denmark followed the Netherlands and other European countries in amending its constitution so as to increase the capacity of the government to make treaties, immediately

effective in national law and subordinating national sovereignty to international organs. This action accords with the resolution of the congress of the Inter-Parliamentary union in 1952 (A.J., vol. 50, p. 654 [July 1956]). A Philippine court held that the Romulo-Snyder executive agreement in 1948 for repayment of United States loans made during the war was valid. The authority to make executive agreements could be presumed from the Philippine constitution, and the court had to assume that the executive of the United States had similar powers. It could not properly inquire into the United States constitution (*U.S.A. F.F.E. Veterans Association, Inc. v. Treasurer of the Philippines*, A.J., vol. 50, p. 686 [July 1956]).

A California court held that the United States-Chinese treaty of 1946 was applicable to Manchuria even when that country was occupied by Communist forces, and that the provision concerning reciprocal inheritance rights was valid even though at the time a United States citizen could not have enjoyed this right under the circumstances. The court held that a treaty was with the state and applied to its entire territory irrespective of civil war and governmental changes. Consequently, a resident of Manchuria in 1949 was entitled to claim an inheritance in California, since the existence of the treaty established the reciprocity necessary for applicant to benefit by the California law (*In re Nepogodin's Estate*, 285 Pac. 2nd 672 [1955]). A federal court denied the claim of an Italian against extradition under the treaty of 1868. The court refused to admit that the treaty was terminated by the war of 1941 or that its revival in 1948 by executive action, in accordance with the peace treaty of 1947 without senate concurrence, was *ultra vires* (*Argento v. North*, 131 Fed. supp. 538 [1955]).

The problem of the rights which states may enjoy under treaties to which they are not parties arose in connection with treaties such as that between the United States and Great Britain concerning the Panama canal and that among eight European powers concerning the Suez canal, in each case extending the right of free navigation to all states. This issue was discussed at length by Jimenez De Arechaga ("Treaty Stipulations in Favor of Third States," A.J., vol. 50, p. 338 [April 1956]) with the conclusion that a liberal interpretation should be given to such treaties assuming that the right of the third party arises from the treaty itself and not from formal acceptance of it by that party.

Rights and Duties of Individuals.—The Human Rights commission of the United Nations in the spring of 1956 studied United States proposals concerning the advancement of respect for human rights and decided to request annual reports from members on progress in protecting human rights. A proposal was also made for a special study of the right to be free from arbitrary arrest, detention or exile. A proposal for extending advisory services of the secretariat to states in this field through technical assistance was also discussed but no action was taken.

The right of individual petition to the European Commission on Human Rights for redress of alleged violations of human rights was accepted by six states—the German Federal Republic, Denmark, Iceland, Ireland, Sweden and Norway. Belgium, Denmark, the German Federal Republic, Ireland and the Netherlands had accepted the jurisdiction of the European Court of Human Rights. This court, however, had not yet been established and could not be until eight states had accepted the jurisdiction.

The supreme court of Montana held the Montana Alien Land law barring land ownership by certain resident aliens unconstitutional as contrary to the equal protection clause of the 14th amendment (*State v. Oakland*, 287 Pac. 2nd 39 [1955]).

Status of International Organizations.—The council of the Organization of American States was held in fact and in law the successor to the governing board of the Pan American Union

(*Pan American Union v. American Security Trust Company, A.J.*, vol. 50, p. 438 [April 1956]). U.S. representatives to the United Nations general assembly were considered "officers of the United States" and consequently if the governor of Rhode Island accepted an appointment by the president to such office he could not remain governor (*Opinion to the Governor of Rhode Island*, 116 Atlantic 2nd 474).

War and Aggression.—A Pennsylvania court held that the term war as used in a statute should be interpreted in the popular sense to include the Korean hostilities of 1950 (*Morgan Estate*, 2 D. & C. 2d 480 [1954]). An Israeli court held that under the United Nations charter, members could not be in a state of war at least until the Security council had authorized sanctions. Furthermore if Israel had been at war with Lebanon, that war had been terminated by the armistice of March 1949, and the Israel government in protesting the Egyptian blockade in Suez had contended that there was no state of war. Consequently the contention that transactions of an Israeli with a Lebanese priest were invalid and contrary to the trading with the enemy act were not sustained (*Jiday v. Chief Executive Officer, A.J.*, vol. 50, p. 144 [Jan. 1956]). A United States court held that a German did not lose his enemy status by nominal naturalization in Liechtenstein, and consequently his property in the United States was liable under the trading with the enemy act. This opinion resembled that of the International Court of Justice in the *Nottebohm* case, holding that naturalization to be effective in international law must indicate a real connection (*Übersee Finanz-Korporation v. Brownell*, 133 Fed. supp. 615 [1955]).

The prescription of the use of force by the United Nations charter and the threat of hydrogen bomb war led to much juristic discussion concerning the present status of the law of war and aggression (Josef Kunz, "Laws of War"; Quincy Wright, "The Prevention of Aggression"; and Juraj Andrassy, "Uniting for Peace," *A.J.*, vol. 50, pp. 313, 514, 563 [April, July 1956]).

International Adjudication.—The International Court of Justice held itself without jurisdiction in cases brought by the United States against Czechoslovakia and the Soviet Union on account of aircraft incidents, and also in the cases brought by the United Kingdom against Argentina and Chile concerning claims of those countries in the Antarctic continent. In none of these cases had the defendant accepted the jurisdiction. The court had before it the claim of France against Norway concerning certain Norwegian loans; a request for an advisory opinion from the United Nations Educational, Scientific and Cultural organization (UNESCO) involving certain decisions of the administrative tribunal of the International Labour organization affecting UNESCO employees; and an application by Portugal against India concerning its right of passage through Indian territory to Goa. The court had given an advisory opinion sustaining the right of inhabitants of the mandated territory of Southwest Africa to petition the general assembly's committee orally.

Great Britain and the Union of South Africa renewed their acceptance of the optional clause of the court statute, the latter following the United States in reserving the right to determine what is a domestic question. Portugal also accepted the optional clause. Germany and Italy accepted the jurisdiction of the court for controversies with other parties to the Brussels treaty of 1948.

A United States court held that a decision of the Foreign Claims Settlement commission between the United States and Yugoslavia was final so an action to reopen a claim was denied (*De Vegvar v. Gilliland*, 228 Fed. 2nd 640 [1955]).

Codification.—At its seventh session in 1955 the International Law commission had reported its actions since 1949 on the regime of the high seas and had published provisional articles on freedom of the high seas for navigation, fishing, laying cables and flying. The draft dealt with the immunity of ships, collision,

salvage, slave trade, piracy, pursuit, pollution of waters, the limits of the territorial seas and innocent passage. Eighteen state submitted comments on this draft. The commission had also proposed a draft on the continental shelf.

Other topics under consideration in 1956 by the commission included the law of treaties, of consuls and of state responsibility. On the latter topic the Harvard Law school had renewed its research on international law and was preparing a draft on the responsibility of states for injury to aliens.

International Law Meetings.—The American Society of International Law celebrated its 50th anniversary at its annual meeting in April 1956. Regional meetings were held in 12 cities throughout the country. At the annual meeting appraisals of the present status of international law in the light of recent changes were made by Pres. Quincy Wright and the honorary president Secretary of State John Foster Dulles. Other topics discussed at the meeting included international air law, the regime of the seas, nationality and statelessness, and the constitutional and legal aspects of international relations.

Under the auspices of the American Society of International Law, an international investment law conference was held in February 1956 in Washington, D.C. Foreign tax problems, the effects of antitrust laws on international investments and legal incentive to investments were considered.

The Institute of International Law held its 47th meeting at Granada, Sp., in April 1956. Drafts were adopted on the interpretation of treaties, the exhaustion of local remedies, model clauses on obligatory jurisdiction of the International Court of Justice and the consequences of differences of nationality on marriage.

The Hague Academy of International Law held its 27th session in July and August 1956. Lectures were given on general principles, on the individual and international law, on protection of private property under international law, on recognition, on neutrality and on the protection of indigenous populations. Other lectures dealt with the history and the sociology of international law, and with the problem of the United Nations charter review.

The Inter-American Academy of International Law met in Havana, Cuba, in February and March 1956 and lectures were presented on international law and the United Nations charter and on various aspects of private international law.

(See also UNITED NATIONS.)

(Q. W.)

International Monetary Fund. The International Monetary fund came

into existence on Dec. 27, 1945, when its articles of agreement (formulated by the United Nations Monetary and Financial conference, Bretton Woods, N.H., in July 1944) were signed by 29 governments. After an inaugural meeting in March 1946 in Savannah, Ga., the fund officially began operations on May 6, 1946, at its seat in Washington, D.C. On Dec. 18, 1946, the fund announced agreement to the initial par values of 32 of its members and on March 1, 1947, announced its readiness to commence exchange transactions.

As of Sept. 30, 1956, there were 60 members with aggregate quotas of \$8,923,000,000.

International Monetary Fund, Member Countries, Sept. 30, 1956

Afghanistan	Denmark	Indonesia	Panamá
Argentina	Dominican Republic	Iran	Paraguay
Australia	Ecuador	Iraq	Peru
Austria	Egypt	Israel	Philippines
Belgium	El Salvador	Italy	Sweden
Bolivia	Ethiopia	Japan	Syria
Brazil	Finland	Jordan	Thailand
Burma	France	Korea	Turkey
Canada	German Federal Republic	Lebanon	Union of South Africa
Ceylon	Greece	Luxembourg	United Kingdom
Chile	Guatemala	Mexico	United States
China	Haiti	Netherlands	Uruguay
Colombia	Honduras	Nicaragua	Venezuela
Costa Rica	Iceland	Norway	Vietnam
Cuba	India	Pakistan	Yugoslavia

The board of governors approved the application of the republic of the Sudan which had until March 31, 1957, to complete membership formalities. An application was received from the Gold Coast. The executive board completed its quinquennial review of quotas required by the articles of agreement in Jan. 1956, and did not propose any general revision. However, increases in quotas were granted to the Dominican Republic, Ecuador and Nicaragua.

Assets of the fund as of Sept. 30, 1956, were \$8,909,436,772.92 including \$1,885,498,936.28 in gold, \$6,077,580,431.21 in national currencies (including \$1,697,720,493.42 in U.S. dollars) and \$941,421,140.50 in subscriptions receivable from member governments.

During the 12 months ended Sept. 30, 1956, six members purchased currency from the fund amounting to \$117,750,000 as follows: Burma purchased \$15,000,000; Egypt purchased the equivalent of U.S. \$15,000,000 in Canadian currency; Indonesia purchased \$55,000,000; Iran purchased \$26,250,000; Paraguay purchased \$1,500,000; and the Philippine republic purchased \$5,000,000. Since the beginning of operations in March 1947, total sales of currency by the fund, including Belgian francs, Canadian dollars, deutschemarks, pounds sterling and U.S. dollars, amounted to \$1,325,448,380.91.

During the same 12 months Burma, Ceylon, Finland, France, India, Indonesia, Iran, Japan and Turkey purchased amounts of their currencies with gold and dollars totalling \$253,069,936.91, bringing the total repurchases since the beginning of fund operations to \$984,880,970.71, of which \$199,613,472.08 was paid in gold and \$785,267,498.63 in U.S. dollars.

Stand-by arrangements with Belgium for \$50,000,000 and with Peru for \$12,500,000 continued in effect during the year. Mexico allowed its stand-by arrangement, which permitted drawings up to \$50,000,000, to expire on Oct. 15, 1955. A stand-by arrangement was agreed to by the fund to permit drawings by Chile up to \$35,000,000 over a period of one year from April 1, 1956.

There were 11 fund members (including the two newest members, Argentina and Vietnam) which had not established par values for their currencies in agreement with the fund. In addition, some members did not effectively maintain the par values agreed upon. The fund concurred in a proposal by the government of Paraguay for a change in the par value of the guarani from 1 to 60 guaranies per U.S. dollar in March 1956, at which time Paraguay carried out a simplification of its complex multiple rate system.

During the year three fund members, Thailand, Chile and Iran, effected substantial unifications of their exchange rates. Unification of the exchange system of Thailand was practically complete by the end of 1955. By Sept. 1956 all of Thailand's foreign exchange transactions were effected at the fluctuating free market rate. In April 1956 Chile carried out a considerable simplification of its multiple rate structure and abolished its import licensing system.

This was part of a general program intended to re-establish the stability of the Chilean economy. In Iran a uniform rate for buying and selling was established for all commercial and most noncommercial transactions.

Members availing themselves of the transitional arrangements under article xiv of the fund agreement, which provides for the possibility of applying payments restrictions without prior approval of the fund, are required to consult with the fund annually concerning the further retention of those restrictions. As of Sept. 30, 1956, 49 of the 60 members of the fund resorted to this transitional arrangement. Consultation with these countries enabled the fund to maintain direct and close contacts with members and provided an opportunity for discussion of the economic and financial problems which give rise to restrictive and discrim-

inatory practices and of the possibilities of further relaxation.

The *Seventh Annual Report on Exchange Restrictions* published in June 1956 reviewed the 1955 consultations, surveyed recent developments in the field of restrictions and outlined the restrictive systems of individual countries. In 1955, the movement toward greater freedom of trade and payments continued. This movement took place in a world payments situation which, in general, continued to show improvement. Very few countries intensified their restrictions and a large number found it possible to reduce them, the measures varying according to the system in force in the member country and its own particular situation.

The fund gave considerable attention to the so-called "Hague club" arrangement, by which Brazilian earnings from transactions with Austria, Belgium-Luxembourg, France, the Federal Republic of Germany, Italy, the Netherlands and the United Kingdom were pooled and the currencies of these countries made interchangeable, thus eliminating strict bilateralism. The participating countries hoped that certain other countries would make similar arrangements with Brazil. The fund welcomed the contribution made by these arrangements as a transitional step toward a fully multilateral and nondiscriminatory system of trade and payments. A somewhat similar arrangement, known as the "Paris club" and involving a slightly different group of countries, was also brought into operation for transactions with Argentina.

The fund continued to encourage the forward movement toward a fully multilateral system and to urge its members to diminish their use of restrictive and discriminatory practices, wherever their balance of payments, positions and prospects warranted such action. Moreover, the fund stood ready to make its resources available to members who needed help in establishing or maintaining the convertibility of their currencies or in overcoming temporary balance of payments difficulties. Barring unforeseen developments, the immediate future was expected to prove propitious for further progress in many countries in reducing, or eliminating, exchange restrictions.

The fund's general policies regarding the use of its resources remained unchanged during 1956. The revised schedule of charges which had been in effect from Jan. 1, 1954, and which expired on Dec. 31, 1955, was extended by the executive board until Dec. 31, 1956, and was being kept under review.

During the year, members of the fund staff visited 49 member countries for purposes of consultation, technical assistance or the exchange of views and information. The fund's training program had 17 participants in 1956 from 17 countries. The program, intended primarily to provide nationals of member countries with technical training related to activities with which the fund is especially concerned, also proved useful in disseminating a clearer understanding of the fund's purposes and procedures and made a valuable contribution to the general relations of the fund with its members.

On Oct. 3, 1956, Ivar Rooth (Sweden) retired after five years as chairman of the executive board and managing director. He was succeeded by Per Jacobsson, also of Sweden, who took office in Nov. 1956.

International Trade. For the third successive year world trade in 1956 moved toward a new record level, as evidenced by data available through the first half of the year. From \$77,500,000,000 in 1954 and \$84,000,000,000 in 1955, exports for 1956 (at an annual rate based on January-June) were more than \$92,000,000,000. The previous high point had been \$76,500,000,000 in 1951. Generally booming economic

conditions in most of the major trading countries of the world were responsible for this continued growth in trade. Industrialized countries were requiring more and more imports to meet the expanding needs of consumers and industry. Payments by these countries tended in turn to stimulate their exports, as raw material producing countries were enabled to buy new goods which made possible increased living standards and expanded programs for capital development.

An analysis of the increased trade by areas showed that the industrialized countries over the last several years had been making a much greater contribution to the expansion of trade than the countries mainly producing foodstuffs and raw materials. This growth took place in spite of a movement of the terms of trade throughout the postwar period in the direction of the latter. As can be seen from Table I, 1956 appeared to be no exception to this trend.

Publication of indexes tends to lag behind that of trade data; indications were that the volume of trade (omitting changes in prices) was 5% greater in the first quarter of 1956 than in the comparable period of 1955. Prices of commodities moving in world trade had increased on the average by about 2% in the first quarter as compared with the like quarter of 1955. Data by regions showed more specifically that export prices of the United States, Canada, the United Kingdom and continental Europe in this period had risen by nearly 4%, while those of the rest of the world had declined somewhat.

In Jan. 1956 the fourth in a series of multilateral tariff negotiations under the General Agreement on Tariffs and Trade (GATT) was held in Geneva, Switz. This conference took place primarily as a result of legislation passed by the United States congress in 1955 which enabled the United States to negotiate with other countries concerning the further reduction (within specified limits) of United States tariffs. Twenty-two nations participated in these negotiations, which ended in May with a schedule of tariff concessions agreed on by the participants. These were to go into effect in the various countries on dates to be announced by each government. Those of the United States were required by U.S. legislation to be implemented in stages over a three-year period; the first stage became effective on June 30, 1956. (See also TARIFFS.)

United States.—During the first half of 1956 United States trade also registered record totals. Commercial exports, which were valued at \$8,343,000,000, surpassed all previous semiannual periods in quantity, except the first six months of 1947 when postwar requirements were at a peak. Imports, at \$6,330,000,000 in January-June, were greater than those in any earlier period, both in value and in volume. These record levels were brought about by the continued high levels of economic activity,

both in the United States and abroad.

The predominance of industrial goods in the growth of United States exports continued in 1956, as advances in producers' equipment and other capital goods became particularly marked in contrast to previous heavier gains in crude materials. Industrial goods accounted for more than half, or \$700,000,000, of the net over-all addition to commercial exports between the first six months of 1955 and the corresponding period of 1956. The remainder of the increase was divided between foodstuffs, which were up about one-third in value, and a miscellany of manufactured products. Among industrial goods of which export sales increased, construction, mining and other industrial machinery and trucks were prominent. Construction and mining machinery deliveries were more than 50% greater in value than those in the like period of 1955; other industrial machinery and trucks were 26% more. Sales of raw materials, mainly metals, fuels and chemicals, also continued to expand, but at a slower pace than in previous years. January-June shipments of coal showed a moderate rise beyond the extraordinarily high volume exported in the latter half of 1955. Metal exports, which slackened toward the end of 1955, renewed their upward movement as Canadian requirements for iron and steel and Japanese purchases of scrap and refined copper grew.

Agricultural exports increased markedly. In the first half of 1956 sales of wheat and flour were 46% higher in quantity and \$100,000,000 higher in total value than in the like period of 1955. A gain of about \$300,000,000 occurred in other foodstuffs. Coarse grains, oranges, dairy products, fats, oilseeds and tobacco were all exported in larger values than in the first half of 1955. Cotton sales, although recovering a part of the loss incurred in the second half of 1955, persisted at a low level, well under that of the first half of 1955.

Higher commodity prices contributed to the augmented export values. Unit values of manufactures were on the average 5% above the first half of 1955 and those of coal and semimanufactured materials were about 14% more. Prices of foodstuffs, on the other hand, were reduced by 3% or 4%.

Raw materials accounted for half of the net addition since the first six months of 1955 to the total value of imports for consumption, rising by \$380,000,000 or 13%, mainly because of higher prices. The volume of these imports advanced only about 5%. Prices of rubber, nonferrous metals, newsprint, iron ore and fuel oil averaged higher than in the first half of 1955. Those of

*Country and area export totals exclude items in the "special category", i.e., commodities to which security restrictions apply regarding publication of detailed export statistics. Area totals exclude most countries to whom the United States shipped less than \$35,000,000 annually and those from whom U.S. received less than \$25,000,000 annually.

copper were up by 35% and of rubber, 20%. Much larger amounts of iron ore and crude petroleum were obtained from Canada and Latin America than in January-June 1955. Wool, newsprint, wood pulp and lead arrived in appreciably increased volume. Purchases of rubber, contrasting sharply with the sustained high level of demand in the United States for other raw materials, fell below those of 1955. There was a continued expansion in U.S. purchases of foreign manufactured goods, notably in machinery, aircraft, automobiles and structural steel products.

Compared with raw materials and manufactured goods, the value of foods imported rose only moderately, largely because of a fall in prices of coffee and cocoa. The quantities of foodstuffs imported were nevertheless at record peacetime levels. Purchases of coffee averaged 25% more in quantity but 10% less in unit value than in the first half of 1955, while 30% more cocoa was obtained for a smaller expenditure.

The distribution of United States exports between the various markets changed relatively little in January-June 1956 from that in the comparable period of 1955, as can be noted from Table II. The percentage of U.S. exports going to western Europe and Latin America, two of the largest markets of the United States, did not change, although the value of exports was much higher. Canada's share, however, rose from 23½% to 25% of the total. Nearly three-fifths of the increase in the export surplus of the United States in this period was concentrated in trade with Canada.

In the case of western Europe, foodstuffs, influenced by the U.S. surplus disposal programs, advanced by about one-third as compared with each half of 1955. Exports of industrial machinery also showed an important rise as did many industrial raw materials. Shipments to Canada of capital equipment rose unprecedentedly, and significant gains also occurred in exports of industrial equipment to Latin America. About 75% of the advance over the first half of 1955 was in that item.

U.S. imports from western Europe were valued at one-fourth more in the first half of 1956 than in the corresponding period of 1955. Nearly every European country contributed to this increase, which occurred especially in finished durable goods and industrial materials. Imports into the United States from all other areas except Africa rose in the first six months of 1956. There was also a 40% rise in imports from Japan between the two periods, concentrated primarily in cotton manufactures, glassware, cutlery, sewing machines and other manufactured goods.

During the year the second of the three major items in the Government's trade program was enacted into law by the Congress. On Aug. 2, Pres. Dwight D. Eisenhower signed the Customs Simplification act (H.R. 6040). In June 1955 the Trade Agreements Extension act had been passed, and it was under this that the United States was enabled to negotiate tariff reductions at the GATT meetings previously mentioned. Action on the third major trade proposal, U.S. participation in an Organization for Trade Cooperation, was delayed until 1957.

Canada.—Canadian foreign trade in the first half of 1956

CONTROVERSIAL SHIPMENT of U.S. tanks destined for Saudi Arabia being loaded aboard a freighter at Brooklyn, N.Y., in Feb. 1956

reached record peacetime levels for any six-months' period. Imports increased by 29% over the first half of 1955 to a value of Canadian \$2,845,000,000, while total export values at C\$2,304,000,000 rose 12% above the previous record of January-June 1955. These changes brought about the largest import balance in Canadian history, 60% above the previous half-year record in 1951.

As in the past, the United States continued to be Canada's leading supplier and primary market. Of Canada's exports, 60% went to the United States in January-June 1956 and 75% of its imports derived from there. Table III shows that forest products remained the largest group of goods exported to the United States; others of rising importance were nonferrous metals, iron ore and petroleum. Canadian imports from the United States rose sharply. While there were substantial advances throughout most commodity groups, by far the largest gain was in iron and steel imports (notably nonfarm machinery), rolling mill products, cars and trucks, tractors and pipe.

Canadian trade with the United Kingdom, second in importance to the U.S. as a trading partner, reversed itself completely in the first half of 1956 from the like period of 1955. In the 1955 period, strong British demands for grains, forest products and metals brought a 35% gain in Canadian exports, while imports

into Canada, delayed by strikes and reduced by lowered demand, dropped by 10%. In the first six months of 1956, Canadian exports to the United Kingdom, influenced by large inventories of Canadian goods accumulated in Britain during 1955, were curtailed by 4%. Imports from Britain, on the other hand, increased by more than 30% and were at their highest postwar level.

Canada's trade with Europe rose by 50% over the level of January-June 1955, with wheat accounting for almost 90% of the increased exports and manufactured goods of many types providing most of the increased imports. Exports to the other countries in the Commonwealth were at their highest level since the first half of 1952. Much of this increase was attributed to shipments of locomotives to India; there was also a substantial rise in the share taken by the Union of South Africa. Increases in imports from Latin America, especially cotton from Mexico, were much larger than increases in exports.

Latin America.—Available data on the trade of the first quarter of 1956 indicate a general rise in exports of the Latin American republics as a group when compared with 1955, and a maintenance of imports at approximately the levels of 1954 and 1955. Grouping the republics into "dollar" and "nondollar" countries, some divergent trends may be noted. The trade of the dollar countries, whose currencies and foreign economic positions were closely tied to the economy of the United States, appeared to be climbing, led by buoyant trends in Mexico, Venezuela and Cuba. The trade of the nondollar countries was being maintained at, or slightly below, the level of 1955.

The Central American countries, whose economies were aided by good markets for coffee, bananas, fibres and minerals, were showing an expansion in their exports in the early months of 1956. A plan for economic integration of this area was proceeding, as bilateral "free trade" treaties were put into effect between several of the five republics. In Jan. 1956, at the third meeting of the committee on Central American Economic Cooperation composed of the ministers of economy of the five republics, it was decided to draft a multilateral treaty for the purpose of establishing a free trade zone for certain commodities. A committee was authorized to study the problem of uniformity of tariffs for the republics as a necessary prerequisite to establishing a customs union.

In the strong Mexican economy imports were running at record levels in the first six months of 1956. Exports, also, for this period were at levels nearly 15% above the corresponding period of 1955, having been swelled by the early unloading of the remainder of the 1955-56 cotton crop. The ministry of economy announced at the end of July 1956 that imports of selected items (automobiles, trucks, pipe, machinery installations and a few others) would be permitted only in compensation for Mexican cotton exports. This was considered to be a temporary expedient in force until the new cotton crop was sold. Venezuelan exports continued to climb, as crude petroleum production reached another record high of 2,472,000 bbl. a day for the week ended July 2. The favourable economic position of Venezuela, based on large world demand for petroleum, enabled that country to remain one of the few nations without import controls. Cuban prosperity was attaining new heights in the first half of 1956, as sugar exports were 16% ahead of those in the corresponding period of 1955, and prices were relatively satisfactory. Outside of the United States market, which took 58% of the 1956 sugar shipments, the U.S.S.R. was Cuba's leading customer, with Japan a close second. Larger exports made possible increasing imports into Cuba in the first six months, and still allowed a rise in Cuba's official international reserves as of June 30, 1956, at 10% above the level of the year before.

Among the major nondollar countries, Brazil and Argentina were both undergoing continued economic difficulties, although

these were less severe than in previous years. The Brazilian balance of payments showed some improvement in the first half of 1956, largely as a result of high coffee exports at good, and slightly rising, prices. But imports were still limited by restrictions, first imposed early in 1954 in an effort to strengthen the country's international financial position. Total exports reached a value of \$719,000,000 in January-June 1956 compared with \$613,000,000 in January-June 1955, while imports declined to \$548,000,000 from \$662,000,000 in the first six months of 1955. There was therefore, a normal export balance on trade account for the first six months, unlike the first six months of 1955 when there was a sizable import balance.

Exporters in Argentina appeared in a much stronger position at the end of the first half of 1956 than for many years. An outstanding trade development in Argentina, a revision of the previous administration's policy, was the negotiation of a multilateral trade agreement with several countries of western Europe to replace the former separate bilateral agreements. The arrangement spread Argentina's commercial debt over a 10-year period and made it possible for Argentina to buy on the best price terms from any member of the western Europe trading group.

Western Europe.—Member countries of the Organization for European Economic Cooperation include Austria, Belgium-Luxembourg, Denmark, France, the German Federal Republic, Greece, Iceland, Ireland, Italy, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey and the United Kingdom. The trade of the O.E.E.C. countries combined continued to rise in the first two quarters of 1956, but at a slower rate than during the exceptional year of 1955 (See Table IV). The value of O.E.E.C. exports and imports in the first quarter was at the highest level ever achieved, except in the last quarter of 1955. Trade between the O.E.E.C. countries, which had risen greatly during 1954 and the first six months of 1955, continued to decline slightly, while that with the dollar and other areas increased. The dollar trade gap lessened as exports from western Europe to the dollar area rose faster than imports from the area.

Several countries, including Germany, Norway and Sweden further liberalized imports from the dollar area during the early and middle parts of the year. The new dollar-free list published by the government of the German Federal Republic in June 1956 brought the total of private imports which could be purchased without license from the dollar area to more than 90%. As of July 1 imports into Norway from the dollar area were liberalized to about 80% of the total. Likewise, Sweden's liberalization of imports from the dollar area was further extended on July 1.

Multilateral payments systems were developed between major western European nations and two Latin American countries dur-

late 1955 and 1956. The "Hague club" arrangement provided for the settling of trade accounts with Brazil by multilateral payments agreements. Members of this group included Austria, Belgium-Luxembourg, France, the German Federal Republic, Italy, the Netherlands and the United Kingdom. The arrangement provided that exchange proceeds from Brazilian exports to any one of the members of the club were to be pooled, and could be used to pay for imports from any other member of the group. A similar group called the "Paris club" came into force on July 2 between Argentina and a group of European countries, including Austria, Belgium, Luxembourg, Denmark, France, Netherlands, Norway, Sweden, Switzerland and the United Kingdom, and Italy joined later in the year.

The steady rise in the value of trade of the German Federal Republic was a key factor in western Europe's continuing prosperity. The value of German imports in the first half of 1956 reached 13,070,000,000 deutschemarks (DM) and exports were DM14,480,000,000. These figures compared with imports of DM11,400,000,000 and exports of DM12,100,000,000 in the first half of 1955, resulting in a rise in the export surplus to DM1,410,000,000 in January-June 1956 from DM700,000,000 in January-June 1955. Nearly three-quarters of the increase in imports between these two periods was in goods for industry, especially raw materials including coal, whose value rose by 19%. There was also a noticeable expansion in imports of certain manufactured goods such as machinery, rolling mill products, chemicals and ships. Exports of manufactured goods accounted for the major share of the increase in exports. All of Germany's principal exports expanded; especially large increases were registered in machinery, motor vehicles, electro-technical products, ships, chemicals and iron products.

With the O.E.E.C. area as a whole, German sales rose by 18% and purchases by about 6%. German exports to the Netherlands, the United Kingdom, Belgium-Luxembourg, France and Switzerland showed the most significant increases. The export surplus with this area, which takes more than 70% of German exports and provides 60% of its imports, rose in the first half of 1956 to almost double the amount for the corresponding half of 1955. Trade with the United States expanded in both directions. Purchases rose from DM1,600,000,000 to DM2,400,000,000 and sales from DM730,000,000 to DM965,000,000. During the latter part of June, the German government published a list of 600 additional items which could be imported from dollar countries free of all restrictions. This was the fourth such list issued since 1954 and, as noted earlier, brought the liberalization of private imports from the dollar area to more than 90% of the total. German importers could then buy about as freely from dollar countries as from those in western Europe. New tariff cuts became effective on July 1 for an 18-month period. These were designed to encourage imports, and thereby to help keep down domestic prices and to relieve inflationary pressures building up in the booming German economy.

In the first half of 1956 French imports rose by more than 10% over those of the first half of 1955, even though, for certain statistical reasons, the 1956 period of calculation was shorter by several days. The decline of nearly 5% in exports (to \$2,284,000,000) was exaggerated slightly by this change in the period of calculation. The trade deficit, which amounted to \$488,000,000 in the first half of 1956 compared with a small surplus of \$20,000,000 in the comparable period of 1955, was largely responsible for the decline in French gold and foreign exchange reserves by about \$200,000,000 between the two periods. The French government had permitted a record value of imports in the first semester of 1956 in an effort to counteract the inflationary pressures of rapidly rising internal demand on domestic production of industrial supplies and consumer goods. Forces inflating the de-

mand for imports also caused some of the normal export supplies to be drained off to supply the domestic market, thus widening the trade deficit still further.

Demand remained strong in 1956 for Belgian exports, the value of which rose during the second quarter by 10% over the first quarter, and by 25% over the first quarter of 1955. Imports increased by approximately the same percentage as exports, so that the trade of Belgium-Luxembourg continued to remain in balance in the first six months of 1956 as it had been in the corresponding period of 1955. Some concern was felt over the threat of inflation and the effect it might have on Belgium's competitive position in world markets, but the rise in the price index was still moderate, relative to that of many other western European countries.

The Netherlands' economy in 1956 was likewise expanding, but nevertheless exports were expected to be limited more by capacity to produce than by demand for goods. Between the first halves of 1955 and 1956, they had risen by 10%. Imports more than kept pace, rising in the first half of 1956 by 15% over the previous year and causing the trade gap to widen by about \$90,000,000.

United Kingdom.—During the first six months of 1956 the trade of the United Kingdom showed a steady rise in value and a smaller, but nevertheless substantial, rise in volume. Exports which totalled £1,674,000,000 in January-June 1956 were 14% above the level of the same period of 1955. Dock strikes were considered to have distorted the 1955 data to some extent. Official estimates of the "underlying increase" in the value of exports, after allowing for strikes and for the United Kingdom's repayment of silver bullion to the United States from April 1956, were only 10%. It was calculated that imports, which rose in terms of recorded value by 4% above the first six months of 1955 (to £1,980,000,000), were only 2% greater in value when the effect of the 1955 strikes was discounted. The index of terms of trade for January-June 1956 showed little change from 1955, indicating that the rise in prices of goods exported was almost exactly compensated by the increase in prices of goods imported.

As can be seen from Table V, the most striking change in the direction of British trade in January-June 1956—as compared with that of a year earlier—was the increased level of goods moving to the nonsterling countries. These exports, totalling £154,000,000 a month in the first half of 1956, were 23% above the

1956: First half	51	23	9	7	12

level of a year earlier. Exports to the dollar area in particular showed a significant jump. Greater amounts of machinery, cars, aircraft, ships, whisky and woollens figured in the increase. Exports to the United States, which had moved steadily upward since the latter part of 1954, rose 37% above the level of January-June 1955, while those to Canada were 47% greater. Larger deliveries of ships to other dollar countries—Liberia, Panamá and Venezuela—were key dollar earners. Exports to O.E.E.C. countries were 10% greater in the first six months of 1956 than in the comparable period of 1955. Substantial increases occurred in shipments to Belgium, France, the German Federal Republic, Norway and Sweden.

"IS OFFERING USUAL EASY TERMS to friendly nations, comrade trade delegate! 10% off for cash or 10% infiltration of Communists in their government!!" another 1956 cartoon by Lichty of the Chicago Sun-Times Syndicate

Rises in imports from nonsterling area countries more than accounted for the over-all increase in British imports during the first six months of 1956. There were heavier imports of cereals, fruits and vegetables, sugar, paper and machinery from the dollar area. Larger iron and steel imports contributed heavily to an 8% rise in total imports from O.E.E.C. countries.

Trade with the whole sterling area showed relatively little change from 1955. Exports rose in value by 7% as imports declined by 1%. A dock strike in Australia early in 1956 delayed arrivals from that area, reducing imports by 14% in the first six months compared with a year earlier. There were larger imports of meat and dairy products from New Zealand. Exports to Oceania, where sterling imports were restricted for balance-of-payments reasons, declined, as did those to Pakistan. Sales to India and to the colonies rose considerably. These shifts in trade with sterling countries brought about a decline in the trade deficit with the area from £114,000,000 in the first half of 1955 to £57,000,000 in the first half of 1956.

The expansion in British trade between the first halves of 1955 and 1956 occurred most noticeably in capital goods from the metals and engineering fields, as indicated in Table VI. Manufactured consumer goods rose more moderately. Exports of engineering products were at their highest level, a full 21% above the value of January-June 1955. Chief among these exports were several large ship deliveries—notably the "Empress of Britain" to Canada and the "Bergensfjord" to Norway. All types of heavy machinery showed increases in export values, as did most electrical machinery. Aircraft exports, at £6,500,000 a month, were more than twice as much as in January-June 1955. Exports of cy-

cles, motorcycles, and commercial vehicles were all greater, but those of motor cars, especially influenced by reductions in Australian and New Zealand sterling imports, fell by 15% in quantity. Metal exports rose by 18% compared with those of a year earlier. Most important were copper and aluminum where increases in price as well as quantity contributed to the substantial rise.

Imports of food, beverages and tobacco, which constitute nearly 40% of British imports, were valued at about the same total level in January-June 1956 as in the like period of 1955. Compared with a year earlier, the principal changes were reductions in imports of cocoa beans, tea, cereals and feed balanced by increases in meat, dairy products, fruits and vegetables. Price declines were a significant factor in the reduction of tea and cocoa values. The rise in the value of meat imports was accounted for by increases in imports of chilled beef, mutton and lamb. More butter and more and higher-priced cheese caused a 14% increase in the value of dairy imports. Among the basic raw materials necessary for the operation of the British economy, imports of timber, pulp and textile fibres declined in value, but were almost counterbalanced by increases in the value of imported fats and oils, steel-making materials and rubber.

Union of South Africa.—The foreign trade of the Union of South Africa showed further rises in the first half of 1956, despite the fact that this period was marked by a continuation of the slowdown in internal economic development which began in 1955. There were minor relaxations in import controls made toward the end of 1955, but these had relatively little impact on the volume of imports through the first six months of 1956. Exports rose by \$40,000,000 in January-June 1956, as compared with the same months of 1955, fruits and minerals being the principal commodities with larger sales. Prices of wool, South Africa's largest earner of foreign exchange after gold, declined in 1956 to such a point that, although the clip was the largest in 20 years, it was valued at more than South African £5,000,000 less than the 1955 crop.

Gold exports, which are not included in South Africa's trade totals, but are used as a commodity to balance its trade deficit, continued to rise. Output for the first six months of 1956 again set a record and was valued at SA£96,500,000. Despite this gain, the first week in July saw South Africa's reserves of gold and foreign exchange at their lowest level since May 1954.

Middle East.—Although trade data for many middle eastern countries are inadequate and slow to be published, available information for early 1956 pointed to the year as a likely period of rising trade. Development plans in many countries were beginning to bear fruit, as export earnings rose sufficiently to enable increased imports of capital goods and equipment as well as incentive consumer goods.

Egypt's exports in the first half of 1956 showed a rise for the first time since 1952. At Egyptian £90,000,000, they were 36% above export earnings in the corresponding period of 1955. Improved shipments at better prices of long-staple cotton,

Egypt's major commodity export, were primarily responsible for the increase. Prices of cotton were nearly 50% higher in May than at the beginning of the crop year in Sept. 1955. About 28% of Egypt's total exports represented cotton for the Soviet Union, compared with 14% in January-June 1955.

Egypt's total imports in the first six months, excluding wheat imported from the United States under Public Law 480, amounted to £105,000,000. This was a 23% increase over the value of imports in the like period of 1955. It represented a slower rate of increase than that of exports, thereby narrowing the unfavourable trade balance for the period in comparison with January-June 1955.

Two of the middle eastern countries for which data were available—Iraq and Iran—are heavily dependent on petroleum for their export earnings. In both countries, the average daily crude oil production continued to rise, bringing with it the opportunity for larger imports. In Iran, payments by members of the oil consortium (foreign oil companies) to the government of Iran rose substantially. Imports of all kinds of goods were larger than in 1955, especially of iron and steel products. Iranian trade with the U.S.S.R., normally one of Iran's major trading partners, declined by almost 50% because rice was not available for export. Imports of cars, trucks, tires, pharmaceuticals and luxury goods from the United States were more important than formerly, as were cars, photographic materials, iron and steel and household goods from Germany. In Iraq, where 70% of the oil revenues were set aside for development purposes, trade was booming for such goods as automobiles, trucks and heavy construction and road-building machinery.

Israel, which regularly runs a substantial trade deficit financed by earnings from other sources and by foreign loans and investments, increased its deficit by 15% over the first half of 1955. Exports of January-June 1956 totalled Israeli £111,000,000, while imports were £330,000,000, leaving a deficit of £219,000,000 as compared with £194,000,000 for January-June 1955.

Far East.—The generally expansive economic situation in the industrially developed countries of the western world was reflected in the favourable trading patterns of the countries of the far east, as demand in the first half of 1956 continued high for raw materials. Not every country was sharing in the upward movement of trade, but that it was quite widespread can be seen from Table VII.

Indian exports during the first half of 1956 were running at about the same level as in the corresponding period of 1955. Imports, on the other hand, rose by more than 20% between these periods. A number of internal factors were responsible for the sharp rise. Among them were the initiation of India's second five-year development plan, which became effective April 1, 1956, and under which a new import policy was announced further liberalizing the entry of "essential" commodities into India in order to increase the tempo of industrial development. A second

major reason for the rise in the value of imports was the government's attempt to use larger imports as a means of combating inflation. The rubber-dependent Malayan economy showed signs of weakening, as rubber prices dropped during the second quarter of 1956, but when they turned upward again in June, continued prosperity was in prospect. Export and import totals for January-June 1956 were well above those for comparable periods of the last several years. Exports of rubber, tin, iron ore and bauxite were all at high levels during the period. Imports, primarily food and manufactured goods as usual, rose to such a level that Malaya's normal export surplus shifted to an import surplus in the first half of 1956.

The Philippine economy showed a general expansion during the first half of 1956 which was reflected in rising values for exports. Since export prices remained stable, this increase was explained almost entirely by greater volume of goods. Contrariwise, imports in the first half of 1956 declined from levels of a year earlier. In the case of imports, prices had risen by about 10%; the import volume, therefore, had dropped substantially. The trade situation of Thailand, despite certain problems, was considered generally good through the first half of 1956. There were difficulties in obtaining rice for export (Thailand's principal export commodity) because of shortages induced by lowered stocks, transportation delays and some speculative withholding. Prices of rubber fell in the second quarter, as in Malaya. Nevertheless, rubber export earnings increased in value with greater quantities being shipped. Tin, Thailand's third most important exchange earner, continued to bring a good income. Imports in the first semester of 1956 equalled the record level of the last half of 1955, and were far above any other previous half-year period.

The foreign trade of Taiwan (Formosa) in the first half of 1956 showed a surplus of \$8,600,000 despite the fact that exports rose by 10% above 1955 levels and imports, excluding United States aid, were higher by nearly 40%. Exports of a wide variety of goods expanded, including sugar (63% of total exports), citronella oil, coal, cotton yarns and various other agricultural products.

During January-June 1956 Indonesia's trade balance was an unfavourable one for the first time since 1952. Up to 1956, the volume of exports had remained about the same for several years, though values had increased, while imports (subject to strict licensing) declined both in value and in volume. A freer trade program introduced in Sept. 1955 resulted in a great jump in imports, accompanied by little change in export values. In Aug. 1956 the Indonesian government put into effect a new plan designed to stimulate lagging exports. Bonuses ranging from 3% to 20% of the f.o.b. proceeds were to be paid on about 30 export commodities, including rubber, copra, coffee, tea and sugar. The issuance of import licenses was suspended until further notice except on wheat flour, rice and goods for certain industrial and developmental projects.

Japan's industrial production during the early months of 1956 reached an all-time high, with a consequent jump in exports (through June 1956) of 30% as compared with the first half of 1955. Rises in exports of ships, iron and steel and cotton fabrics were among the most important. In the first six months of 1956 imports increased by about 23%; imports of iron ore and scrap rose sharply, as did those of petroleum and raw wool. Despite a trade imbalance, however, Japan's foreign exchange receipts continued to exceed payments. The increase in merchandise imports was not completely reflected in this situation, as Japan financed substantial amounts of imports under deferred payments arrangements.

Oceania.—The Australian economy in 1956 was in a period of transition. As the phenomenal economic growth of the years

since the war continued, the government found it necessary to take further steps to restrain inflationary demand by attempting to cut imports and to raise exports. Trade returns through Australia's fiscal year ending June 1956 showed imports of Australian £821,000,000, about A£23,000,000 less than in the preceding fiscal year. Exports for the same period totalled A£784,000,000, leaving a trade deficit for the 12 months of A£37,000,000, well below that for the fiscal year 1955 of A£70,000,000. In an effort to correct the unbalanced payments situation, new import restrictions were put into effect in Oct. 1955. When these appeared not to be stringent enough, further cuts designed to reduce imports by another A£40,000,000 a year were announced effective July 1, 1956.

Normally more than half of Australia's overseas earnings come from exports of wool and another 7% to 10% from wheat and flour. The 1955-56 fiscal year brought successful attempts to broaden this base in many fields where new Australian industries were being developed, notably chemicals, electrical equipment, tobacco, timber and engines.

New Zealand's overseas deficit during the year ended June 30, 1956, was only New Zealand £5,000,000 compared with NZ£42,000,000 in the previous fiscal year. Heavy restrictions on imports helped to achieve a near balance on current account. With the aim of giving the country's many new industries protection against imported goods, the New Zealand board of trade was working on a revision of the 1938 customs tariff during the course of 1956, but this new tariff was not expected to come into force until 1958.

Interstate Commerce Commission. The duties and powers of the U.S. Interstate Commerce commission are set forth in the Interstate Commerce act, passed in 1887 and later amended in many important particulars, and in related acts. The act, divided into four parts, deals with the regulation of (1) railroads and related agencies and oil pipelines; (2) motor carriers; (3) water carriers; and (4) freight forwarders. The commission's regulatory powers extend to, among other things, carrier charges; questions involving the valuation and financial reorganization of railroads; the issuance of securities; acquisition of control of carriers by other carriers or persons; accounting practices and the filing of reports; matters involving proposed institutions of new services by motor and water carriers or freight forwarders or the construction, abandonment and operation of lines of railway; and safety of facilities and operations in rail and motor transportation. Much interstate motor and water transportation is carried on under exemptions from regulation and by private carriers.

The commission is composed of 11 members appointed by the president.

There were several amendments to the act during 1956, the most important of which defined exemptions for motor vehicles of farmers, co-operative associations or federations thereof, and also of private carriers, under certain circumstances, from regu-

lation by the commission as to the duration of the lease, or the amount of compensation to be paid for the lease of such vehicles. Another amendment requires the commission, under certain circumstances, to establish for motor carriers of migrant workers reasonable requirements with respect to comfort of passengers, qualifications and maximum hours of service of operators, and safety of operation and equipment.

The date of Dec. 31, 1955, fixed for expiration of a general increase of 15% in rail rates, authorized in stages in 1951 and 1952, was removed, and the increase became permanent on Oct. 17, 1955. A further general increase of approximately 6% became effective on March 7, 1956. Water carriers and freight forwarders were permitted the same general increases, and authority was also granted during the year for motor carriers of general freight, in various areas, to advance the levels of their rates.

The railroads' share of intercity ton-miles was slightly less than 50% in 1955. Railroad revenue, \$10,900,000,000 in fiscal 1956, was 58% of the revenues of all carriers subject to the commission's jurisdiction. In the first seven months of 1956, rail ton-miles and revenues increased approximately 6% above the level of that period of 1955, but net income, after taxes, decreased 9%.

Expenditures for capital improvements for the first six months of 1956 were at a higher level than for the same period in 1955. Technological and operational advances were continued. Diesel locomotives, during the first six months of 1956, accounted for 88% of railroad freight and 91% of passenger service. This compares with 86% and 88%, respectively, for the same period in 1955, and 10% and 13%, respectively, for that period of 1946.

Beginning in Feb. 1956 freight car shortages again reached serious proportions. The building of freight cars remained below the level of retirements, which continued at a substantial pace. Six service orders were issued by the commission to alleviate the car supply. Motor carrier facilities continued in ample supply, and there were substantial additions to the equipment of inland water carriers. Highway improvements, including extensions of toll roads, were continued at a high level, and a program calling for even more extensive modernization of highway systems was enacted by congress. In recognition of a need for additional funds to enable the commission to strengthen its regulation of carrier safety activities, the independent offices appropriation bill for 1957, which was passed by congress, carried a record appropriation of \$14,879,696 for the commission.

(R. F. ML.)

Intestinal Disorders: see STOMACH AND INTESTINES, DISEASES OF THE.

Intoxication, Alcoholic. During 1956 increased interest was evidenced in medical circles in the problem of alcoholism. There was a lively contention about the nature of the problem. Some claimed that it is a disease, others maintained that it is a symptom, and still others described it as a pattern of behaviour. It is obviously a pattern of behaviour, psychologically understandable in terms of an escape mechanism. Sometimes problem drinking is merely a symptom of an underlying and basic depression, and some problem drinking merely develops in certain susceptible persons as an exaggeration of social drinking.

Most interesting were the speculations and investigations into the nature of alcoholism as if it were a disease. If it is a disease, it is characterized by several prominent features: (1) a craving for alcohol; (2) usually a waning of the ability of the body to burn the alcohol, which increases in the years between 20 and 50; (3) pathological side effects with peculiar forms of intoxica-

tion. Some authorities believe that alcoholism can be compared with diabetes to some extent, in that the body appears to be unable to burn alcohol ingested at a rapid rate. Alcohol taken into the body of an alcoholic produces signs of intoxication and may be said to circulate as does antifreeze in an automobile radiator. The molecules of alcohol continue to bombard the brain cells with untoward results. In this way alcohol may be considered a nerve poison, for the effects are certainly not "stimulating" as so many persons believe; in fact, alcohol is actually narcotic or depressant in its action. Obviously it depresses the cerebral cortex.

Alcoholics Anonymous had become a powerful moral force in all large communities. It provided alcoholic persons with something that was hard to describe but that was valuable to those who were willing to seek its help. More state legislatures and municipal committees were accepting the problems of alcoholic persons in their thinking and action, thereby making alcoholism more than ever before a public health problem. The use of Antabuse was widespread, and although it had natural hazards it was definitely useful in some cases.

If one goes on the theory that alcoholism is a deficiency disease (such as diabetes), then it is logical to suppose that the site of hypothetical lesion may be the liver, because the body treats alcohol as if it were sugar. However, no such specific substitute as insulin had been found. Nevertheless, a large number of drugs are helpful in the treatment of alcoholism; for example, Dexamyl and other forms of the amphetamine compounds, which relieve the depression in which the drinking occurs. In some cases it is as if the person who is depressed were trying to treat himself by drinking. This self-medication, using alcohol as a drug, never works because alcohol produces a momentary lift, then appears to increase the depression. If alcohol actually relieved depression, it would be one of the most useful drugs in the world. Certain persons who drink when they are tense, for "Dutch courage," were finding relief in the ataractic drugs. The essential treatment of alcoholism is to stop drinking or to learn not to drink in excess. If alcoholism is merely a craving, then will power is the best remedy, but the situation is not so simple as that.

Most important during the year 1956 was the increase of public information about alcoholism and of possibilities of its treatment as a medical disorder and the publication of several excellent books on the subject, including *Alcoholism*, edited by George N. Thompson, which contains much valuable information for physicians, and *Understanding and Counseling the Alcoholic*, *Through Religion and Psychology* by Howard J. Clinebell. This book is written largely for the layman and for families that have to deal with the alcoholic person.

Iowa. Iowa, nicknamed the "Hawkeye state," was admitted to the union in 1846 as the 29th state. The name of the state is derived from the Indian name meaning "This is the place" or "The beautiful land." Located in the north central region, Iowa comprises 56,290 sq.mi., of which 245 sq.mi. are inland water surface. The census figures for 1950 showed a population of 2,621,073, an increase of 2.9% over the 1940 figures, with 52.3% rural, a decrease of 4% since 1940. The population was 99.2% white, 96% native-born. The federal estimation of population for July 1, 1956, was 2,692,000, an increase of 2.6%

since 1950. The capital and largest city is Des Moines, with a 1950 population of 177,965. Other chief cities are Sioux City, 83,991; Davenport, 74,549; Cedar Rapids, 72,296; Waterloo, 65,198; Dubuque, 49,671; and Council Bluffs, 45,429.

History.—The general assembly, meeting in the odd-numbered years, did not meet in 1956. A tax study committee, appointed to prepare recommendations for revising the tax structure of the state, worked on the problem during the year but made no report before the November election. A proposed special session of the legislature, to deal with taxes, was not called.

The state officers during 1956 were: Leo A. Hoegh, governor; Leo Elthon, lieutenant governor; Melvin D. Synhorst, secretary of state; Chet B. Akers, auditor; M. L. Abrahamson, treasurer of state; Clyde Spry, secretary of agriculture; Dayton Countryman, attorney general; J. C. Wright, superintendent of public instruction. All state officers, the eight representatives in congress and Senators Bourke B. Hickenlooper and Thomas E. Martin were Republicans.

In the November election Iowa's majority for Pres. Dwight D. Eisenhower was about 228,000, a reduction from the 357,000 majority in 1952. All the state officers were re-elected, with the exception of Governor Hoegh, who was defeated by a Democrat, Herschel C. Loveless, and the attorney general, Dayton Countryman, who was not a candidate. Republican Norman Erbe was elected attorney general. Senator Hickenlooper and seven of the eight representatives in congress were re-elected, incumbent James I. Dolliver in the 6th district being defeated by his Democratic opponent, Merwin Coad. In the Iowa general assembly, the Democrats increased their membership from 4 to 10 in the senate (total of 50 members) and from 14 to 33 in the house (total of 100 members). The voters passed by a three-to-one margin a \$26,000,000 bond issue for bonuses for Korean war veterans.

Education.—During 1955-56 Iowa had 2,901 public elementary schools, with 412,584 students; 790 high school districts with 126,160 students; and 16 public junior colleges with 1,837 students. The number of teachers and superintendents in the public schools on June 30, 1956, was 25,750. Teacher salaries in 1956 averaged \$3,536 as compared with the 1955 average of \$3,270.

There are 23 private colleges and universities in the state and three state-supported institutions: the state university at Iowa City; the agricultural college at Ames; and the teachers college at Cedar Falls. Enrolment in the three state institutions for the fall semester of 1956 was 22,644, an increase of 1,192 over 1955. Total enrolment in all public and private institutions of higher learning in 1956 was 46,106, an increase of 8.1% over 1955. The appropriation for the three state schools voted by the 1955 legislature was \$39,297,062 for the 1955-57 biennium, as compared with \$36,517,476 for the 1953-55 biennium.

Social Insurance and Assistance, Public Welfare and Related Programs.—The allocation for social welfare totalled \$33,070,000 for the 1955-57 biennium, as compared with \$34,640,000 for 1953-55. Contributions to the state unemployment fund as of June 30, 1956, were \$5,152,403, compared with \$4,034,830 for 1955; benefit payments were \$6,685,415, compared with \$7,222,934 for 1955; the reserve fund, as of June 30, 1956, totalled \$107,754,045.

Iowa's three penal and two correctional institutions had 3,102 inmates as of Aug. 1956. The six mental hospitals had 8,202 patients.

Communications.—Iowa had a total of 7,657 mi. of paved highways as of June 30, 1956. Expenditures for construction in the fiscal year 1955-56 were \$43,272,929; maintenance costs for the same period were \$10,151,384. The state is served by 12 major railroads with a total track mileage of 8,584 mi. In 1955 there were 1,194,003 registered motor vehicles, private and commercial.

Iowa has about 850,000 telephones, 50 radio stations, and 12 television stations. There are about 70,000 mi. of electric transmission lines in the state, and 97% of all farms are electrified.

Banking and Finance.—There were, as of June 30, 1956, 564 state banks in Iowa, 161 bank offices, 258 small loan licensees, and 290 credit unions under the supervision of the state banking department. Total assets of the 564 state banks as of June 30, 1956, were \$1,936,222,800 (an increase of \$24,392,176 over the 1955 figures); total deposits were \$1,766,744,835 (an increase of \$14,248,996 over the 1955 figures). As of April 10, 1956, there were 95 national banks in the state with total deposits of \$884,507,000 and total resources of \$958,087,000.

The revenue received from all special taxes and liquor profits in Iowa for the fiscal year 1955-56 was \$237,150,374, an increase of \$33,948,995 for the 1954-55 figure. Total allocations from this fund amounted to \$210,473,738. The largest single item was the 2½% sales tax, which brought in \$68,813,390; second was the gasoline tax, totalling \$54,472,049; motor vehicles brought in \$39,196,537; while the state income tax totalled \$25,548,812 for individuals and \$3,190,239 for corporations.

Agriculture.—Iowa has 25% of all grade A land in the country and produces more than 10% of the nation's food. The state usually leads the

	1956	1955
Hogs	11,602,000	12,048,000
Cattle	6,223,000	6,279,000
Sheep	1,247,000	1,307,000
Horses and mules	88,000	92,000
Chickens	27,717,000	30,378,000
Turkeys	154,000	141,000

nation in value and production of corn, oats, pigs, poultry, eggs, and the marketing of grain-fed cattle and is second in production of soybeans and butter. There were 192,028 farms in Iowa in 1955, compared with 194,623 in 1954. These farms had a total of 34,746,569 ac.; the average size was 180.9 ac. In 1955, 50% of Iowa farms were owner-operated; 50% tenant-operated.

The total cash income of Iowa farmers for 1955 was \$2,145,039,000; of this total, \$1,671,503,000 was from the sale of livestock; \$466,100,000 from crops, and \$7,436,000 from government payments. The total cash income was \$211,720,000 less than in 1954. On Jan. 1, 1956, there were 66,738 trucks on Iowa farms, 284,316 tractors, 85,455 grain combines, and 107,338 mechanical cornpickers; all figures showing an increase over the 1955 figures.

In 1955 Iowa produced 4,855,000,000 eggs, 181,100,000 lb. of butter, and 22,099,000 lb. of cheese.

Manufacturing and Industry.—Iowa's principal industries are based on farm needs and farm production: agricultural machinery, meat packing plants, food processing plants. There were 3,736 manufacturing plants in Iowa, employing 165,256 persons, in 1955. The average weekly wage was \$75.67, as compared with \$76.39 in 1954. The estimated value of all manufactured products was \$3,900,000,000, an increase of \$100,000,000 over the 1954 figure. Iowa's per capita income for 1955 was \$1,577, a decrease of \$90 from the 1954 figure. The cost-of-living index for 1955 was 114.7 as compared with 101.8 in 1950. (M. Te.)

Mineral Production.—Table IV shows the tonnage and value of those minerals produced in Iowa in 1953 and 1954 whose value exceeded \$100,000. Iowa ranked 30th among the states in the value of its mineral output, with 0.42% of the U.S. total in 1954.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Middle States*, 2nd ed. (1955).

Iran (PERSIA). An independent kingdom of western Asia, Iran is bounded east by Pakistan and Afghanistan, north by the U.S.S.R., west by Turkey and Iraq and south by the Persian gulf and Arabian sea. Area: 636,293 sq.mi. Pop. (1955 est., no census ever taken): 21,146,000. Language: mainly Persian, but

OIL GUSHING from a newly discovered oil field in Iran in Aug. 1956. The well was spouting about 80,000 bbl. a day until it was capped

Turkic and Armenian in the northwest, Kurd in the west, Arabic in the south and Pushtu in the east. Religion: Moslem, mainly Shia, but the Kurds (850,000) are Sunni; Christian (there are about 50,000 Gregorian Armenians, a few thousand Catholic Armenians and 40,000 Nestorians); Jewish 40,000; and about 10,000 Zoroastrian. Chief towns (1950 est.): Tehran (cap.) 618,976; Tabriz 279,168; Isfahan 196,134; Meshed 191,794; Hamadan 123,931; Shiraz 116,274; Resht 111,978; Kermanshah 108,484. Ruler, Shahanshah Mohammed Riza Shah Pahlavi; prime minister in 1956, Hussein Ala.

History.—Iran's major problem in 1956 was economic reconstruction. The renewal of oil revenues contributed to an improvement, but the budget approved in April still showed a substantial deficit. The seven-year plan (originally drafted in 1948) was revised and contracts for the development of the country were carefully shared out on an international basis to British, U.S., French, Danish, Belgian and other firms. A new aid agreement was signed with the United Nations in February, and the possibility of a loan from the International Bank for Reconstruction and Development was discussed with its president, Eugene Black, when he visited Tehran in June. An offer of Soviet technical aid without political or military strings was received in June; but Iran preferred to remain economically linked with the west and gave a country-wide air-survey contract to a British firm and the Khuzistan development contract to a U.S. firm, although willing to sign a barter agreement to the value of £9,400,000 for 12 months with the U.S.S.R. in September. The major economic event of the year was the striking of what was called the biggest oil well in Iran near Qum, 75 mi. S. of Tehran, in August.

In foreign relations Iran continued to oscillate between east

and west. Iran's adherence to the Baghdad pact in 1955 had led to many Soviet protests, the third of which was rejected in April. But friendly relations with the U.S.S.R. were pursued through visits to Moscow by a parliamentary delegation at the beginning of the year and by the shah and his Empress Soraya in June. The royal couple also visited India in February and Turkey in May. The balance of international interest was kept even by again claiming Bahrein from Great Britain in April; by seizing the Soviet oil concession at Khuryan in June (which the U.S.S.R. agreed to surrender a month later); by a final settlement of border disputes with the U.S.S.R.; by expelling a Soviet military attaché for espionage; by supporting the U.S. plan for solving the Suez canal dispute at the London conference in August (the Iranian foreign minister being one of the committee of five who put the plan before Pres. Gamal Abdel Nasser); by entertaining a British parliamentary delegation in October; and by joining the neighbouring Baghdad pact powers (Turkey, Iraq and Pakistan) in calling on Great Britain and France to withdraw their troops from Egypt in November. The second annual council meeting of the Baghdad pact powers took place in April in Tehran, with the attendance of U.S. observers as well as the five member states.

The main domestic political events of the year were the opening of the new *majlis* (parliament) on June 14, when the prime minister, Hussein Ala, formally resigned and was re-appointed by the shah; and the release from jail on Aug. 4 of the former prime minister, Mohammed Mossadegh, at the end of a three-year sentence for unconstitutionally opposing the shah in 1953.

(C. M. WE.)

Education.—Schools (1953-54): primary 5,959, pupils 790,200, teachers 26,965; secondary (1951) 308, pupils (1953-54) 119,300, teachers (1951) 3,304; vocational (1950) 186, pupils 7,776, teachers 494. Universities 2, students (1954-55) 9,197 (including 348 at secondary teacher training college).

Finance and Banking.—Monetary unit: rial, with a principal buying rate of 75 and a principal selling rate of 76.50 to the U.S. dollar. Budget (1954-55 actual; 1956-57 est. in parentheses): revenue 11,300,000,000 rials (15,800,000,000 rials); expenditure 14,800,000,000 rials (19,800,000,000 rials). Currency circulation (Dec. 1954) 9,570,000,000 rials, (Dec. 1955) 9,720,000,000 rials. Deposit money (Dec. 1954) 8,940,000,000 rials, (Dec. 1955) 10,500,000,000 rials. Gold and foreign exchange (Feb. 1955) U.S. \$220,000,000, (Feb. 1956) U.S. \$197,000,000. Foreign exchange receipts from oil operations (March 1955-56): U.S. \$135,000,000.

Foreign Trade.—(1955-56) Imports (excluding duty free imports) 9,098,000,000 rials at official rate; 23,972,941,000 rials at commercial rate. Exports (excluding oil) 3,315,000,000 rials at official rate; 8,019,726,000 rials at declared value; oil exports at official rate 3,792,000,000 rials; at value declared 9,405,000,000 rials. Main sources of imports (1955): U.S. and Canada 24%; Germany 18%; continental E.P.U. (European Payments Union countries) 32%; U.K. 10%; Japan 10% (1953-54): U.S.S.R. (1953-54) 5.7%; India (1953-54) 7.6%. Main destinations of exports: Germany 8%; other continental E.P.U. 27%; U.S. and Canada 11%; U.K. 14%; U.S.S.R. 12.8% (in 1953-54); Japan 12% (1953-54). Main exports (1953): rugs 16%; cotton 17%; petroleum 2%.

Transport and Communications.—Roads (1953) 26,000 km. Motor vehicles use (March 1955): passenger 29,245, commercial 25,054. Railways (1954) 2,600 km.; passenger-km. (March 1953-54) 412,000,000; freight ton-km. (March 1955-56) 1,251,600,000. Telephones (Jan. 1955) 51,300. Radio receiving sets (1950) 184,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 2,313,000 (2,100,000); barley 880,000 (820,000); cottonseed 60,000 (120,000); cotton, lint 60,000 (60,000); jute 4,000 (4,000); rice 322,000 (526,000); wool 10,000 (10,000); beet sugar, raw (1955-56) 4,000, (1954-55) 69,000; raisins (1954) 50,000, (1953) 48,800; dates (1954) 140,000, (1953) 125,000; tobacco (1954) 14,600, (1953) 18,500. Livestock (March 1955): cattle 3,349,000; sheep 21,650,000; horses 50,000; mules 93,000; asses 1,300,000; goats 9,728,000; camels 100,000; fidoes (Sept. 1952) 120,000.

Industry.—Production (metric tons): crude oil (1955) 15,780,000, (1954) 3,504,000; coal (March 1954-55) 155,000; cement (1954) 1,000; electricity, installed capacity (1954 est.) 125,000 kw. (excluding 1,000 kw. in southern oil fields); cotton fabrics (1953 est.) 110,000,000 m.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Iran—Between Two Worlds* (1954); *The Middle East* (1955).

An Arab kingdom, Iraq is bounded northwest by Syria, north by Turkey, east by Iran, southeast by Kuwait and the Persian gulf, south by Saudi Arabia and west by Jordan. Area: 171,599 sq.mi. Pop.: (1947 census) 4,816,185; (1955 est.)

5,200,000. Language: Arabic 77%; Kurdish 15%; others 8%. Religion: Moslem 94%; Christian 3%. Chief towns (pop., city proper, 1947 census): Baghdad (cap.) 352,137; Mosul 133,625; Basra 219,167. King, Faisal (Feisal) II; prime minister in 1956, Nuri es-Said.

History.—Nuri Pasha es-Said's government continued to govern the country without any serious challenge during 1956, although an attempt was made to form an opposition outside parliament, restore party life to Iraq (after the dissolution of all parties in 1954) and proclaim a rival policy to that of Nuri Pasha. Mohammed Mehdi Kubba, former leader of the dissolved Independence party (extreme nationalist), and Kamel el-Chadirihi, former leader of the dissolved National Democratic party (allegedly communistic in outlook), formed a coalition in August to which they gave the name of "National Congress." The main features of the new party's program were the restoration of parliamentary democracy based on the party system, and the combating of foreign influences and all entanglements in military groupings or alliances. The minister of the interior, however, refused the application of the founders to form the party and denied the implication that there was no democracy or parliamentary government under the present regime.

In April the evacuation of the royal air force units stationed at the Habbaniya and Shaiba bases was completed in accordance with the special agreement concluded between Iraq and Great Britain in 1955. Arrangements were also made for the purchase by Iraq from Great Britain of arms valued at £2,000,000 during 1956-57 in return for Great Britain's waiving its claim to the value of British military installations left in Iraq, estimated at £2,755,000.

Relations between Iraq and Egypt eased somewhat during the year, in spite of continued tension between the two countries over the future of Jordan. On the Suez canal issue Iraq gave at least formal support to Egypt and joined in the Arab league meeting in Cairo during September which condemned the attitude of Great Britain and France. On the other hand, Iraq strengthened its relations with Pakistan and Iran (two of its partners in the Baghdad pact) by concluding with them an agreement to launch a joint shipping company with a capital of £15,000,000 to operate between Pakistan and the Persian gulf.

A new development in Iraq's inter-Arab policy was the *rapprochement* that took place with Saudi Arabia during the Suez crisis. King Faisal II visited King Saud at Riyadh, and the general interpretation indicated that the two oil-producing countries were finding a common interest in their anxiety lest their royalties should suffer as a result of the dispute between Egyptian President Gamal Nasser and the western powers.

Iraq's relations with Jordan alternated between improvement and deterioration. After the dismissal of Lieut. Gen. J. B. Glubb from the command of the Arab legion (*see* JORDAN) and Jordan's rejection of the Baghdad pact, Egyptian influence seemed to be gaining ground in Jordan at the expense of Iraq. Then came a change when the Jordanians seemed to be turning again toward Iraq, particularly for military support after the Israeli attack on Husan in September. Iraq, however, was said to have laid down certain conditions for the requested military aid, notably a unified command of Jordanian and Iraqi troops under an Iraqi officer, which Jordan was unwilling to accept.

After the attack on Egypt by Israel, Britain and France, Iraqi troops entered Jordan in November at the request of the Jordanian government. Meetings were held between representatives of Iraq, Iran, Turkey and Pakistan (all the signatories of the Baghdad pact except Britain) which resulted in joint communiqués condemning the Israeli attack and calling on Brit-

ain and France to withdraw their forces from Egypt. Iraq's relations with Syria became extremely strained as a result of the growth of communist influence in the latter country. The blowing up of the oil pipelines in Syrian territory was a heavy blow to Iraq, inflicting on it a loss of about £5,000,000 a month.

(E. S. AH.)

Education.—Schools (1953-54) (including private and foreign): primary 1,549, pupils 280,478, teachers 9,521; secondary 197, pupils 46,463, teachers 2,679; vocational 11, pupils 1,874, teachers 90; teacher training colleges 11, students 1,744, teachers 78. Institutions of higher education 12, students 5,255, teaching staff 234.

Finance and Banking.—Monetary unit: Iraqi dinar at par with the pound sterling (=2.80 U.S. dollars). Budget (1953-54 final) revenue 47,720,843 dinars, expenditure 50,157,017 dinars; (1956-57 est.) revenue 61,675,750 dinars, expenditure 66,032,455 dinars. Currency circulation (Dec. 1954) 41,200,000 dinars, (Dec. 1955) 43,200,000 dinars. Deposit money (Dec. 1954) 20,000,000 dinars, (Dec. 1955) 21,900,000 dinars. Gold and foreign exchange holdings (Dec. 1954) U.S. \$287,500,000, (Dec. 1955) U.S. \$335,500,000.

Foreign Trade.—(1955) Imports 97,400,000 dinars of which 6,300,000 dinars by foreign oil companies; exports 185,700,000 dinars. Main sources of imports: U.K. 38%; other sterling area 13%; France and other continental E.P.U. (European Payments union countries) 25%; U.S. and Canada 15%. Main destinations of exports: continental E.P.U. and France 58%; U.K. 12%; U.S. and Canada 2%. Main exports: petroleum 91%; barley 3%; dates 1%.

Transport and Communications.—Roads (1954) 19,300 km. Motor vehicles in use (1955): passenger 14,052, commercial (including buses, taxis) 16,716. Railways (1955) 1,700 km.; traffic (April 1953-54): passenger-km. 524,990,700; freight, ton-km. 855,014,800. Air transport (1955): passenger-km. 21,844,000; freight, ton-km. 248,400. Telephones (March 1955) 32,824. Radio receiving sets (1954) 66,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): barley 768,000 (1,239,000); wheat 483,000 (1,160,000); rice 98,000 (180,000); cotton, lint 8,000 (7,000); cottonseed 15,000 (13,000); wool, raw, 8,000 (8,000); dates (1954) 350,000, (1953) 350,000; sesame (1954) 15,800, (1953) 16,200. Livestock (1953-54): sheep 10,000,000; cattle 1,510,000; buffaloes 718,000; horses 300,000; mules 500,000; (1953 est.): asses 1,000,000; camels 300,000; goats 2,000,000.

Industry.—Crude oil production (1955) 33,240,000 metric tons. Consumption of electricity in 1954: 390,034,000 kw.hr. including the Kirkuk oil fields.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Middle East* (1955).

Ireland, Republic of. The Republic of Ireland has about 85% of the area (south, centre and northwest; 26 of the 32 counties) and about 68% of the population of the whole of Ireland. Area: 27,136 sq.mi. Pop.: (1951 census) 2,960,593; (1956 preliminary census) 2,894,822. Languages: English about 76%, Erse (Gaelic) about 24%. Religion (1946 census): Roman Catholic 94.3%; Anglican 4.2%; Presbyterian 0.8%; Methodist 0.3%; Jewish 0.1%. Chief towns (pop., 1951 census): Dublin (cap.) 522,183; Cork 74,567; Limerick 50,820; Dun Laoghaire 47,920. President in 1956, Sean T.

O'Kelly (Seán T. Ó. Ceallaigh); prime minister, John A. Costello (Seán Ua Coisdealbha).

History.—In 1956 the serious preoccupations of government, opposition and thoughtful sections of the public were economic and social rather than political. A disturbing feature was that as the year 1955 drew to a close there was little evidence of any effort on the part of the public to spend less on imported consumer goods, and the deficit on the international trade account remained. In Jan. 1956 a provisional return of trade showed a heavy deficit, and it was recognized that something was necessary to bring about a better equilibrium. Fortunately the amount of external assets remained substantial but, as the Central bank reports stressed, these reserves could not last indefinitely. In March the government imposed a schedule of special levy duties on a wide range of less-essential imports. Some of these duties were later found to weigh on industries. A duty on newsprint for instance affected not only newspapers but various other interests.

Despite some pessimism outside the government, revenue came in quite satisfactorily and by the end of the first half of 1956 a total of £53,592,000 was raised or £2,488,773 more than in the corresponding period of 1955. On the other hand expenditure was £3,468,324 higher. In the early summer a state loan for £20,000,000 was floated but the response of the public fell short of that amount and underwriters (the banks) had to supply the greater part of the loan. Previously the government-sponsored Electricity Supply board floated a stock loan of £10,000,000 which was oversubscribed.

Emigration was subject to much discussion. In April a special census of population was made to ascertain *inter alia* the incidence of emigration since 1951. A provisional return indicated that the resident population had declined by 65,771 (44,500 males, 21,271 females), and by comparing this figure with the national increase of population (excess of births over deaths) the net emigration was estimated at 200,358 (109,221 males, 91,137 females) or an average of 40,072 per annum. At least 90% of the emigrants went to Great Britain. The rest left chiefly for the United States.

Generally speaking economic development advanced. A large hydroelectric development was completed near Cork. The Lee river was dammed at two points to form reservoirs or lakes covering 3,000 ac. of farm land. Agricultural development continued

KILLARNEY LAKE seen from the ruins of Ross castle, Ireland, a view of part of the famous estate sold in 1956 to a U.S. businessman

and improved production would depend on the balancing of the export-import trade. Tourism ranked second to agricultural produce as a money earner, bringing into Ireland approximately £39,000,000 in 1955.

Much was expected in connection with the establishment of a large oil refinery at Whitegate inside Cork harbour but development of the site required by the company was rather slow.

(D. J. R.)

Education.—(1954) Schools: primary 4,874, pupils 472,536, teachers 3,144; secondary (recognized) 447, pupils 54,019, teachers 4,097; vocational (1953-54) 225 permanent, 621 nonpermanent centres, pupils 89,277. Teachers' training colleges (1953-54) 10, students 1,197. Universities (excluding St. Patrick's college, Maynooth), students (1954-55) 8,338, teaching staff 609.

Finance and Banking.—Monetary unit: (Irish) pound, at par with the pound sterling (=2.80 U.S. dollars). Budget (1955-56 est.): revenue £110,620,000; expenditure £112,720,000; (1956-57 est.) revenue £113,000,000, expenditure £118,791,000. Internal debt (March 1954) £238,000,000; external debt £40,600,000. Currency circulation (Feb. 1955) £50,100,000, (Feb. 1956) £58,700,000. Deposit money (Feb. 1955) £98,000,000, (Feb. 1956) £92,400,000. Gold and foreign exchange (March 1955) U.S. \$579,000,000, (March 1956) U.S. \$489,000,000.

Foreign Trade.—(1955) Imports £204,340,000; exports £110,260,000. Main sources of imports: U.K. 53%; other sterling area 9%; continental E.P.U. (European Payments Union) countries 16%; U.S. and Canada 12%. Main destinations of exports: U.K. 87%; continental E.P.U. 5%; U.S. and Canada 3%.

Transport and Communications.—Roads (1953) 80,600 km. Motor vehicles in use (1954): passenger 122,800, commercial 39,000. Railways (including cross-border systems, 1955): 4,700 km.; freight, ton-km. (1955) 484,800,000. Air transport (1955): passenger-km. 138,600,000; freight, ton-km., 1,178,000. Navigable inland waterways (1953) 800 km. Telephones (Jan. 1955) 109,734. Licensed radio receivers (1954) 428,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 430,000 (497,000); oats 610,000 (483,000); barley 268,000 (170,000); rye 3,000 (3,000); potatoes 2,114,000 (2,284,000); flax fibre (1954) 700, (1955) 2,200. Livestock: (Jan. 1956) cattle 4,069,500; sheep 2,484,400; pigs (Sept. 1955) 805,000; poultry (1954) 16,062,050; horses (Sept. 1954) 313,000; goats (1953) 46,176. Miscellaneous production (metric tons, 1955): milk 2,040,000; beet sugar, raw 92,000; wool 2,000; (1954) pork 89,000; beef and veal 80,000. Fish landings (1954) 8,700 metric tons.

Industry.—Production (1955): coal 198,000 metric tons; cement 682,000 metric tons; electricity 1,532,400,000 kw.hr.; manufactured gas 186,000,000 cu.m. Index of industrial production (1955; 1953=100) 105. Unemployment (1954) 8.1%; (1955) 6.8%; (March 1956) 8.1%.

Iron and Steel. Data presented in the three parts of this article are based on statistics available in Nov. 1956 from the U.S. bureau of mines, except as otherwise noted.

Iron Ore.—Table I gives data on world output of iron ore by countries producing more than 100,000 tons a year. In 1955 Canada more than doubled its 1954 production of iron ore as a result of greatly expanded operations, and Venezuela increased its production by more than 3,000,000 tons. These countries supplied the bulk of the U.S. imports of iron ore in 1955. In the first half of 1956 Canada produced 6,353,760 short tons, Venezuela 5,428,640 and Peru 1,537,760 tons. Iron ore imports for consumption in the U.S. in this period totalled 13,449,726 (Venezuela 6,353,760, Canada 3,757,133 and Peru 1,156,981 tons, or nearly 76% of total U.S. iron ore imports).

Table I.—World Production of Iron Ore

*Revised and completed. †Preliminary.

Output of iron ore in the United States rose from 87,465,000 short tons in 1954 to 115,368,000 tons in 1955 of which the Lake Superior district provided about 79%. In the first half of 1956 iron ore output totalled 50,184,044 tons, 75% of which originated in the Lake Superior area. Of the shipments of iron ore, totalling 46,151,599 tons, 73% was from the Lake Superior area.

The \$190,000,000 taconite processing plant at Silver Bay, Minn., was dedicated in Oct. 1956. When operating at full speed it would supply huge tonnages of crude iron. Bulk samples of Lake Superior taconite were analyzed and classified by metallurgical type in 1955 by the U.S. bureau of mines. These studies were continued into 1956, since full utilization of this ore would require solutions of many complex and difficult processing problems. Taconite is an extremely hard iron ore found in both magnetic and nonmagnetic types. Facilities at magnetic taconite operations were being expanded steadily, eventually to provide 30,000,000 tons of iron ore agglomerates. Dock facilities at Taconite Harbor, Minn., progressed satisfactorily in 1956.

The U.S. bureau of mines announced in mid-1956 that it would speed research on iron. It planned to investigate iron ore deposits in the north-central-western states and conduct laboratory studies to develop methods of beneficiating low-grade ferrous materials in ten western states. Also, further research in beneficiating and agglomerating low-grade red ores and iron-bearing sandstones of southeastern U.S. was to be intensified.

Pig Iron.—World production of pig iron increased in 1955, as shown in Table III. Output in the United States rose to a new high in 1955 (see Table IV) and was 33% greater than in 1954. Nearly all pig iron produced locally is consumed in the U.S.—more than 75% in steelmaking. The leading states that consume most of the iron ore and pig iron for steelmaking are Pennsylvania, Ohio, Indiana and Illinois. Improved use of fuel at furnaces

lowered the ratio of coke to pig iron equivalent, leading to a saving of 2,900,000 tons of coke in 1955 (see COKE). An even higher output of pig iron was expected in 1956.

Steel.—Table V shows an increase in world production of steel in 1955, to which the United States contributed largely. Details of the U.S. situation are given in Table VI. India planned to increase its 1955 steel capacity of 1,750,000 long tons to 6,000,000 tons in the next few years.

In 1955 the steel industry in the United States reported an output that topped all previous high records. It was more than 34% higher than in 1954 and about 5% over the previous high of 1953.

Capacity for steelmaking in the U.S. increased from 128,360,000 tons in 1955 to 133,459,000 tons in 1956. The operating

Irrigation. **United States.**—Sufficiency of irrigation water supplies in the mountain and Pacific states varied widely during 1956. August inventories showed them ranging from normal or better in the Pacific northwest and in California north of the San Joaquin valley, to good in coastal and northern Rocky mountain areas, subnormal on the plains where summer rainfall was inadequate, and very low in the Colorado and Rio Grande basins. In the southwest generally, from Texas to Arizona, stored supplies were low and irrigators had to depend on pumping from wells. In May, ground water levels in key wells observed by the federal geological survey were at record or near-record lows in southern California, Arizona and New Mexico. Levels were below average in most of the south, southwest and midcontinent areas but above average in the northeast and well above average in the northwest. However, only in the far west and the southwest was a definitely continuing decline observed; in most other areas, the survey concluded, nature either had brought or was expected to bring the usable levels back to normal positions, notwithstanding increasing demands of irrigation and other users.

Preliminary reports of the 1954 federal census of agriculture, issued in 1956, disclosed the extent of the recent advances in irrigation, not only in the western states but also throughout the south and east (see Table). In the 17 mountain and Pacific states, the irrigated land in farms increased from 24,270,566 ac. in 1949 to 26,901,747 ac. in 1954, although the number of farms reporting irrigation declined from 281,476 to 279,625. In the three southern states where irrigation had long been practised extensively—Arkansas, Louisiana and Florida—irrigated acreage increased substantially, notably because of the expansion of the rice industry in the first two states and the orchard and trucking industries in Florida. Rice also had much to do with the acreage growth in Missouri and Mississippi, but in those states as in others, truck orchards and pastures relied increasingly on irrigation, mostly from wells, for moisture in critically dry periods. The over-all increase in number of irrigated farms in the 48 states was from 305,059 to 319,965; irrigated acres increased from 25,787,442 to 29,484,059. The leading state was California, with 7,048,792 ac. despite a decline in the number of irrigated farms; Texas was second, with 4,706,017 ac. and an increased number of farms.

Conditions favouring the expansion shown in the table continued in 1956, with the federal bureau of reclamation still the principal large-scale construction agency. In its 1956 fiscal year the bureau added facilities to serve 203,000 ac. with new or supplemental water supplies and provided 120,000 kw. of hydroelectric generating capacity in multipurpose dams. With these completions the agency increased by about \$145,000,000 its \$2,600,000,000 investment in western reclamation and became

IRON AND STEEL EXHIBIT opened in the Arts and Industries building of the Smithsonian Institution, Washington, D.C., in Jan. 1956. The exhibit was a gift of the Bethlehem Steel company

responsible for the over-all supervision of facilities capable of delivering water to about 7,500,000 ac., or more than one-fourth of the total irrigated area of the western states. Crops harvested on the projects in 1955 were valued at \$827,700,000. Plans for further expansion in fiscal 1957 were to be financed with \$144,255,000 of new funds and a carry-over of \$29,000,000. The bureau started construction of 11 new projects, including the comprehensive Colorado river storage enterprise, approval of which was granted after long consideration by congress. Completion of this, the largest reclamation project in point of dollar authorization (\$760,000,000) was expected to take several decades. Irrigation water for more than 366,000 ac., installed hydroelectric capacity of 1,000,000 kw., and other benefits were contemplated.

Construction of four storage units and 11 participating projects in Colorado, New Mexico, Utah and Wyoming was authorized, and feasibility investigations were ordered for 25 associated projects. Largest of the proposed storage units was Glen canyon dam and reservoir with capacity of 26,000,000 ac.-ft. The concrete dam would rise approximately 700 ft. above river bedrock about 13 mi. south of the Utah-Arizona boundary, where a power plant with installed capacity of 800,000 kw. would be built. Flaming gorge reservoir, on Green river in Utah, would have a storage capacity of almost 4,000,000 ac.-ft., created by a dam 600 ft. high. The power plant would have an installed capacity of 1,000 kw. The two other storage units, of smaller capacities, were to be built on San Juan river in New Mexico and Gunnison river in Colorado.

Acceleration of the irrigation expansion in eastern and south-

PLASTIC IRRIGATION PIPE easily rolled and carried to various parts of a field, a polyvinyl chloride hose weighing 58 lb. per 100 ft. developed by Trinity Products, Inc., in 1956. Regularly spaced tubes attached to the main pipe make possible irrigation of crops by rows

* Totals for 1949 do not include, for District of Columbia, two farms, 13 ac.

ern states continued. In July, a northeastern exploratory conference on water rights legislation, irrigation and small watershed development was called by the New York joint legislative committee on interstate co-operation. The conference was informed that about 70,000 New York farmers were using supplemental irrigation. In attendance were representatives from nine northeastern states. Of concern was the absence of legal safeguards for rights to water without which northeastern farmers were declared hesitant about investing further in irrigation systems. A more dependable right than that afforded by the common law was sought. Many other eastern and southern states were seeking similar legislative protection.

Mexico.—Final control of the lower Rio Grande was expected to be brought about by Anzalduas dam, construction of which was begun under supervision of the international boundary and water commission. Ultimate cost was estimated at \$5,000,000, to be met equally by Mexico and the United States. The site of the dam was 8 mi. south of McAllen, Tex., and downstream from the recently completed Falcón dam. Although the structure was planned for flood control primarily and United States interest was confined to that feature, the Mexican government intended to use it to firm up the diversion of water through Anzalduas canal, the principal artery of a government-built irrigation system designed to complete the agricultural development of 500,000 ac. around Matamoros. (See also DAMS; FLOODS AND FLOOD CONTROL; SOIL CONSERVATION.) (P. A. E.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Irrigation Farming* (1951).

Islam. The year 1956 saw the Moslem world starting off well in its efforts to raise its cultural standards but progress was considerably hindered by the general political unrest. Even so it became more and more conscious of the cultural affinities

that existed between its various component parts, and the radio and press were used extensively to emphasize their importance. In all Moslem countries efforts toward the yearly extinction of illiteracy by voluntary and official means figured prominently. This was particularly true of Jordan and the principality of Kuwait, which spent £7,000,000 on new schools in 1956 and had more than 12,000 scholars in its various schools. In Egypt, which built more than 500 primary schools during the year, it was stated by the minister of education that by 1962 there would be 4,000,000 scholars studying in primary schools. The new University of Assuit, which could not start its academic career in 1955, began to function in 1956.

The period under review gained in importance as a result of the independence of Tunisia and Morocco, where the educational institutes hitherto controlled by the French came under the control of their own nationals. Cultural activities also were stimulated by visits between the heads of some of the Moslem states. The president of the Islamic republic of Pakistan and the king of Iraq visited Turkey; the shah of Iran and the king of Saudi Arabia went on state visits to India and the president of Pakistan visited Afghanistan. Some Moslem countries sent delegations on tours to non-Moslem countries to establish cultural contacts. Turkey, for instance, sent a delegation in October to Latin-American countries where it had no permanent cultural representation.

In February Pakistan convened a conference of its envoys to the middle east. The conference expressed the view that the happy relations existing with the countries of the middle east should be further strengthened by increased commercial and cultural exchanges. The government of Pakistan offered middle eastern countries facilities for the training of their students in Pakistan's educational institutions. The sixth session of the Pakistan History conference held in Karachi in January called upon the Pakistan Historical society to rewrite the history of the period of Moslem supremacy in the subcontinent of India.

A cultural conference of the Arab league countries held its session in February for the first time on the soil of Saudi Arabia under the chairmanship of one of the foremost littérateurs of the Arab world, Taha Husain. A conference of the Arab Men of Letters met in September at Damascus, Syr., to discuss ways and means of keeping the Arabs informed of the new cultural movements in various parts of the Arab world, and the cultural section of the Arab league announced that it would offer prizes for the best books dealing with the problems of regenerating the Arab cultural heritage. The league also decided to open cultural institutions in São Paulo, Braz., Buenos Aires, Arg., Boston, Mass., and Djakarta, Indon., where there were large Arabic-speaking colonies, and a conference of Arab states consisting of the representatives of Jordan, Syria, Iraq, Tunis and Kuwait met in August to co-ordinate the problems affecting the historical monuments in those countries.

(A. Md.)

Isle of Man: see GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

Israel. A republic, proclaimed on May 14, 1948, Israel is bounded north by Lebanon, east by Syria and Jordan, south by Egypt and west by the Mediterranean. Area: 7,984 sq.mi. Pop.: (Nov. 1948 census) 782,000, including 716,678 Jews; (1956 est.) 1,827,000, including about 1,592,000 Jews. Religion: mainly Jewish but in 1953 there were 127,000 Moslems, 18,000 Druses and 41,000 Christians. Chief towns (pop., 1953 est.): Jerusalem (cap., Israeli part only) 143,500; Jaffa-Tel Aviv 354,500; Haifa 153,500. President of the republic in 1956, Isaac Ben-Zvi; prime minister, David Ben-Gurion.

History.—The year 1956 was dominated by the impact of

world events on Israel. It began with the repercussions to the pronouncement made at the supreme soviet in Moscow on Dec. 29, 1955, by N. S. Khrushchev, the first secretary of the Communist Party of the Soviet Union. "From the first days of its existence the state of Israel has taken a hostile and threatening position towards its neighbours," he said. This new Soviet policy toward Israel was welcomed on New Year's day by the spokesman of the Arab league in Cairo. He told a correspondent that "the Arabs now know that they can count on Russia's moral and material support in their dispute with Israel. The Arabs need no longer forego the opportunity of making use of such support."

It was against this background that the *knesset* met on Jan. 2. David Ben-Gurion, the premier, outlined the government's attitude. He said: "We shall be answerable to our conscience if we do not see with open eyes the danger of attack which is fast approaching from Egypt." The cabinet, he insisted, was strongly opposed to a preventive war. "We prefer peace even to victory in war," he concluded. But in the weeks that followed the emphasis remained more on war than on peace. There was a recurrence of incidents on the Egyptian border. On Jan. 15 King Hussein of Jordan said in a broadcast to the nation that the Arab legion would "soon reconquer Palestine."

However, events outside the country impinged on the apparent drift to war. On Jan. 19 the United Nations Security council by a unanimous vote of its 11 members condemned Israel in strong terms for the retaliatory raid against Syrian positions in which about 50 Syrians were killed and 29 taken prisoner. The Soviet delegate, Arkady Sobolev, had made it clear that the Soviet Union would support a Syrian move to have Israel expelled from the United Nations. But five days later, Dag Hammarskjöld, the UN secretary-general, paid his first visit to Israel. He stayed for 39 hours, had talks with the premier and with Moshe Sharett, the foreign minister, before leaving for an equally brief visit to Cairo.

There later came a momentary relaxation in the drift to war when Ben-Gurion announced that Israel would not proceed for the time being with the project of diverting the Jordan river waters in the demilitarized zone between Israel and Syria. But the relief was only temporary. On Feb. 28 the Israeli ambassador in Washington called on Secretary of State John Foster Dulles for a definite answer to the request for arms from the United States. He did not get it, but the U.S. government did agree to France's selling 12 Mystère jet fighters to Israel.

There followed a period of uncertainty, heightened by the public differences between London and Washington on middle east policy and especially on the evaluation of Col. Gamal Abdel Nasser. On April 5 an Israeli patrol was attacked near the settlement of Kissufim and an artillery duel started. That night Israeli forces shelled Gaza in retaliation.

A new factor of uncertainty developed as it became known that strong personal differences had arisen between the Israeli premier and the foreign minister. On June 4 the Security council passed a British-sponsored resolution from which the desirability of a "mutually agreed solution" to the Palestine problem had been deleted. There was a widespread reaction to this UN step. It was felt that the Sharett policy of moderation had produced no dividends. Two weeks later, on June 17, Sharett formally resigned after having been foreign minister for eight years since May 14, 1948. He was succeeded by Mrs. Golda Myerson, who subsequently changed her name to Meyer or Meir.

Domestic preoccupations continued awhile but by the second week of July there was renewed tension on the Jordan border after a number of incidents. The following week Hammarskjöld paid a second unexpected visit. He spent seven hours alone with Ben-Gurion before going to Cairo. But any hopes of calmer conditions were cancelled out by the Egyptian nationalization of

the Suez canal on July 26. Israel kept itself aloof from the conflict, except for insisting on its right of passage.

During September the question of border security again became acute. Within three days there were three major incidents which resulted in 6 Israeli dead and 20 wounded. Israel now began a series of retaliatory actions against fortified Jordan police posts in the area of the incidents. These culminated on Oct. 10 in an attack on the village and police post of Kalkiliya (Qalqilya); 13 Jordanians and 18 Israelis were killed. Thereupon Jordan appealed to Iraq under the 1947 treaty to send troops into Jordan, but Israel warned it would take such a move by the Iraqis as *casus belli*. Thereupon the British government informed Israel that under these circumstances Great Britain would come to the aid of its ally, Jordan. The night of Oct. 15 was decisive. On the following day the Iraqis announced that they would not enter Jordan.

Also on Oct. 16 Ben-Gurion warned members of the *knesset* that the principal danger was Egypt, not Jordan or Iraq. But at the same time the principal envoys of Israel met in Jerusalem to discuss Israel's position. On Oct. 26 it became evident that Israel had started to mobilize its reserves, and Pres. Dwight D. Eisenhower appealed to Ben-Gurion to take no forcible action.

On Oct. 29 the first Israeli units crossed into the Sinai peninsula at Elath, while three other forces moved on the main Egyptian concentrations at Rafa and Abu Ageila in the north. Three main engagements were fought at Kusseima, Rafa and Abu Ageila, and a fourth of a different kind was fought by an Israeli parachute battalion which had been dropped on the road to Mailia. Israeli army headquarters later announced that all Egyptians in the peninsula had laid down their arms by the morning of Nov. 5. The entire peninsula except for a ten-mile Jordan along the canal had been occupied, as well as the whole of the Gaza strip. (See also SUEZ CANAL CONFLICT.)

On Nov. 7 Ben-Gurion told the *knesset* that Israel would stay out of Sinai and in Gaza until a satisfactory settlement had been reached, but in a dramatic midnight broadcast the following day, he told the nation that all Israeli troops would be withdrawn from Sinai. The future of Gaza he left still open.

Home Front.—The domestic situation developed mainly in the shadow of foreign affairs. Development and new building were devoted to essentials, as the demands of the armed forces increased. Inflationary pressure continued despite severe financial measures against credit expansion; exports remained low and imports were materially reduced. The adverse balance of payments was covered again by income from German reparations and from institutional funds. The hopes of extensive oil fields were not fulfilled though it was hoped that sufficient oil had been tapped to supply Israel with a quarter of its oil requirements. Between May 1955 and May 1956 a total of 42,888 immigrants arrived, while 6,646 Jews left the country. In 1954-55, 23,670 persons emigrated.

(See also RELIGIOUS EDUCATION; UNITED NATIONS.) (J. K.)

Education.—Schools (1954-55): primary 929, pupils 232,205, teachers 1,000; secondary 79, pupils 22,400, teachers 1,250; vocational and agricultural (1953-54) 69, pupils 8,229, teachers 1,028; teacher training colleges 24, students 3,394, teachers 420. Institutions of higher education (1955-56) students 6,500.

Finance and Banking.—Monetary unit: Israeli pound, divided into 1,000 mils with a principal exchange rate of IL 1.80 to the U.S. dollar (other rate, IL 1.50 = U.S. \$1). Budget (1955-56 actual): revenue IL 775,000,000, expenditure IL 778,200,000; (1956-57 est.) balanced at IL 775,000,000; additional receipts for defense fund under Defence Tax law (est.) IL 54,000,000-55,000,000. Currency circulation (Jan. 1955) IL 1,500,000,000, (Jan. 1956) IL 1,777,100,000. Deposit money (Jan. 1955) IL 1,800,000,000, (Jan. 1956) IL 2,240,000,000. Gold and foreign exchange (Jan. 1955) U.S. \$69,000,000, (Jan. 1956) U.S. \$80,500,000.

Foreign Trade.—(1955) Valued at U.S. dollar 0.56 = 1 Israeli pound. Exports IL 585,970,000; imports IL 1,538,690,000. Main sources of imports: U.S. and Canada 30%; U.K. 10%; continental E.P.U. (European Economic Union countries) 36% (mainly Turkey, Finland). Main destinations of exports: U.K. 19%; U.S. and Canada 20%; continental E.P.U. 36%. Main exports: citrus fruits 36%; industrial diamonds 23%.

Transport and Communications.—Motor vehicles in use (1954): passenger

16,085, commercial (including buses) 20,669. Railways (1955): 400 km.; passenger-km. (1954) 200,000,000; freight ton-km. (1955) 140,400,000. Shipping: merchant vessels of 100 gross tons and over (July 1955) 38; total tonnage 122,235. Air transport (1955): passenger-km. 141,432,000; freight ton-km. 3,528,000. Telephones (Jan. 1955) 57,178. Radio receiving sets (1954) 234,274.

Agriculture.—Cereal production (metric tons, 1953-54): wheat 34,000; barley 89,000; oats 13,260. Miscellaneous production (metric tons, 1955; 1954 in parentheses): olives 4,000 (22,000); bananas 17,000 (11,000); (1955): wines 3,843 kl.; figs 6,000; (1954): olive oil 4,000; peanuts 16,660; oranges and tangerines 395,000; grapefruit 62,000; lemons, limes, etc. 13,000. Livestock (1954-55): cattle 79,167; sheep 98,000; goats (1954) 47,000; chickens (1954) 3,659,000. Fish landings (1955) 9,002 metric tons (of which 5,606 metric tons for breeding).

Industry.—Production (metric tons, 1955): salt 20,290; superphosphates 101,309; cement 663,000; electricity 1,258,000,000 kw.hr. Index of production (Dec. 1955; 1954 = 100) 107. New buildings completed (1955) 1,786,800 sq.m. ground area; industrial diamonds (exports, value 1954) IL 5,607,000.

ENCYCLOPEDIA BRITANNICA FILMS.—*Israel* (1955); *Jerusalem—The Holy City* (1951); *Major Religions of the World* (Development and Rituals) (1954); *Planning Our Foreign Policy* (Problems of the Middle East) (1955).

Italian Literature. One of the most striking aspects of post-World War II Italian culture is the literature of protest. Mindful of the moral experiences undergone during the Fascist dictatorship and the war, young writers in particular have felt an impelling need to establish a concrete relationship between culture and labour, to penetrate into and become part of the primitive world of the peasant, to be man and brother among men and brothers in order to become the voice of the underprivileged multitude who have neither the means nor the time to express themselves. And this with the purpose of correcting the squandering of wealth on the one hand and the horrors of poverty on the other, in the firm belief that without the democratic progress of the have-nots there can be no real democratic progress of the nation as a whole.

Following the early trends established by Ignazio Silone, Elio Vittorini and Carlo Levi, writers turned more and more for subject matter to the Italian south with its teeming contemporary humanity still living under primordial conditions.

Ten of the 25 books awarded literary prizes in 1956 dealt with the south and of these 9 were written by southerners. The most conspicuous contribution, E. Vittorini's *Erica e i suoi fratelli. La Garibaldina* (Bompiani), consisted of two short novels composed at a 14-year interval and offering a two-dimensional aspect of his art. The first tells of the moral sacrifice of an abandoned 15-year-old girl for her younger brothers, and the second reports the eventful train conversation in Sicily between a belligerent old "baroness" and a soldier on leave who both develop into symbolic and legendary figures. In *Le parole sono pietre* (Viareggio prize, Einaudi) Carlo Levi gave pictorial and poetical substance to the plight of the population of a Sicilian district terrorized by the mafia while government authorities look with olympian indifference upon hunger, wretchedness and crime. L. Rèpaci won the newly-instituted Crotona prize for a social novel (*Un riccone torna alla sua terra*, Ceschina) which lays bare some of the endemic, unsolved problems that plague the people of Calabria. In a humorous and mordant chronicle of a typical Sicilian provincial town (*Le parrocchie di Regalpetra*, Crotona prize, Laterza), L. Sciascia reveals what a far cry are its civic life and mores from the world of justice, freedom and human reason to which all aspire. S. Strati, a former self-educated Calabrian mason who, with the financial help of an American uncle, became a school teacher, made his literary début with *La Marchesina* (Villa San Giovanni prize, Mondadori), a vigorous and spontaneous picture of the primitive living conditions of his home town stagnating on the margin of national life. Two amusing and dramatic tableaux of the precarious existence of the white-collar class with its privations, pretensions, ambitions and office gossip and politics were storied by C. Montella (*Incendio al catasto*, Vallecchi) and N. Palumbo (*L'impiegato d'imposte*, Deledda prize, Mondadori). The most striking liter-

ary, psycho-sociological monographs on the harsh realities of the southern way of life were *Il cafone all'inferno* (Laterza) by the humanist T. Fiore, which deals with conditions in Apulia, and *Banditi a Partinico* (Laterza), a well-documented first-hand report on the inconceivable poverty, squalor and backwardness of one of Sicily's worst sore spots, by D. Dolci.

The same genuine and deep-seated interest in the lot of those living "on the wrong side of the track" prompted another group of writers to turn for inspiration to other sections of Italy. S. Giannini exposes the trials and tribulations which stalk the plain folk of the Po valley in *Prati di fieno* (Firenze prize, Mondadori), and the problems of the Carrara marble quarriers in *La valle bianca* (Hemingway prize, Mondadori); while L. Bianciardi and C. Cassola in *I minatori della Maremma* (Laterza) probed into the past and present social conditions of the miners in the rapidly developing industrial sections of southern Tuscany. In five dramatic and facetious stories, all of them set in his native Ferrara (*Cinque storie ferraresi*, Strega prize, Einaudi), G. Bassani skilfully linked the individual story of each character with national political events of the last half-century. E. Pea in *Peccati in piazza* (Napoli prize, Sansoni), set forth the absorbing if harrowing experiences of a young Tuscan woman living in an egotistic and narrow-minded milieu who, through sin, finds her own redemption. Focusing not on a primitive southern Italian village but on Rome, capital of Italy and centre of the Roman Catholic church, as her field of investigation, A. Garofalo, in her thought-provoking *Cittadini si e no* (Nuova Italia) gives a fair-minded and accurate appraisal of the staggering major social problems facing Italy today.

A considerable number of major and minor writers concerned themselves with higher and more restricted aspects of modern life. G. Manzini orchestrated on a theme of life and death her romantic, "crepuscolare" love story whose real protagonist is the racking cough, "la sparviera" which, hawklike, preys upon the existence of a tubercular young artist (*La sparviera*, Viareggio prize, Mondadori). A. de Céspedes turned out, if not her best, her most significant novel (*Prima e dopo*, Mondadori) which presents a solution to the dilemma of home or career with its freedom from family bonds and promise of happiness in the world of art, on which were impaled the women characters of her earlier novels. The anguish of the humble as they endeavour to understand the true reasons behind man's actions was the subject of a profound novel (*Il testimone*, Massimo, Milano) by M. Pomilio.

Ten lively and urban stories by N. Tucci based on his personal Italian and American experiences (*Il segreto*, Garzanti) were awarded the Viareggio prize for first works. *Minuetto all'Inferno* (Einaudi) by E. Zolla, a bizarre satirical and allegorical novel which strikes a note against so-called "absolute principles" and "eternal values," also won the first-work Strega prize. A witty and wry commentary on prevailing contemporary life and customs, particularly those of café society gravitating on Via Veneto, was contributed by E. Flaiano in *Diario Notturno* (Bompiani), a collection of ironic, well-limned essays, reflections, anecdotes, *tranches-de-vie* and profiles.

The field of poetry yielded a rich harvest. E. Montale took the Marzotto prize for *La bufera e altro* (Neri Pozza), a collection of austere, grieving poems of consummate metric and rhythmic skill, allusive and elusive in nature, re-evocations of past, present and future swathed in an atmosphere of reality and unreality. L. Sinisgalli, scientist and poet of the hermetic school, in *La vigna vecchia* (Mondadori) transforms his family into household gods and his native Lucania into a legendary land. G. Sbarbaro collected his early poems (*Rimanenze*, Pesce d'Oro, Milano) motivated by an unswerving conviction that life is poverty and sorrow comforted only by bits and splinters of hopes

past. G. Noventa's *Versi e poesie* (Comunità), poems in Venetian dialect in a political and philosophical vein inspired by the contemporary scene, were granted the Viareggio prize. The Salento award went to the philosopher, A. Capitini, for his unconventional lyrics, *Canto corale* (Pacini Mariotti, Pisa) animated by a profound universal religious feeling.

One of the editorial feats of the year was the publication by Laterza of the first two volumes of Benedetto Croce's history of Italian literature (*La letteratura italiana*) edited by Mario Sansone, which consists of a careful selection of Croce's literary and historical essays on each literary period and figure of importance. (M. F. C.)

Italy. A republic of southern Europe, Italy is bounded on land northwest by France, north by Switzerland and Austria and northeast by Yugoslavia. The country includes the whole of the Apennine peninsula, the large Mediterranean islands of Sicily and Sardinia and a number of smaller islands. Area: 116,294 sq.mi. Pop.: (1951 census) 47,218,534; (1956 est.) 48,951,000. Language: mainly Italian, but in Venezia Tridentina there were about 210,000 German-speaking Tyrolese and about 10,000 speaking Rhaeto-Romance dialects; in the area east of Udine there were about 11,200 Slovenes and the population of Val d'Aosta (about 6,600) was French-speaking. Religion: mainly Roman Catholic (99.6%). Chief towns (pop., 1951 census): Rome (cap.) 1,555,773; Milan 1,260,609; Naples 887,327; Turin 717,245; Genoa 648,078; Palermo 434,502; Florence 342,300; Bologna 316,074; Venice 174,632; Catania 294,199; Bari 250,189; Messina 168,497; 13 towns with a pop. of from 100,000 to 200,000. President in 1956, Giovanni Gronchi; prime minister, Antonio Segni.

History.—The political history of Italy during 1956 was dominated by the problem of Pietro Nenni, the leader of that branch of the Italian Socialist party which had remained in alliance with the Communists. On May 27 both provincial and communal elections were held all over Italy according to a changed elec-

"THE BUDDIES," a bronze monument erected as a memorial to U.S. servicemen who fought at Anzio, It., during World War II. The monument is located in the centre of a cemetery, inaugurated in 1956, in which more than 7,000 U.S. servicemen are buried

oral law which abolished the system by which groups of parties had gained extra seats on administrative bodies if they were supported by more than 50% of the voters. This bonus plan, although more practical than strict proportional representation, had outraged the Italian sense of justice. Hence proportional representation was restored for the communes of more than 10,000 inhabitants, while for the smaller ones the straight majority system was adopted. At the same time, and by agreement with the smaller parties within the government coalition, the same principles were established for the next general election to be held in 1958, the senate finally passing the necessary law on May 8.

The changed system of voting made the local elections on May 27 more indeterminate than usual. In the provincial elections, approximately 9,300,000 votes went to the Christian Democrats and 8,300,000 to the Communists and the followers of Nenni; about 3,000,000 votes went to the moderate secular parties and 2,600,000 to the Monarchists and neo-Fascists on the right. The Communists lost ground and Nenni gained it; at the same time the Social Democratic followers of Giuseppe Saragat, the deputy premier, and even the conservative Liberal party, made gains, while the extreme right did poorly.

When it came to the setting up of the new municipal administrations a stalemate threatened in nearly all the major towns except Naples where the local shipowner, Achille Lauro, gained an absolute majority for his dissident Monarchist party. Elsewhere it was not until late in the summer that the mayors and city councils could be finally established. In Milan, for instance, Virgilio Ferrari, a Social Democrat, was elected mayor with support from the extreme left; pressure from the right then drove him to resign but he was reinstated early in September. Similarly

Rome the left objected to the new mayor, Umberto Tupini, a Christian Democrat, because he depended upon the support of the extreme right, but after lengthy disputes he too was accepted. In spite of much talk of superimposing administrators nominated by the central government recourse was had to this expedient only in a few smaller communes.

With the Communists, in the shadow of de-Stalinization, declining and both brands of Socialists gaining, the pressure in favour of the reunion of the Socialists strengthened. There was much talk about bringing Nenni back into the democratic fold. The Christian Democratic leaders felt very much concerned. On the one hand the party secretary, Amintore Fanfani, who stood for ending the coalition and trying to govern with a purely Christian Democratic cabinet, disliked the more dangerous competition promised from a reunited Socialist party. On the other hand Guido Gonella, whose views were more conservative, was in favour not only of Socialist reunion but also of Christian Democratic collaboration with Nenni-cum-Saragat because he believed that the extreme left might otherwise prove irresistible in the long run. Even so late as October, when the Christian Democratic party congress was held at Trento, at a time when the U.S.S.R. was in retreat in Poland and for the moment in Hungary, Fanfani and Gonella still disputed along these lines.

After all kinds of feelers had been tried, Nenni and Saragat met to discuss their problem at Pralognan in Savoy on Aug. 26. The chief stumbling block was Nenni's traditional alliance with the Communist leader, Palmiro Togliatti, which he at one moment seemed ready to sacrifice only at the next to announce that his links with the Communist party could never be broken. It was observed that the Communist trade union leader, Giuseppe Vittorio, seemed to favour Socialist reunion at his own party's expense. With the re-emergence of Wladyslaw Gomulka in Poland and with the popular uprising in Hungary in October, Nenni's reaction of approval was found to be directly opposed to Togliatti's pro-Soviet sympathies, but, in condemning the

POLITICAL POKE delivered during a heated session of the Rome, It., city council in 1956 as Umberto Tupini was elected mayor of Rome

Anglo-French attack on Egypt, Togliatti, Nenni and Saragat were all in agreement. In November Togliatti's approval of the Russian occupation of Hungary once again divided his party from that of Nenni.

Economic Position.—Economically the discomfiture of the Communists became increasingly evident as the year passed. The index of industrial production rose from less than 200 (1938 = 100) in 1955 to 207 for the first eight months of 1956. This fact, together with a modest but perceptible rise in the standard of living, combined with the news from the U.S.S.R. to loosen the Communist hold. On Jan. 11, after a long period of dispute, all state employees (about 1,200,000 persons) were promised an increase in their pay; in June it was reckoned that the cost of living had risen by 4.6% as compared with June 1955, but the pay of state employees was up by 6%, that of industrial workers by 6.9%, that of transport workers by 7.1% and of agricultural workers by 5.2%.

On Feb. 2 the large typewriter manufacturer Olivetti of Ivrea offered to reduce hours of work without reducing pay. By the time this promise came into operation in May Fiat had offered the same thing to its employees; after negotiations with the factory committees an agreement was signed on May 22 according to which, from June 4, all Fiat workers were to work two hours less every week for the same pay. In October all the E.N.I. (Ente Nazionale Idrocarburi) factories made even bigger concessions, reducing their hours of work from 48 to 44 hours per week.

It was not surprising in the circumstances that in the elections to the Fiat works committees in March the votes for the Communist-dominated Confederation of Labour fell from 36.7% of the whole to 28.8%; at the same time the vote for the Catholic trade union representatives increased from 40.5% to 47.2% and that for the anti-Communist Socialists from 22.5% to 23.7%. The relatively prosperous Fiat workers had been deserting the Communist leaders for some time, but the Christian and other trade unions increased their support in other factories throughout the year; their representatives were in a stronger position to negotiate with the employers, and this fact, in conjunction with rising production, accounted for the improvement

in working conditions.

In spite of a seasonal improvement in the summer the solid body of 2,000,000 unemployed still remained, but there was a more serious feeling than before that this need not always be so. Although the minister of the budget, Ezio Vanoni, collapsed and died on Feb. 16, the Segni government determined to carry out his ten-year plan. A ministerial committee was set up for this purpose toward the end of July; it consisted of Saragat and the ministers of the treasury, of industry and trade, agriculture, labour and the minister for the south. Vanoni had allowed for an annual increase of 5% in the gross national product, but already in 1955 this increase had reached 7.2% and it rose still further during 1956.

Vanoni's plan was based above all upon the development of southern Italy. By the summer of 1956 the progress made in the "crusade" for the south was outstanding, for instance, in the irrigation and settlement at Metaponto in Lucania, and also in Sicily and Sardinia. The government decided to prolong the life of the Cassa per il Mezzogiorno, the organization through which the south was aided, for a further three years to 1966, and an additional 590,000,000,000 lire were voted for the purpose. The whole position encouraged the International Bank for Reconstruction and Development to agree on Oct. 11 to another loan of \$7,462,800 for the development of southern Italy, making a total of more than \$160,000,000 which had been lent to Italy for this purpose. During 1956 the Italian economy was appreciably helped by a state Swiss loan to the Italian railways on condition that certain improvements should be carried out, and by considerable private borrowing on the Swiss money market. On July 15 it was announced that an Italian group called Impresit, which was backed by Fiat, Falk and other big Italian firms, had obtained the contract to erect the new dam at Kariba in Rhodesia; the value of this contract was estimated at about 60,000,000,000 lire. It proved possible also to increase the export of Italian labour.

The production of methane gas continued to expand; on the other hand the history of Italian oil production during 1956 was unsatisfactory. Pending legislation on the distribution of profits the oil wells were not exploited, and during the summer those discovered in 1955 in the Abruzzi dried up. At last on July 12 the chamber of deputies agreed to a new bill which, while reducing the 60% share which had been intended for the state and its protégé, the E.N.I., still preserved unusual advantages for them both. Until such time as the senate should ratify this bill, the minister for industry and trade, Guido Cortese, issued provisional permits for those who wished to exploit oil wells or prospect for them. Foreign companies remained discontented with this state of affairs on the Italian mainland, whereas Sicilian law provided the Gulf Oil corporation with the facilities normally offered to foreigners; indeed the corporation hoped to bring its production of oil in Sicily up to a level of 800,000 tons a year by the end of 1956. Meanwhile Italian imports of oil and coal continued to increase.

Foreign Policy.—Good relations between Italy and the United States were emphasized by the visit paid by the president of the republic, Giovanni Gronchi, to North America, from Feb. 27 to March 15. From Feb. 6 to 10 the prime minister, Antonio Segni, and foreign minister, Gaetano Martino, visited Bonn, Ger., and the visit was returned by the leaders of the German Federal Republic from July 1 to 6; among the questions discussed was that of stimulating the flow of Italian labour to western Germany.

When Pres. Gamal Abdel Nasser of Egypt repudiated international control of the Suez canal at the end of July, Italy, ranked fourth among the users of the canal in 1955, felt greatly concerned; 90% of Italy's oil imports had come from the middle

east. Since the Italians hoped to maintain friendly relations with the Arab world they behaved with caution, even contemplating some kind of mediation. Toward the end of September their policy was bitterly attacked by the French because they had paid canal dues to Egypt. Later, and particularly after the Anglo-French attack upon Egypt, Italy followed the policy of the United States.

(E. W.)

Education.—Schools (1953-54): primary 41,119, pupils 4,554,422, teachers 176,687; secondary (intermediate) 2,293, pupils 456,513, teachers 38,122; secondary (higher classical and scientific) 982, pupils 172,166, teachers 15,684; vocational 1,971, pupils 440,350, teachers 39,229; teachers training 503, students 100,362. Institutions of higher education (1954-55) (including fine arts and music schools), of which 28 were universities; students 211,100.

Finance and Banking.—Monetary unit: lira (pl. lire), with an exchange rate of 625 lire to the U.S. dollar. Budget: (1955-56 actual) revenue 2,751,537,000,000 lire; expenditure 2,900,880,000,000 lire; (1956-57 est.) revenue 2,671,000,000,000 lire; expenditure 2,990,900,000,000 lire. Public debt (Jan. 1956) 4,499,882,000,000 lire. Currency circulation (Dec. 1954) 1,507,000,000,000 lire, (Dec. 1955) 1,632,000,000,000 lire. Deposit money (Dec. 1954) 2,529,000,000,000 lire, (Dec. 1955) 2,818,000,000,000 lire. Gold and foreign exchange (Dec. 1954) U.S. \$1,041,000,000, (Dec. 1955) U.S. \$1,237,000,000.

Foreign Trade.—(1955) Imports 1,691,164,000,000 lire; exports 1,160,668,000,000 lire. Main sources of imports: continental E.P.U. (European Payments union countries) 38%; U.S. and Canada 16%; U.K. 5%; other sterling area 19%; Latin America 7%. Main destinations of exports: continental E.P.U. 44%; Latin America 10%; U.S. and Canada 9%; U.K. 7%; other sterling area 8%.

Transport and Communications.—Roads (1954) 171,202 km. Motor vehicles in use (1954): passenger 744,299, commercial 329,588. State railways (1954) 16,966 km.; passenger-km. (1955) 22,636,000,000; freight, ton-km. (1955) 14,568,000,000. Shipping: merchant vessels, 100 gross tons and over (July 1955) 1,149; total tonnage 3,910,658. Air transport (1955): 369,132,000 passenger-km.; freight, 8,388,000 ton-km. Telephones (Jan. 1955) 2,036,788. Licensed radio sets (1954) 5,536,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 9,505,000 (7,251,000); maize 3,194,000 (2,954,000); barley 292,000 (278,000); oats 528,000 (546,000); rye 125,000 (115,000); potatoes 3,398,000 (3,183,000); rice 859,000 (859,000); broad beans 464,000 (534,000); dry beans 144,000 (163,000); tomatoes 1,350,000 (1,534,000); tobacco 58,000 (66,000); olives 1,170,000 (1,720,000); citrus fruit 964,000 (1,005,900); grapes 8,000,000 (8,027,400); hemp 34,100 (41,800); figs 274,000 (335,600); beef 339,600; pork 200,400; lamb (1954) 45,000; cheese 348,000; beet sugar, raw 1,111,000; olive oil (mechanically processed) 180,000; wine (1955 est.) 50,000,000 hl. Livestock (1954): cattle 9,032,600; sheep 9,746,400; pigs 3,744,800; goats 1,797,500; horses 669,300; mules 401,900; asses 724,100.

Industry.—Fuel and power (metric tons, 1955): coal 1,135,200; lignite 416,400; crude oil 204,720; gas (natural) 3,624,000 cu.m., (manufactured) 2,136,000,000 cu.m.; electricity 37,260,000,000 kw.hr. Production (metric tons, 1955): iron ore (50% metal content) 1,382,400; pig iron 1,734,000; crude steel 5,400,000; zinc, smelter 41,760; lead, smelter 41,760; aluminum, smelter 61,440; cement 10,584,000; cotton yarn 147,600; rayon filament yarn 64,200; rayon staple fibre 66,960; nitrogenous fertilizers (1954-55) 311,200; sulphuric acid (1954) 2,936,211; shoes and slippers (1954) 33,465,000 pairs; passenger cars (units 1955) 230,880; commercial vehicles (units 1955) 38,520. Merchant vessels launched (100 gross tons and over, 1955) 167,200 gross tons. New dwelling units completed (1954) 177,432. Unemployment (1955) 9.8%; (1954) 10.0%.

ENCYCLOPÆDIA BRITANNICA FILMS.—Italy (1955); Italy—Peninsula of Contrasts (1952); Pompeii and Vesuvius (1951); Rome — City Eternal (1951); Venice — Queen City of the Adriatic (1951).

Ivory Coast: see FRENCH UNION; FRENCH WEST AFRICA.

Jamaica. Jamaica is a British colony in the Caribbean. Dependencies: Cayman Islands (93 sq.mi., pop., 1955 est., 8,052) and Turks and Caicos Islands (202 sq.mi., pop., 1955 est., 6,315); also Pedro and Morant Cays (2 sq.mi.). Area (colony): 4,411 sq.mi. Pop.: (1943 census) 1,237,063 (77% Negro, 18% mixed, less than 2% white); (mid-1955 est.) 1,550,000. Language: English. Religion: Christian. Chief towns (pop., 1943 census): Kingston (cap.) 109,056 (1955 est., 145,418); Spanish Town 12,007 (1953 est., 12,300); Montego Bay 11,547 (1953 est., 12,000). Governor in 1956, Sir Hugh Foot; chief minister, Norman Manley. Commissioners: A. M. Gerrard (Caymans), E. G. Lewis (Turks).

History.—The most important event of 1956 was the decision that Jamaica would join the British Caribbean federation. The federal capital site commissioners visited Jamaica in August and on Sept. 2 N. W. Manley, chief minister, was elected president of a newly formed Caribbean Federal Labour party. By a minor change in the constitution the official nominated mem-

rs of the legislative council were replaced by unofficial nominees, and a new constitution before the end of the year wasreshadowed by the governor. A bill to raise a £10,000,000 loan for development was passed in August.

Bauxite companies announced plans for extension, running to many millions of pounds, while in agriculture the prospect for sugar was eased by the selling of accumulated surpluses. Banana exports for the year were expected to exceed 12,000,000 lbs. Coffee exports for 1955 constituted a record, and £294,750 was allocated from the Colonial Development and Welfare fund for the expansion of the cocoa industry.

A start was made in building a new hotel near St. Ann's bay and the oldest and best-known hotel, the Casa Blanca in Montego Bay, was transferred to U.S. ownership. Outward migration to the United Kingdom continued, and bills to control travel and employment agencies were passed. (H. D. Hs.)

Education.—*Colony* (1955): Schools, public primary 704, pupils 225,000, teachers 4,400; secondary 28, pupils 8,645, teachers 488; vocational 7, pupils 1,655, teachers 71; teacher-training colleges 4, pupils 355, teachers 11. *University college of the West Indies*, students 453, teaching staff 111. *Dependencies* (1954): Schools, primary 25, pupils 1,900; private second-

Finance and Trade.—Monetary unit: pound sterling (with local notes). *Assets: Colony* (1954-55): revenue £17,096,245, expenditure £16,866,411. *Dependencies* (1954-55): Cayman, revenue £92,428, expenditure £64,711; Turks and Caicos Islands (1954-55 revised), revenue £84,857, expenditure £89,279. Foreign trade (*colony*, 1955): imports £45,700,000; exports £34,300,000. Principal exports: (*colony*), sugar, bananas, rum, coffee, copra, cocoa, pimento, citrus fruits, ginger, bauxite, alumina; (*dependencies*), turtles, rope, salt, conchs, crawfish. Principal imports: food, ink, tobacco, cotton. Production: (1955) sugar 396,550 metric tons; bananas 13,550,000 stems; rum 1,507,400 gal.

Japan. A constitutional monarchy in the northwestern Pacific, Japan is made up of four main islands, Hokkaido, Honshu, Kyushu and Shikoku, with minor adjacent islands (total area, 142,801 sq.mi.; pop., 1950 census, 83,199,637). Population reached an estimated total of 90,017,000 on July 1, 1956. Six largest cities contain 15.9% of the total population (pop., 1950 census, 1956 est. in parentheses): Tokyo, 5,385,071 (urban areas, 6,966,499); Osaka, 1,956,136 (2,547,321); Nagoya, 1,330,635 (1,336,779); Kyotō, 1,101,854 (1,204,017); Yokohama, 951,189 (1,143,287); Kobe, 765,435 (979,290). Principal religions: Buddhism; Shinto. Emperor: Hirohito. Prime minister: 1956: Ichiro Hatoyama until Dec. 20; thereafter Tanzan Ishibashi.

History.—*Foreign Affairs.*—The year 1956 saw the Hatoyama government, spurred by rising strength of opposition parties, striving for greater freedom of action within the framework of Japan's alliance with the U.S. and the free world. The presence even a decreasing number of U.S. forces continued to cause dissatisfaction, to give rise to popular demonstrations, to hamper U.S.-Japanese co-operation and to serve as an obstacle to the Japanese rearmament prerequisite to the withdrawal of U.S. troops. The most serious issue during 1956 concerned continued U.S. requisition for U.S. forces in Okinawa, which was under U.S. occupation. The total amount of land already requisitioned in Okinawa amounted to 42,000 ac., or 12% of the total area. In June, when a U.S. house of representatives subcommittee under Rep. Melvin Price released a report recommending requisition of an additional 12,000 ac. (for the marine corps) and the payment of blanket rents, the issue was brought to a head. In Okinawa a five-man committee representing the legislative assembly, the administrative government, landowners and towns and villages demanded that the U.S. cease the use of land, that adequate compensation be paid for land and for damages resulting from use, and that land no longer needed be promptly turned back to owners.

During 1956 the U.S. continued various efforts to assist Japan in becoming economically self-sufficient and in expanding its

foreign trade. An agreement was signed in Tokyo on Feb. 10 by Foreign Minister Mamoru Shigemitsu and U.S. Ambassador John M. Allison, whereby Japan was to pay \$65,800,000 in yen for surplus agricultural commodities. About 75% of the yen fund was promptly lent back to Japan for development of agriculture, electric power and industrial modernization; the remainder was to be spent in Japan by the U.S.

With regard to its Asian neighbours, Japan made little progress in ameliorating bad relations with South Korea, and only unofficial contacts continued with Communist China, despite continuous pressure by various groups on the government. On May 9 an agreement was reached with the Philippines on reparations and loans, under which Japan agreed to pay the yen equivalent of \$550,000,000 in capital goods and services; an additional agreement provided for the encouragement of private lending from Japan. Meanwhile, reparations payments to Burma during the fiscal year ended March 31 amounted to the equivalent of \$15,700,000.

Following overtures from the Soviet Union and Prime Minister Hatoyama's promise to "normalize" relations with the U.S.S.R., conversations were held in London throughout 1955; by March 1956 they had completely stalled over questions of territory and the repatriation of Japanese prisoners. On July 28, 1956, Foreign Minister Shigemitsu headed a delegation which arrived in Moscow to resume the suspended conversations. He cogently presented the Japanese territorial case: Japan, under the San Francisco treaty, renounced all title to South Sakhalin and the Kuriles (the Russians had refused, however, to sign that treaty, and therefore no beneficiary to these territories had been named); Etorofu, Kunashiri, as well as Shikotan and the Habomais—all off the coast of Hokkaido—were Japan's inherent territory and were never mentioned as part of the Kuriles; finally, these territories should be returned to Japan, following principles laid down in the Atlantic charter, in the Cairo declaration, the Potsdam proclamation and the UN charter, to all of

which the U.S.S.R. had adhered. On the issue of Japanese prisoners of war (the Japanese said they numbered 13,000), Shigemitsu pleaded for a "psychological rapprochement" involving settlement prior to "normalization" of relations.

In reply, Soviet officials flatly refused to discuss the southern Kuriles and offered to return only the Habomais and Shikotan. The Soviet Union applied the "German formula" to the issue of the prisoners (the Russians said they numbered 1,100) and offered to solve the problem only after relations had returned to normal. The entire Japanese press reacted strongly to the Russian refusal, and for a time the negotiations hung in delicate balance. On Sept. 28 Japan and the Soviet Union, sidestepping territorial issues, finally agreed on a formula which would end the state of war and restore diplomatic relations. On Oct. 12 Premier Hatoyama himself arrived in Moscow to arrange the resumption of relations.

Domestic Affairs.—In late 1955, after the merger of left-wing and right-wing Socialists, the coalition of conservative parties into Liberal-Democrats and the installation of the third Hatoyama cabinet, the line-up of lower house seats appeared as follows: Liberal-Democrat, 300 (64%); Socialist, 154 (33%); Farmer-Labour, 4; Communists, 2; minor and vacancies, 7. After the new year recess, the 24th ordinary session of the diet opened on Jan. 26 and from then until the eve of the upper house elections in July handled such important bills as the public office election law, Constitution Research council establishment bill, National Defense council organization law and the new education board bill. All except the constitution bill encountered rough sailing.

Blocked in the previous session of the upper house, the bill for a constitutional review passed the lower house on March 29 and the upper house in the last days before the summer election, and provided for a cabinet council "to carry out a complete examination of the [so-called MacArthur] Constitution of Japan from a national viewpoint." When the council got down to work, these were the changes most often mentioned: conversion of the emperor from the "symbol" to the "chief" of state; re-drafting of article 9, the constitutional bar to full rearmament; clarification of rights and duties of citizens; and re-examination of the role of the upper house.

Both constitutional review and rearmament were dealt severe blows in the upper house elections of July 8, Japan's first national ballot since the recasting of party lines. In the election for half the upper house seats, the results as announced July 10 showed that: the Liberal-Democrats held their own, taking exactly the number of seats previously held, 122; the Socialists gained 12 seats for a total of 80 (68 in previous house); the *Ryokufukai*, usually counted on for government support, lost 12 to total 31 (43); and thus the conservatives did not gain the two-thirds necessary to pass a constitutional amendment (required, two-thirds in both houses and a majority in a national referendum).

In December the Liberal-Democratic party elected Tanzan Ishibashi, minister of international trade and industry, as president of the party to succeed Hatoyama, who was retiring because of failing health. On Dec. 20 Hatoyama and his cabinet resigned, and Ishibashi was elected prime minister by vote of the house of representatives.

Economic Affairs.—Partly as a result of a tight money policy and a trimmed budget, Japan's export prices fell between 1953 and 1955 and exports rose \$800,000,000 (69%); with an expanding world trade and a record rice crop, which cut the level of imports, Japan at the end of 1955 attained its best postwar trade and payments position. Although U.S. special procurement fell off to \$557,000,000 (\$40,000,000 less than 1954), Japan's surplus rose to \$494,000,000 and its foreign exchange reserves

to a new high of \$1,447,000,000 (Dec. 31, 1955). Compared with a dollar gap of \$514,000,000 in 1951 and \$469,000,000 in 1954, the 1955 figure was narrowed to \$103,000,000.

Despite these gains, in 1955 Japan was still spending \$524,000,000 on food, \$492,000,000 on textile raw materials, \$214,000,000 on petroleum and \$192,000,000 on minerals, metals and coal. The foreign exchange budget for fiscal 1956-57 allocated a further increase to about \$3,000,000,000 in imports, from which \$300,000,000 would go for food and \$327,000,000 for textile raw materials.

Education.—In 1954 Japan had 22,036 primary schools, 15,906 secondary schools and 528 colleges and universities, with a total of 20,525,698 students and 725,845 teachers.

Finance.—The monetary unit is the yen, with an official value in 1956 of 360 yen to the U.S. dollar. See Tables I, II and III for budgetary, banking and other financial data. Japan's national income during the calendar year 1955 totalled 6,574,500,000,000 yen (\$18,263,000,000), a rise of 8.4% over the previous year.

Foreign Trade.—Traditionally, Japan built its export drives on textiles which, even in 1955, accounted for 37% of exports. The U.S. absorbed (by value) 22% of the exports, northern Asia (China, Korea, Formosa, Ryu-

bus) 10%, southern Asia and middle east 32%, Europe 10%, Latin America 9%, others 17%. Food and food products accounted for 29% of exports, textile fibres 24%, coal and petroleum 12%; the U.S. supplied 1% of Japan's imports, northern Asia 8%, southern Asia and middle east 9%, Europe 7%, Latin America 10%, others 15%.

Agriculture.—After two years of poor crops, unusually good weather in the 1955 season produced a bumper rice crop, raising farm income about 5% over the previous year and considerably easing the pressure for food imports.

Manufacturing.—Manufacturing output (1953=100), which had been 115 in 1950, rose to 80 in 1952, to 108 in 1954, to 115 in the second quarter of 1955, to 216 in the fourth quarter of 1955, fell off to 119 in Jan. 1956 and rose to 123 in Feb. 1956. See Table VI for other data. Peak unemployment was 840,000 in March 1955; a low point of 570,000 was reached in Nov.—Dec. 1955. (A. W. Bs.)

Jehovah's Witnesses. Jehovah's Witnesses were organized internationally as a society of Christian ministers under the Watch Tower Bible and Tract Society (a U.S. nonprofit corporation) in 1884. Growth of the organization was again the marked feature of 1956 activity. Preaching was expanded into Madagascar and Iran with a new branch office opened in west Berlin to total 160 countries under 100 branches where the membership of 642,929 Christian ministers preached "the kingdom of heaven has come."

Circulation of the *Watchtower* and *Awake!* magazines each showed a gain of more than 25% in 1956, reaching 2,800,000 and 1,000,000 copies respectively. Peak circulation of the *Watchtower* was attained in April with 7,905,688 copies of a special issue distributed in 44 languages.

During 1956 a resolution and petition was addressed to Premier Nikolai A. Bulganin of the U.S.S.R. requesting the release of the 9,000 ministers of the society known to be imprisoned in more than 50 Soviet penal camps. The petition further requested that a delegation be permitted to proceed to Moscow to present additional information about Jehovah's Witnesses and request permission to organize the Witnesses into congregations with responsible ministers, and to publish Bible literature. An incomplete report for the year showed that the resolution was unanimously adopted by 290,298 Witnesses assembled in 72 district conventions throughout North America, the British Isles and northern Europe. (N. H. K.)

Jet Propulsion. Turbojets.—The year 1956 marked the debut of one of the most promising engines in the arsenal of the western democracies, when General Electric's J-79 took to the air in the Lockheed F-104 jet fighter, a aeroplane capable of speeds in the 1,500-1,600-m.p.h. range. The J-79, turning out about 15,000 lb. thrust and slated for further development to higher ratings, was placed on production status in 1956. It was also to be the power plant for the Convair F-105 Hustler, the U.S. air force's first supersonic bomber, which started taxi tests late in 1956.

Pratt & Whitney Aircraft continued development of its J-75 engine, basically rated at 15,000 lb. thrust, and indicated plans to develop it to 18,000 lb. in the near future.

In Great Britain, Bristol Aero-Engines Ltd. announced a new engine in the high-thrust category, the Olympus BO1.6, a split-compressor type turning out 16,000 lb. thrust without aid of afterburner. The de Havilland Engine Co., Ltd., successfully tested its Gyron at the 16,000-lb. mark. Also the Gyron Junior, low-weight, small frontal area engine designed for high supersonic aircraft, and weighing only 1,500 lb., successfully passed thrust-rating tests in the 8,000-11,000-lb. category.

In a different thrust category, two new U.S. engines were announced: General Electric's J-83 and General Electric's J-85, both

rated at about 2,000 lb. Designed for missile application, the major feature of both engines was a very high thrust-to-weight ratio (about 10 to 1).

Pratt & Whitney's J-57 (10,000-13,000 lb. thrust) continued to rank first in production in the United States. Already installed in several aircraft, it seemed to be the most likely engine for use in the commercial jet transports which were being developed. Pratt & Whitney was working on a commercial version of the J-57, rated at 11,000 lb. and known as the JT3C-4. Similarly, the company was developing a commercial J-75, designated JT4A-3 and rated at 15,000 lb. In production as a replacement engine was the old 7,200-lb.-thrust J-48 centrifugal-flow turbojet.

General Electric's production effort, in addition to the J-79, was centred on various versions of the 7,000-to-8,000-lb. J-47 engine, ten years old in 1956 but still in wide service use in the Boeing B-47 jet bomber and the North American F-86 series of fighters. In addition, the company was producing in quantity the 9,000-lb.-thrust J-73 for a late version of the F-86.

Allison division of General Motors Corp. continued to produce the relatively low-powered (4,600 lb. thrust) J-33 turbojet, used in missiles and trainers, and the 10,000-lb.-thrust J-71, used in a navy fighter and an air force bomber.

Westinghouse (Aviation Gas Turbine division) turned out a limited number of its 4,000-lb.-thrust J-46 engine, and also received a contract for an experimental power plant designated XJ-81, about which no data were released.

Wright Aeronautical division of Curtiss-Wright corporation was in production with its J-65 (7,200-7,700 lb. thrust) and continued developing the 15,000-lb. J-67 Olympus.

In Great Britain Bristol was producing two other versions of the Olympus, the Olympus 101, rated at 11,000 lb., and the Olympus 102, rated at 12,000 lb. Bristol was also developing a low-rated engine, the 4,000-lb.-thrust Orpheus, for use in lightweight fighters.

Production at Armstrong Siddeley Motors Ltd. consisted of several versions of the Sapphire, rated from 8,000 to 11,000 lb. thrust, and the low-powered Viper in four versions of from 1,650 to 2,000 lb. thrust. Rolls-Royce Ltd. continued development of its low-powered low-weight Soar Mark 101 (1,800 lb. thrust) and its 13,000-lb. bypass engine, the Conway. In production were six versions of the Avon, rated from 7,000 to 10,000 lb. (with a 10,500-lb. low specific fuel consumption Mark 29 Avon in test status) and the 5,000-lb. Nene.

Although developmental effort concentrated on the Gyron and Gyron Junior, de Havilland was producing two versions of its 5,000-lb.-thrust Ghost, the Mark 103 and Mark 104.

In Canada, Orenda Engines Ltd. was developing an Orenda PS-13 engine, reportedly in the 20,000-lb.-thrust category, and had in production three lesser Orendas rated from 6,500 to 7,200 lb. thrust.

In France, Société Nationale d'Étude et de Construction de Moteurs d'Aviation (SNECMA) was producing its Atar axial-flow jet, top rated at 9,200 lb. without afterburner, and was working on a new lightweight engine, the 3,000-lb.-thrust Vesta. Société Rateau continued development of its 8,800-lb.-thrust axial, the SRA-101, while in Spain Hispano-Suiza pursued its 7,700-lb.-thrust Verdon R450.

Although information about Soviet engines continued to be scarce, one Russian engine, credited to P. F. Zubets (no designation), powered both the Tupolev 104 twin-jet transport plane and the Badger bomber. It revealed a thrust rating of 16,000 lb. in the former and more than 17,000 lb. in the latter, and was in line with the Russian plan of designing high-power single units rather than lower-powered engines in combination.

Turboprops.—In Great Britain the newest engine to make its

appearance in 1956 in the turbine-propeller category was Bristol's B.E.25, a 5,000-h.p. unit in early development and slated for 1959 production. Bristol was also turning out a limited number of the 4,000-h.p. Proteus. Rolls-Royce disclosed the existence of the Tyne, a 4,500-h.p. axial-flow turboprop, and had in production several versions of the Dart, rated from 1,500 to 2,000 h.p.

Armstrong Siddeley was in production with the 1,500-h.p. Mamba and the 3,000-h.p. Double Mamba. D. Napier & Son Ltd., turboprop specialist, developed five versions of its Eland axial-flow turboprop, rated from 3,000 to 4,200-h.p., and continued development of the low-powered Oryx 750-950-h.p. gas generator, and Gazelle, a 1,300-h.p. free turbine for helicopter use.

In the United States Allison division of General Motors placed more and more emphasis on its line of turboprop engines, particularly the T-56, a 3,750-h.p. engine which powered the Lockheed C-130 transport, and the model 501-D13, commercial version of the T-56, planned to be the power plant for Lockheed's turboprop airliner, the Electra. Pratt & Whitney was developing two large turboprops, the 6,000-h.p. PT2G-3 and the 16,000-h.p. T-57.

In lower power categories, General Electric announced development and plans for production of the 1,000-h.p. T-58, designed primarily for helicopter use; and Lycoming division of Avco Manufacturing Corp. was working on an 800-h.p. helicopter engine, the XT-53. Two other helicopter engines under development were the small Boeing T-50 and its commercial counterpart, the 502-10B, rated at 200-275 h.p., and Continental Aviation and Engineering Corp.'s T-51, with several models rated from 280 to 425 h.p.

Miscellaneous.—Although ramjet engines ("flying stovepipes"), which compress air through speed of motion rather than by a mechanical compressor, had been under development for many years, 1956 saw the first order for a production ramjet—a 28-in. supersonic engine for missile use designed and built by Marquardt Aircraft Co. The thrust rating, in turbojet equivalent, was about 10,000 lb.

The 15,000-lb.-thrust Curtiss-Wright XLR-25, first throttleable, double-barrelled rocket engine, demonstrated the capabilities of small-package, high-thrust, liquid-fuel rockets when it powered the Bell X-2 to a new speed record of 1,900 m.p.h. and also drove the same plane to a new altitude mark of 126,000 ft. Unfortunately, the X-2, including the engine, was lost in a crash. In the United States, development of a number of extremely high-thrust rocket engines was under way, but details were withheld because of the secret guided missile programs involved.

The British government announced development of a new rocket engine, the Screamer, a liquid oxygen-paraffin burning engine built by Armstrong Siddeley. Its thrust was 8,000-9,500 lb. depending upon operating altitude. Napier was working on a rocket, the Scorpion NSC.1, a liquid-propellant engine designed for auxiliary thrust for take-off.

No new information was released on the progress of nuclear power plants for aircraft, although both Pratt & Whitney and General Electric were engaged in such projects in the United States. The air force disclosed that it was testing a low-powered reactor of unidentified design in a B-36; the reactor, however, was not the power source for the engines and was being used only for engineering studies of radiation.

Jewish Literature. Hebrew Literature.—In spite of hardly favourable economic and political conditions, Hebrew literature for the year 1956 again displayed considerable vitality. Numerous works of poetry and prose were published.

A leading Hebrew novelist, Hayim Hazaz, depicted colourfully and with insight the life of Jews in a small Ukrainian town, following the downfall of the czar, in *Daltot Nehoshet* ("Brass Doors"). There appeared *Mivhar Sippurai Dov Kimhi* ("Selected Stories by Dov Kimhi") whose realism is softened by lyricism, while *Kol ha-Adam Aino Kovev* ("All Men Do No Deceive"), by Yakov Horowitz, exemplified more modern story telling. A first novel, *Shaul ve-Yohanna*, by Naomi Frankel, about Jewish life in pre-Hitler Germany, manifested a canny perceptiveness. Somehow related to this was Joseph Arikha's *Tzeadim ba-Esh* ("Steps in the Fire") which described forcefully the tribulations of a Jewish woman in Nazi-occupied Poland and her subsequent life in Israel.

Shelomo Zemah's volume of incisive literary evaluations *Massa u-Vikoret* ("Essays and Criticism") wears its erudition gracefully. Zevi Wayslavsky, in his book *Yehidim Birshut ha-Rabim* ("Individuals in the Public Domain"), discerningly contemplated some sociological aspects of the contemporary scene, while David Canaani approached modern Hebrew authors in *Bainam le-Vain Zemanam* ("Between Them and Their Time") from a Marxian viewpoint.

The achievements of the "Father of Spiritual Zionism," the centennial of whose birth was celebrated in 1956, were reviewed in a comprehensive biography and study, *Ahad ha-Am, Hayav, Poalo ve-Torato* ("Ahad ha-Am, His Life, Work and Teachings") by Aryeh (Leon) Simon and Joseph E. Heller. There appeared the weighty, third, concluding volume of N. H. Tur Sinai's *ha-lashon ve-Hasefer* ("The Language and the Book") which bears on basic, varied problems of Hebrew philology. In a lighter vein were the learned, attractively written disquisitions by Dov Sdan, *Avnai Sefa* ("Touchstones of Language"). The publication of revealing letters by the national Hebrew poet to his wife, entitled *Igrot H. N. Bialik le-Ishto Manyu*, confirmed his warm-hearted humanity. Named after him, the national Hebrew publishing house Mosad Bialik marked its 20th anniversary.

A work of surpassing significance was Yigael Yadin's publication, with notes, emendations and commentaries, of *Megilat Milhemet B'nai or Bivnai Hoshekh* ("The Scroll of the War of the Sons of Light Against the Sons of Darkness"). Part of the Dead Sea Scrolls, it is a manual of military operations, patterned after Roman tactical planning, which aimed at the final victory of God over the forces of Evil.

In poetry, another volume by a leading elder Hebrew poet, Yaakov Cahan, testified to his continued vigour of expression along traditional lines. During the year appeared the selected abstract, yet concretely realized, poems of Sh. Shalom, as well as the collection *be-Ailem Kol* ("With Muted Voice") by Mordecai Temkin, distinguished by straightforwardness and nobility of tone, and Abraham Braudes' "Roots in the Rock," *Shoroshim ba-Sela*, intimate, cleanly wrought poems inspired by Israel. Yitzhak Shalev's verse in *Kol Anot* ("Voice in Song") holds a new note, while *be-Hatzrot Yareah* ("In the Courts of the Moon"), by Yitzhak Ogen, is reflective and pictorial.

The shadow of tragedy is cast upon *Ketavim Aharonim* ("Last Writings") of Yitzhak Katzenelson. The poet was murdered by the Nazis; yet some of his poems, unearthed at war's end, possess a characteristically playful touch. As if complementing this book, were "Songs of Radiant Sadness," *Shirai ha-Etzev ha-Koren* by Shelomo Shenhud, which deal with the heroism of Israeli youth during the war of liberation, and project fresh

agery and inherent hope tinged with resignation.

In the United States, Hebrew literary activity was at a relative standstill. Nevertheless, some volumes deserve attention. *Shvilai ha-Mahashava ve-Hasifrut ha-Ivrit* ("On the Pathways of Hebrew Thought and Letters"), by the prominent literary historian Meyer Waxman, is a selection of diverse, learned essays. Sarah Heller-Wilensky's *Rabbi Yitzhak Arama u-Mishnato* ("The Philosophy of Isaac Arama") is an exhaustive analysis, with reference to Philonic doctrine, of the theories of the renowned mediaeval exegete. *Haye ha-Yehudim be-Italia tikufat ha-Renesans* ("Life of Italian Jewry During the Renaissance") by A. M. Shulvass represents a serious study. Finally to be mentioned is Simon Bernstein's collation of old Lamentations, *Al Naharot Sfarad* ("Upon the Rivers of Spain"), painstakingly reconstructed from the only extant manuscript.

(G. P.)

Yiddish Literature.—Commemoration of the past, so prominent in recent Jewish literature, was still the dominant trend of Yiddish literature in 1956. The "old country," its characters, ideals and values, occupied the most prominent place in Yiddish fiction. Some novelists portrayed traditional Jewish life romantically, as Pinkhos Shteynvaks in *Yidn tsum gedenken* ("Jews Remember"), and Borukh Hager in *Malkhus Khshides* ("The Kingdom of Hasidism"), awarded the S. Stolar prize in Buenos Aires, Arg. Other works, treating the subject realistically but with a great deal of sentiment, included Khayim Grade's *Der mames shabosim* ("The Mother's Sabbaths"), an autobiographical novel, awarded the Louis Lamed prize for Yiddish fiction in 1956.

An approach to the recent past from the point of view of class struggle was attempted in the novels of B. Shlevin, *Di bider Khaykin* ("The Brothers Khaykin"), and L. Olitski, *Yaye Koval*, published respectively in Paris and Warsaw, and written in the tradition of the communist school of "socialistic realism." The contemporary scene was the subject of two novels, *Rebelia* by Itskhok Perlov, describing life in Israel and the clash of the old and the new generations, and *Di shpete yorshim* ("The Late Heirs") by S. Izbán, a novel of American Jewish

Historical novels about Jewish life included *In a nayer velt in a New World*) by S. Apter, a story about the life of the first Jewish settlers in America, and *Georemt mitn vint* ("Arm with the Wind") by M. Shtrigler, a broad panorama of 19th-century Jewish life in Poland.

A few lengthy poetical works also appeared in 1956, among them *Amerike* ("America") by Berish Vaynshteyn, awarded the Bimko prize for poetry. Collections of shorter poems included from Zak's *Fun ale navenadn* ("From all my Wanderings"), an expression of loneliness of a Jewish poet lost in a strange world. Contributions to the history of Jewish settlements were made by L. Feldman in his book *Yidn in Johannesburg* ("Jews in Johannesburg"), and by M. Kahan in *Yidn in der antshteyung in Brazil* ("Jews in the Origins of Brazil"). *Fun kheyder un shools biz Tsisho* ("From the Traditional Heder and Russian Schools to Tsisho") by C. S. Kazdan told of the rise and growth of the Yiddishist movement, while the demographic and sociocultural study of Jacob Lestshinsky, *Dos natsionale ponim fun uns yidntum* ("The National Characteristics of the Jews in the Diaspora"), showed the decline of national consciousness among temporary Jews outside Israel.

Among noteworthy books on the Jewish persecutions were M. Twicz's *Oyf arishe papirn* ("With Aryan Identification Papers"), a collection of eye-witness reports of Jews hiding from Nazi persecution, and Eliezer Vizl's *Un di velt hot geshvign and the World Kept Silent*), an account of the destruction of Jews in the Marmarosh province of Hungary.

Continuing the commemorative trend, several biographical works were produced: *Fun beyde zaytn ployt* ("On Both Sides of the Fence") by Max Weinreich; *Di lererin Esther* ("The Teacher Esther") by Jacob Pat; and a two-volume biographical dictionary, *Doyres bundistn* ("Generations of Bundists"), edited by Sholem Hertz. Yiddish literary criticism suffered a heavy loss by the death of its most distinguished representative, S. Niger; nevertheless a number of books and essays on Yiddish writers and letters were produced in 1956. Two publications in the field of literary history may be noted: an anonymous 18th-century comedy *Als der sof iz gut, iz ales gut* ("All Is Well What Ends Well"), edited by L. Fuchs from a newly discovered manuscript, and letters of Morris Rosenfeld, the great Jewish poet of the late 19th century, edited by I. Lifshutz. (D. Az.)

Jiménez, Juan Ramón (1881–), Spanish poet, was born at Palos de Moguer, on the Atlantic coast of Andalusia, Dec. 24. He was awarded the 1956 Nobel prize for literature, after a life more exclusively devoted to poetry than perhaps any other in the annals of literature. He was taught by Jesuits and later attended the University of Seville. From 1909 to 1916 he lived in the Residencia de Estudiantes in Madrid. In 1916 he married Zenobia Cambrubí Aymar, translator of Rabindranath Tagore; she died of cancer a few days after his prize had been announced.

Jiménez cultivated an extraordinary sensitivity with an aristocratic, almost an imperial, disdain of other expressions of the human personality. Though he lived in several countries (since the Spanish Civil War in the United States and other parts of America), and absorbed the best European, English and American poetry, as much of his writing reveals, the ultimate inspiration always came from within himself. In a new golden age of Spanish poetry the total dedication of Jiménez to creation for the enjoyment of the *inmensa minoría* was a perpetual inspiration, however indirectly later generations imitated his work. Some representative titles are: *Jardines lejanos* (1904); *Olvidanzas* (1907); *Laberinto* (1913); *Platero y yo* (prose, 1914); *Diario de un poeta recién casado* (1917); *Sonetos espirituales* (1917); *Segunda antología poética* (1922); *Unidad* (1925); *Canción* (1936); *Españoles de tres mundos* (1942); *La estación total* (1946); a complete *Obra* was being published in Madrid.

John Simon Guggenheim Memorial Foundation: see SOCIETIES AND ASSOCIATIONS, U.S.

Johnson, Lyndon Baines (1908–), U.S. senator, was born near Stonewall, Tex., on Aug. 27. He took a bachelor's degree from Southwest Texas State Teachers college at San Marcos in 1930 and later (1935) studied law at Georgetown university in Washington, D.C. From 1930 to 1932 he taught in public schools of Houston, Tex., and during the next three years was secretary to Texas Congressman R. M. Kleberg in Washington, D.C. He then was Texas state director of the National Youth administration (1935–37). Johnson was elected as a Democrat to fill a vacancy from the 10th Texas district in the 75th U.S. congress (1937–39) and was re-elected for five successive terms (1939–49), broken only by service as a U.S. naval officer during 1941 and 1942 in Australia and New Zealand. Elected senator from Texas on the Democratic ticket in 1948 for the term 1949–55, he was named chairman of the defense "watchdog" subcommittee of the senate

armed services committee in 1950 and devoted most of his time during his first term to spurring the U.S. defense program. In Jan. 1951 he was elected majority whip of the senate. Re-elected senator in 1954 for the term 1955-61, Johnson continued as senate Democratic leader in the 84th congress until a heart attack suffered July 2, 1955, prevented him from attending the closing weeks of the session. After his re-election in 1954 Johnson pledged his party's co-operation with the Eisenhower administration's program in congress. On June 29, 1955, however, he declared that the Democrats would not "carry out instructions like a bunch of second lieutenants taking orders." He was prominently mentioned for the Democratic presidential nomination in 1956, but disclaimed any ambition for the office. Nevertheless he received 80 votes on the first and only ballot at Chicago, Ill., on Aug. 16 that nominated Adlai E. Stevenson.

Joint Chiefs of Staff: see GOVERNMENT DEPARTMENTS AND BUREAUS, U.S.

Jordan. An Arab kingdom, Jordan is bounded west by Israel, north by Syria, east by Iraq and southeast by Saudi Arabia. Area (including Arab Palestine): 37,264 sq.mi. Pop.: (1952 census), 1,329,174; (1956 est.) 1,471,000, including (1953 est.) 745,786 in west Jordan (Arab Palestine). Capital: Amman, pop. (1954 est.) 202,213. Language: mainly Arabic. Religion: Moslem (chiefly Sunni); Christian, about 8% (mainly Arab-speaking Greek Orthodox). King, Hussein I. Prime ministers in 1956: Ibrahim Hashem (Dec. 21, 1955-Jan. 7, 1956); Samir el-Rifai (Jan. 9-May 20); Said el-Mufti (May 22-Oct. 29); Suleiman Nabulsi (from Oct. 29).

History.—The year 1956 was one of disquiet and instability in Jordan, whether in regard to the internal regime of the country, its orientation between the other Arab countries, its relations with Great Britain or the perennial conflict with Israel. The principal crisis had indeed developed in Dec. 1955 with the attempt made by Great Britain to bring Jordan into membership of the

Baghdad pact. The extreme violence of the opposition to the pact, which was largely inspired by Egypt, compelled King Hussein to reject it, and a new government was formed on Jan. 9 under Samir el-Rifai. An acute state of tension, however, remained, and in March King Hussein summarily dismissed Lieut. Gen. John Bagot Glubb, commander of the Arab legion. The king was persuaded to take this step in deference to nationalist opinion and particularly to the wishes of a group of young Arab officers in the legion, one of whose leaders was the 33-year-old Lieut. Col. Ali Abu Nawar, who had been educated in England.

For some time the gravest uncertainty prevailed about the whole question of Jordan's treaty relations with Great Britain, its receipt of British subsidies and the position of the remaining British officers in the Arab legion. Gradually, however, the situation was clarified and stabilized. Both King Hussein and the prime minister affirmed Jordan's wish to preserve its treaty with Great Britain, to continue to receive the British subsidy and to retain in the Arab legion a number of British officers for training and technical purposes. Great Britain, for its part, declared that it would respect the treaty and continue to pay Jordan the agreed subsidies.

It was thought at the time that Colonel Abu Nawar (promoted major general and appointed commander of the Arab legion on May 24) and his colleagues would follow up Jordan's rejection of the Baghdad pact with a policy of definite alignment with Egypt, Syria and Saudi Arabia. This, however, was not the case. Indeed, after the events of March, the Jordanian pendulum swung back quite markedly toward Iraq, though not toward the Baghdad pact. King Hussein and his cousin King Faisal met during the spring and, more significant still, General Abu Nawar himself paid a cordial visit to Iraq, after which there were repeated staff talks and military exchanges between the two countries. This development reached its peak when a severe Israeli attack was launched against a Jordanian frontier post in September, at the height of the Suez crisis. It was to Iraq that the Jordanians turned, rather than to Egypt or Syria, and plans were suggested for the stationing of Iraqi troops in Jordan to strengthen the country's defenses. (See IRAQ.)

The Israeli attack was the culmination of nearly a year of border tension and clashes between the Jordanians and the Israelis. The United Nations armistice commission pronounced now Israel and now Jordan to be the guilty party in these incidents. However, the Jordanian attacks were for the most part in the nature of sniping and small ambushes, whereas the Israeli raid in September was a full-scale military operation in which heavy weapons were used and about 50 Jordanians killed.

In the second half of October Iraqi troops were on the frontier ready to enter Jordan. Pro-Egyptian and Communist elements in the country staged demonstrations against this move. The Israelis also opposed it with threats of "reserving their freedom of action." Finally it was agreed between the governments of

JORDAN TROOPS, members of the Arab legion, on guard in the Jordan section of Jerusalem in Jan. 1956 after rioting followed the signing of the Baghdad alliance

Jordan and Iraq that the troops should not enter but should remain at the frontier ready to come in if wanted by Jordan.

Elections were held a few days later and resulted in a victory for the parties opposed to Great Britain and in favour of Egypt. A government was formed under Suleiman Nabulsi, which brought Jordan into the unified command agreement concluded earlier in the year between Egypt and Syria.

After the Israeli attack on Egypt on Oct. 29 Iraqi and Syrian troops were called in. On Nov. 20 Jordan decided to abrogate the Anglo-Jordanian treaty and to establish diplomatic relations with the U.S.S.R. and the People's Republic of China.

Economically, Jordan took a step toward integration with Syria when the two countries concluded a customs union in August. They decided to have a common currency, to share customs revenue on the basis of comparative figures in the past, and to abolish passports between the two countries. (E. S. AH.)

Education.—Government schools (1953–54) 964, pupils 180,015, teachers 581. Vocational (1952) 3, pupils 193, teachers 13. Teacher-training 1, students 46.

Finance and Banking.—Monetary unit: Jordan dinar at par with the pound sterling (=U.S. \$2.80). Budget: (1955–56 est.) revenue 17,300,000 dinars, expenditure 17,900,000 dinars; (1956–57 est.) revenue 21,500,000 dinars, expenditure 23,400,000 dinars.

Foreign Trade.—(1955) Imports 27,058,453 dinars, exports 2,868,175 dinars (re-exports 1953, 200,000 dinars). Main sources of imports (1954): U.K. 15.4%; U.S. 9.6%; German Federal Republic 5.5%; France 5%; Syria 0.23%; Lebanon 0.1%. Main destinations of exports (1954): Lebanon 42.5%; Syria 24%; Iraq 14%; Saudi Arabia 2.6%.

Transport and Communications.—All-weather roads (1956) 3,520 km., of which 1,520 km. were asphalted. Motor vehicles in use (Dec. 1954): passenger 3,209, commercial 3,710. Railways (1954) 400 km. Air Transport: Arab Airways and Air Jordan; scheduled routes (1955) 9,222 km. Telephones (Jan. 1955) 9,300. Licensed radio receivers (1954) 14,000.

Agriculture.—Production (metric tons, 1954; 1953 in parentheses): wheat 233,000 (105,000); barley 104,000 (43,000); sorghum 18,000 (16,000); oats (2,000); chick peas 4,000 (3,000); lentils 17,000 (5,000 in 1955); figs 18,500 (61,200); olive oil 15,000 (9,000); maize (1952) 4,000; kersennah (1950) 8,200; tobacco (1948) 400; dry beans (1948–9) 1,000. Livestock (Sept. 1954): cattle 52,000; sheep 364,000; goats 15,000; camels 19,000; horses (1953) 2,576; mules (1953) 7,165; asses (1953) 56,510. Phosphates: exports (1955) 150,621 tons, (1954) 43,495 tons.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Middle East* (1955); *Planning Our Foreign Policy* (Problems of the Middle East) (1955).

Judaism. American Jewry was agitated during 1956 by the growing discrimination by Arab states against Americans of Jewish faith. This discrimination was manifest in the denial by the Arab states of entry or transit visas to Jews, the boycott of American Jewish businesses and the refusal to permit Jews to hold United States government civilian and military posts in Arab countries.

Protests against tampering with the rights of United States citizens by foreign governments were voiced by the American Jewish congress, American Jewish committee, B'nai B'rith and Jewish War Veterans as well as non-Jewish organizations. These expressions of protest culminated in a unanimous resolution by the United States senate on July 25, which read in part:

Whereas it is a primary principle of our Nation that there shall be no distinction among United States citizens based on their individual religious affiliations and since any attempt by foreign nations to create such distinctions among our citizens in the granting of personal or commercial access or any other rights otherwise available to United States citizens generally is inconsistent with our principles: Now, therefore, be it Resolved, That it is the sense of the Senate that it regards any such distinctions directed against United States citizens as incompatible with relations that should exist among friendly nations, and that in all negotiations between the United States and any foreign state every reasonable effort should be made to maintain this principle.

The 24th World Zionist congress, originally scheduled to meet in Israel in the summer, convened in May to focus world attention on the gravity of the situation created by communist support to Egypt. The congress also reaffirmed the spiritual and cultural ties that bind Diaspora Jewry to Israel, and resolved to intensify religious and educational activities throughout the Jewish world. Nahum Goldmann was elected president of the world Zionist organization, a post that had been kept vacant since the death in 1952 of its former president, Chaim Weizmann. During 1956 considerable progress was made in historical and

archaeological investigations and explorations in the Holy Land. Hebrew university scholars deciphered part of the Book of Lemach, one of seven ancient biblical scrolls discovered by shepherds in a cave near the Dead sea in 1947. It is an Aramaic version of several chapters of the Book of Genesis and includes a detailed description of Sarah's beauty, a narrative of Abraham's "walk through the land in the length of it and in the breadth of it," the story of the war of the Five Kings, and names and places not found in other translations.

Among the more ambitious archaeological enterprises of recent years were the excavations at Hazor in upper Galilee under the direction of Yigal Yadin, former chief of staff of the Israel army. Hazor was one of the largest and most important cities of ancient Palestine. According to the Bible, it played a significant role during the period of the Hebrew conquest and served as one of Solomon's royal cities in the north. Hazor is also mentioned several times in Egyptian sources from the 19th to the 13th centuries B.C.

Excavations by scholars from the Hebrew university and other institutions of higher learning continued in the north at the catacombs of Beth Shearim, where the graves of leading rabbinic personalities of the Talmud were found; the ancient Jewish fortress Masada near the Dead sea; the Negev; and other points of historic interest.

Reports on antiquity studies since the rise of Israel were made at the annual conference of the Israel Exploration society in Oct. 1955. It was attended by biblical scholars and archaeologists, and was addressed by I. ben Zvi, president of Israel and a distinguished historian of oriental Jewish communities.

The Jewish cultural world took note of the 850th anniversary of the death of Rashi (initials of Rabbi Solomon ben Isaac) of Troyes, northern France, whose commentaries on the Bible and the Talmud are still recognized as valuable aids in the study of Judaism. A series of educational programs and publications was also undertaken in observance of the 100th anniversaries of the birth of Louis D. Brandeis, member of the supreme court of the United States and illustrious liberal and Zionist spokesman, and of Ahad Haam (Asher Ginsburg), Hebrew essayist and philosopher of the Jewish Renaissance.

Juvenile Delinquency. The reporting of crime and juvenile delinquency statistics in the United States during 1956 was neither uniform nor complete. In spite of the efforts of the federal children's bureau to secure reliable reports from juvenile courts, they covered no more than 29% of the total child population. The latest reports supplied data from only 585 courts in 29 states, and the highly urban and industrialized states of New York and Massachusetts were not included. Students of delinquency therefore exercised caution in drawing conclusions about trends and volume. In 1952 an estimated 385,000 children, or about 2% of all children in the U.S. aged 10–17, appeared in juvenile courts. By 1956 the total child population had increased by about 22%, yet taking the country as a whole the number of juveniles committed to state institutions for reform or correction decreased about 10%. This information was based on returns from a ques-

tionnaire submitted to every state correctional institution for juveniles in the United States. Boy offenders outnumbered girls five to one, a trend which appeared to hold for 1956.

The majority of delinquencies continued to occur in large urban centres. Delinquent children in rural areas were frequently cared for by relatives or friends, or by a priest or minister, or were under quasi-official supervision by the local police. In the cities, the focus of delinquency had passed from the native-born children of European immigrants to the children of the Mexican, Puerto Rican and Negro minorities. Much of the delinquency still seemed to be related to rejection of minority groups.

Conspicuous among the events of the year was the work of Anna Kross, commissioner of the department of correction of New York city, where a program of education and guidance for adolescents had been set up in all the city prisons dealing with youth. Citizen participation, in the form of friendly visitors, "a friend for every prisoner," was in process of development.

A remarkable experiment in treatment was that of Chief Justice Irving Ben Cooper of New York city. He placed a group of young lawbreakers on probation to a group of "graduates"—former probationers who had successfully solved the problems of rehabilitation. This use of a major principle of group therapy attracted favourable attention from the National Probation and Parole association.

Important trends in the study of motivation and personality research were summarized by Herbert A. Bloch and Frank T. Flynn in their book *Delinquency: The Juvenile Offender in America Today* (1956). It was noteworthy that more importance was now being given, in the study of delinquency, to the inter-human relationships than to the environmental factors.

(See also CHILD LABOUR; CHILD WELFARE.) (M. V. W.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Why Vandalism?* (1955).

Kansas. Located in the geographical centre of the continental United States, Kansas was admitted to the union as the 34th state on Jan. 29, 1861. It is frequently referred to as the "Sunflower state," but it is known also as the "Jayhawker state," a name of mysterious source. The total area of the state is 82,276 sq.mi., of which 82,113 sq.mi. is land. Kansas is the geodetic centre of the North American continent from which point all geodetic surveys are made. Population of the state: (1950 federal census) 1,905,299; (March 1, 1956, est.) 2,077,711. For the three largest cities (Topeka being the state capital) the 1956 population was: Topeka, 85,687; Wichita 240,106; Kansas City, 127,437 (1956 state census). According to the 1950 federal census, Kansas population was 50.3% rural and 49.7% urban.

History.—The principal state officials in 1956 were: Fred Hall, governor; John McCuish, lieutenant governor; Paul R. Shanahan, secretary of state; George Robb, auditor; Adel F. Throckmorton, superintendent of public instruction; Frank Sullivan, commissioner of insurance; John Anderson, Jr., attorney general; Ferdinand Voiland, state printer; Richard T. Fadely, treasurer.

In Jan. 1956 the first budget session of the Kansas legislature convened for a 30-day session. The budget session, the purpose of which is to consider the governor's budget for the ensuing fiscal year, was authorized by a referendum on a constitutional amendment submitted to a vote of the people in the general election of 1954. The budget session was to convene on even-numbered years and the regular session of the legislature would meet in odd-numbered years. Prior to the authorization of the budget session, the legislature had convened each two years and fiscal matters were considered along with other legislation.

During 1956 the Governor's Advisory Committee on Penal and Correctional Institutions, composed of penal and medical

authorities, completed a study of the state's penal system and made recommendations for long-range improvements, including establishment of a state correctional authority and an improved probationary system. An extensive program of improvement in penal facilities already had been under way for many months, anticipating many of the needs to be pointed out in the study.

In 1956 Kansas experienced the worst of four consecutive years of drought. In some areas of the state the shortage of rainfall was the worst on record.

In the Nov. 6 election, Pres. Dwight D. Eisenhower drew about 270,000 more votes in Kansas than his Democratic opponent, Adlai E. Stevenson. Elected to state offices were the following: George Docking, governor; Joseph Henkle, lieutenant governor; Paul R. Shanahan, secretary of state; George Robb, auditor; John Anderson, Jr., attorney general; Richard T. Fadely, treasurer; Adel F. Throckmorton, superintendent of public instruction.

Education.—In Sept. 1956 there were about 425,753 primary and secondary pupils enrolled in Kansas schools. There were 21 four-year colleges and 22 two-year colleges which had a combined enrolment of 42,538 students. The combined enrolment of the four state colleges and one university was 22,731. The populations of the other state institutions were as follows: school for the blind, 104; school for the deaf, 227.

Social Insurance and Assistance, Public Welfare and Related Programs.—The populations of the state's institutions in Sept. 1956 were as follows: state training schools, 2,008; hospitals for tuberculars, 258; children's homes, 80; industrial school for girls, 72; industrial farm for women, 39; mental hospitals, 4,366; state penitentiary, 1,492; reformatory for boys, 435; industrial school for boys, 126.

As of Aug. 1956 there were 62,093 persons receiving public assistance: old-age assistance, 34,423 persons with an average monthly payment of \$64.86; aid to dependent children, 17,711 at an average of \$29.30; general assistance, 4,947, average \$25.43; aid to blind, 721, average \$64.15; aid to disabled, 4,291, average \$66.05.

Communications.—As of June 30, 1956, the total length of primary and secondary county, and township roads in the state of Kansas was 137,000 mi., of which 9,786 mi. were state-maintained. There were 534 mi. of urban state highways. The remainder of the highways were controlled by the respective municipalities. Highway maintenance and construction contracts in 1955 totalled \$43,989,157. Highway building and maintenance contracts let during the first six months of 1956 amounted to \$26,182,879.

Kansas had 8,732 mi. of railroads and there were (according to CAA classifications) 70 public airports, 96 limited airports and 7 military air bases. Cities owned 94 airports in Kansas.

Banking and Finance.—Total state expenditures authorized for the 1957 fiscal year amounted to \$258,127,747, a slight increase over estimated expenditures of \$253,063,113 for fiscal 1956. The amount of sales tax (2%) and compensating tax collected for the fiscal year 1956 was \$51,592,841. The total income tax for the fiscal year 1956 was \$17,207,645. There were (1956) 170 national banks, 430 state banks. Total deposits of all Kansas banks reached a total of \$2,028,543,959 as of Jan. 1, 1956.

Agriculture.—The effect of the most severe year of drought on record was reflected in the state's farm economy. The cumulative 12-month total of cash income from farm marketings for the period ending in July dropped to \$798,275,000, largely because cash farm income each month except July decreased from the level of the preceding year for the 12th consecutive month. The aggregate figure was 13% below the total for the like 12-month period a year earlier.

The number of cattle and calves on Kansas farms decreased 1% to total

298,000 on Jan. 1, 1956. The number of hogs and pigs increased 3% to 9,000 head. All sheep and lambs decreased 2%. The number of chickens on farms decreased 12%. Horses and mules continued to decline with a 9% decrease from Jan. 1, 1955.

Cash receipts from farm marketings during the first seven months of 1956 were \$411,876,000, down 10.1% from the corresponding period of 1955.

Manufacturing and Industry.—Data on manufacturing industries in Kansas for 1954, based on preliminary reports of the 1954 U.S. census of manufactures which were issued in July 1956, are shown in Table II. (F. H.)

Mineral Production.—Table III shows the tonnage and value of the minerals produced in Kansas in 1953 and 1954 whose value exceeded \$100,000. In 1954, Kansas was fifth among the states in crude petroleum output and eighth in natural gas output. It ranked eighth in the value of its minerals, with 3.22% of the U.S. total.

Kefauver, Estes (1903–), U.S. senator, was born on July 26 in Madisonville, Tenn. He studied at the University of Tennessee, Knoxville (B.A., 1924), and the Yale university law school (LL.B., 1927), was admitted to the Tennessee bar and practised at Chattanooga before his appointment in 1939 as Tennessee state commissioner of finance and taxation. A few months later he was elected to fill an unexpired term in the U.S. house of representatives. He was re-elected several times and served until 1949, when he took office as U.S. senator from Tennessee. In the senate Kefauver gained national attention during 1951 as chairman of the upper house's crime investigation committee, whose televised hearings drew large audiences of viewers.

Kefauver was a prominent candidate for the Democratic presidential nomination at the 1952 convention at Chicago, Ill., where he led on the first and second ballots before yielding to Adlai E. Stevenson. Re-elected to the senate in Nov. 1954 for his second term, Kefauver became, on both domestic and foreign issues, one of the most vocal Democratic critics of the Eisenhower administration.

Late in 1955 he again set out on an intensive campaign for the Democratic presidential nomination. After winning an upset victory in the Minnesota primary in March 1956 he seemed to be the front-running candidate. However, Adlai E. Stevenson's drive for the nomination gradually gathered momentum and on July 31, 1956, Kefauver (who had exchanged rather bitter oratorical remarks with Stevenson during their respective primary campaigns) withdrew from the race and endorsed Stevenson.

When Stevenson, following his own nomination, declared the vice-presidential nomination at Chicago open to the free choice of the Democratic convention's delegates, Kefauver and Sen. John F. Kennedy of Massachusetts became the principal contenders. Kefauver won on the second ballot in a close contest, 55½ to 589 for Kennedy, but he and Stevenson lost to the Eisenhower-Nixon ticket in the national election of Nov. 6, 1956. They polled 44% of the popular vote, but carried only 7 states.

THE OUTSTRETCHED HAND of Estes Kefauver was the symbol of the senator from Tennessee as he made a whirlwind tour of the U.S., greeting hundreds of persons daily, in an effort to win the Democratic nomination for president in 1956.

Kentucky. An east south-central state of the United States, admitted to the union on June 1, 1792, Kentucky is popularly called the "Blue Grass state." Area: 40,395 sq.mi., of which 531 sq.mi. are water. The population by the 1950 official census was 2,944,806. The foreign-born population was 16,068, of whom 11,022 were in the cities. The capital, Frankfort, had a population of 11,916. The three largest cities were Louisville (369,129), Covington (64,452), and Lexington (55,534). The school census of April 1, 1956, estimated the state population as 3,211,092. As in immediately preceding years, population had shifted from coal mining counties in eastern Kentucky and marginal farming regions to counties along the Ohio river, especially the Louisville and Covington-Newport areas. The U.S. bureau of the census provisional estimate of the state's population as of July 1, 1956, was 3,017,000.

History.—The chief events of the year 1956 related to school support, desegregation and social legislation. The assembly strengthened the minimum foundation program of education by voting at least \$80 per pupil in average daily attendance. This law took the place of the per capita and equalization fund and became effective July 1, 1956. In early August, school districts in all but a score of counties were expected to start desegregation. In mid-September, 29 of 40 Kentucky colleges were desegregated. They were expected to have about seven-eighths of the college students. Of the ten United Mine Workers' hospitals dedicated in June, six are in Kentucky, namely, Harlam, Pikeville, Middlesboro, McDowell, Hazard and Whitesburg. They provide free medical service for member miners and their families and are open to others. Assessments levied on coal mined

support the system.

The repeal of the lien law which gave the state a claim on the recipient's property for the money spent in his support increased the recipients by about 2,000 in August. The legislation of 1956, among other provisions, provided for increased benefits effective in October.

In the Nov. 1956 general election, Kentucky voters gave Pres. Dwight D. Eisenhower 572,000 votes for re-election, as against 476,000 votes to Adlai E. Stevenson. Both senatorships went to Republicans, Thruston B. Morton winning out over the incumbent Earle C. Clements by a narrow margin, and John Sherman Cooper defeating former Gov. Lawrence W. Wetherby in the race for the four years remaining of Alben W. Barkley's term. Two Republicans and six Democrats, all incumbents, were re-elected to the U.S. house of representatives. The highway improvement bond measure of \$100,000,000 won by an overwhelming vote.

The state officers in 1956 were: governor, A. B. Chandler; lieutenant governor, Harry Lee Waterfield; secretary of state, Thelma Stovall; auditor, Mary Louise Foust; attorney general, Jo M. Ferguson; treasurer, Henry H. Carter; superintendent of public instruction, Robert R. Martin; commissioner of agriculture, Ben J. Butler; and clerk, court of appeals, Charles K. O'Connell.

Education.—According to a report from the office of the superintendent of public instruction, public schools in 1955-56 included 3,572 elementary schools, 143 high schools and 353 combined elementary and high schools. Total public-school pupils, grades 1-12, numbered 605,488, and full-time teachers, exclusive of principals, supervisors, helping teachers, etc., numbered 20,189.19. The state per capita fund was \$26,212.500 and the equalization fund was \$8,573,000. Negro high schools (public), grades 8-12, had 11,007 pupils enrolled. The per capita pupil cost, 1955-56, was \$160 for current expenses. In 1955-56 the median annual salary of all 21,361.51 teachers, principals, supervisors and vocational teachers was \$2,500. The new education program with an extra \$20,000,000 for 1956-57 was keeping more teachers in the state, 63% of the 1956 graduates in comparison with 43% in 1955. The reason, of course, was higher salaries, an average of about \$2,900 for teachers with degrees, \$300 to \$800 in excess of 1955 salaries, yet still far below the 1954-55 average of Illinois teachers at approximately \$4,350, Michigan at \$4,300, Indiana at \$4,100, Ohio at \$3,975, and Florida at \$3,725.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the fiscal year 1955-56 the department of economic security provided unemployment insurance benefits of \$25,504,574 to a weekly average of 23,312 persons, of whom veterans averaged 1,828 and federal employees 649. The department of economic security paid out \$39,223,125 in the public assistance program. Old-age assistance to the amount of \$23,539,528 went to a monthly average of 55,129 persons. Aid to 50,700 children in 18,744 families amounted to \$14,325,570. Aid to the needy blind came to \$1,358,027 for a monthly average of 3,054 persons. In calendar 1955 adoption petitions were filed for 997 children as compared with 908 in 1954. On Aug. 31, 1956, the tuberculosis hospitals contained 846 patients. The population of the correctional institutions on June 30, 1956 was: reformatory, 2,299; penitentiary, 1,130; women's prison, 68; houses of reform, boys, 255, girls, 93.

Communication.—As of June 30, 1956, the Kentucky department of highways had under maintenance 18,700 mi. of road. Two public toll and 3 private toll bridges over the Ohio river then served traffic. Road fund receipts for the fiscal year amounted to \$95,784,767.35; expenditures amounted to \$81,249,867.18. On June 30, 1956, the state had registered 768,201 passenger cars, 112,468 commercial trucks, 78,998 farm trucks, and 4,185 motorcycles. Thirty-six airports in 1956 were valued at approximately \$22,886,000. Nineteen railroad companies on Dec. 31, 1955, owned 3,708.6 mi. of line; 5 switching companies increased the mileage to 3,827.41.

Banking and Finance.—National banks in Kentucky, on June 30, 1956, numbered 89 and had total assets of \$789,589,000. On the same date state banks and trust companies numbered 279 and had resources amounting to \$1,220,534,082.10. For fiscal 1955-56 the state's total income, including borrowing of \$4,849,504.30, amounted to \$242,483,021.76 according to preliminary returns. Selected sales and gross receipts taxes amounted to \$87,080,331.13; taxes on motor fuels yielded \$51,121,364.44 of that amount. Income taxes contributed \$42,242,649.98, nearly three-fourths being from individual incomes. Licence and privilege taxes yielded \$22,038,682.10. Property taxes amounted to \$14,388,183.62. Inheritance and estate taxes yielded \$3,254,015.97. Nontax receipts contributed \$67,839,551.59. Federal grants amounted to \$52,039,794.28, including \$31,931,000.96 for welfare and health and \$14,634,443.82 for roads. Alcoholic beverage taxes contributed one-seventh of the \$99,377,813 of general fund revenue. Taxes on cigarettes contributed \$8,347,939.01, or slightly more than the \$8,069,459.08 derived from motor vehicle registration taxes. Of all expenditures, those for welfare, education and roads took about 85% of the 1955-56 budget.

Agriculture.—The number of milk cows on Kentucky farms in June 1956, was estimated at 595,000, 2% above the previous year and about 1% above the 1945-54 average. An estimated lamb crop of 556,000 was 6,000 in excess of the previous year, but 13% below the 1945-54 average. Total farm marketings for the first seven months of 1956 yielded \$210,651,000, a

decrease of \$33,884,000 from the yield of the corresponding months of the previous year.

Manufactures and Commerce.—Between Jan. 1 and June 30, 1956, 47 new industrial plants began operation or announced plans to locate in Kentucky. In June 1956, nonagricultural employment, exclusive of construction, was about 571,400, a decrease of about 5,300 from the previous month but about 6,300 above June 1955. Employees in government, chemicals, metals, retail trade and the service industries accounted for most of the increase over 1955.

In May 1956, about 120,000 people were employed in the wholesale and retail trade, but the number was down to about 128,400 the next month. That figure was in excess of the previous June. Employment in the whole sale trade in June 1956, was about 27,200 as compared with 28,700 a year earlier. In 1954, 2,720 wholesale establishments were credited with a total trade of \$2,188,582,000. In the retail trade employment had increased from 99,500 to 101,200 during the fiscal year 1955-56. In 1954 the state had 26,472 stores with sales of \$2,201,101,000; food stores numbered 7,430 and had sales of \$527,409,000. (W. W. Js.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Kentucky in 1953 and 1954 whose value was \$100,000 or more. In 1954 Kentucky was second among the states in output of ball clay and third in bituminous coal and fluorspar. It ranked 11th in value of mineral output, with 2.35% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Kentucky* (1955); *Southeastern States*, 2nd ed. (1956).

(1894-), Soviet political leader, was born at Kalinovka, Kursk province, April 17, the son of a coal miner. He joined the Communist party in 1918. In 1929 he was sent to study at the Industrial academy in Moscow, and in 1932 was a secretary of the Moscow city committee of the party. In 1934 he was elected to the central committee of the All-Union Communist party and the following year succeeded L. M. Kaganovich as first secretary of the Moscow regional committee. At the beginning of 1938 he was sent to Kharkov as secretary-general of the Ukrainian Communist party with the task of eradicating all Nationalist Ukrainian

"PCHA—CAPITALISTS! And with us they won't even share atom secrets!" 1956 cartoon by Scott of the London Daily Sketch (Eng.)

tendencies. He was so successful that on March 23, 1939, V. Stalin promoted him full member of the Politburo. During the German occupation of the Ukraine he co-ordinated, as lieutenant general, the guerrilla movement there. After the return of the Soviet army in 1943 he also became chairman of the Ukrainian council of people's commissars in Kiev. In 1949 he was made responsible for enlarging the collective farms (*kolkhozy*) by amalgamation.

Ten days after Stalin's death (March 5, 1953) Khrushchev succeeded G. M. Malenkov as party first secretary and soon turned his attention to the declining agricultural production. In Feb. 1954 he proposed an entirely new remedy; namely that the main source of additional supplies of grain should be new state farms to be set up in Kazakhstan and western Siberia.

On the night of Feb. 24–25, 1956, at a private session of the 20th congress of the Communist Party of the Soviet Union, Khrushchev made a memorable and startling speech. In this session—not published in the U.S.S.R., but revealed on June 4 by the U.S. state department—he bitterly attacked Stalin's cruelty, megalomania and self-glorification, deriding his military capacities and his leadership during World War II. On Sept. 19 Khrushchev arrived in Belgrade, Yugos., eight days later he flew to Sevastopol, with Marshal Tito of Yugoslavia. On Oct. 19, together with three other Soviet leaders, he flew to Warsaw, Poland, returning to Moscow the following day.

Kimpton, Lawrence Alpheus (1910–), chancellor of The University of Chicago, was born on Oct. 7 in Kansas City, Mo. He graduated from Stanford university, Stanford, Calif., in 1931 and took his Ph.D. degree at Cornell university, Ithaca, N.Y., in 1935. That year he was appointed a teacher at Deep Springs school and in 1936 was named dean and director. In the autumn of 1942 Kimpton became dean of the college of liberal arts and professor of mathematics and philosophy at the University of Kansas City. He joined the metallurgical laboratory, atomic bomb project, at the University of Chicago, as associate chief administrative officer in 1943, and shortly thereafter became chief. In 1944 he became dean and professor of philosophy and education at The University of Chicago, and on July 1, 1946, was elected vice-president and dean of faculties. He accepted an appointment as dean of students at Stanford university in 1947, returning to The University of Chicago in 1950 as vice-president in charge of de-

velopment, the position he held when elected chancellor on April 12, 1951.

Kimpton's administrative program advanced notably during the year 1956. The campaign for \$32,700,000 announced in June 1955 produced \$20,300,000 by the end of the first year. Among other objectives, the campaign permitted increases in faculty salaries. In addition, \$6,300,000 was received for support of regular university activities and an estate tentatively estimated at \$15,000,000 was bequeathed the university in the will of Louis Block, of Joliet, Ill. Undergraduate enrolment increased substantially for the third consecutive year. The plan to conserve the university neighbourhood approached the state of construction. Five bids were received by the Chicago Land Clearance commission in September for the \$20,000,000 rebuilding of the 47.3-ac. area in which demolition was largely completed.

Knowland, William Fife (1908–), U.S. senator, was born on June 26 at Alameda, Calif. After taking his bachelor's degree at the University of California, Berkeley, in 1929, he entered the newspaper business, becoming assistant publisher of the *Oakland Tribune* (Calif.) in 1933. He was a member of the California state assembly from 1933 to 1935 and of the state senate from 1935 to 1939; in 1941–42 he was chairman of the executive committee of the Republican national committee. In 1945 Gov. Earl Warren of California appointed him to the U.S. senate to fill the unexpired term of Hiram W. Johnson. He was elected on the Republican ticket in 1946 for the full term 1947–53 and was re-elected in 1952 for the term 1953–59. On Jan. 2, 1953, Knowland was elected Republican policy committee chairman of the U.S. senate. On Aug. 4, 1953, after the death of Robert A. Taft, he became majority leader of the senate.

Knowland's strong views on foreign policy led him into disagreement with the administration and Secretary of State John F. Dulles as, for example, on April 14, 1954, when he criticized Dulles' plan for a southeast Asia security alliance as "weak" and "unrealistic" without the participation of both Nationalist China and South Korea. On July 1, 1954, he declared flatly that if Red China were granted admission to the United Nations he would resign his majority leadership and devote full time to bringing about U.S. withdrawal from the UN.

Following the Democratic victory in the congressional elections of Nov. 1954, Knowland became senate minority leader in the 84th congress when it convened Jan. 5, 1955. He continued to criticize the Eisenhower administration's foreign policy on specific issues, but supported the administration's domestic legislative program almost without reservation. He announced in late 1955 that he would run for the Republican presidential nomination if Pres. Dwight D. Eisenhower delayed his second-term decision unduly. On March 1, 1956—the day after President Eisenhower agreed to run again—he withdrew his candidacy. On July 13 Knowland was appointed a delegate to the UN general assembly session convening in Nov. 1956.

Korea. Korea is a peninsula extending southward from Manchuria and the U.S.S.R., 525 mi. long and from 125 to 200 mi. wide. It is bounded north by the Yalu and Tumen rivers, south by the Straits of Korea, west by the Yellow sea and east by the Sea of Japan. Area: 85,266 sq.mi. Total pop.: (1944 census) 25,120,174; (1955 est.) 28,600,000. Religions: Buddhism, Confucianism, shamanism and a unique eclectic religion, Chondokyo. In 1939 there were about 500,000 Korean Christians.

The country is divided into two parts. In the south is the Republic of Korea, area about 36,152 sq.mi. Pop. (1955 est.) 21,526,000. Chief cities (pop., 1955 est.): Seoul (cap.) 1,520,000; Pusan 840,000; Taegu (1949 est.) 313,705. President of the republic in 1956, Syngman Rhee.

In the north is the Democratic People's Republic of Korea, area about 49,114 sq.mi. Pop. (1955 est.) 6,474,000. Chief city, Pyongyang, pop. (1952 est.) 500,000. Prime minister in 1956, Marshal Kim Il Sung.

History.—On May 31, 1956, the United Nations command informed the Communist command in Korea and the Neutral Nations Supervisory commission that, because of violations of the provisions of the armistice agreement of 1953 by the Communists and because of the obstruction of the tasks of the commission by the Communists and by the Polish and Czech members, the United Nations command was provisionally suspending, during the time that the Communist side continued in default, performance on its part of those provisions of the armistice agreement governing the operations of the commission and the inspection teams. The United Nations command made it clear that it continued to regard the armistice agreement as in force. In June the Neutral Nations Supervisory commission teams in the Republic of Korea withdrew to Panmunjom in the demilitarized zone, and the teams in North Korea returned to Panmunjom.

The army of the Republic of Korea had 650,000 men in 1956, making it the fourth largest in the world. In June 1956 the Chinese Communists were reported to have 300,000 soldiers in North Korea, and the North Koreans were reported to have a somewhat larger number of men under arms.

At the Republic of Korea's third presidential election on May 15, 1956, Syngman Rhee was re-elected as president. His strongest and long-time opponent, P. H. Shinicky, a member of

the house of representatives and candidate of the Democratic party, died ten days before the election. The vice-presidential candidate of the Democratic party, John M. Chang, former ambassador to the U.S., was elected over Syngman Rhee's running mate, Lee Ki Poong, speaker of the house of representatives. The chief constitutional duty of the vice-president is to preside over the upper house of the legislature, the house of councillors. The house of councillors, however, had never been created, and upon taking office on Aug. 15, 1956, Vice-President Chang announced that his first task would be its establishment.

Marshal Kim Il Sung, chairman of the council of ministers of the Democratic People's Republic of Korea, was re-elected chairman of the central committee of the Korean Labour party in April 1956.

Education.—In 1954 there were in the Republic of Korea 3,954 elementary schools with 2,342,065 pupils and 36,353 teachers; 621 middle schools with 324,114 pupils and 6,785 teachers; 398 high schools with 160,266 pupils and 4,401 teachers; 48 colleges with 40,520 pupils and 3,685 teachers; and 18 normal schools with 12,190 pupils and 305 teachers. In 1952, 65% of the population of the Republic of Korea was believed to be literate.

The north Korean regime claimed in 1955 to have 4,800 elementary and junior high schools, 72 technical and other vocational schools and 16 colleges and universities. School enrolment in 1956 was claimed to total 1,942,000 students.

Finance.—The budget of the Republic of Korea for the 18 months ending Dec. 31, 1956, amounted to estimated revenues of 580,100,000,000 hwan and expenditures of 598,500,000,000 hwan. The 1955-56 budget ran for 18 months because of the change made in June 1956 to have the 1957 fiscal year correspond with calendar year 1957.

The official exchange rate, which had been 180 hwan to U.S. \$1 since Dec. 1953, was changed to 500 hwan to U.S. \$1 in Aug. 1955 and remained at that level in 1956. The unofficial free-market rate at the end of June 1956 was 1,040 hwan to U.S. \$1, although it changed to 920 hwan by Oct. 1956. By the end of June 1956 the currency in circulation totalled 58,920,000,000 hwan. The retail price index (1947=100) in the Republic of Korea rose to a peak of 21,087 in May 1956, and still was climbing moderately thereafter. The balance sheet of the Bank of Korea, the central bank of the Republic of Korea, showed assets and liabilities of 243,807,635,000 hwan at the end of May 1956.

The United States government made available to the Republic of Korea during the 1955-56 fiscal year \$327,000,000 in economic assistance.

Trade.—The Republic of Korea's trade deficit continued into 1955. In calendar year 1955, commodity imports, excluding U.S.-UN-financed imports, totalled \$82,500,000 and exports \$17,600,000. In the first seven months of 1956 imports totalled \$27,000,000 and exports \$14,400,000. U.S.-UN-financed imports totalled \$244,000,000 in 1955 and \$50,700,000 during the first three months of 1956. Japan, the U.S. and Hong Kong were the major sources and destinations of South Korea's imports and exports. Chief imports, including aid imports, were raw cotton, fertilizer, coal, petroleum and some manufactured goods and foodstuffs, and chief exports were minerals and marine products.

North Korea's trade continued to be chiefly with Communist China and the Soviet Union. Communist China claimed to have undertaken to contribute about 8,000,000,000 yuan and the Soviet Union 1,000,000,000 roubles in economic assistance for four-year and three-year periods, respectively, beginning in 1954.

Transportation.—In March 1956 there were in operation in the Republic of Korea 2,904 km. of railroad track and 40 km. of streetcar track. As of May 1956, there were 522 locomotives, 11,410 freight cars and 1,097 passenger cars in the Republic of Korea. The railroads handled 2,060,000,000 ton-km. of freight and 3,712,000,000 passenger-km. during 1955. There were an estimated 1,000 km. of railroad track in North Korea.

There are about 21,000 mi. of roads, of which 9,500 mi. are in South Korea. At the end of 1955, the Republic of Korea had 8,103 trucks, 2,953 buses and 6,556 automobiles. Korean National Airlines, Northwest Airlines and Civil Air Transport, a Nationalist China air line, provided domestic and international air service for the Republic of Korea in 1956. In 1956 Korea had a merchant fleet of 7,671 vessels with a gross tonnage of 268,358 tons, of which 237 vessels were more than 100 tons each and had a gross tonnage of 145,922 tons.

Agriculture, Fishing and Forestry.—Agricultural production in the Republic of Korea in the 1955-56 crop year included, in metric tons: rice, 2,315,690; fall grains (millet, corn, oats and buckwheat), 92,180; summer grains (barley, naked barley, wheat and rye), 725,580; pulses, 168,310; potatoes and sweet potatoes, 212,180; fruit, 116,900; and vegetables, 1,185,000. In 1955 the Republic of Korea had 867,000 cattle; 334 milk cows, 17,000 horses; 775 sheep; 38,000 goats; 168,000 rabbits; 1,262,000 pigs; 8,924,000 chickens; and 622,000 ducks. Marine landings in 1955 totalled 257,300 metric tons. Lumber production in the Republic of Korea in 1953 totalled 301,000 cu.m.; firewood production 148,215 metric tons; and charcoal production 15,337 tons. There were reports of food shortages in Communist-held North Korea in 1955 because of cold weather and floods. These reports continued into 1956 as fertilizer, seed and farm manpower were inadequate.

Manufacturing.—Industrial production in the Republic of Korea in 1955 included: cotton yarn, 58,576,000 lb.; cotton cloth, 121,523,000 sq.yd.; woollen yarn, 244,032 lb.; woollen and worsted cloth, 4,153,293 yd.; rayon cloth, 80,514,000 sq.yd.; silk cloth, 1,800,000 sq.yd.; all-rubber shoes, 23,422,000 pairs; paper, 33,017 metric tons; cement, 56,257 metric tons; bicycles, 24,048; and soap, 21,798 metric tons. The Republic of Korea has a state monopoly on salt, tobacco and ginseng. Production in 1955 included, in metric tons: salt, 353,919; cigarettes, 12,605; and cut tobacco, 5,179. Electric power production in 1955 totalled 880,000,000 kw.hr.

FUNERAL PROCESSION in Seoul, Korea, following the death of P. H. Shinicky in May 1956. Shinicky was campaigning for election as president of the Republic of Korea

The North Korean regime announced that it had embarked on a three-year economic plan in Jan. 1954. By the end of 1956, North Korea hoped to be producing 4,000,000 metric tons of coal as compared with 700,000 tons in 1953 and rehabilitation of a 600,000-kw. hydroelectric plant was expected to be completed in 1956. By the end of 1955, 236 factories were reported to have been rehabilitated and 71 new factories established. The five-year People's Economic plan was reported to be scheduled to begin in 1957 with emphasis to be on the development of heavy industry. Unconfirmed reports indicated that North Korea expected to increase its steel production by 3 to 3.5 times in 1961 over 1956 levels; increase pig iron production by 2.8 times; increase coal production by 1.6 times; and increase chemical fertilizer output to 400,000 tons.

Mining.—Most of the major mineral resources of Korea are in the northern area held by the Communists, with important iron ore, copper, lead, zinc, pyrites, coal and magnesite deposits. Mineral production in the Republic of Korea in 1955 included (in metric tons): copper ore, 12,704; tungsten, 3,146; amorphous graphite, 90,018; kaolin, 14,143; fluorspar, 1,081; anthracite coal, 1,308,232; gold, 1.5; silver, 2.5; iron ore, 28,616; manganese, 3,482; talc, 6,201; lead ore, 1,366; electrolytic copper, 327; bismuth, 20,541; monazite, 498; bismuth, 433. (S. Nr.)

Kubitschek, Juscelino (1902—), inaugurated president of Brazil Jan. 31, 1956, was born at Diamantina in the state of Minas Gerais, Braz., on Sept. 12. He graduated with high honours from the medical school of the University of Minas Gerais at Belo Horizonte in 1927, served two years of internship in Paris, Berlin and Vienna, and then returned to Brazil, where he became a successful surgeon. In 1933 Kubitschek was appointed to his first political post, as a government secretary, and the following year was elected to the federal chamber of deputies. In 1940 he took office as mayor of Belo Horizonte, attracting national attention for an extensive city planning project. In 1946 he was returned to the federal chamber of deputies for a four-year term and in 1950 was elected governor of the state of Minas Gerais.

The Brazilian Social Democratic party nominated Kubitschek for the presidency in Feb. 1955, and despite considerable opposition from top army officers he was elected president of Brazil on Oct. 3, and took office on Jan. 31, 1956, for a five-year term. Prior he had flown to Key West, Fla., where he met Pres. Dwight D. Eisenhower on Jan. 5, and then to Europe to enlist financial and technical assistance in the development of Brazil's natural resources. The day after his inauguration Kubitschek announced a new five-year economic plan for Brazil.

Labour, U.S. Department of: see GOVERNMENT DEPARTMENTS AND BUREAUS, U.S.

Labour: see AGRICULTURE; CHILD LABOUR; EMPLOYMENT; INTERNATIONAL LABOUR ORGANIZATION; LABOUR UNIONS; NATIONAL LABOR RELATIONS BOARD; STRIKES; UNITED STATES; WAGES AND HOURS. See also under various states.

Labour Unions. United States.—Wages kept pace in 1956 with general economic growth in the United States. More than half of the collective bargaining agreements signed during the year called for wage boosts of 10 to 12 cents an hour, and four out of five of the negotiated contracts called for increases of 7 cents or more. Wage increases were generally several cents higher than they had been during the previous year. In addition to the wage increases, most of the contracts provided for improved fringe benefits. The trend toward employer-financed health and welfare benefits continued. The number of paid holidays tended to increase, more than half of the contracts signed in 1956 providing for seven paid holidays more a year.

A significant aspect of the 1956 labour agreements was the trend toward lengthening the duration of contracts to two, three or even five years. These contracts normally called for automatic annual wage boosts during the life of the agreement as well as "escalator" clauses to provide wage adjustments proportionate to increases in cost of living.

A rise in the number of long-term agreements and increases

Source: "Directory of National and International Labor Unions in the United States," U.S. Department of Labor, Bureau of Labor Statistics Bulletin No. 1185 (Washington, D.C., 1955).

in the consumer price index during the summer months revived interest in automatic pay raises to keep pace with increased living costs. The steel, electrical machinery and aluminum workers were the largest groups to be covered under the so-called "escalator" clause. The general practice in these contracts was to provide for adjustments in wage rates proportionate to fluctuations in cost of living, but wages could not drop below the level agreed upon when the contract was signed.

The supplementary unemployment compensation provisions which were adopted in the automobile industry in 1955 became effective during 1956, when a sufficient number of states allowed the payment of supplementary benefits in addition to the payments made by state unemployment insurance. Supplementary unemployment compensation was extended to the steel, aluminum, rubber and glass industries in 1956.

There was little change in total union membership during 1956, but some significant developments took place within the trade union movement. One major independent union, the Brotherhood of Locomotive Enginemen and Firemen, with a membership of 96,000 railroad workers, joined the A.F. of L.-C.I.O. Large defections in membership occurred in the United Electrical Workers, the largest of the unions which were expelled from the C.I.O. in 1949 because of Communist domination. Eighteen thousand members of the union in the New York metropolitan area left the United Electrical Workers and joined the International Electrical union, an affiliate of the A.F. of L.-C.I.O., and another 10,000 members in upstate New York deserted the United Electrical Workers in favour of the Machinists. Attempts by the International Longshoremen's association, previously expelled from the A.F. of L. because of alleged racketeer domination, to join the A.F. of L.-C.I.O. were rejected.

About half of the former A.F. of L. and C.I.O. state organizations had merged in the first year since the union of the A.F. of L. and C.I.O. on Dec. 4, 1955.

A major development within the A.F. of L.-C.I.O. was the formation of the Industrial Union department. Seventy-two unions, whose membership was organized wholly or partially on an industrial basis, joined together to form this department with a membership of about 7,000,000 persons. The function of the Industrial Union department was to co-ordinate the bargaining of unions which dealt with the same companies. Therefore, the department was organized along industry groups having common economic and collective bargaining problems.

Two important extensions of federal legislation in the interests of labour became effective in 1956. Unemployment insurance benefits were extended to 1,400,000 new workers under a law

JAMES C. PETRILLO (right), president of the American Federation of Musicians, awaiting his turn to speak as George Meany, president of the A.F. of L.-C.I.O. unions, addressed the platform committee of the Democratic national convention at Chicago in 1956

which brought employers of four or more workers under the unemployment insurance program. Only employers of eight or more employees had previously been covered by federal law, though the majority of states had already passed more liberal coverage provisions of their own. On March 1, 1956, the minimum hourly wage rate under the Fair Labor Standards act was raised from 75 cents to \$1. Out of about 24,000,000 workers covered by the law, about 2,000,000, most of whom were in the south, were directly affected by the increase.

The right of states to pass legislation prohibiting union shops, the so-called right to work laws, remained a central point of contention in a number of states. Louisiana was the first southern

state to repeal its right to work law affecting nonagricultural employees. In addition to Louisiana there were 17 other states in the United States which had passed legislation prohibiting union shops.

(S. A. LN.)

Canada.—The outstanding event in the Canadian labour movement in 1956 was the merger convention held at Toronto, Ont., in April, when the Trades and Labour Congress of Canada and the Canadian Congress of Labour joined forces to form the Canadian Labour congress. The membership of the Trades and

Labour congress was estimated at approximately 600,000, and the Canadian Congress of Labour at 400,000.

Nine departments were established by the Canadian Labour Congress convention, dealing with organization, legislation, education, research, international affairs, government employees, provincial federations of labour and labour councils, political education and public relations. The official journal of the new congress was known as *Canadian Labour*.

Before the convention had concluded, an independent group known as the One Big union, with headquarters at Winnipeg, Man., and a membership of approximately 5,000, was accepted as an affiliate of the new congress; and, in July, the General Policy committee of the Brotherhood of Locomotive Firemen and Enginemen authorized an application for affiliation of its Canadian membership of 12,000.

A further step toward labour unity was taken in Sept. 1956 when the Canadian and Catholic Confederation of Labour (membership 100,000) authorized a nine-member committee to continue discussions with Canadian Labour congress representatives, with a view to reaching a basis of affiliation, which would be placed before a special convention in June 1957 for ratification.

In Dec. 1955 the Trades and Labour congress and the Canadian Congress of Labour, as well as the Canadian and Catholic Confederation of Labour and the national legislative committee of the international railway brotherhoods, made representations to the federal government. Considerable unanimity was indicated in the requests for legislative and administrative policies. While employment in Canada continued at a fairly high level, emphasis was laid on the adoption of measures which would lessen the effect of seasonal unemployment. Amendments to the Unemployment Insurance act were requested, particularly the provision of benefits to insured workers who became idle because of illness. All four organizations stressed the desirability of a national health insurance plan and the control of immigration. Other representations dealt with a national labour code, a national minimum wage, equal pay for equal work for men and women, housing, taxation, etc. Strong opposition was expressed to compulsory arbitration, which had been threatened in connection with a nationwide railway strike.

The total membership of labour organizations in Canada as of Jan. 1, 1956, was reported by the federal department of labour to be 1,351,652, or 6½% above the corresponding figure for 1955.

(N. S. D.)

International.—The International Confederation of Free Trade unions reported that on June 1, 1956, it had a membership of 54,000,000 in 114 organizations in 81 countries. The I.C.F.T.U. European Regional organization held its biennial conference in Frankfurt-on-Main, Ger., May 22-24. The conference considered reports on automation, the European common market and Euratom. Resolutions were adopted which stressed the importance of strengthening these European agencies.

A special conference was convened by the European Regional organization of the I.C.F.T.U. in Brussels, Belg., during Aug. 25-27, 1956, to consider the "Revival of the European Idea." The conference adopted a policy statement in favour of a progressive reduction of tariff barriers and the creation of a European common market; it recommended the establishment of a European investment fund to assist the underdeveloped regions in Europe. It was also suggested that closer integration in the field of transport would bring considerable benefits, and the conference proposed the immediate setting up of a European Transport authority. Approval was given to the Euratom proposals, but it was strongly emphasized that the production of atomic energy should be undertaken by public authorities. Finally the conference expressed approval of the recognition, by the conference of ministers of the European Coal and Steel community, of the prin-

iple of levelling up social conditions in Europe and it urged practical measures to bring about a progressive upward adjustment as soon as possible.

Great Britain.—Little change had occurred in total trade union membership during the past few years. During 1955 the affiliated membership of the Trades Union congress rose by 56,783 to 8,263,741. The main increases were recorded by the general unions and unions in the engineering and printing industries.

Since the end of World War II the Trades Union congress had generally adopted a cautious, moderate policy on economic, political and industrial matters. In 1956 the congress did not heed the warnings of the chancellor of the exchequer and it passed resolutions in favour of a militant wages policy and a 40-hr. week.

On the surface the 1956 Trades Union congress was more united than any congress for many years. For the first time since World War II there was no sharp cleavage between the left and right wings of the trade union movement on either domestic or foreign policy issues, but the sharp differences of opinion that separated the Communists and their sympathizers from the rest could not be hidden. The unity that prevailed was purely tactical and was likely to be temporary.

Another important feature of the congress was the markedly political tone of the debates. The government was assailed far more vigorously than the employers, and there were many references to the desirability of securing the return of a Labour government at the earliest opportunity. It was, however, doubted whether the unions would be prepared to accept the implications of the planned economy for which they called, if a Labour government were returned at the next election.

Lacrosse. The University of Maryland, College Park, swept through its second consecutive campaign unbeaten and tied to retain the Wingate cup, symbol of national intercollegiate supremacy in the sport. When the Terrapins routed Johns Hopkins, 13-6, at Baltimore, Md., on May 19, 1956, they won their all-winning streak through 23 games to again clinch laurels in the Cy Miller division of the United States Intercollegiate Lacrosse association and carry off national honours at the same time. Rensselaer Polytechnic institute, Troy, N.Y., was runner-up in the point standing for competition against other squads of the Cy Miller division. The University of Baltimore tied the Laurie Cox group with 35 points while Colgate university, Hamilton, N.Y., captured the championship trophy in the Roy Taylor division with 28 points. Oberlin college of Gambier, O., carried off the McCormick trophy, symbol of Midwest league laurels.

Maryland's star attack man, Charles Wicker, along with teammates James Kappler, goalie, John Simmons, defense, and James Keating, midfield, gained places on the official first team chosen by the U.S.I.L.A. Rounding out the first ten were John Pendergast, Yale, and Peter Wagner, Rensselaer Polytechnic institute, defense; Robert Kelley, Rutgers, and Arlyn Marshall, Johns Hopkins, midfield; and Stuart Lindsay, Syracuse, and John Howland, Washington college, attack.

In the annual battle between the north and south all-stars, played at Geneva, N.Y., on June 9, the south triumphed by 20-

Yale, with five victories and no defeats, won the champion-

ship in the first official season of the Ivy league. Following the Elis in the final standing were Dartmouth (3-2), Princeton (3-2), Cornell (2-3), Harvard (2-3) and Pennsylvania (0-5).

The Washington and Lee university squad of Lexington, Va., made a 26-day exhibition tour of England and compiled the brilliant record of eight victories in nine contests. A high point of the Americans' trip was a triumph over a combined Oxford-Cambridge team. The Generals' only setback was to an All-England team, by 5-4.

Women's lacrosse continued to gain in interest among college and preparatory schools during the year. The United States Women's Lacrosse association season was climaxed by the group's annual tournament at Waltham, Mass., late in May.

Laos. A landlocked kingdom, a member of the French union, situated in the Indochinese peninsula, Laos is bounded north by China, northeast by the Democratic Republic of Vietnam, east by the National Republic of Vietnam and south by Cambodia. Area: 91,506 sq.mi. Pop. (1955 est.) 1,425,000. The Laotians are Thais and speak a Thai dialect. Religion: Buddhist. Chief towns (pop., 1953 est.): Luang-Prabang (royal capital) 15,000; Vientiane (administrative capital) 20,000. Ruler, King Sisavang Vong; premier in 1956, Prince Suvanna Phuma.

History.—In the elections to the French national assembly held on Jan. 7, 1956, the Progressive party secured 21 seats, Independents (supporters of the government) 8 and other parties 10. In spite of the instructions issued by the Communist-controlled Pathet Lao, 80% of the electorate went to the polls. After a long parliamentary crisis, Prince Suvanna Phuma was able to form a government. Laotian representation in the assembly of the French union was increased from three to five delegates, but the prime minister nevertheless expressed a wish to see modifications in the constitution of the union. On coming to power, the Progressives changed their name to Nationalists.

On Aug. 6 the government reached an agreement with Prince Suphanu Vong, the leader of the rebel Pathet Lao movement: hostilities were to cease; the two dissident provinces of Sam Neua and Phong Saly and the armed forces of Pathet Lao were to acknowledge the royal authority; mixed commissions were to settle the details of unification; further elections were to be held to increase the number of deputies; and a united government was to be formed.

(HU. DE.)

Education.—Schools (1954): primary 677, pupils 35,042 (excluding 100 primary schools closed in areas affected by war); secondary (including 1 teachers' training) 7, pupils 1,126.

Finance.—Monetary unit: 1 kip=10 metropolitan French francs. U.S. \$1=350 metropolitan francs.

Literary Events.—A more revealing demonstration of the vitality of Latin-American letters than the prizes, celebrations and commemorations of 1956 was the increasing number of translations of this corpus of literature into other languages. Such a novel as *Los pasos perdidos* of the Cuban Alejo Carpentier provided stimulating reading for the vast English- and French-speaking public, being read by the latter group as the prize-winning *Partage des eaux*. Thanks to an agreement between UNESCO (the United Nations Educational, Scientific and

Cultural organization) and the Organization of American States, a series of French translations of Latin-American literary works was begun. Additional authors translated during the year in Paris, Fr., were Picón Salas, Rafael Pineda, Domingo F. Sarmiento, Luiz Machado de Arnao and Roberto Ganzo of Caracas, whose complete works were put into French. Italians were given opportunity to read *Il figlio del ladro* (Manuel Rojas) and *Tutto il verde perirà* (Eduardo Mallea), among other translations. An anthology of Latin-American poets appeared in Munich, Ger., under the title of *Schwann im Schatten*.

New literary journals which appeared were *Estaciones*, *Revista literaria* (Mexico), *Ficción* (Buenos Aires), *La Revista Dominicana de Cultura*, and *Cordillera*, announced as a project sponsored by the Bolivian government. In Seville, Sp., the *Anuario de Estudios Americanos* devoted much space to a new section, *Historiografía y Bibliografía Americanista*. The coveted Emecé prize for the novel, awarded in Argentina, went to Federico J. Peltzer for his *Tierra de nadie*, the tragedy of a young lover's guilt and suicide. The corresponding Zig-Zag prize of Chile was awarded to the novelist and story writer Luis Merino Reyes for his novel in manuscript *Regazo amargo*. Brazil's Carmen Dolores Barbosa prize and the Monteiro Lobato award were granted respectively to Origenes Lessa for his novel *Rua do sol* and to Osman Lins for his tales collected under the title of *Os gestos*. Venezuela's highest literary award went to Miguel Otero Silva for his *Casas muertas*, and to the essayist Augusto Mijares for his *La luz y el espejo*.

Poetry.—Mexico's Fondo de Cultura Economica published several important collections of verse, including Alí Chumicero's elegiac and amatory *Palabras en reposo*, Carlos Pellicer's *Práctica de vuelo*, and Octavio Paz's *El arco y la lira*. Brazil produced the complete works of Carlos Drummond de Andrade in a volume of 600 pages entitled *Fazendeiro do ar e poesia até agora*. Lêdo Ivo maintained his position as one of Brazil's important poets with *Um Brasileiro em Paris*, demonstrating again his technical prowess and his gift for selecting poetic themes. A notable member of the so-called Generation of 1945, João Cabral de Melo Neto, made clear once more in his *Duas Aguas* that poetry cast in prosaic form can be highly lyrical. The Venezuelan César Lizardo's *Eternidad del júbilo* (Caracas) is informed with his humanistic credo: "I place over Poetry and Beauty my faith in Man, my unshakable passion for friendship even over Justice." Sensitive impressions and Lorquian metaphor abound in the Peruvian César Miró's *Alto sueño*. The Chilean-American Arturo Torres-Rioseco again showed his diversified talents by publishing in Mexico his *Cautiverio*, a collection of poems from 1940 to 1955; the collection carries a prologue by Gabriela Mistral.

Prose.—Although some critics see the Latin-American novel as evolving from a realistic chronicling of regionalism, emphasizing *costumbrismo* and *indigenismo* toward a more artistic analysis of a broader world, the wealth of national *milieus* was once again exploited to good advantage by the novelists. Such a regionalist novel was *Chão bruto* of the Brazilian Hernani Donato, which treats of plantation life with realism and even sociological polemic. Another such novel was *Casas muertas*, by the Venezuelan Miguel Otero Silva, published in Buenos Aires, Arg.; this story deals with the plain-city of Ortiz, gradually becoming a ghost town as its plague-ridden inhabitants flee it for a safer life elsewhere. *Açoite*, a novel by Armindo Pereira, takes place in the northeast of Brazil and exploits the theme of the famous "Essa Negra Fulô" of Jorge de Lima's poem; the beautiful and pure mulatto daughter of a plantation owner and a slave girl is persecuted unto death in a tragic atmosphere of jealousy and hatred.

Several of the better novels abandon the richness of regionalism to emphasize psychological problems in the absolute. Enrique Lafourcade's *Pena de morte* deals with a disturbed per-

sonality, a painter who has abandoned his art in the quest for an absorbing and perfect love; happiness is denied him by the very unattainability of his standards and his desires, and he proves the familiar theory that man creates his own hell. *Chão de espinhos*, by the Brazilian Ondina Ferreira, treats of the insoluble problem of a woman unable to obtain a divorce and who traverses a "field of thorns" by entering into a forbidden love. Psychological and emotional problems are incessant in José de Barros Pinto's *Jangada*, which brings two former lovers back together into a lifeboat when their ship has been torpedoed off the coast of Brazil. This unusual treatment of a novel theme won this new author fame and a literary prize. The Fondo de Cultura Económica brought out an unpublished novel of Mariano Azuela; *Esa sangre* treats of the tragedy of a man who is unable to reclaim the position and fortune he held before the agrarian revolution. Second prize of Emecé's competition for novelists went to Eliseo Montaine's *El viaje*, a study of evolving emotions and fortunes of a group of travellers thrown together in a coach travelling toward Tandil, Arg. V. Botella Pastor set his psychological novel *Por qué callaron las campanas* in the turmoil of the Spanish civil war, although there is no connection between this story of a triangle and Ernest Hemingway's novel of kindred title. Last but by far from least was Silvina Bullrich's *Teléfono ocupado*, the vivid portrayal of the intimate character of a woman in Buenos Aires through the medium of the telephone, an unusual device of composition which succeeds in maintaining suspense until the end.

In Mexico Julio Jiménez Rueda edited for university students a collection of short stories and prose of José María Roa Barcena, a neglected *cuentero* of the 19th century. The Brazilian diplomat João Guimarães, whose *Sagarana* met with success a decade earlier, published the tales *Corpo de baile*, again recording the dramas, superstitions, joys and passions of the cowboys of his native Minas Gerais. The well-known Brazilian journalist and essayist, Rubem Braga, published a collection of mood-pieces *A Barboleta amarela* ("The Yellow Butterfly"). One final collection of stories worthy of note was the *Historias de Tata Mundo* of the Costa Rican Fabián Dobles.

Anthologies, Literary History.—An important vehicle for the diffusion of Latin-American letters was the *Anthologie de la poésie Ibéro-américaine*, issued in Paris under the editorship of Federico de Onís. The year marked the publication of volume ii of Alfonso Reyes's complete works, constituting three pieces composed by the gray eminence of Mexico in Spain between 1914 and 1924. Also from Mexico came a two-volume anthology of *Poesía gauchesca*, compiled and edited by Argentinians Jorge Luis Borges and Adolfo Bioy Casares. In Havana appeared the *Obra poética* of Emilio Ballagas, arranged by the poet's friends and including verses written from 1925 to the year of his death (1954).

The year was rich in literary scholarship, history and criticism. At least three histories of Chilean literature became available. Raúl Silva Castro's *Panorama de la literatura chilena* (Mexico City) is a scrupulous chronological register of Chilean novelists from José Victorino Lastarria down to the present. From the same city came Arturo Torres-Rioseco's *Breve historia de la literatura chilena*, which justifies the author's claim of objectivity and completeness. These volumes followed in the wake of Montes and Orlandi's *Historia de la literatura chilena*, criticized as being insufficiently complete. From La Paz came the six *Estudios de literatura boliviana* by Gabriel René Moreno. Pinto de Carmo's study of new directions in Brazilian letters was translated and published by the American House of Montevideo. Luis Leal's *Breve historia del cuento mexicano* was hailed as a model of thoroughness and scholarship; its ten chapters trace the genre's evolution from the pre-Hispanic tale to the expres-

nistic pieces of recent date. A companion publication was large Adalberto Vázquez's brief *Perfil y Esencia de la poesía mexicana*. Important as the first broad study of the essay genre is Robert Mead's *Breve historia del ensayo hispanoamericano*. Studies on individual authors varied from familiar to unfamiliar figures. Nobel prize winner Gabriela Mistral was the object of a study probing the motifs of her lyrics, published in Munich by Hans Rheinfelder. Alfredo Cardona Pená's collection *Pablo Neruda y otros ensayos* consists of appreciations of eight contemporary poets, including four Spanish exiles: Guila, Garfias, Moreno Villa and León Felipe. The stature of Bra's Machado de Assis continued to grow. Not only did the National Ministry of Education sponsor a complete bibliography of his works edited by Galante de Sousa, but a new study on him was published by R. Magalhães Junior and a fifth edition appeared of the basic *Machado de Assis* by Lúcia Miguel Pereira. In Mexico Manuel Pedro González published a long essay viewing José María Heredia as the "primogénito del romanticismo hispano." Jorge Luis Borges devoted a volume to Leopoldo Lugones, describing this Cordoban writer as "a man who unconsciously denied himself all passion and laboriously erected lofty and illustrious verbal edifices until coldness and loneliness overtook him." Another serious study of *Lugones Escritor* was published in Buenos Aires by Juan Carlos Ghiano. From Caracas came a keen and lively biography of Pedro Maria Morantes (Pio) by José Carrillo Moreno, including an *ineditum* of that writer, *El Capitán Tricófero*.

Latvia. A Soviet Socialist republic, Latvia is bounded north by Estonia, east by the Russian S.F.S.R., southeast by Byelorussia, south by Lithuania and west by the Baltic sea. Area: 24,600 sq.mi. Pop.: (1935 census) 1,950,502; (1956 est.) 2,000,000. Nationalities (1935): Latvian 75.5%; Russian 15.6%; Jewish 4.8%; German 3.2%; Polish 2.5%. Religions (1935): Lutheran 56.1%; Roman Catholic 24.5%; Greek Orthodox 8.9%; Old Believers (Russians) 5.5%; Jewish 4.8%. Chief towns (pop., 1935 census; 1956 est. in parentheses): Riga (pp.) 385,100 (565,000); Liepaja 57,100 (80,000); Daugavpils 2200 (55,000). First secretary of the Latvian Communist party in 1956, Janis Kalnberzins; chairman of the presidium of the Supreme Soviet, Karlis Ozolins; chairman of the council of ministers, Vilis Lacis.

History.—The 14th congress of the Latvian Communist party was held in Riga from Jan. 17 to 19, 1956. Kalnberzins was re-elected first secretary; a Russian, Filip Ivanovich Kashnikov, became second secretary. Colonel-General Aleksandr Gorbatov, commander in chief of the Baltic military district, was also elected a member of the new Politburo.

Under the five-year plan 1951–55, 73 new industrial enterprises had been established in Latvia. The 1956–60 plan provided, among others, for the building of a new hydroelectric power station at Plavinas, on the Daugava river.

On Aug. 3–7, a squadron of the Swedish navy paid a visit to Riga. Officers, ratings and journalists making the visit had ample opportunity to observe life in Riga, now, with suburbs, a city of about 800,000 inhabitants with a Russian majority. Living conditions were bad and the average monthly wage of an industrial worker was 800 roubles, barely the price of a suit. A fairly large number of deportees had returned lately, but nearly all were broken in health.

(See also ESTONIA; LITHUANIA.)

(K. SM.)

Education.—Schools (1939; 1950 in parentheses): primary 1,895 (1,700), pupils 229,825 (232,000); secondary 114 (96), pupils 25,225 (20,000). In 1953 Latvia had 10 institutions of higher education with a total of 15,000 students.

Finance.—Budget: (1955 est.) balanced at 1,656,421,000 roubles; (1956) balanced at 1,881,212,000 roubles.

Agriculture.—Main crops (metric tons, 1937–39 average): rye 409,700; wheat 186,900; barley 215,900; oats 433,800; potatoes 1,729,700; flax 22,300. Livestock (1938): cattle 1,224,400; pigs 813,500; sheep 1,360,500; horses 414,000; poultry 5,140,900.

Law. Since 1954 when the school segregation cases were decided, the United States supreme court has found itself the centre of controversy over the extent of its powers. During the election year 1956, many citizens who normally paid scant attention to the activities of the court were mindfully and watchfully following its work. In this climate, decisions of minor legal points that would ordinarily pass without special notice were suddenly seen by some to possess deep and enduring significance.

While the people argued and squabbled about the court, the court itself went about its business and in the process handed down some important decisions. The purpose of this article is to review the important legal developments of general interest enunciated by the supreme court in 1956. (For names of the justices, see the article SUPREME COURT OF THE UNITED STATES.)

Aliens.—The United States supreme court again demonstrated its solicitude for the rights of citizens in denaturalization proceedings in the cases of *United States v. Minker*, 350 U.S. 179, and *United States v. Zucca*, 351 U.S. 91.

The Minker case dealt with the power of an immigration officer to subpoena a naturalized citizen in an investigation aimed at determining whether or not denaturalization proceedings should be instituted against that citizen. Section 235 (a) of the Naturalization act of 1952 grants power to immigration officers to "require by subpoena the attendance and testimony of witnesses." Minker, the subject of the immigration investigation, refused to respond to a subpoena, and the government contended that his refusal was unlawful in that he was a "witness" within the meaning of the statute because he could give testimony at the hearing. The court rejected this contention and ruled that the immigration department had no authority to subpoena a putative defendant who was, himself, the subject of the investigation.

United States v. Zucca involved a denaturalization proceeding brought because Zucca allegedly had concealed his membership in the Communist party and had wilfully misrepresented his intentions and beliefs at the time he was naturalized. The denaturalization complaint was verified by the assistant United States attorney, but no affidavit showing good cause was submitted. Section 340 (a) of the Immigration and Nationality act of 1952 makes the filing of an "affidavit showing good cause" a prerequisite to maintenance of denaturalization suits. The court held that this requirement is a statutory safeguard which "must not be lightly regarded," and it ordered the complaint dismissed. A strong dissenting opinion by three judges criticized the majority position for placing an extreme burden on the government and for promulgating a rule tending to submerge the denaturalization procedure in a "morass of unintended procedural difficulties."

The thrust toward extreme protection of defendants in denaturalization proceedings, however, was checked in *Jay v. Boyd*, 351 U.S. 345. In this case an alien had been ordered to be deported because he had been a member of the Communist party. Section 244 (a) of the Immigration and Nationality act of 1952 provides for discretionary suspension of deportation. Although the deportable alien met the prerequisites to the relief outlined in section 244 (a) of the act, his application was denied on the basis of confidential information never disclosed to him. The court held that there was nothing in the statute or the federal constitution which required a hearing "with all the evidence spread upon an open record" to determine how discretion should

POLISH YOUTHS CLOSELY GUARDED in the defendant's box at the opening of the trial following the riots in Poznan, Pol., in 1956

be exercised with respect to suspension of deportation, because the grant of the suspension is a matter of grace only. Four justices dissented on the ground that the statute required a "hearing" and that any hearing under U.S. law means a full and open disclosure of all the information considered.

Business Regulation.—In an important commercial case, *United States v. McKesson and Robbins*, 351 U.S. 305, the court again showed its animosity toward what it considers price fixing. Price fixing is contrary to the policy of competition under the Sherman act. But the Miller-Tydings act exempts fair trade retail price maintenance contracts from the prohibitions of the Sherman act if such contracts are authorized by state law and if the commodity affected is in free and open competition with commodities of the same general class produced or distributed by others. Thus, while the owner of trade-marked products can sometimes establish "vertical" minimum resale prices binding on those who distribute these products, it is illegal for them to make "horizontal" price-fixing agreements with other producers or distributors who are direct competitors at the same functional level. McKesson and Robbins, the largest drug wholesaler in the United States and also a large manufacturer of drug products, distributes its own brand products directly to retailers through its own wholesale divisions, and also through independent wholesalers. It entered into fair trade agreements with these independent wholesalers respecting its own brand products. The court held that these fair trade agreements violated the Sherman act because they were made with independent wholesalers with whom McKesson and Robbins competed at the same functional level. McKesson and Robbins argued to no avail that the Sherman act, as amended by the Miller-Tydings act, only prohibits price-fixing contracts between two competing independent wholesalers regarding brand products produced by neither of them. A dissent by three judges made it clear that they regarded the majority opinion to be predicated on "lack of sympathy" with the Miller-Tydings act.

Civil Rights.—The question of bringing white and Negro students together in public schools occupied the attention of the court in two cases. Both decisions were consistent with the strong integration position which the court had assumed. In *Florida ex*

rel. Hawkins v. Board of Control, 350 U.S. 413, an action was brought to compel a state university to admit to graduate professional school an applicant who had been refused admission solely because he was a Negro. The state university took the position that the matter should be governed by the broad ruling of *Brown v. Board of Education* which, while holding segregation unconstitutional, gave the school boards time to work out solutions to the problem. The supreme court held that the admission of a Negro applicant to professional school could not be delayed by considerations applicable to desegregation of public elementary and secondary schools. The university was ordered to apply to applicant the same admission standards applicable to other candidates.

In *Lucy v. Adams*, 350 U.S. 1, the court refused to suspend an injunction in which the dean of the University of Alabama had been enjoined from denying admission to persons "solely on account of their race and color." Undaunted, the university continued its long fight to keep Miss Lucy from matriculating. She finally appeared to succeed by indefinitely expelling her for disciplinary reasons. The supreme court was not called on to review the propriety or legality of the expulsion.

Three other important civil rights cases involved the right of employers, governmental and private, to discharge employees because of subversive activities. In these cases the court seemed to adopt the position that employers have broad powers to select and discharge their employees so long as they exercise these powers fairly and consistently with due process of law. In *Slowchower v. Board of Higher Education of the City of New York*, 350 U.S. 551, the court held unconstitutional, as a denial of due process, a clause in the charter of the city of New York which requires the discharge of any employee who pleads the protection of the privilege against self-incrimination to avoid answering a question about his official conduct. Slowchower, a professor at municipally supported Brooklyn college, had refused to testify before a senate subcommittee about his alleged membership in the Communist party. Because of this he was summarily dismissed. The court said, "It is one thing for the city authorities themselves to inquire into Slowchower's fitness, but quite another for his discharge to be based entirely on events occurring before a federal committee whose inquiry was announced as not directed at the property, affairs, or government of the

city." In any event, the court concluded, the statute under which Slowchower was discharged is unconstitutionally arbitrary: "As interpreted and applied by the state courts, it operates to discharge every city employee who invokes the Fifth Amendment. In practical effect the questions asked are taken as confessed and made the basis of the discharge. No consideration is given to such factors as the subject matter of the questions, remoteness of the period to which they are directed, or justification for exercise of the privilege. It matters not whether the plea resulted from mistake, inadvertence or legal advice conscientiously given, whether wisely or unwisely. The heavy hand of the statute falls alike on all who exercise their constitutional privilege, the full enjoyment of which every person is entitled to receive. Such action falls squarely within the prohibition of [the due process clause of the fourteenth amendment]."

In *Cole v. Young*, 76 S. Ct. 861, the court held that it was improper to discharge a federal governmental employee for allegedly being friendly with and helpful to known communists, without first establishing that the employee held a position which could adversely affect the national security.

But in *Black v. Cutter Laboratories*, 76 S. Ct. 824, the court upheld a state court decision that Communist party membership constituted "just cause" for discharge of an employee in private industry under a collective bargaining agreement which authorized the employer to discharge employees for just cause only. The court pointed out that the judgment of the lower court rested on adequate state grounds and that no substantial federal question had been presented.

Criminal Law.—For many years the United States supreme court had insisted that the federal constitution was designed to give maximum protection to persons accused of crime. The decisions handed down in 1956 showed no retreat from this position.

Several cases involved questions of the procedural fairness of grand juries. In *Reece v. Georgia*, 350 U.S. 85, the court reversed a conviction based on a Georgia rule of law which provides that when "an accused has been arrested for the commission of a penal offense and is committed to jail, he is apprised of the fact that his case or the charge against him will undergo grand jury investigation, and it is incumbent upon him to raise objections to the competency of the grand jurors before they file an indictment against him." Reece, a semiliterate Negro, was arrested for rape and he was indicted by a grand jury from which Negroes allegedly had been systematically excluded. One day after the indictment, counsel was provided for Reece for the first time. Counsel objected to the make-up of the grand jury, but the state court refused the objection because it had not been made prior to the indictment. Subsequently, Reece was convicted. In reversing the conviction, the supreme court held that "it is utterly unrealistic to say that he had such opportunity to make timely objection to the composition of the grand jury) when counsel was not provided for him until the day after he was indicted."

But the case of *Michael v. Louisiana*, 350 U.S. 91, makes it clear that an accused can waive his rights to challenge the composition of a grand jury. The court simply requires that the defendant have a fair opportunity to enter his objection. In the *Michael* case three defendants, all Negroes, after being convicted of rape, challenged the make-up of the grand juries which indicted them, on the ground that Negroes had been systematically excluded from the panels. None of them made the objection within the three-day limit set by statute. In the case of two of the defendants counsel had been appointed in time to challenge the grand jury but failed to do so. The third defendant fled the state and was absent during the period in which he could have made his objection. On arraignment after

being returned to the state, he was represented by counsel of his own choosing. At arraignment counsel entered a plea of not guilty and made a motion for severance. Not until several days later did he for the first time object to the composition of the grand jury. The court held that all three defendants had waived their right to object to the composition of the grand juries.

Costello v. United States, 350 U.S. 359, involved another attack on the grand jury system. Frank Costello was indicted by a grand jury and subsequently convicted by a federal district court of the crime of income tax evasion. The grand jury was permitted to consider hearsay evidence, and Costello challenged the indictment on this ground. The court held that the indictment was proper. "The Fifth Amendment provides that federal prosecutions for capital or otherwise infamous crimes must be instituted by presentments or indictments of grand juries. But neither the Fifth Amendment nor any other constitutional provision prescribes the kind of evidence upon which grand juries must act."

Ullmann v. United States, 350 U.S. 422, upheld the constitutionality of the federally-enacted Immunity act of 1954 which requires a witness to give testimony that may be incriminatory in exchange for immunity from prosecution. By the terms of the statute, the Immunity act is applicable only to testimony in cases or investigations involving national security, and the request for immunity must originate from a United States attorney and have the approval of the attorney general. A grand jury, investigating espionage and national security in New York city, put certain germane questions to Ullmann. Ullmann invoked the protection of the self-incrimination clause of the fifth amendment. Upon application of the United States attorney, approved by the attorney general, the court directed Ullmann to answer the questions and it guaranteed him immunity from prosecution. Ullmann still refused to answer the questions, and he was convicted of contempt. On appeal Ullmann contended that the federal statute did not give him immunity from a possible prosecution in the state courts and therefore it was unconstitutional. The Supreme Court replied that the statutory language applied "in any court," which included state courts. The court pointed out that congressional power to provide for the national defense enables it to restrict the exercise of state jurisdiction in this area.

Other less dramatic, but equally important, criminal cases involved situations in which the supreme court, following its best traditions, vigorously asserted or implemented the rights of criminal defendants. *Remmer v. United States*, 350 U.S. 377, for example, showed the supreme court "bending over backwards" to see to it that the defendant got a fair trial. The defendant, convicted for income tax evasion, was here awarded a new trial because of the uncertainty of the effect on his case of an alleged attempt made on his behalf to bribe one of the jurors.

Griffin v. Illinois, 351 U.S. 12, involved the rights of indigents accused of crime. After being convicted of armed robbery, the defendants filed a motion in the trial court asking that a certified copy of the entire record, including a transcript of the proceedings, be furnished to them free of charge. They stated that they were "poor people with no means of paying the necessary fees" for the records. Under Illinois law, the defendant is required to furnish much of the lower court record in order to obtain a full direct appellate review and only indigent defendants sentenced to death are provided with free records. The trial court denied the motion. But the supreme court of the United States vacated the judgment and remanded the case. Said the court, "In criminal trials a state can no more discriminate on account of poverty than on account of religion, race, or colour. Plainly the ability to pay costs in advance bears no rational relationship

to a defendant's guilt or innocence and could not be used as an excuse to deprive a defendant of a fair trial."

Domestic Relations.—Ever since the famous decision of *Williams v. North Carolina*, 325 U.S. 226, was handed down in 1945 the supreme court had been plagued by a series of cases involving the effect of the "full faith and credit" clause of the constitution of the United States on divorce decrees granted by a state in which only one of the spouses is domiciled. Another such case, *Armstrong v. Armstrong*, 350 U.S. 568, came before the court in 1956. In this divorce case, Armstrong, a resident of Florida, obtained a divorce there. Mrs. Armstrong had separated from him and established her residence in Ohio. Service on her was constructive only. In handing down its decision, the Florida court observed that Mrs. Armstrong had made no showing of any need on her part for alimony and decreed that no alimony award be made. Subsequently, Mrs. Armstrong brought suit in Ohio for divorce and alimony. The husband asserted that Ohio was required to give faith and credit to the Florida decision. Partially accepting this contention, the Ohio court denied the divorce on the ground that the Florida decree had already dissolved the marriage. But it awarded alimony. The supreme court of the United States held that the Ohio decree of alimony was not violative of the full faith and credit clause because the Florida decree did not purport to adjudicate the absent wife's right to alimony. A concurring opinion by four judges adopted perhaps a more orthodox approach. This opinion took the position that Florida had denied alimony but Ohio was not compelled to give full faith and credit to this judgment because the wife was not personally served in Florida and could not be bound by an *in personam* judgment there.

A change of heart by natural parents after they have permitted their child to be put out for adoption has caused much sorrow and legal trouble, and it has deterred many potential adopters from taking custody of unwanted children. Adopters can take heart from the decision of *Sklaroff v. Skeadas*, 76 S. Ct. 736, handed down in 1956. Three days after the birth of a child, the mother, then unwed and living in Massachusetts, consented to the child's adoption by a couple from Rhode Island. The couple subsequently initiated appropriate adoption proceedings in Rhode Island. In the meantime, the father and mother of the child had married and had the child's name changed on the Massachusetts records from that of the mother to that of the father. The father opposed the adoption proceedings on the ground that he had never consented to adoption. The law of Rhode Island requires the consent of both parents to legal adoption, and the Rhode Island court, accordingly, ordered the child returned to its natural parents. The adopting parents filed an application to the United States supreme court for a stay of the order. They claimed in the application that "a change of custody . . . would run counter to the decencies of civilized conduct, and thereby would be violative of . . . the due process clause of the Fourteenth Amendment." Justice Felix Frankfurter said that this contention was not frivolous, and he ordered that the Rhode Island judgment be stayed pending a further consideration of the matter.

Labour.—Several important labour decisions were handed down in 1956 concerning alleged unfair labour practices, construction of collective bargaining agreements, the conduct of union officials, the right of the states to regulate labour, and the scope of social legislation enacted to further the health and welfare of the workingman.

Three cases involved alleged unfair labour practices. *N.L.R.B. v. The Warren Co.*, 350 U.S. 107, held that an employer must bargain with a union for a reasonable length of time after the National Labor Relations board has certified the union as the exclusive bargaining representative, notwithstanding the em-

ployer's contention that the union had lost its former majority status by reason of a turnover in personnel. Failure to so bargain is an unfair labour practice.

In *N.L.R.B. v. Truitt Manufacturing Co.*, 351 U.S. 149, the court found an employer guilty of an unfair labour practice in that it refused to furnish employees with information regarding its ability to pay increased wages. The union had asked for a wage increase of ten cents an hour. The company replied that it could not afford an increase of more than two and a half cents an hour, but it denied the union's request to look at its books, arguing that the union had no legal right to such information. The company made no effort whatsoever to substantiate its claim. The court held that the company had not bargained in good faith, but it added that no definitive decision was being made as to the right of the union to company records, since each case must turn upon its own particular facts as to whether the obligation to bargain in good faith has been met.

In *N.L.R.B. v. Babcock & Wilcox Co.*, 351 U.S. 105, the issue was whether or not an employer could refuse the use of company-owned parking lots for the distribution of union literature by nonemployee union organizers. The court held that the employer's refusal constituted an unfair labour practice.

One case decided in 1956 pertained to an important judicial construction of a collective bargaining agreement. In *Mastro Plastics Corporation v. N.L.R.B.*, 350 U.S. 270, the court was asked for an answer to this question: Does a no-strike clause in a collective bargaining agreement bar the employees' right to strike against their employers' unfair labour practices? The court answered the question in the negative, thus seriously limiting the efficacy to employers of a clause in the collective bargaining agreement obliging the union "to refrain from engaging in any strike or work stoppage during the term of this agreement."

Two cases decided in 1956 involved the conduct of union officials. In *United States v. Ryan*, 350 U.S. 299, Joseph Ryan, president of the International Longshoremen's association, was found guilty of violating the Labor Management Relations act by accepting \$1,500 from the president of a shipping firm whose employees were members of the association. Section 302 (b) of the act makes it unlawful "for the representative of any employees" to receive money from an employer. Ryan was president of the association and a member of the wage scale committee of the union. But he claimed he was not a "representative" of any employee within the technical meaning of the act. The court rejected his contention, saying that congress intended the word "representative" to include any person authorized by the employees to act for them in dealings with their employers.

In *N.L.R.B. v. Coca-Cola Co.*, 350 U.S. 264, an employer complained that a certain officer of the union authorized to bargain with the employer had not complied with section 9 (h) of the National Labor Relations act which requires each officer of a labour organization to file an affidavit that he is not a member of the Communist party or affiliated with any organization that seeks to overthrow the government by illegal means. The National Labor Relations board rejected the employer's complaint because "the compliance status of a union . . . is a matter for administrative determination and not one to be litigated in complaint." The supreme court reversed this ruling and held that the employer had standing to raise the question of compliance with section 9 (h) of the act.

Two cases decided in 1956 pertained to the right of the states to regulate labour matters. In *Railway Employees' Department v. Hanson*, 351 U.S. 225, the court held that states had the constitutional right to enact "right to work laws" outlawing union shop agreements only where congress had not pre-empted the field. The case arose when nonunion railroad employees succeeded in getting a Nebraska court to enjoin under its right-to-

work law the application of a union shop agreement. The supreme court of the United States reversed the decision because it said the Railroad Labor act of congress pre-empted this field and permitted union shop agreements to stand.

In *U.A.W.-C.I.O. v. Wisconsin Employment Relations Board*, 36 S. Ct. 794, the court re-affirmed the principle set out in *Railroad Employees' Department v. Hanson*, that, as a general rule, the state may not interfere in labour matters pre-empted by congress. But it held that no federal statute takes away from the states the right to prevent mass picketing, violence and overt threats of violence.

United Kingdom Legislation.—The most important piece of legislation passed through the United Kingdom parliament during the year was the Restrictive Trade Practices act. This set up a Restrictive Practices court, the basic qualification for each member being that he should be "a person appearing—to be qualified by reason of his knowledge of or experience in industry, commerce or public affairs" to hold office for such period not less than three years as might be determined at the time of his appointment. Part 1 of the act provided for the registration with the Registrar of Restrictive Trading Agreements of any agreement between two or more persons carrying on business within the United Kingdom in the production or supply of goods, or in the application to goods of any process of manufacture. Section 8 specified a number of exceptions and section 9 provided for registration which would come into force at such date as the board of trade might determine. Section 13 empowered the court to order the rectification of the register by variation or removal of particulars included thereon; and to declare whether or not an agreement was one to which that part of the act applied, while section 20, probably the most controversial of all the clauses, gave the court jurisdiction to declare whether or not any restrictions were contrary to the public interest, such an order having the effect of making such restrictions void. Section 21 specified circumstances in the absence of any of which a restriction should be deemed to be contrary to the public interest. Sections 14–16 provided for the enforcement of the sections relating to registration.

Part 2 of this act prohibited agreements for the collective enforcement of conditions as to resale prices, but enabled a supplier to enforce such conditions against any person not a party to the sale who subsequently acquired the goods sold with notice of the conditions, unless the agreement had been declared contrary to the public interest.

Part 3 amended the Monopolies and Restrictive Practices acts, 1948 and 1952, and in effect limited the functions of the Monopolies commission to fact-finding inquiries.

Other measures worthy of note were the Food and Drugs act, 1955, the principal effect of which was to provide a stricter code relating to catering premises; the Diplomatic Immunities restriction act, 1955, empowering the executive to withdraw diplomatic immunities where they exceeded those accorded to a British envoy or to those connected with him; the Magistrates' Courts (Appeals from Binding Over Orders) act, authorizing such appeals from magistrates' courts; the Hotel Proprietors act; the Small Lotteries and Gaming act, legalizing small lotteries as therein defined for charitable and similar purposes and exempting small gaming parties held to raise money (other than for private gain) from the laws as to gaming and gaming houses.

More important than these were the British Caribbean Federation act, which gave authority for the setting up of such a

federation and of the appropriate political and judicial organs; and the Clean Air act, which prohibited the emission of dark smoke from chimneys (to be modified in its application for a period of seven years). The Copyright bill, which proposed important changes in the law of copyright and had passed through the house of lords, awaited its final stages in the house of commons.

Commonwealth Legislation.—*Pakistan.*—The outstanding measure of the year was the bill to provide Pakistan with a constitution. This declared that Pakistan was to be a democratic state based on the principles of social justice, and formed a federation consisting of the territories included in or which might hereafter accede to Pakistan. It enshrined equality before the law, freedom from arrest, freedom of speech, the right of assembly, the maintenance of freedom to practise and propagate any religion, the prohibition of slavery, and the right to preserve any distinct language, culture or script. It proclaimed the strengthening of the bonds of unity among Moslem countries, and that Moslems were to order their lives according to the Koran and Sunnah, the teaching of the former being compulsory. It contained measures designed to prevent prostitution, gambling and the consumption of alcohol, to protect the legitimate rights and interests of non-Moslem communities, to promote social security and to reduce disparities in earnings.

The main constitutional provisions were that there should be a national assembly, with 150 members each from East and West Pakistan and with five women members from each. The president would appoint the prime minister. The demarcation of powers between federation and province was fixed by a schedule of subjects, containing a federal list, a provincial list and a concurrent list. Where provincial legislation affecting a subject in the concurrent list was repugnant to federal legislation, the latter was to prevail, but residuary power was to rest in the provincial assemblies. There was to be a supreme court having original jurisdiction both in disputes between the federal government and a province and in disputes between provinces. Both Urdu and Bengali were to be the official languages but English could be used for official purposes for 20 years from Constitution day.

Pakistan decided to remain within the commonwealth.

Canada.—The continuance of the Defence Production act for three years from the date when it was due to expire, namely July 21, 1956, evoked an important debate. The opposition criticized this measure and after debate amendments were agreed which placed orders made under this act subject to parliamentary control and fixed a definite date for the expiry of the "powers" sections.

United Kingdom Case Law.—*Criminal Law.*—In view of widespread public concern over the extent of commercial vice in London, there was much interest in the decision of Judge Maude at the Central Criminal court in *R. v. Silver and Others* (1956 1 W.L.R.281). Four men were alleged to have let flats to individual prostitutes, knowing that they were to be used for prostitution, and to have received rents as high as £25 a week on that account, whereas normal rents would be from £3 to £5 a week. Four other men were alleged to have conducted an estate agency, the main business of which was to let flats to individual prostitutes for the purposes of their trade. On this basis they were charged with living wholly or in part on the earnings of prostitution, contrary to the Vagrancy act, 1898. The learned judge, after speaking of such persons in comparison with shopkeepers, who may supply goods to prostitutes, and doctors, who may render their professional services, said that they were all living on their own earnings. He therefore directed the jury to return a verdict of "Not Guilty."

In *R. v. Owen and Seth-Smith* (*The Times*, Oct. 3, 1956) the

court of criminal appeal held that a conspiracy to defraud a government department in western Germany was not an indictable offense in the United Kingdom.

On the other hand, posting a forged letter in the United Kingdom was sufficient to bring the accused within section 6 (2) of the Forgery act, 1913.

Civil Cases.—In *A. V. Pound and Co. Ltd. v. M. W. Hardy and Co. Inc.* (1956 2 W.L.R. 683) which arose out of a contract made in England whereby purchasers agreed to buy a quantity of Portuguese turpentine f.a.s. buyers' ship at Lisbon, Port., the destination being to the sellers' knowledge in eastern Germany, the house of lords held that there was no general rule that where there was a prohibition on export without licence, then, on an f.o.b. or f.a.s. contract the buyer must supply a ship into or alongside which the goods could legally be placed, the importance of this decision to a large extent resting on the distinction drawn between this case and the decision of the court of appeal in *H. O. Brandt & Co. v. H. N. Morris & Co. Ltd.* (1917 2 K.B.784). Another interesting decision in the same broad field was that of Justice Sellers in *Luigi Monta of Genoa v. Czechofracht Co. Ltd.* (1956 3 W.L.R. 480). In this case a Czechoslovakian company chartered an Italian shipowner's steamship to load a cargo at ports in north China and proceed to ports in Europe. The charter party, which was governed by English law, gave the ship liberty to comply with any orders or direction by any government. The vessel was intercepted by Chinese nationalists.

The court held that the foreign office statement that the British government did not recognize the government in Formosa was not conclusive, that the latter government was a government within the meaning of the charter party, and that the shipowning company was accordingly entitled to freight.

Inland Revenue Commissioners v. Hambrook (1956 3 W.L.R. 643) was one of a series of recent cases in which employers brought actions against parties who had inflicted injuries on, and so deprived them of the services of, an employee. In this case the employee was an official in the service of the commissioners of inland revenue, and the court of appeal, affirming the lord chief justice's decision in the court below, held that an employer in such a case only had a right of action where the employee was a domestic servant.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Bill of Rights of the United States* (1956); *The Congress* (1954); *The Constitution of the United States* (1956); *The Supreme Court* (1954); *Understanding the Law—Equal Justice for All* (1953).

Lawn Bowling. At Hartford, Conn., Aug. 6-10, 1956, was held the annual national tournament of the American Lawn Bowling association, as well as the annual meeting of the A.L.B.A. council. In the various contests, the winners were as follows:

Rinks (Four-Man Teams).—The Rettie Memorial trophy was won by Robert Dickson (skip), David Ferguson, Robert Barclay and Charles Quinn of Thistle Lawn Bowling club, Hartford. Winners of the Chicago cup were Robert Gray (skip), Gabriel Strathdie, Earle Hutt and Raymond Lees of New Haven (Conn.) Municipal Lawn Bowling club.

The Wisconsin cup went to Frank Murray (skip), George Plestid, William G. (Bill) Hay and Howard J. Swallow, representing combined clubs of California.

Doubles.—The California trophy was awarded to John McArthur and John Milne of Quincy (Mass.) Bowling Green club. The Lakeside trophy was won by Earle Hutt and Raymond Lees of New Haven (Conn.) Municipal Lawn Bowling club. The Western New York trophy was taken by John Forbes and Forbes Duff of Essex County Lawn Bowling club, Bloomfield, N.J.

Singles.—The National Open Singles trophy went to Peter

Campbell of Smithfield Avenue Lawn Bowling club, Pawtucket, R.I. The Metropolitan trophy was won by Bill Hay of Beverly Hills Lawn Bowling club, Beverly Hills, Calif.

The next annual A.L.B.A. tournament and meeting of the National council was to be held at Seattle, Wash., Aug. 28-Sept. 4, 1957.

Following the national tournament of the A.L.B.A., there was also held at Hartford, Aug. 11, 1956, the annual international match between six rinks teams representing the eastern division of the A.L.B.A. and six teams from the Provincial Lawn Bowling association of Toronto, Can. The U.S. players won 150-91.

In Canada, in addition to territorial and sectional tournaments in the various provinces, the principal lawn bowling event was the Lawn Bowling Championships tournament, held at Vancouver, B.C., Aug. 27-29, 1956. Following play-downs in the several provinces, the territorial champions met in a round robin competition. The singles winner was J. A. Linford of Lachine, Que.; doubles, George W. Davis and Walter L. Buchanan (skip), of Burnaby, B.C.; rinks, Sterling Shields (skip), H. C. Robertson, H. Gardler and James A. E. Gallagher of Edmonton, Alta. The 1957 Canadian championships were to be played at Montreal, Que.

A group of 19 lawn bowlers from Great Britain, under sanction of the International Bowling board, visited the United States Aug. 14-Oct. 24, 1956. Stops were made at selected points in the eastern, central, northwest and southwest divisions of the A.L.B.A., where games were played with the host lawn bowlers. A special feature of this visit was the playing of three contests for the Fox International trophy by teams of four rinks of British and four rinks of U.S. bowlers, each in the eastern, central and southwest divisions, the total combined three scores determining the winners. The outcome was plus 97 points net for the U.S. players, who retained the trophy until another such contest would be held at a later date.

Lead. World smelter production of lead rose in 1955 as revealed in detail in Table I, based on data in reports of the U.S. bureau of mines, which also supplied data for Table II.

United States.—Despite prolonged strikes in July and August the mine output of the domestic industry increased in 1955 over 1954. Although larger in 1955, the mined lead output was well below the 1946-55 average of 372,000 tons. Of the 1955 total

177,409 tons were from 11 western states; 145,640 tons from three west central states—Kansas, Missouri and Oklahoma; and 10,379 tons from six states east of the Mississippi river.

Consumption, which had turned upward in May 1954 for the first time since Oct. 1953, continued at the higher rate through 1955 and 1956.

In the first eight months of 1956 mine output of recoverable lead was 231,415 tons; refinery lead output was 358,202 tons; and shipments were 140,335 tons.

Bolivia.—In Nov. 1955 a third furnace of the privately owned lead smelter at Tupiza was opened. Lead-bearing ores from Sud Chichas province in Potosí department supplied the chief raw material. Mines in the area produce about 2,000 tons of crude ore a month.

Mexico.—Resumption of the lead-silver-zinc mine in Michoacán state resulted in an increased total output of lead in 1956.

(F. E. H.; B. B. M.)

League of Women Voters of the United States: see SOCIETIES AND ASSOCIATIONS, U.S.

Lebanon. This Arab republic is bounded west by the Mediterranean, north and east by Syria and south and southeast by Israel. Area: 4,015 sq.mi. Pop. (1955 est.): 1,425,000 (Lebanese nationals only). Language: Arabic 90%; French, Armenian, Greek, etc., also spoken. Religion: Christian 52.8% (more than half are Maronites, in communion with Rome); Moslem 45.3%. Chief towns (pop., 1953 est.): Beirut (cap.) 600,000; Tripoli 140,000; Zahlé 30,000; Saida 60,000. President of the republic, Camille Shamun. Prime ministers in 1956: Rashid Karamah, Abdullah el-Yafi (March 20–Nov. 16) and, from Nov. 18, Sami es-Solh.

History.—In March 1956 Rashid Karamah resigned as prime minister and a new government was formed by Abdullah el-Yafi, a former prime minister. The new government declared its opposition to regional pacts and to the Johnston (U.S.) plan for utilizing the waters of the Jordan. Its Arab policy was neutral between Syria, Egypt and Iraq.

In the dispute with the Iraq Petroleum company—one of the principal issues facing the country from the previous year—the new government held rigidly to the initial demand put forward by Lebanon, namely that the annual pipeline royalties should be increased to £L. 28,000,000, whereas the company was offering about £L. 6,400,000 to be increased to about £L. 13,000,000 on the construction of a new pipeline to Tripoli. In January negotiations were broken off, and the stalemate continued under el-Yafi's government, which included Saeb Salam, minister of state especially responsible for oil affairs. In June the government passed a law, backdated to 1952, imposing various taxes on foreign companies from which they had previously been exempt, and the company subsequently announced that it would divert its new pipeline from Homs to Banias in Syria, instead of bringing it to Tripoli.

On Nov. 16 el-Yafi resigned and was succeeded on Nov. 18 by Sami es-Solh, who stated that negotiations with the Iraq Petroleum company and the U.S.-owned Trans-Arabian Pipeline (called Tapline) company would be reopened.

In March Lebanon suffered a severe earthquake which destroyed a large number of villages in the southern part of the country. Relief for the refugees and the rebuilding of demolished houses was one of the government's major internal tasks for the remainder of the year.

(E. S. AH.)

Education.—Schools (1954–55): primary 1,775, pupils 155,297; higher primary 264, pupils 21,442; secondary 92, pupils 4,572; vocational 33, pupils 1,396. Institutions of higher education (including 3 universities, 1954–55) 11, students 4,246.

Finance and Banking.—Monetary unit: Lebanese pound, with an official exchange rate of £L. 2.191 and a free rate of £L. 3.23 to the U.S. dollar.

Budget (1954 est.; 1956 est. in parentheses): balanced at £L. 123,400,000 (£L. 151,500,000). Currency circulation (Oct. 1954) £L. 246,000,000 (Oct. 1955) £L. 271,000,000. Deposit money (Oct. 1954) £L. 345,000,000, (Oct. 1955) £L. 442,000,000. Gold and foreign exchange, official: (Feb. 1955) \$77,700,000 U.S., (Feb. 1956) \$85,600,000 U.S.

Foreign Trade.—(1955) Imports £L. 476,800,000; exports £L. 108,000,000. Main sources of imports: Syria 16%; U.K. 15%; other continental E.P.U. (European Payments union countries) 21%; U.S. and Canada 14%; France 10%. Main destinations of exports: Syria 11%; U.S. and Canada 10%; U.K. 5%; France 5%; other continental E.P.U. 11%; Saudi Arabia (1953) 11%; Egypt (1953) 7%. Main exports (1954): citrus fruit, apples and bananas 15.8%; pulses 9.7%; onions 1.3%; textiles (1953) 9%.

Transport and Communications.—Roads (1954) 4,045 km. (of which 510 km. arterial). Motor vehicles in use (Dec. 1955): passenger 22,578, commercial (including buses) 5,272. Railways (1954): Syria-Lebanon routes 774 km., of which 191 km. owned by Lebanese government; passenger-km. (1955) 6,905,000; freight, ton-km. (1955) 43,850,000. Air transport (1954): passenger-km. 52,320,000; cargo, ton-km. 1,744,000. Telephones (Jan. 1955) 33,192. Radio receivers (1954) 52,021.

Agriculture.—Production (metric tons, 1954; 1953 in parentheses): wheat 60,000 (63,000 in 1955); barley 27,000 (26,000); maize 13,000; lentils 2,000 (2,000); olive oil 12,000 (10,000); grapes 70,000 (80,000); figs 20,000 (12,500); bananas (exports) 6,275 (production, 1952) 17,000; oranges, etc., 75,000 (77,000 in 1955); lemons, etc., 40,000 (25,000 in 1955); broad beans 6,000 (7,000); chickpeas 2,000 (1,000 in 1955); dry beans (1952 and 1953) 5,000; apples 30,000 (30,000); onions 28,000 (38,000); raisins (1951) 1,000. Livestock (1954): cattle 25,000; horses (September) 7,000; asses (September) 24,000; goats 500,000; camels (September) 2,000; sheep (Sept. 1955) 60,000.

Industry.—Production (metric tons): iron ore (57% metal content; 1954 est.) 100,000; cotton yarn (1955) 3,800; cement (1955) 453,600; cotton fabrics (1954) 5,220; woollen fabrics (1954) 290,000 m.; rayon fabrics (1954) 2,200,000 m.; electricity (1954) 181,000,000 kw.hr.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Middle East* (1955).

Leeward Islands. This term includes the British colonies of Antigua, St. Kitts-Nevis-Anguilla, Montserrat and British Virgin Islands, forming the northern part of the Lesser Antilles and (Virgin Islands) the eastern extremity of the Greater Antilles in the Caribbean. The colonies have in common governor and (with the Windwards) supreme court, but separate legislatures. Population, mainly Negro. Lan-

Colony	Area (sq.mi.)	Population (1946 census) (1955 est.)	Capital (pop., 1955 est.)
Antigua	170*	41,757 51,681	St. John's 11,000
St. Kitts-Nevis-Anguilla	152	46,243 54,327	Basseterre 13,500
Montserrat	33	14,333 14,436	Plymouth 2,500
British Virgin Islands	67	6,505 7,760	Road Town 1,100
	422	108,838 128,204	

*Including Barbuda (62 sq.mi.), Redonda (0.5 sq.mi.), dependencies. †Seat of government. ‡Properly St. Christopher. §Including for administrative purposes Sombro, dependency of Virgin Islands.

guage: English. Religion: Christian. Governor in 1956, A. T. Williams; administrators, Lieut. Col. A. Lovelace (Antigua), Lieut. Col. Hon. H. A. C. Howard (St. Kitts), A. F. Dawkins (Montserrat), G. P. Allsebrook (Virgin Islands).

History.—Weather conditions in 1956 were much more favourable to primary production than in 1955. In Antigua sugar output rose to 28,713 tons and in St. Kitts and Nevis to 50,371 tons. In Antigua the sea-island cotton crop amounted to 1,134,277 lb., little less than the record crop of 1955, while cotton production in Nevis increased to 574,624 lb. For technical reasons, no cotton crop was planted in Montserrat for reaping in 1956, in consequence of which production of fruits and vegetables greatly increased. Export of livestock from the Virgin Islands decreased.

There were two constitutional changes of major importance during the year. In January the ministerial system of government was introduced in Antigua and St. Kitts-Nevis-Anguilla, and on June 30 the Leeward Islands colony, a federation established in 1871 and comprising four presidencies, was abolished, the four presidencies becoming colonies. (P. D. Md.)

Education.—(1955) Antigua: primary schools 39, pupils 11,562, teachers 265; secondary 8, pupils 1,661, teachers 72. St. Kitts-Nevis-Anguilla: primary 38, pupils 10,928; secondary 4, pupils 810, teachers 17. Montserrat: primary 13, pupils 3,200, teachers 91; secondary 1, pupils 182, teachers 12. Virgin Islands (1954): primary 12, pupils 1,886; secondary 1, pupils 113. A teachers' training college for women at Antigua and the University College of the West Indies, Jamaica, serve all the Leeward Islands.

Finance and Trade.—Monetary unit: British West Indian dollar; B.W.I. \$1.70 = U.S. \$1.

	Budgets (1955 est.)	
	Revenue	Expenditure
Leeward Islands		
Antigua	£1,116,006	£1,139,000
St. Kitts-Nevis-Anguilla	£961,000	£957,000
Montserrat	£228,000	£213,000
Virgin Islands	£115,000	£113,000

Foreign Trade.—(1955) Imports £3,940,000; exports £2,640,000. Principal exports (1955): sugar, sea-island cotton, molasses, tomatoes, salt, limes, fruits; main destination of exports, U.K. Principal imports: food, drink, tobacco, timber; main source of imports, U.K. and other commonwealth countries.

Legislation: see LAW; TAXATION; UNITED STATES. See also articles on individual nations and U.S. states.

Lemons: see FRUIT.

Leukemia: see BLOOD, DISEASES OF THE.

Liberia. Liberia lies on the southwest coast of Africa and is bounded by Sierra Leone (British) and the French overseas territories of the Ivory Coast and Guinea. Having established itself as a Negro republic in 1847, Liberia is one of the oldest independent countries in Africa. It has an area of approximately 43,000 sq.mi. and a population estimated at about 1,250,000 in 1955. The capital and largest city, Monrovia (population of city and environs estimated at 45,000), has a modern port and an international airport about 50 mi. away.

English is the official language, but most of the tribes continue to speak their own languages and dialects of which there are about 25. The central government, in an effort to implement the administration's unification program, has been pursuing actively a literacy campaign. Although paganism still exists, many of the tribesmen are Christians as a result of the extensive missionary efforts. Islam has been making inroads, particularly in the north.

President in 1956: William Vacanarat Shadrach Tubman.

History.—In Jan. 1956 President Tubman, who won the May 1955 elections by a majority of 99.5% of the vote, was inaugurated for a third term; the elaborate ceremonies lasted a fortnight and 30 nations had delegations in attendance. Although

some individuals expected President Tubman to effect changes in his cabinet, he reappointed the same cabinet which served him during the previous term. President Tubman devoted considerable time and energy during the early part of the year to making visits into the hinterland where he held executive councils to settle tribal differences. He was invited to visit various European capitals, including Rome, The Hague and Bonn.

Indications were that the year 1956 would produce the highest governmental revenues ever; estimates ran between \$18,000,000 and \$20,000,000.

The government continued to push its road construction program, and sizable commitments were made against the \$15,000,000 credit the government obtained in 1955 from the Export-Import Bank of Washington. In addition, the government explored the possibility of improving other forms of communications (radio, telephone, air, etc.) between Liberia and other areas as well as within the country.

Foreign investors continued to show interest in Liberia and several significant concessionaires started or expanded their activities in 1956. Private investment by United States firms remained paramount, but private Swedish and German investments continued to be made.

(A. J. Dr.)

Education.—In 1955 there were 456 schools with (1954) 1,358 teachers and enrolment of 40,353, about 9.5% of the population of school age. The five coastal counties accounted for 72% of the enrolment. There was one university. Illiteracy was estimated at 95%.

Finance.—The monetary unit is the U.S. dollar supplemented by Liberian fractional coins. Actual government expenditure in 1955 was \$15,297,805; revenue (Jan.-Nov.), \$14,354,967. The 1956 budget estimated revenue at \$14,850,000 and expenditure at \$14,858,320. The public debt, external and internal, totalled \$7,860,554 on Nov. 30, 1955. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$261,000,000, over 75% of which represented investments in oil tankers registered under the Liberian flag.

Trade and Communications.—Exports in 1955 totalled \$42,839,300; imports, \$25,964,900. Leading exports were rubber (79%), iron ore (16%), palm kernels (2%) and diamonds (1%). Leading customers were the U.S. (87%), the Netherlands (5%), western Germany (4%) and the U.K. (2%); leading suppliers, the U.S. (62%), western Germany (11%), the U.K. (11%) and the Netherlands (7%).

There are 39 mi. of private railway and about 720 mi. of roads. On Jan. 1, 1955, there were 1,418 automobiles and 1,349 trucks. Telephones (Jan. 1, 1955) numbered 621, all in Monrovia. According to *Lloyd's Register of Shipping*, 436 vessels (100 tons and over) aggregating 3,996,904 gross tons were registered under the Liberian flag on June 30, 1955. In 1955, 1,067 vessels entered the port of Monrovia.

Production.—Agricultural exports in 1955 included rubber 86,780,800 lb.; palm kernels 21,222,900 lb.; cacao 1,048,500 lb.; coffee 735,500 lb.; piassava 5,749,600 lb. Mineral exports included iron ore 1,716,900 long tons and diamonds 203,500 carats.

(J. W. Mw.)

Libraries. Years of unremitting effort on the part of organized librarians were rewarded on June 19, 1956, when Pres. Dwight D. Eisenhower signed a bill, introduced in congress by Sen. Lister Hill of Alabama, to promote library services in rural areas. As President Eisenhower pointed out in his message accompanying the signed bill, which became the Library Services act, public law 597, the purpose of the law was to "stimulate states and local communities to increase library services available to rural Americans." It authorized the federal government for five years to make an annual appropriation of \$7,500,000 to state library extension agencies in basic and matched grants. Any state library extension agency (including those in Alaska, Puerto Rico, Hawaii and the Virgin Islands) was eligible to receive federal funds provided it had not reduced its current budget and provided it submitted a plan of administration acceptable to the U.S. commissioner of education. The basic allotment for each agency was \$40,000, except for the Virgin Islands where it was \$10,000. The balance of the appropriation would be distributed as matched grants, with the federal government contributing from 33% to 66% of the additional budget, with the federal share determined by the percentage of rural population and per capita income in the states. To qualify for assistance, extension programs had to be undertaken in incorporated or unincorporated places with populations of less than

LIBERIAN CHIEF OF PROTOCOL James Morgan checking a point of etiquette at the 1956 inauguration of Pres. William V. S. Tubman. Fans were distributed to all guests attending the ceremonies held in temperatures of more than 100° F.

9,000. Most of the 26,000,000 persons in the United States who live without library service live in such rural areas.

New Public Library Standards.—The Coordinating Committee on the Revision of Public Library Standards, headed by Lowell Martin, presented its report, *Public Library Service to America*, to the American Library association council. The report was the result of a two-year study financed by the Public Libraries division of the association and the Carnegie corporation and was a complete revision of the *Post-War Standards for Public Libraries* of 1943.

The major portion of the report presented 70 general principles of public library service and 200 implementing objective standards. A supplement analyzed 1956 costs of library service by presenting model budgets for four public libraries ranging in size from a county library serving 50,000 persons to a library serving a metropolitan population of 200,000. Throughout the report there was emphasis on the quality of library service offered and the necessity of combining into larger units of service. The committee, by its variable budgets for libraries of different sizes, suggested that in 1956 the annual per capita costs for adequate library service would range inversely from \$3.41 for the library serving only 50,000 to \$2.60 for the metropolitan library serving 200,000. However, the report extended beyond the study of costs and considered the purposes and function of the public library, the structure of service, materials, personnel, physical facilities and the organization and control of materials.

Council on Library Resources, Inc.—U.S. research libraries received important aid with the establishment of the Council on Library Resources in Sept. 1956. A nonprofit corporation established with a grant of \$5,000,000 from the Ford foundation to cover initial expenses for a period of five years, the purpose of the council was to seek solutions to the problems of research libraries. It aimed to develop the application of scientific techniques and mechanisms to library procedures, to extend inter-library co-operation, to promote developments that would enable academic libraries to serve both undergraduates and research scholars better and to promote liaison with foreign research libraries and collections.

Library Statistics.—Public library circulation in the United States continued to rise. The index of public library circulation compiled by the University of Illinois library school stood at 85 for the early part of 1956 as compared with 98 in the preceding year. Using 1939 as a base, the index had shown a steady rise following a wartime slump in 1945 to 75.

Statistics of the U.S. office of education reported in 1956 for public libraries in 108 cities of more than 100,000 population showed book holdings of 56,916,000 and a total annual circulation of 171,449,000. Total annual library expenditures in the cities was \$82,134,000. The annual per capita expense was \$1.76. The university library with the largest book collection in 1956 was that of Harvard, with more than 6,000,000 items. Harvard also spent most for books and binding, but the University of Illinois had the largest number of acquisitions reported, with 63,294.

Intellectual Freedom.—Columbia Pictures released a film, *Norm Center*, with Bette Davis in the role of a small-town librarian who refused to remove a controversial book from the shelves of the library. The film was made after consultation with officers of the American Library association, and John D. Henderson, chairman of the Intellectual Freedom committee, acted as technical consultant. The reaction of librarians to the film was favourable, and it was a shock to some of them when the Motion Picture Decency put it in a special classification, disapproving on political rather than moral grounds.

The University of Kansas (Lawrence) received the *Letter* literary award at Miami Beach for its exhibition of books from

Plato to Hemingway that had been banned. The purpose of the exhibit was to illustrate the great cultural contribution of some books that had been suppressed by censors.

In July libraries were still having difficulty with the U.S. attorney general's interpretation of the 1938 Foreign Agents Registration act. By this interpretation the post office refused to deliver some things published abroad, such as Russian newspapers and some pacifist books published in Great Britain.

Most pressures were directed against the circulation of books accused of obscenity. Librarians were presumably subject to some of these pressures, but there was no reason to believe that in large and well-supported libraries great freedom of book selection did not exist in 1956. An encouraging trend was the continued increase in full library services offered to Negroes in the south.

Notable Additions to Collections.—Described as the greatest gift of its kind ever made, the J. K. Lilly library, gathered over a period of 30 years, was presented to Indiana university. The collection is strong in books about the discovery and exploration of America, American history, American and English literature, manuscripts of Indiana authors and early science and technology.

The University of California, Berkeley, marked the acquisition of its 2,000,000th volume with a Shakespeare first folio. The University of Illinois acquired the private library of Carl Sandburg. Florida State university acquired the Olin Downes music library of 1,500 books, 1,200 scores and 1,200 long-playing recordings. Columbia university announced notable acquisitions in Chinese and Tibetan literature and the manuscripts of George Santayana. Washington university, St. Louis, Mo., acquired a 35,000-volume patent library gathered by Roy Eliers, a St. Louis patent attorney. The University of Kansas acquired the William Butler Yeats books collected by P. S. O'Hegarty. The University of Rochester added the Thomas E. Dewey papers to its collection.

Library Buildings.—The Denver Public library building, constructed at a cost of \$3,300,000, was opened in 1956. Public libraries throughout the country were constructing both main and branch buildings. The \$2,500,000 Donnell branch of the New York public library was a notable example of the latter.

Among the colleges and universities dedicating new library buildings in 1956 were Western Reserve university, DePauw university and Carleton college. Louisiana State university, Washington university of St. Louis, and City College of New York each secured an appropriation of \$3,500,000 for the construction of new library buildings. Ground was broken on a \$1,650,000 building at Colgate university.

National and State Libraries.—Congress acted to create a national library of medicine, combining in one library system the world-famous Army Medical library and the medical libraries of the navy, air force and public health service. After surveying various locations, congress decided to construct a new library building in Washington, D.C., for the institution.

Appointments.—Some large university libraries acquired new directors during the year. Wayne Yenawine became director of libraries and dean of the library school at Syracuse university. William B. Locke was appointed at Massachusetts Institute of Technology, Arthur Hamlin at the University of Cincinnati, William B. Ready at Marquette university and James V. Jones at St. Louis university. Other university library appointments were Russell S. Dozer at DePauw, Joseph Komidar at Tufts, Wyman Parker at Wesleyan and James Ranz at Wyoming. Important college library headships went to Eileen Thornton at Oberlin, Flora E. Reynolds at Mills college and Donald Thompson at Wabash college.

Louis D. Sass became dean of the library school at Pratt in-

stitute, and Janice Kee was appointed secretary of the Wisconsin Library commission. Important public library directorships went to Morton Coburn at Edmonton, Alta., and to Marjorie Donaldson at Pasadena, Calif. Henry Cummings Campbell, formerly head of the United Nations Educational, Scientific and Cultural organization Clearing House for Libraries, became director of the Toronto Public library.

Grants and Aids.—A Rockefeller foundation grant of \$116,000 provided for the establishment of an American Library association office for overseas development. The Carnegie corporation granted \$50,000 to the Western Reserve university school of librarianship to evaluate the curriculum of library schools. The U.S. Steel corporation granted the Association of College and Research Libraries \$30,000 to strengthen college and university libraries through the improvement of equipment, collections and programs supplementary to teaching. Remington Rand donated \$5,000 to make a small number of grants to four-year nontax-supported liberal arts colleges. The *New York Times* gave \$5,000 for supplying microfilm copies of back files of the *Times* to college libraries.

(See also AMERICAN LIBRARY ASSOCIATION; SOCIETIES AND ASSOCIATIONS, U.S.) (H. W. WR.)

International.—Mechanization and cataloguing, which sprang into prominence in library research in 1955, continued to attract many writers in 1956. Special attention was paid to mechanical methods of storing and sorting recorded knowledge and to mechanical translation. The issue for October of *Library Trends* and that for April of *American Documentation* surveyed recent work in this field.

The organ of the International Federation of Translators, *Babel*, devoted its number for October to machine translation; the Cambridge Language Research group initiated a scientific study of language and the potentialities of translating by machine. Interest centred on dividing the "store" or "memory" of the machine into words of common usage (about 90%) and words peculiar to the intellectual or scientific content of the job in hand (about 10%). A striking example of the use of computers for semantic research was the production by a U.S. computer in 2,000 hours of a 1,000-page concordance to a new edition of the Bible. A service known as DMS (Documentation of Molecular Spectroscopy), established in London and Weinheim, Ger., for an annual subscription of £65, proposed to issue about 2,000 cards a year, four-fifths of them carrying spectral diagrams and one-fifth literature references. The better use of libraries and the improvement of means of communicating information were the subjects of many studies; the Ford foundation established the Council on Library Resources in Washington, D.C.; and *Bibliotekar*, no. 10 (Moscow, 1956), was virtually a special issue on this topic.

The improvement of cataloguing rules also figured largely in 1956. The *UNESCO Bulletin for Libraries* continued its series of articles on the trend of revision in various countries with essays on cataloguing in Spain and France. With the assistance of UNESCO (the United Nations Educational, Scientific and Cultural organization), the International Federation of Library Associations (I.F.L.A.) had already begun a study of the principles for establishing main entries for anonymous works and works of corporate authorship; its report was published in *Libri*, vol. 6, no. 3, pp. 271-298. The *Library Quarterly*, vol. 26, no. 4 (October) contained a number of articles on the revision of cataloguing codes.

UNESCO, at a meeting of experts in Paris, Fr., on Feb. 5-10, examined the Brussels convention of 1886 on the international exchange of publications with a view to drafting a new convention. This meeting was followed on Oct. 1-5 by one in Havana, Cuba, on the international exchange of publications in Latin

America, at which it was proposed to establish a pilot national centre for exchanges, perhaps in Brazil or Chile. The Organization of American States was asked to consider drawing up an inter-American convention on exchanges. The second edition of UNESCO's *Handbook on the International Exchange of Publications* was published in Paris. Among other UNESCO publications were L. Brummel's *Union Catalogues, Their Problems and Organization*, and Frank M. Gardner's *The Delhi Public Library: an Evaluation Report*, scheduled for issue at the end of the year.

In Calcutta the UNESCO Research Centre on the Social Implications of Industrialization in South Asia began work, equipped with library and documentation services. The work of UNESCO in developing bibliography, libraries and documentation during the first ten years of its existence was summarized by Verner W. Clapp in *American Documentation*, vol. 7, no. 2, pp. 127-133 (April), and fully described in the *UNESCO Bulletin for Libraries*, vol. 10, no. 11/12 (December), which was a special anniversary issue.

The I.F.L.A. held its 22nd council meeting at Munich, Ger., on Sept. 2-4. One of the new bodies set up at the Brussels conference in 1955, the International Association of Agricultural Librarians, issued the first number of its *Quarterly Bulletin* in January. The International Federation for Documentation (F.I.D.) council met at Stuttgart, Ger., on Aug. 27-29 under the chairmanship of Alexander King (United Kingdom). Poland was admitted as the 24th national member of F.I.D. A special study was made of the development of new methods and techniques for communicating knowledge, based on King's earlier paper presented to the International Advisory Committee on Bibliography during its meeting at UNESCO house on May 24-26, when a five-year plan of work was drawn up.

The third International Congress on Archives was held in Florence and Siena, It., at the end of September.

Great Britain.—An event of unusual liturgical and typographical importance was the discovery in October of a book published by William Caxton. During the recataloguing of the library of the Collegiate Church of St. Mary, Warwick, there came to light a copy of the *Legenda secundum usum Sarum*, hitherto known only from 29 odd leaves at Cambridge and a few elsewhere. The newly found volume, of 342 leaves, was printed by Maynyal in Paris in 1488 and bore Caxton's device, showing that it must have passed through his Westminster office.

CONVEYOR BELT arching over 14th street, Denver, Colo., as books and documents were transferred from the old library into a new building, across the street, which was opened Oct. 18, 1956

British public library statistics for 1955-56, issued in Nov. 1956, showed that at least 32,000 service points and 183 mobile libraries were in operation, with a total stock of 63,400,000 volumes and a full-time staff of 12,700. Book expenditure was £3,410,000 and the total cost of the service was £13,870,000, or 5s. 5½d. per head of population.

Lending library issues were 398,700,000, or 7.8 per head, an increase of 12,400,000.

Other Countries.—The French Library association celebrated its 50th anniversary on Nov. 20-21. The Direction de la Documentation in Paris announced plans to produce, in collaboration with the Fondation Nationale des Sciences Politiques, an abstracting service on cards covering the political, economic and social sciences. The Direction des Bibliothèques replaced its own *Bulletin d'informations* and the Bibliothèque Nationale's *Bulletin de documentation bibliographique* by a new periodical called *Bulletin des bibliothèques de France*.

The Leipzig edition of the *Börsenblatt für den Deutschen Buchhandel* reported on May 12 that the library of Gotha, containing 600,000 volumes, including productions of Gutenberg's press, first editions of Cicero and Luther and many other rarities, would shortly be returned to Gotha by the Academy of Sciences at Leningrad, where it had been preserved since World War II.

Olomouc University library, Czechoslovakia, came to the fore as a producer of important bibliographies, including a catalogue of the 1,900 incunabula in the library (*Soupis Prvotisku Univerzitní Knihovny v Olomouci*) and a number of scientific and technical indexes. Statistics in *Bibliotekar*, no. 7 (Moscow, 1956), of Yugoslav libraries gave the total holdings of the six national libraries (Belgrade, Zagreb, Ljubljana, Skoplje, Sarajevo and Cetinje) as about 2,000,000 volumes. Complete figures for public and other libraries were not given. The Bulgarian National Library, Sofia, celebrated its centenary. Budapest City library had in preparation a dictionary of library terms in English, French, German, Hungarian, Italian, Rumanian, Russian, Spanish and Swedish.

(F. L. K.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Library Story* (1952).

Libya. A federal kingdom in North Africa, Libya is bounded north by the Mediterranean, west by Tunisia and Algeria, south by French West Africa and French Equatorial Africa and east by Egypt and Sudan. Area: 679,358 sq.mi. Pop. (1954 census): 1,091,830; Berbers, with Arab admixture; Italians; small Greek, Maltese and Jewish communities. Language: Arabic. Religion: mainly Moslem. Capitals (pop., 1954): Tripoli 130,538; Benghazi 70,533. King, Idris I; prime minister in 1956, Mustafa Ahmed ben Halim.

History.—The new house of representatives of 55 members, elected on Jan. 7, 1956, was opened by King Idris at a special meeting at Derna. Because of his health, the king was unable to travel the long distance from his Tobruk residence to Tripoli, the government's seat. On March 25 ben Halim reshuffled his cabinet, retaining the portfolio of foreign affairs.

King Idris paid a state visit to Turkey (Aug. 6-11), stayed there ten days in a private capacity and on Aug. 23 arrived on a three-day official visit to Beirut, Lebanon.

On Jan. 6 N. I. Generalov, former Soviet ambassador to Australia, arrived at Tripoli as the first Soviet ambassador to Libya. In March the Libyan government rejected an offer of Soviet credit and arms.

On April 8 it was announced that the United States had offered Libya \$12,000,000 in additional aid, 30,000 tons of wheat as a gift for famine relief, and the equipment for 1,000 men for the expansion of the Libyan army.

On June 18 ben Halim arrived in London for talks. Returning to Tripoli on July 2 he said that the British government had

agreed to create a nucleus of the Libyan air force and navy and provide free arms and equipment for 10,000 troops.

On Aug. 16, in connection with the Suez crisis, antiwestern and pro-Egyptian demonstrations took place in Tripoli, Benghazi and other towns. To disperse mobs the Libyan police had to use tear-gas bombs.

Education.—Schools (1954-55). *Tripolitania*: primary 196, pupils 34,142, teachers 1,172; secondary 4, pupils 1,756, teachers 135; vocational 2, pupils 348, teachers 38; teachers' training colleges 2, students 798, teachers 35. *Cyrenaica*: primary 94, pupils 20,232, teachers 573; secondary 3, pupils 427, teachers 49; vocational 3, pupils 134, teachers 26; teachers' training colleges 2, students 71, teachers 14. *Fezzan*: primary 27, pupils 2,008, teachers 57.

Finance.—Monetary unit: Libyan pound, at par with sterling, divided into 100 piastres. Budget (1953-54 actual; 1955-56 est. in parentheses): revenue £6,191,709 (£9,816,405), expenditure £5,149,291 (£9,816,405). Currency circulation (Jan. 1954) £3,849,000, (March 1955) £4,566,000. Bank deposits (1954 est.) £7,000,000.

Foreign Trade.—(1955) Imports £14,340,000; exports £4,620,000. Chief sources of imports (1954): Italy 32.9%; U.K. 21.9%; Ceylon 6.5%. Chief destinations of exports (1954): U.K. 30.8%; Italy 29.8%; Greece 17.3%. Main imports: foodstuffs, textiles, petroleum products, agricultural machinery, motor vehicles. Main exports: esparto, peanuts, livestock, wool, sponges, tunny.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Mediterranean Africa* (1952).

Liechtenstein. Liechtenstein is an independent principality lying between Switzerland and Austria, united with Switzerland by monetary and customs union. Area: 61 sq.mi. Pop. (1955 census): 14,861. Language: German. Religion: Roman Catholic. Capital: Vaduz, pop. (1955) 3,031. Sovereign prince, Franz Josef II; minister-president (appointed Sept. 3, 1945), Alexander Frick.

History.—The event of the year 1956 was the celebration, on Sept. 8-9, of the 150th anniversary of the country's independence. Frick, the head of the government, and Alois Richter, the president of the *landtag*, made speeches emphasizing the profound attachment of the Liechtenstein people to the idea of independence and sovereignty of their principality.

On June 20 Prince Franz-Josef and his Princess Georgine returned to Vaduz from a month's visit to the United States.

Education.—Schools (1955-56): primary 14, pupils 2,130, teachers 58; secondary 4, pupils 461, teachers 32.

Finance.—Included since Jan. 1924 in the Swiss customs union, Liechtenstein uses Swiss currency. In 1956 the franc was valued at 23.3 cents U.S. Budget (1955 actual; 1956 est. in parentheses): revenue 5,965,442 Fr. (7,736,750 Fr.); expenditure 5,967,250 Fr. (8,100,557 Fr.). Public debt (Dec. 31, 1955): 10,351,111.20 Fr.

Agriculture.—Chief products: grain, potatoes, fruit, wine, vegetables. Livestock (1955): cattle 5,548; sheep 804; horses 295; pigs 3,635; goats 770; chickens 33,002.

Industry.—Cotton weaving and spinning, ceramics, artificial teeth, pottery, hardware, machinery, sausage cases.

Limes: see FRUIT.

Linen and Flax. Flax continued in 1956 to represent only about 5% of the world's fibre production, with most of it being produced in the U.S.S.R. and eastern European countries.

The United States, which produces practically no flax of its own for textile purposes and only a limited supply for linseed oil, continued to be the leading consumer of linen products. Irish linen (from Northern Ireland) continued to be the major source of linen imported into the U.S., the total value of Northern Ireland linen exports to the U.S. in 1955 being £6,562,000.

The Belgian linen industry, which in 1955 started an intensive promotional campaign in the United States, ranked second in the U.S. market. Competition was increasing, however, from Italy, France, Peru and especially Japan.

The 22-nation conference held in Geneva, Switz., under the General Agreement on Tariffs and Trade (G.A.T.T.) reduced rates of duty on a variety of linen items imported from any country except those behind the "iron curtain." These reductions,

which ranged in size from 8½% to 76% of the pre-existing duty rates, were scheduled to go into effect in three successive stages, beginning June 30, 1956, June 30, 1957, and June 30, 1958.

The third event of major significance occurred only a few weeks later when on June 25, 1956, Pres. Dwight D. Eisenhower ordered a drastic increase (from 10% to 40% ad valorem) in the tariff on linen towelling imported into the U.S. This was the first time the tariff "escape clause" had been used in a textile case.

Other developments of interest were a continued trend toward bright colours and gay prints and toward further experimentation with blends of linen with other fibres. Potentially most important of all was the announcement by a British company in 1956 of the development of a new process for making linen crease-resistant in a manner which would require a minimum of ironing, after washing.

On the whole, the linen trade for the year 1956 was expected to be slightly better than in 1955. (J. RL.)

Liquors, Alcoholic. The three principal problems which occupied and disturbed the distilled beverage industry in the United States during 1955 did not find an appreciable approach toward solution in 1956.

Sales and distribution of illegal whisky not only continued but actually increased at an accelerated pace. A total of 14,499 illegal stills were seized by authorities in 1956, and it was believed that at least 25,000 illicit stills continued in operation.

The remedy believed to be most effective for this situation, a reduction in the excise tax which had been written into the law enacted April 1955 to be effective in April 1956, was cancelled in congress in the latter month.

The third and perhaps most troublesome problem for the industry was the so-called bonding law, which prescribes that the tax on U.S. whisky reaching the age of 8 years must be paid irrespective of whether or not any of it has been sold. Many smaller distillers who found themselves unable to raise the large sums required for such payments were forced to sell at great losses or go out of business.

By 1956 all but two states, Mississippi and Oklahoma, had legalized liquor sales. In addition, a number of states in providing for the legal sale of liquor had left to the electorate of localities within the state the final determination concerning the legalization or prohibition of the sale of liquor within their communities. Thus about 16.3% of the population of the United States lives in "dry" areas.

In 1956 the 197 distilleries, 141 rectifying plants, 52 bottling plants, 1,500 wholesalers and approximately 200,000 retail outlets provided employment for an estimated 800,000 persons with annual payrolls estimated at more than \$2,000,000,000. During fiscal 1956, the federal government realized \$2,100,000,000 in spirits revenues. In addition, state and local governments collected almost \$620,000,000 from the manufacture and sale of distilled spirits during calendar 1955.

During fiscal 1956, 234,932,922 gal. of distilled spirits were produced in beverage distilleries, an increase of 28.9% over total spirits output in fiscal 1955. Included were 130,700,000 gal. of whisky and 68,400,000 gal. of neutral spirits, marking an increase of 25.8%

in whisky production and an increase of 28.3% in neutral spirits output from 1955.

Total domestic bottled output in fiscal 1956 amounted to 185,389,480 gal. of which whiskies accounted for 141,991,554 gal. This was an increase in total spirits bottlings of 7.4% over 1955, and an increase in whisky bottlings of 2.2%.

Whiskies continued to dominate the total of domestic spirits entering consumption channels, constituting about 77% of the over-all total. Of the total increase in spirits bottled domestically of more than 12,000,000 gal., about two-thirds could be accounted for by increases in vodka and gin. Bottled output of brandy, cordials, liqueurs and rum showed relatively slight changes in fiscal 1956 over fiscal 1955. The output of vodka, however, rose sharply, increasing by 123%. Gin bottlings also showed a relatively sharp increase over fiscal 1955, rising by 14.4%. Bonded and straight whiskies constitute 40% of whisky bottlings in 1956, while the blends represented 60%.

During fiscal 1956, total bottled imports amounted to 25,999,-

ption. During fiscal 1956, 1,855,046 gal. were imported, of which 1,635,781 gal. came from Puerto Rico. Brandy, liqueurs and gins accounted for an additional 1,780,598 gal. of the fiscal 1956 import total. In addition to the bottled imports, there were 252,669 gal. of bulk distilled spirits, including 413,011 gal. of whiskey, 469,974 gal. of rum and 425,092 gal. of brandy imported and bottling in the United States.

Per capita consumption of spirits in the United States during calendar year 1955 was 1.22 wine gallons.

The federal tax rate in 1956 amounted to about 43% of the selling price of a typical fifth bottle of whisky; with state and local levies added, 56% of the selling price went for taxes.

Literary Prizes.

The following is a selected list of literary prizes awarded during the year 1956 and the latter months of 1955.

UNITED STATES.—ACADEMY OF AMERICAN POETS AWARD.—To Rolfe Humphries.—Lamont Poetry selection, to Philip Booth for *Letter From a Plant Land*.

AMERICAN ACADEMY OF ARTS AND LETTERS AND NATIONAL INSTITUTE.—Award of merit to Enid Bagnold for *The Chalk Garden*. Russell Loines awarded to John Betjeman. Prix de Rome fellowship to John Ciardi. Renewal Prix de Rome fellowship to Ralph Ellison.

AMERICAN POLITICAL SCIENCE ASSOCIATION.—Woodrow Wilson Foundation award of \$1,000 for the best book on government and democracy to Louis Hartz for *The Liberal Tradition in America*.

SPRINGFIELD-WOLF AWARDS.—Two awards of \$2,000 each for books in the field of race relations, administered by the *Saturday Review*, to John P. Sweeney and Alex Rosen for *A Manual of Intergroup Relations*, and to George Shepherd for *They Wait in Darkness*.

LANCROFT PRIZES.—\$2,000 each annually for the two best books in American history, American diplomacy or American international relations, Elizabeth Stevenson for *Henry Adams*, and to Richard N. Current and Randall for *Last Full Measure: Lincoln the President*.

HUNTINGTON PRIZE IN POETRY.—\$1,000 to Conrad Aiken for *A Letter to Li Po, and Other Poems*.

JOHN BURROUGHS MEDAL.—To Guy Murchie, Jr., for *Song of the Sky*. CATHOLIC BOOK CLUB.—Campion award to honour long-standing and eminent service in the cause of Catholic letters, to Helen C. White.

CHRISTOPHER AWARDS.—Bronze medallions, awarded semiannually, to Ira Avery for *The Five Fathers of Peppi*; Ruth Cranston for *The Miracle of Lourdes*; Rumer Godden for *An Episode of Sparrows*; Budd Schulberg for *Waterfront*; Agnes Turnbull for *The Golden Journey*; Sen. John F. Kennedy for *Profiles in Courage*; Adele Comandini for *Doctor Kate*; Thomas Dooley for *Deliver Us From Evil*; and to George Mardikian for *Song of America*.

COMMONWEALTH CLUB OF CALIFORNIA.—Gold medal to Allan Temko for *Notre-Dame of Paris* (nonfiction) and to C. S. Forester for *The Good Shepherd* (fiction). Silver medals to Carl Bridenbaugh for *Cities in Revolt*; Aldous Huxley for *Genius and the Goddess*; and Samuel Dickson for *Streets of San Francisco*. Silver medals (special) to Delina Margot-Parle for *Symphony* (poetry); Irene D. Paden and Margaret E. Schlichtman for *The Big Oak Flat Road* (California history). Honourable mention to Leon J. Richardson for *Singing in Sunshine* (poetry).

DELL-WESTERN AWARD.—\$1,000 for the best western novel, reprint or original, published by Dell Publishing company, to Will C. Brown (C. S. Boyles, Jr.) for *The Border Jumpers*.

FRIENDS OF AMERICAN WRITERS.—\$1,000 annual award to a midwestern writer, to Carol Brink for *The Headland*.

ROBERT FROST FELLOWSHIP IN POETRY.—Tuition, board and room at Middlebury College Breadloaf Writers' conference, sponsored by Henry Holt and Company, to Herbert A. Kenny.

GUGGENHEIM FELLOWSHIPS.—Among those awarded fellowships were Edward Charles O'Gorman, Margaret Kirkland Avison, David Russell Wagoner, Donald Earl Wetzel, David Karp, Frank Rooney, Harry Miles Muheim, Thomas Hal Phillips and Barbara Francesca Gibbs Golfing for creative writing.

HARPER'S EUGENE F. SAXTON FELLOWSHIPS.—To Nick Joaquin y Marques, for completion of a novel, an account of three generations of Philippine history.

HUNTINGTON HARTFORD FOUNDATION AWARDS.—\$500 and an invitation to live six months at the foundation estate, to Edward Hopper, painter, and Ernst Toch, composer.

SIDNEY HILLMAN FOUNDATION PRIZE AWARD.—To John Lord O'Brian for *National Security and Individual Freedom*.

INSTITUTE OF EARLY AMERICAN HISTORY AND CULTURE AWARD.—\$500 to Alan Simpson for *Puritanism in Old and New England*.

JEWISH BOOK COUNCIL AWARDS.—Harry and Ethel Daroff Memorial Fiction award of \$250 to Jo Sinclair for *The Changelings*. Harry Kovner Memorial awards of \$100 each to Hillel Bavli for a book of Hebrew poetry, and to the Yiddish poet Naphtali Gross for cumulative contribution to Yiddish poetry.

MEDIAEVAL ACADEMY OF AMERICA.—Haskins medal to Ernest A. Moody for *Truth and Consequence in Medieval Logic*.

MYSTERY WRITERS OF AMERICA AWARD.—Honorary "Edgars," busts of Edgar Allan Poe, awarded for mystery writing: for best mystery novel, to Margaret Millar for *Beast in View*; best first mystery novel, to Lane Kauffmann for *The Perfectionist*; best short story to Philip MacDonald for *Dream No More*; best fact-crime to Manly Wade Wellman for *Dead and Gone*; annual "Raven" to Charles Scribner's Sons for consistently excellent book jackets in the mystery-suspense field.

NATIONAL BOOK AWARDS.—Gold medals awarded by the entire book industry: for distinguished fiction, to John O'Hara for *Ten North Frederick*; for nonfiction, to Herbert Kubly for *Americans in Italy*; for poetry, to W. H. Auden for *The Shield of Achilles*.

NATIONAL BROTHERHOOD AWARD.—To John Lord O'Brian, for *National Security and Individual Freedom*.

NATIONAL INSTITUTE OF ARTS AND LETTERS.—\$1,000 grants to seven nonmember authors, to James Baldwin, John Cheever, Henry-Russell Hitchcock, Joseph Kerman, Josephine Miles, Priscilla Robertson and Frank Rooney.

NATIONAL LEAGUE OF AMERICAN PEN WOMEN AWARD.—For best book of poetry by a member of the league, to Jane Merchant for *The Greatest of These*.

NEW YORK DRAMA CRITICS CIRCLE AWARD.—For best play, to Frances Goodrich and Albert Hackett for adaptation of *Diary of a Young Girl* by Anne Frank; best foreign play, to Christopher Fry for *Tiger at the Gates*; best musical, to Alan Jay Lerner and Frederick Loewe, for *My Fair Lady*.

POETRY MAGAZINE AWARDS.—Levinson prize to Stanley Kunitz; Oscar Blumenthal prize to Sydney Goodsir Smith; Eunice Tietjens prize to Mona Van Duyn; Harriet Monroe Memorial prize to David Jones; Bess Hokin prize to Charles Tomlinson; Union League Civic and Arts Foundation prize to Jean Garrigue; Vachel Lindsay prize to Hayden Carruth.

POETRY SOCIETY OF AMERICA AWARDS.—Alexander Drutzkoy Memorial award of gold medal and \$100 to Louis Untermeyer; Walt Whitman award of \$200 to Gay Wilson Allen; Reynolds Lyric award of \$200 to William D. Barney; Edna St. Vincent Millay Memorial award of \$200 to Donald Hall; William Rose Benet Memorial award of \$100 to Norman Nicholson; Ridgely Torrence Memorial award of \$100 to Adrienne Cecile Rich; Poetry Chap-Book award of \$100 to Thomas H. Johnson; Emily S. Hamblen Memorial award of \$100 to Stanley Gardner. Annual award of \$100 to Virginia Earle; second prize of \$50 to Gustav Davidson. Also Borestone Mountain Poetry awards: \$1,250 to Rolfe Humphries; \$250 each to Phyllis McGinley and Robert Hillyer; \$100 to Alastair Reid.

TAMMINGTON INSTITUTE BOOK AWARD.—\$500 for best American biography, to James MacGregor Burns for *Roosevelt: The Lion and the Fox*.

TEXAS INSTITUTE OF ARTS AND LETTERS AWARDS.—Carr P. Rollins award of \$1,000 for best Texas book of the year, to John S. Spratt for *The Road to Spindletop*; *Economic Change in Texas, 1875-1901*; Summerfield G. Roberts award of \$1,000 for the best book about the Republic of Texas, to Bessie Lee Fitzhugh for *Bells Over Texas*; Dallas Museum of Fine Arts award of \$25 for book design, to Carl Hertzog, publisher; McMurray Bookshop award of \$250 for the best first novel to Fred Gipson for *Recollection Creek*; A. Harris Poetry award of \$100 to William D. Barney.

WESTERN WRITERS OF AMERICA AWARDS.—Silver Spurs for best western novel, to L. P. Holmes for *Somewhere They Die*; best nonfiction award to Paul F. Sharp for *Whoop-Up Country*; best western short story to S. Omar

Barker for *Bad Company*.

THE WESTERNERS, NEW YORK POSSE, AWARD.—For best western book, to Mark H. Brown and W. R. Felton for *The Frontier Years*.

YALE SERIES OF YOUNGER POETS AWARD.—To James Wright for *The Green Wall*.

ZONDERVAN CHRISTIAN TEXTBOOK AWARD.—\$1,500 to R. Laird Harris for *The Inspiration and Canonicity of the Bible*.

NOBEL PRIZE FOR LITERATURE.—(See article NOBEL PRIZES.)

PULITZER PRIZES.—(See article PULITZER PRIZES.)

U.S. Children's Books.—JANE ADDAMS CHILDREN'S BOOK AWARD.—For a book which embodies the spirit of world understanding and friendship, to Anna Bontemps for *Story of the Negro*.

HANS CHRISTIAN ANDERSEN MEDAL.—International award on books for young people, to Eleanor Farjeon for *The Little Bookroom*.

BOYS' CLUBS OF AMERICA JUNIOR BOOK AWARDS.—Carolyn Haywood for *Eddie and His Big Deals*; Patrick Pringle for *Great Discoverers in Modern Science*; Ray Bradbury for *Switch on the Night*; Edwin Tunis for *Wheels*; Natalie Savage Carlson for *Wings Against the Wind*.

CALDECOTT MEDAL.—For the year's most distinguished American picture book for children, to Feodor Rojankovsky for *Frog Went A-Courtin'*.

CHICAGO CHILDREN'S READING ROUND TABLE AWARD.—For distinguished service in the field of children's reading, to Dilla MacBean.

CHILD STUDY ASSOCIATION OF AMERICA CHILDREN'S BOOK AWARDS.—To Taro Yashima (Jun Iwamatsu) for *Crow Boy* and Virginia Sorensen for *Plain Girl*.

COMMONWEALTH CLUB OF CALIFORNIA.—Silver medal for best juvenile, to Frederick A. Lane for *Westward the Eagle*; honorable mention to Marion Garthwaite for *You Just Never Know*.

DODD MEAD-BOYS' LIFE AWARD.—\$2,000 plus royalty, to Marian Talmadge and Iris Gilmore for *Pony Express Boy*.

DODD MEAD-COMPACT AWARD.—To Alexander L. Johnson for *Oasis for Lucy*.

THOMAS ALVA EDISON FOUNDATION NATIONAL MASS MEDIA AWARDS.—\$250 and a scroll each to Hazel Wilson for *His Indian Brother* (best children's book for character portrayal); John Lewellen for *The Boy Scientist* (best children's science book); and Virginia S. Eifert for *The Buffalo Trace* (youth book best portraying America's past).

HELEN DEAN FISH AWARD.—\$500 for best first book, to Aylesa Forsee for *The Whirly Bird*.

JEWISH BOOK COUNCIL.—Award of \$250 for cumulative contribution to Jewish juvenile literature to Sadie Rose Weilerstein.

NEWBERRY MEDAL.—For the year's most distinguished contribution to American literature for children, to Jean Lee Latham for *Carry On, Mr. Bowditch*.

NEW YORK HERALD-TRIBUNE CHILDREN'S SPRING BOOK FESTIVAL AWARDS.—Three prizes of \$200 each: for a picture book, to William Pene du Bois for *Lion*; for middle-age group, to Rutherford G. Montgomery for *Beaver Water*; for older children, to Richard Armstrong for *Cold Hazard*.

OHIOANA AWARD.—For best juvenile, to James Flora for *The Fabulous Firework Family*.

SECONDARY EDUCATION BOARD AWARDS.—For ten best adult titles suitable for pre-college readers: MacKinley Kantor for *Andersonville*; James Bishop for *The Day Lincoln Was Shot*; Rumer Godden for *Episide of Sparrows*; Edward Steichen for *The Family of Man*; Richard Aldrich for *Gertrude Lawrence as Mrs. A.*; Anne Morrow Lindbergh for *Gift From the Sea*; C. S. Forester for *The Good Shepherd*; John Gunther for *Inside Africa*; Gerald M. Durrell for *Three Tickets to Adventure*; and Virginia Pasley for *Twenty-One Stayed*.

TEXAS INSTITUTE OF ARTS AND LETTERS.—Cokesbury Book Store award for best Texas juvenile, to Fred Gipson for *The Trail-Driving Rooster*.

WILLIAM ALLEN WHITE AWARD.—To Marguerite Henry for *Brightly of the Grand Canyon*.

Canada.—GOVERNOR GENERAL'S AWARDS.—Fiction, to Lionel Shapiro for *The Sixth of June*; creative nonfiction, to N. J. Berrill for *Man's Emerging Mind*; academic nonfiction, to D. G. Creighton for *John A. Macdonald, the Old Chief*; poetry, to Wilfred Watson for *Friday's Child*; juvenile, to Kerry Wood for *The Map-Maker: The Story of David Thompson*.

LEACOCK MEDAL FOR HUMOUR.—To Eric Nichol for *Shall We Join the Ladies?*

LORNE PIERCE MEDAL OF THE ROYAL SOCIETY OF CANADA.—For a contribution to the development of Canadian literature, to Thomas H. Raddall.

PIERRE CHAUVEAU MEDAL.—For Canadian literary production of a high order, to Victor Morin.

PRESIDENT'S MEDALS.—Short story, to Eva Lis Wuorio for *Call Off Your Cats*; single poem, to Louis Dudek for *Keewaydin Poems*; general article, to Ralph Allen for *The Land of Eternal Change*; scholarly article, to D. M. Stanley for *Kingdom to Church*.

TYRRELL MEDAL OF THE ROYAL SOCIETY OF CANADA.—For outstanding contributions to the study of Canadian history, to Monseigneur Olivier Maurault.

UNIVERSITY OF BRITISH COLUMBIA MEDAL.—For popular biography, to D. G. Creighton for *John A. Macdonald, the Old Chief*. (A. J. RR.)

Great Britain.—Among awards made in 1956 were: JAMES TAIT BLACK MEMORIAL PRIZES for 1955 (about £250 each) to Ivy Compton-Burnett for *Mother and Son* (fiction) and Robert Wyndham Ketton-Cremer for *Thomas Gray* (biography); ARTS COUNCIL AWARDS for original verse to R. S. Thomas for *Song at the Year's Turning* (1955), to J. P. Fletcher for *Tally 300* (1956) for a first book of original verse and to W. Watson for *Friday's Child* (1955); the ARTS COUNCIL SCOTTISH PRIZE for poetry to Robert McLellan for his poem *Sweet Largie Bay*; CAFÉ ROYAL PRIZE (first prize £300) to Laurence Henry Forster Irving for a book on his grandfather, *Henry Irving: The Actor and His World* (1955); the QUEEN'S GOLD MEDAL for poetry to Edmund Blunden; the SOMERSET MAUGHAM TRUST PRIZE to Elizabeth Jennings for *A Way of Looking* (1955). Charles Whiting, author of *The Frat Wagon* (1954) and *Lest I Fall* (1956), was the first winner of the DOWTY AWARD "to enable a writer under 35 to travel in Canada." Other prizes included the HANS CHRISTIAN ANDERSEN PRIZE and the LIBRARY ASSOCIATION CARNEGIE MEDAL, both to Eleanor Farjeon for *The Little Bookroom* (1955); the FOYLE PRIZE to Laurie Lee for *My Many Coated Man* (1955); the W. H. HEINEMANN FOUNDATION

PRIZES for literature to R. S. Thomas for *Song at the Year's Turning* (1955), V. Cronin for *The Wise Man From the West* (1955) and to R. Ketton-Cremer for *Thomas Gray*; the JOHN LLEWELYN RHYS MEMORIAL PRIZE to John Hearne for *Voices Under the Window* (1955); the SUNDAY TIMES LITERARY PRIZE (£1,000) and GOLD MEDAL to Alan Moorehead for *Gallipoli* (1956). (X.)

France.—The principal literary prizes awarded during 1956 were: 1. GRAND PRIX LITTÉRAIRE DE LA VILLE DE PARIS to Louis Madelin for his historical work as a whole; the PRIX LITTÉRAIRE PRINCE RAINIER to Monaco to Marcel Brion for his work as a whole; the GRAND PRIX NATIONAL DES LETTRES to Alexandre Arnoux of the Académie Goncourt for his work as a whole; the PRIX DE LA FONDATION DEL DUCA to Alain Robl Grillet for *Les gommages et le voyeur* and to Maurice Guy for *L'Enseignement*; the PRIX ALBERT LONDRES (reporting) to René Maurières; the PRIX DE CRITIQUES to Michel Leiris for *La règle du jeu*; the PRIX DE L'HUMOUR to Paul Guimard for his *Faux frères*; the GRAND PRIX LITTÉRAIRE de l'ACADÉMIE FRANÇAISE to Henri Clouard for his *Histoire de la littérature française du symbolisme à nos jours*; the PRIX DU ROMAN de l'ACADÉMIE FRANÇAISE to Paul Guth for his work as a whole; the PRIX DES AMBASSADEURS to Jacques Chastenot for *Winston Churchill*.

According to tradition, the year's four outstanding prizes were announced in December; the PRIX FEMINA was awarded to François-Régis Basti for his novel *Les Adieux*; the PRIX GONCOURT to Romain Gary for *Le racines du ciel*; the PRIX RENAUDOT to André Perrin for *Le Père*; the PRIX INTERALLIÉ to Armand Lanoux for *Le Commandant Watrin*. (A. PR.)

Lithuania. A Soviet Socialist republic, Lithuania is bounded north by Latvia, east and southeast by Byelorussia, south by Poland and the Russian Kalinin oblast (province) and west by the Baltic sea. Area: 31,200 sq.mi. Pop. (1956 est.) 2,700,000. Languages (1954 est.): Lithuanian 73%; Russian and other Soviet 17%; Polish 10%. Religions (1954 est.): Roman Catholic 81%; Protestant 2.5%; Orthodox 2.5%; other no religion 14%. Chief towns (pop., 1956 est.): Vilnius 472,000; Wilno (cap.) 200,000; Kaunas 195,000; Klaipeda or Memel (1939 est.) 47,200. First secretary of the Lithuanian Communist party in 1956, Antanas Snieckus; chairman of the presidium of the supreme soviet, Justas Paleckis; chairman of the council of ministers, Moteius Juozovic Sumauskas.

History.—Capital investments in Lithuanian industry amounted to 1,500,000,000 roubles under the five-year plan 1955-59. Among the important enterprises built during that period were a turbine works, a machine-tool factory, three electric engineering industry factories, a large brick works and a cement plant. In 1956 Lithuania generated about 350,000,000 kw.hr. of electricity, eight times more than in 1940; that figure would be doubled when the Petrasunai hydroelectric power station, now under construction, was completed. The number of workers in the industry almost doubled between 1950 and 1955.

Mecislovas Gedvilas, premier since 1943, was relieved of his post on Jan. 15, 1956, and replaced by Moteius Juozovic Sumauskas. Complaints about the political situation in Lithuania voiced in the Soviet press insisted that there was still much "bourgeois nationalism."

In 1956 there were in Lithuania 30 secondary and 326 primary Polish schools; there was also a Polish teachers' training college and a higher pedagogical institute. It was estimated that in 1956 the population of Vilnius comprised 90,000 Russians, 60,000 Lithuanians, 40,000 Jews and 10,000 Poles.

(See also ESTONIA; LATVIA.)

(K. SM.)

Education.—Schools (1955): primary 3,200, pupils 430,000; secondary 110, pupils 35,000; vocational 230, pupils 215,000; institutions of higher education 14, students, about 15,000.

Finance.—Budget: (1955 est.) balanced at 1,644,514,000 roubles (1956) balanced at 1,908,122,000 roubles.

Agriculture.—Main crops (metric tons, 1938): rye 623,700; wheat 253,300; barley 274,000; oats 420,000; potatoes 2,118,200; flax fibre 25,800. Livestock (1939): cattle 1,103,600; pigs 1,117,100; sheep 1,223,600; horses 520,700; poultry 1,996,800.

Livestock. Livestock and poultry on United States farms and ranches at the beginning of 1956 showed a net increase of about 2% over the previous year. Meat animals increased, while milk cattle, poultry and work stock decreased. Aggregate value for all seven livestock species on Jan. 1 was \$10,757,612,000.

The U.S. imported 314,377 head of cattle in 1955, including 147,751 from Mexico and 66,603 from Canada. Exports, largely breeding stock, amounted to 24,505 head of cattle, 26,113 of sheep and 4,378 hogs.

Table I.—Livestock on U.S. Farms
(In 000 head)

Animals	Jan. 1, 1956	Jan. 1, 1955	Average, 1945-54
Horses and mules	3,962	4,309	8,212
Cattle (including calves)	97,465	96,592	84,040
Milk cows	23,318	23,462	24,654
Sheep	31,109	31,582	34,736
Hogs	55,088	50,474	56,853
Poultry	382,218	390,708	449,640
Swine	4,892	4,917	5,533

The 97,465,000 head of cattle on farms early in 1956 were valued at \$8,581,370,000 or \$88 per head, approximately the same as in 1955. Although the average price to producers for all cattle had declined to \$15.30 per hundredweight in October, the best fat cattle, which had brought less than \$25 per hundredweight early in the year, had risen to as much as \$34 per hundredweight. The calf crop of 1956 was indicated at 43,272,000 head, 2% larger than in 1955.

The lowest hog prices since 1941 in the late autumn of 1955, together with a related unfavourable corn-hog price ratio, resulted in a reduction of about 8% in the pig crop of 1956. The spring pig crop was 53,085,000 head, as compared with 57,690,000 head a year earlier; the fall crop was estimated at about 1,000,000 head. From a low of \$10.60 per hundredweight received by producers in Dec. 1955, the price climbed seasonally to \$16.20 per hundredweight in August, then again declined below \$15 per hundredweight. Meanwhile, a price support program involving a purchase of pork and lard, which had been suspended in April after purchases of nearly 200,000,000 lb. at a cost of nearly \$100,000,000, was reopened late in October. Because of a harvesttime decline in corn prices, the corn-hog price ratio in Oct. 1956 was 13 to 0, not far below the long-time average; there were some forecasts of moderate expansion in 1957 pig crops.

The 27,009,000 head of stock sheep on farms at the beginning of 1956 resulted from a slightly smaller 1955 lamb crop plus a 2% larger slaughter in 1955. Values also declined in total to \$85,375,000, as compared with \$403,524,000 a year earlier; on a per head basis the decline was from \$14.90 to \$14.30. The 1956 lamb crop included 20,428,000 head, 1% more than in 1955.

Pullets on U.S. farms at the beginning of 1956 were down 7% from breeder turkey hens were increased 7% over a year earlier. Commercial hatcheries produced 1,743,416,000 chicks during the first nine months of 1956, an increase of 15% as compared with 1,511,808,000 during the same months of 1955. Chickens raised on farms in 1956 were estimated at 471,917,000 or 2% more than the record low 461,868,000 produced in 1955 but 28% below the decade average. Heavy breed turkey poult hatched during the first nine months of 1956 totalled 65,108,000, an increase of 28% as compared with 1955. Light breeds for the same period were reduced to 12,525,000 from 14,137,000 in 1955.

World cattle numbers totalled 917,600,000 head at the beginning of 1956, a new record high, 1% larger than a year earlier, 2% above the early postwar (1946-50) average and 22% more than prewar. World sheep numbers increased for the ninth consecutive year to 909,600,000 head at the beginning of 1956, 2% more than a year earlier and 22% above prewar. All major regions except North America participated in the expansion.

Table II.—Number of Livestock in Specified Areas
(In 000 head at beginning of year)

Areas	Cattle		Hogs		Sheep	
	1956	1955	1956	1955	1956	1955
North America	135,100	133,800	74,400	69,100	39,000	39,400
Europe	106,700	105,900	95,800	95,000	122,500	121,200
U.S.S.R.	64,900	64,900	23,200	23,200	124,900	124,900
Asia	342,500	341,800	102,800	102,700	184,600	182,400
South America	148,300	145,700	43,200	45,600	130,000	129,400
Africa	97,400	97,400	3,900	3,900	128,500	126,300
Oceania	22,600	22,100	2,200	2,200	177,000	170,000
Estimated world total	917,600	911,600	373,300	369,500	909,600	893,600

World hog numbers increased to an all-time record high of 373,300,000 at the beginning of 1956, about 1% more than a year earlier, 27% above prewar and 52% more than average for the early postwar period (1946-50).

World work stock numbers generally declined in competition with the tractor: horses to fewer than 59,000,000 as compared with 74,700,000 prewar, mules to about 15,000,000 against 18,400,000 before the war. Camels increased in Africa and Asia to 10,000,000, as compared with 7,800,000 head prewar.

Lodge, Henry Cabot, Jr. (1902—), U.S. delegate to the United Nations, was born on July 5 at Nahant, Mass., the grandson of Sen. Henry Cabot Lodge who led the opposition to U.S. entry into the League of Nations. He was graduated from Harvard university in 1924 and worked first with the *Boston Evening Transcript* and later with the *New York Herald Tribune* until 1932. He was a representative to the Massachusetts general court from 1933 to 1936 and in the latter year was elected U.S. senator from Massachusetts on the Republican ticket. Re-elected in 1942, he resigned in Feb. 1944 to go on active duty with the U.S. army, and saw combat in North Africa and Italy. He was again elected to the senate in 1946.

Lodge directed the strategy that resulted in Dwight D. Eisenhower's nomination at the Republican national convention in July 1952, but he himself was defeated in the election for the senate. President Eisenhower named him as U.S. representative to the United Nations, to succeed Warren R. Austin, and he took office on Jan. 23, 1953.

Lodge's principal tasks in the UN during 1953 and 1954 were to counter soviet propaganda and attempts to split the western powers, and to combat the continued efforts of the soviet bloc to secure admission of Red China to the UN. Much of his time during 1955 was spent on efforts to secure release of 11 U.S. air-men imprisoned by China as "spies," to persuade the U.S.S.R. to participate in a world atomic energy pool for peaceful purposes, and to present the U.S. view on disarmament before the UN subcommittee on disarmament, meeting at New York city. His proposal, advanced in April 1956, that at least part of the United States' foreign aid funds be distributed through the United Nations to forestall competition between the U.S. and the U.S.S.R., was opposed by President Eisenhower.

London. London is the capital of the United Kingdom of Great Britain and Northern Ireland and the centre of the Commonwealth of Nations. The term "London" is used here to describe three areas: (1) the City, the ancient heart of London, which for some purposes functions as a county; (2) the administrative county, comprising the City and the county proper (which consists of 28 metropolitan boroughs); and (3) Greater London, embracing the City, the county proper and the suburbs as far as the borders of the Metropolitan police area; i.e., includ-

FORMER PREMIER GEORGI MALENKOV of the U.S.S.R. signing autographs during his visit to London and other British cities in 1956. Officially Malenkov was sent on an inspection tour of British power plants

ing Middlesex and parts of Essex, Kent, Surrey and Hertfordshire. *City*. Area 1.05 sq.mi.; night pop. (1951 census) 5,268. Lord mayors in 1956: Sir Cuthbert Ackroyd and (from Nov.) Sir Cullum Welch. *County*. Area (including City) 116.95 sq.mi.; pop. (1951) 3,348,336. Lord lieutenant, Field Marshal Viscount Alanbrooke; chairman of London County council, N. Prichard. *Greater London*. Area about 722 sq.mi.; pop. (1951) 8,348,023.

There were several important developments during 1956 in the architectural battle for the future of London. These included plans for providing St. Paul's cathedral with a more fitting background and the proposal to attempt a large-scale fundamental re-planning of the area known as the Barbican. The St. Paul's plan was drawn up by Sir William Holford and consisted chiefly of a series of open spaces around the cathedral including a "semi-formal paved forecourt" and a "large stretch of sheer lawn."

The plan for rebuilding between Aldersgate street and Moorfields, known as the New Barbican scheme, had elements of science fiction about it since it suggested not only a system of linked skyscrapers but the provision of working, administrative and residential areas on three different levels and a form of town planning much more radical than in any scheme hitherto accepted in London. It was rejected by the minister of housing and local government, with the concurrence of both the City and the London County council.

There was much interest in the proposal to demolish the Imperial institute in South Kensington and replace it by a huge new group of buildings needed for the expansion of the Imperial college of science. The main objection to the proposal was that the Imperial institute buildings (designed by Collcutt) included a particularly fine tower, one of the landmarks of Kensington, and this objection proved fatal to the scheme.

First moves were made toward clearing a large site on the south bank of the Thames, near Waterloo railway station, for a group of buildings, including a 25-story office block, which would transform the appearance of this part of London.

The first moves were also made toward carrying out a big scheme for widening the Strand at its western end. When completed this would involve partly cutting off the forecourt of Charing Cross railway station and perhaps demolishing the Charing Cross itself, which is a replica of an older monument to Queen Eleanor, consort of Edward I.

(G. Fy.)

Los Angeles. The city of Los Angeles officially ranked third in population among the cities of the United States in 1956. A special federal census taken in the spring established its population at 2,243,901, exceeded only by New York and Chicago. This was an increase of 273,543 over the 1,970,358 persons recorded in the regular census of 1950. Los Angeles covers an area of 454.7 sq.mi. It functions under a mayor and council form of government. The mayor in 1956 was Norris Poulson.

The city's budget for the 1956-57 fiscal year totalled \$37,027,907. The city property tax rate stood at \$1.9007 on each \$100 of assessed valuation. General obligation bonds outstanding at June 30, 1956, totalled \$183,990,000. All bonds were issued and retired as serial bonds, eliminating the need for sinking funds. Bonds authorized but unsold amounted to \$72,200,000.

Enrolment in the public schools of the Los Angeles city school district, which extends beyond the city limits, was 473,000 as of Sept. 1956. Enrolment in private schools at the beginning of the year was 74,437. Adult education classes had an enrolment of approximately 47,000.

The annual value of manufactures for the Los Angeles metropolitan area, consisting of Los Angeles and Orange counties, was approximately \$6,000,000,000, placing it third for nation's metropolitan areas. At midyear there were 2,361,200 employed and 68,500 unemployed in manufacturing and industry in the metropolitan area.

Foreign commerce for the year ended June 30, 1956, amounted to 5,002,974 tons, of which 2,422,890 tons were exports and 2,580,084 tons were imports.

New industrial investment for 1956 for the metropolitan area was expected to exceed \$300,000,000. Retail sales were expected to reach an estimated \$8,300,000,000, an increase of about 4% over 1955. The valuation of building permits issued in the city alone during 1956 was expected to be approximately \$483,000,000, which would be about \$50,000,000 more than the 1955 total.

At a special election in June, the voters overwhelmingly approved a \$59,700,000 bond issue for the expansion of Los Angeles International airport. Bonds amounting to \$50,000,000 for expansion of the city's sewer system, including construction of a new ocean outfall line, were sold during the 1955-56 fiscal year. Also sold were \$2,000,000 worth of bonds for new fire stations.

Increasing public demand for stricter controls on air pollution was apparent during the year. Enforcement of the anti-smoke laws is the responsibility of the Los Angeles county air pollution control district, which is under the supervision of the county board of supervisors. The primary sources of air pollution in the Los Angeles area are threefold—industry, incinerators and motor vehicles. Although active research had been under way for three years, no satisfactory device at a reasonable price to control motor vehicle exhaust fumes had been developed. The board of supervisors placed a deadline of Oct. 1, 1957, on the use of backyard and domestic incinerators. Controls on the contribution by industry to air pollution were stiffened during the year.

On Sept. 4 the city of Los Angeles observed the 175th anniversary of its founding by a small group of settlers from Mexico. In midyear the Civic Auditorium and Music Center association, a nonprofit organization of community leaders, announced plans for construction on a downtown site of a \$50,000,000 civic auditorium and music centre. Construction was started on an \$8,200,000 auditorium with a seating capacity of 21,000 for sports events and 35,000 for conventions.

Among the well-established cultural activities which were

continued in 1956 were Symphonies Under the Stars at Hollywood Bowl, the programs of the Los Angeles Philharmonic orchestra, the Pilgrimage Play and the Greek Theater productions in Griffith park.

(N. P.)

ENCYCLOPEDIA BRITANNICA FILMS.—*California* (1955); *Far Western States*, 2nd ed. (1956).

Louisiana. One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Crescent state" or "Bayou state." Area 48,523 sq.mi., of which 45,162 sq.mi. is land. Pop. (1950 census): 2,683,516, of which 1,796,548 or 67% were white and 886,968 or 33% nonwhite; 1,471,696 or 54.8% urban and 1,211,820 or 45.2% rural. The provisionally estimated population on July 1, 1956, was 3,004,000. Capital (pop. 1950), Baton Rouge, 125,629. Other important cities (with 1950 pop.): New Orleans 570,445, Shreveport 127,206, Lake Charles 41,272, Monroe 38,572, Alexandria 34,913, Lafayette 33,541.

History.—The Democratic state primary election was held on Jan. 17, 1956, and was a contest between "Long" and "anti-Long" factions. Former Gov. Earl K. Long sought the governorship on a platform of economy, no new taxes, increased aid to the aged, the needy and public education, and criticism of the policies of the incumbent administration of Robert F. Kennon. Anti-Long forces were unable to unite in support of a gubernatorial candidate, but Mayor deLesseps S. Morrison of New Orleans was that faction's strongest candidate. None of the five gubernatorial candidates openly supported aspirants for all other state offices, several of whom ran as independents. To the surprise of many, Earl K. Long received a majority of the total votes. Veteran state treasurer A. P. Tugwell was unopposed for renomination; the secretary of state, Wade O. Martin, Jr., easily won renomination, as did the superintendent of education, Shelby M. Jackson; and Lucille May Grace, former register of land office, also was nominated. Lether E. Frazar and William J. Dodd, Long candidates for lieutenant governor and auditor, respectively, were declared the nominees when their leading opponents declined to enter a second primary. This left only Jack P. F. Gremillion and Sidney J. McCrory, Long candidates for attorney general and commissioner of agriculture and immigration, respectively, confronted with a second primary against Fred S. LeBlanc and Dave L. Pearce, incumbents and runners-up for those offices. The Long faction insisted that no second primary was required when a gubernatorial candidate received a majority, but that candidates receiving the largest vote for all the lesser state offices automatically became the party nominees, while the anti-Long faction maintained that a second primary was mandatory for all offices when no candidate received a majority, unless the runners-up withdrew from the contest. The primary election laws were ambiguous on that point, and LeBlanc and Pearce carried the matter to the state supreme court, which agreed with the Long interpretation of the law and declared Gremillion and McCrory the party nominees. The April general election was a mere formality in the predominantly Democratic state.

The legislature met in regular 60-day biennial session on May 14, and the new state officers were inaugurated the next day. Despite campaign promises to the contrary, Governor Long proposed some new taxes and increased rates on some existing ones, with the explanation that the outgoing administration had depleted the treasury of the anticipated large surplus, making additional revenue necessary to finance his program. The governor's tax-raising program was blocked by a constitutional amendment adopted under the preceding administration, requiring a two-thirds vote in both houses of the legislature to pass any bill levying a new tax or increasing the rate of an existing one. The

governor was unable to obtain the required two-thirds vote for any of his tax bills. While the legislature rejected all tax increases, it passed a bill fixing a higher salary schedule for teachers and many other bills calling for large appropriations, as well as one increasing the legislators' own compensation from \$30 to \$50 per day. Being denied new sources of revenue, the governor was forced to veto many bills carrying appropriations for worthy projects, in order to balance the budget. However, substantial increases for public education, highways and welfare were incorporated in the general appropriation bill.

The legislature passed 48 proposed constitutional amendments for submission to the voters, and also a proposal for a convention to frame a new constitution. The most controversial of the proposed amendments was that repealing the requirement of a two-thirds vote in the legislature to pass tax bills, which had stymied Governor Long's program for tax increases. Opposition to its repeal mounted so rapidly that the governor convened the legislature on Aug. 30, in a 12-day special session, primarily for the purpose of withdrawing that amendment. The legislature withdrew the controversial amendment and passed a bill slightly increasing the tax on pari-mutuel betting at race tracks.

In the general election of Nov. 6, Louisiana's electoral votes went to the Republicans—for the first time since 1876—with a plurality of 85,000. All eight Democratic congressmen were re-elected, only two having Republican opposition; and Sen. Russell B. Long was re-elected. The proposal for a constitutional convention, sponsored by Governor Long, was rejected by a six-to-one vote; and only one of the ten proposed constitutional amendments which he specially favoured was approved. Of the 48 proposed constitutional amendments, 23 were approved and 25 rejected; those approved were mostly of local rather than state-wide interest.

State officers in 1956 (after May 15) were: Earl K. Long, governor; Lether E. Frazar, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; William J. Dodd, auditor; Jack P. F. Gremillion, attorney general; Shelby M. Jackson, superintendent of education; Lucille May Grace, register of land office; Sidney J. McCrory, commissioner of agriculture and immigration.

Education.—In the 1955-56 session the 816 public schools for whites enrolled 254,385 elementary and 101,330 high school pupils and employed 13,932 teachers; the 768 public schools for Negroes enrolled 174,159 elementary and 46,003 high school pupils and employed 6,950 teachers. The 210 private and parochial schools for whites enrolled 71,292 elementary and 14,811 high school pupils and employed 2,703 teachers; the 81 private and parochial schools for Negroes enrolled 20,055 elementary and 2,720 high school pupils and employed 547 teachers. The seven state-approved nursery schools and kindergartens enrolled 144 pupils and employed 14 teachers and assistants. The state operated 25 public trade schools in 1955-56. There were 7 state-supported colleges and universities for whites and 2 for Negroes, 11 privately endowed colleges and universities for whites and 3 for Negroes.

The total state budget for public education at all levels was about \$155,000,000 for the fiscal year 1955-56, compared with about \$177,000,000 budgeted for the fiscal year 1956-57.

Social Insurance and Assistance, Public Welfare and Related Programs.—Total benefit payments under the Louisiana unemployment compensation law were only \$11,756,330 for the fiscal year 1955-56, compared with \$18,626,016 for the fiscal year 1954-55. Louisiana expended more than \$116,000,000, in grants and operating costs, on public welfare in the fiscal year 1955-56, compared with \$108,000,000 in the fiscal year 1954-55.

In 1956 the state maintained eight charity hospitals; three hospitals for mental patients; three tuberculosis sanitariums; a school for white blind, a school for white deaf and a school for Negro blind and deaf; a training school for spastic children; and a training school for the feeble-minded.

Table 1.—Louisiana Public Welfare Programs, 1955-56

Type of assistance	Average number on rolls	Cost for the fiscal year
Old-age pensions	120,685	\$76,714,879
Needy blind	2,579	1,241,741
Dependent children	77,055	15,910,772
Disability assistance	15,559	7,122,445
General assistance	8,570	3,824,449
Foster children	2,537	1,726,510
Totals	226,985	\$106,540,796
Administrative expenses		9,814,136
Total cost of program		\$116,354,932

Source: Louisiana Department of Public Welfare Reports.

The state maintained a prison farm for about 3,000 adult offenders, separate training schools for about 240 delinquent white boys and girls, and a training institute for about 225 delinquent Negro boys. A new reformatory for first offenders, to separate them from the more hardened criminals, was completed in 1956.

Total state expenditures for maintenance, expansion and improvement of charitable and correctional institutions were about \$36,000,000 for the fiscal year 1955-56, compared with \$40,000,000 for the fiscal year 1954-55.

Communications.—Louisiana had 47,472 mi. of rural highways and urban streets in 1956, of which 15,100 mi. were state-maintained, 5,000 mi. being paved with concrete or blacktop and the remainder gravelled. Total state expenditures for public highways, exclusive of federal grants-in-aid, were about \$75,000,000 for the fiscal year 1955-56, compared with \$70,000,000 for the fiscal year 1954-55. There were about 4,400 mi. of railways and 4,800 mi. of navigable waterways. More than 100 airports and 10 seaplane bases were in operation in 1956. There were 751,919 telephones in service on Sept. 1, 1956. Total tonnage handled by Louisiana's three ports for ocean-going vessels increased from 69,417,303 in 1954 to 78,968,879 in 1955; that on the Gulf Intracoastal waterway from 36,928,214 in 1954 to 41,378,856 in 1955.

Banking and Finance.—On Jan. 1, 1956, Louisiana had 41 national banks, with total deposits of \$1,763,903,000 and resources of \$1,902,130,000; and 134 state banks, with total deposits of \$813,932,974 and resources of \$871,703,216. There were 62 savings and loan associations, with total assets of \$398,818,748; 314 small loan companies, with total assets of \$42,474,315; and 105 credit unions, with total assets of \$8,523,243. Total state income for the fiscal year 1955-56 was more than \$500,000,000, exclusive of federal grants-in-aid, compared with \$467,709,249 for the fiscal year 1954-55. State bonded debt on July 1, 1956, was about \$230,000,000.

Agriculture.—The total value of agricultural and truck crops was estimated at \$265,000,000 in 1956, compared with \$270,000,000 in 1955; total acreage harvested was 2,725,000, compared with 2,800,000 in 1955. Total income from crops, livestock and poultry and their products was estimated at \$390,000,000 in 1956, compared with \$400,000,000 in 1955; from government payments \$11,000,000, compared with \$12,000,000 in 1955.

Table II.—Principal Crops of Louisiana

Crop	Indicated 1956	1955	Average, 1945-54
Cotton (bales)	590,000	582,000	589,000

Source: U.S. Department of Commerce, 1954 Census of Manufactures, preliminary report

Manufacturing.—More than 3,000 industrial establishments, employing 175,000 workers and paying about \$560,000,000 in wages and salaries, produced finished products worth \$1,760,000,000 in 1956, compared with \$1,750,000,000 in 1955. Under the state law exempting new industrial installations from taxation for ten years, capital investments in new industrial plants and expansions of existing ones amounted to more than \$100,000,000 in 1956, compared with \$150,000,000 in 1955; these provided 3,000 new jobs in 1956, compared with 4,500 in 1954.

Forest Products, Furs, Fisheries.—Louisiana forests produced 810,628,653 bd.ft. of lumber and 1,552,694 cords of pulpwood in the fiscal year 1954-55, compared with 818,678,014 bd.ft. and 1,486,871 cords in the fiscal year 1953-54.

The Louisiana fur harvest for the 1954-55 season was valued at \$3,418,730, compared with \$1,835,983 for the 1953-54 season, nearly \$1,000,000 of the increase being from nutria, a fur-bearing animal introduced into the state a decade earlier. The Louisiana fur industry was valued at \$15,553,185 for the 1945-46 season, and employed 20,000 persons.

The total catch of Louisiana commercial fisheries—fish, oysters, shrimp, crabs, frogs and menhaden—was valued at more than \$61,000,000 in 1955, compared with \$41,000,000 in 1953. Shrimp headed the list, with a value of \$28,000,000 in 1955. The finished product had a retail value of \$266,000,000 in 1955, and the industry, directly or indirectly, furnished a livelihood for more than 300,000 persons.

Mineral Production.—Table IV shows the tonnage and value of those mineral commodities produced in Louisiana in 1953 and 1954 whose value exceeded \$100,000. In 1954 the state was second among the states in production of natural gas and sulphur and third in the output of crude petro-

Table IV.—Mineral Production of Louisiana
(Short tons, except as noted)

Mineral	Quantity 1953	Value 1953	Quantity 1954*	Value 1954*
Total		\$965,237,000		\$997,107,000
Clays	624,000	952,000	†	†
Natural gas (000 cu.ft.)	1,293,644,000	106,079,000	1,399,222,000	124,531,000
Natural gasoline (000 gal.)	665,532	55,421,000	665,000	54,330,000
Petroleum (bbl.)	256,632,000	721,150,000	246,558,000	722,370,000
Petroleum gases (000 gal.)	287,280	12,654,000	292,000	11,620,000
Salt	3,061,000	9,190,000	3,089,000	11,101,000
Sand and gravel	4,538,000	5,162,000	7,910,000	9,687,000
Sulphur	1,802,000	43,453,000	2,076,000	49,222,000
Other minerals	11,176,000	...	14,497,000

leum and of salt; and ranked third in the value of its minerals, with 7.14% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

Low, Solon Earl (1900—), Canadian political leader was born Jan. 8 at Cardston, Alta. He was educated at Calgary Normal college and at the universities of Alberta and Southern California. He entered provincial politics in Alberta as a Social Credit party candidate in 1935 and was a member of the provincial legislature until 1945; provincial treasurer for Alberta, 1937-44; minister of education, 1943-44 and minister without portfolio, Alberta government, Oct. 1944 to May 1945. Elected president and national leader of the Social Credit Association of Canada at the national conventions in Toronto, 1944, and Regina, 1946, he resigned his provincial seat in 1945 and on June 11 of that year was elected to the house of commons for Peace River, Alta. In June 1955 he conducted a campaign in Alberta on behalf of the Social Credit party, which was returned to power.

After extensive tours of Ontario, the east coast, British Columbia and Alberta, Low suffered a coronary attack on his arrival in Calgary at the end of Nov. 1955 to attend the annual Alberta Social Credit League convention. Following a considerable period of convalescence, he returned to work, on a limited basis in the early spring of 1956. From the beginning of June his recovery was excellent, and he therefore indicated in September that he would continue to lead the Social Credit movement and that there was no call for a national convention in 1956.

(M. L. S.)

Lumber. A preliminary estimate by the National Lumber Manufacturers association placed the total production of lumber in the United States in 1955 at 39,107,000,000 bd.ft. The total included 31,601,000,000 bd.ft. of softwood (coniferous) lumber and 7,506,000,000 bd.ft. of hardwood lumber (broad-leaved species). Production for 1954 and for selected earlier years, as reported by the bureau of the census, U.S. department of commerce, is given in Table I.

Table I.—Lumber Production in the U.S., Selected Years
(in 000,000 bd.ft.)

Year	Softwoods	Hardwoods	Total
1910	34,000	10,500	44,500
1920	26,810	6,989	33,799
1930	21,323	4,729	26,052
1940	24,903	4,031	28,934
1950	30,633	7,374	38,007
1951	29,493	7,711	37,204
1952	30,234	7,228	37,462
1953	29,562	7,180	36,742
1954	29,294	7,417	36,711

Production figures by species, according to reports of the bureau of the census, are shown for 1953 (latest year available in Tables II and III).

Of the principal softwood lumber producing regions of the United States, the Douglas fir region of the Pacific northwest led in 1955 production with 9,474,000,000 bd.ft. The southern pine region ranked second with 8,696,000,000 bd.ft., the west-

Table II.—Softwood Lumber Production in the U.S. by Species*

(in 000,000 bd. ft.)		1953
Kind of wood	production	
Douglas fir	10,367	
Northern yellow pines	7,581	
Loblolly pine	3,783	
White fir	1,577	
Shou-sug-sugi	1,441	
White pine (including western [Idaho] and eastern white pines)	1,334	
Redwood	969	

Lumber in smaller quantities also was produced from sugar pine, Englemann and other pines, cedars, larch, cypress and other softwoods.

Table III.—Hardwood Lumber Production in the U.S. by Species*

(in 000,000 bd. ft.)		1953
Kind of wood	production	1953
Oak	3,339	331
Black and tulip gum	709	236
Beech	551	210
Elm	530	132
Birch	406	

Other hardwood species included ash, sycamore, alder, basswood, hickory and walnut.

in pine region third with 8,658,000,000 bd.ft. and the California redwood region fourth with 2,527,000,000 bd.ft. The northern hardwood region, with 3,984,000,000 bd.ft., accounted for more than half the total 1955 hardwood lumber output.

Exports of lumber from the United States in 1955 amounted to 4,420,000 bd.ft., according to department of commerce reports, an increase over 1954 exports of 723,300,000 bd.ft. The 1955 total included 621,000,000 bd.ft. of softwood lumber, 139,000,000 bd.ft. of hardwood lumber, 3,300,000 bd.ft. of box boards and 80,300,000 bd.ft. of sawed railroad ties.

Imports of lumber in 1955 amounted to 3,596,800,000 bd.ft., compared with 3,066,200,000 bd.ft. in 1954. The 1955 total included 3,326,400,000 bd.ft. of softwood lumber, 266,400,000 bd.ft. of hardwood lumber and 4,000,000 bd.ft. of sawed railroad ties.

The wholesale lumber price index in 1955 rose to a new peak, passing the previous high point reached in 1951. Table IV shows average wholesale price indexes for lumber for selected years, from statistics published by the bureau of labour statistics, U.S. department of labour.

Table IV.—Wholesale Lumber Price Index in the U.S.

(1947-49 = 100)		Index
Year	Index	
1947	33.2	114.5
1948	23.1	123.6
1949	28.9	120.5
1950	40.7	119.4
1951	59.3	117.3
1952	107.3	124.4

Softwood plywood manufacture in the United States consumed a total of 1,861,435,000 ft., log scale, of logs in 1953. The hardwood veneer and plywood industry used 953,504,000 ft., log scale, of logs. Softwood plywood production for the year was 1,848,062,000 sq.ft. ($\frac{3}{8}$ in. equivalent), and hardwood veneer production amounted to 10,105,508,000 sq.ft., surface measure. Hardwood plywood production was 1,304,769,000 sq.ft., surface measure. The softwood plywood figures, as compiled by the department of commerce, represented the west coast softwood plywood industry, principally Douglas fir but including some hardwood. Hardwood veneer and plywood figures covered the veneer and plywood industry other than west coast companies and included some softwood.

An estimate of world production of sawed wood for 1954 by the forestry division of the United Nations Food and Agriculture organization placed the total at 268,900,000 cu.m., a slight increase over the revised 1953 estimate of 265,420,000 cu.m. (1 cu.m. = 424 bd.ft.). Approximately four-fifths of the total 1954 production was softwood.

In a regional breakdown of the estimated total world production in 1954, North America (the U.S. and Canada) accounted for 106,400,000 cu.m., the Soviet Union for 68,900,000 cu.m.,

Europe for 52,240,000 cu.m., Asia for 24,680,000 cu.m., Latin America for 9,500,000 cu.m., the Pacific area for 4,570,000 cu.m. and Africa for 2,640,000 cu.m.

The United States ranked first in production of both softwood and hardwood lumber. Its total output of approximately 88,000,000 cu.m. was about one-third of the world production of sawed wood. The U.S.S.R.'s 68,900,000 cu.m. ranked second. Canada reported 18,363,000 cu.m., Japan 14,090,000 cu.m., Sweden 7,553,000 cu.m., western Germany 7,103,000 cu.m., France 4,890,000 cu.m., Finland 4,801,000 cu.m., Brazil 4,386,000 cu.m., Austria, 3,881,000 cu.m. and Australia 3,099,000 cu.m. Other countries producing more than 1,000,000 cu.m. in 1954 were Yugoslavia, Italy, Norway, New Zealand, the United Kingdom and Switzerland.

The Forest Products laboratory, maintained by the U.S. forest service at Madison, Wis., developed and made available to industry a fast kiln drying schedule for oak panelling. A simplified kiln schedule for seasoning soft maple also was developed.

Information on the use of wood and wood products, developed through studies by the Forest Products laboratory, was made available in a *Wood Handbook* (U.S. department of agriculture handbook no. 72). The handbook contains data on properties, uses, protection, fabrication, processing and modification of wood, as an aid to use of timber products as materials for construction.

ENCYCLOPEDIA BRITANNICA FILMS.—*Lumber for Houses* (1952).

Lutherans. In 1956, merger talks and exploration of union were prominent among the 16 church bodies representing the 7,373,000 Lutherans in the United States and Canada.

Definite commitments for merger in 1960 were made by three church bodies—the 1,000,000-member Evangelical Lutheran Church, the 900,000-member American Lutheran Church and the 60,000-member United Evangelical Lutheran Church. Minneapolis, Minn., was selected as headquarters location for the merged body, to be known as "The American Lutheran Church." However, the 72,000-member Lutheran Free Church, initially a partner in the merger talks, withdrew because a referendum among local congregations failed to obtain the necessary three-fourths majority for union.

The invitation to all Lutherans to talks "looking toward organic unity" issued by the largest U.S. Lutheran body, the 2,270,000-member United Lutheran Church in America, and the 537,000-member Augustana Lutheran Church, was accepted by the 22,000-member American Evangelical Lutheran Church. The 60,000-member Finnish Evangelical Lutheran Church (Suomi Synod) voted to explore this proposal, as well as possibilities to join the group merging into the American Lutheran Church.

On the other hand, the 2,000,000-member Missouri Synod, second largest U.S. Lutheran body, declined the United Lutheran-Augustana invitation, as well as proposed membership in the Lutheran World federation, and so did the other church bodies co-operating in the Synodical conference—the Wisconsin Synod, the Norwegian Synod and the Slovak Evangelical Lutheran Church. Four other minor church bodies did not respond.

Meanwhile, the eight bodies belonging to the Lutheran World federation were active throughout the year preparing for their third assembly, to be held Aug. 15-27, 1957, at Minneapolis, Minn., the first world conclave of Lutherans on American soil. About 8,000 persons were expected to attend sessions for discussion of theology and practical questions under the theme "Christ Frees and Unites." Invited were 900 delegates and official visitors from 57 member churches in 29 countries.

In August, the National Lutheran council, co-operative agency for eight church bodies, announced that U.S. Lutheran giving

for spiritual and material relief activities abroad and in America had passed \$100,000,000. Receipts for Lutheran World Action, the council's annual fund appeal since 1940, totalled \$44,500,000. The value of relief materials shipped abroad by Lutheran World Relief, the council's material aid arm since 1946, exceeded \$56,000,000.

Included in the total food, clothing and medical shipments were \$22,000,000 worth of U.S. government-donated surplus foods. The rest was donated by church bodies of the National Lutheran council and the Missouri Synod, which had co-operated in the relief activities since 1953. The \$44,500,000 Lutheran World Action funds were used for projects in 75 countries including the United States. The largest amounts were spent on interchurch aid, support of orphaned missions and services to refugees.

The 7,150,704 Lutherans in the United States and the 222,234 in Canada were organized in 17,398 congregations served by 16,493 ordained ministers, according to 1956 statistics. During 1955 the number of ministers had increased by 612, a record high. Lutheran church property reached the unprecedented value of \$1,357,942,000. (See also CHRISTIAN UNITY; CHURCH MEMBERSHIP.) (A. LA.)

Luxembourg. An independent grand duchy in western Europe, Luxembourg is bounded south by France, northwest by Belgium and northeast by Germany. Area: 999 sq.mi. Pop.: (1947 census) 290,992; (1955 est.) 309,000. Languages: Letzeburgesch, a German dialect, and French (official). Religion: Roman Catholic, 98%. Capital: Luxembourg; pop. (1953 est.) 66,382.

Sovereign, Grand Duchess Charlotte. Prime minister in 1956, Joseph Bech.

History.—On July 13, 1956, the chamber of deputies adopted a constitutional amendment bill providing for a reduction of the term of office of deputies from six to five years and for the holding of general elections for the whole chamber every five years (instead of the previous system under which one-half of its membership had been renewed every three years). The chamber also decided to extend its lifetime by another two years, thus postponing the next general election from May 1957 to May 1959.

The country's economic position continued to be satisfactory, Luxembourg having the highest national income per head (46,450 fr. in 1955) on the European continent. The output of iron ore continued to increase, reaching 719,000 metric tons in May, while steel production was 304,000 tons in June—both being record figures.

In June a delegation of eight members of the supreme soviet headed by Justas Paleckis, chairman of the presidium of the supreme soviet of Lithuania, visited Luxembourg.

(See also EUROPEAN UNITY.)

Education.—Schools (1953–54): primary 1,045, pupils 28,597, teachers 1,063; secondary 7, pupils 3,253, teachers 280; vocational 7, pupils 3,313, teachers 170. Institutions of higher education 2, students 68.

Finance.—Monetary unit: Luxembourg franc, at par with the Belgian franc. Budget (1954 est.; 1955 est. in parentheses): revenue 3,867,000,000 fr. (4,039,000,000 fr.); expenditure 4,379,000,000 fr. (4,790,000,000 fr.).

Transport and Communications.—Roads (1955) 4,300 km. Railways (1955) 475.8 km. Licensed motor vehicles (Dec. 1955): passenger (including taxis) 21,230, commercial 6,307. Telephones (Jan. 1955) 29,861.

Agriculture.—Main crops (metric tons, 1954): wheat 34,000 (41,000 in 1953); rye 11,000 (8,000 in 1955). Livestock (Sept. 1955): cattle 130,000; sheep 3,000; poultry (1954) 443,000; horses (1954) 11,544; pigs (1954) 86,161.

Industry.—Fuel and power (1955): electricity 1,104,410,000 kw.hr.; manufactured gas 20,940,000 cu.m. Production (metric tons, 1955): iron ore (30% metal content) 7,205,000; pig iron 3,085,000; crude steel 3,225,000.

Machinery and Machine Tools. Makers of metal-cutting and of metal-forming machine tools in the United States attained a new peak of peacetime prosperity in 1956. For the second successive year, net new orders for metal-cutting machines ran ahead of shipments. They fell only a little below \$1,000,000,000. Shipments totalled almost \$900,000,000, compared with \$675,000,000 the previous year. The prosperity enjoyed by the U.S. machine-tool industry was world-wide in its sweep, taking in the machine-tool industries of Great Britain, western Europe and the U.S.S.R. as well.

Even more significant than the huge demand for machine tools was the technical progress made during the year. Higher labour costs and higher prices for materials and components spurred metalworking manufacturers to automate their production processes wherever they could. Ford Motor company, champion of automation, emerged during 1956 as the advocate of so-called "building-block" machine tools as a factor in extending the automatic production line into new areas of industrial production. The building-block idea calls for sectionalized units with standardized dimensions insofar as they affect rearrangement of the sections. If certain physical dimensions like spindle heights and mountings on machine tools are standardized, for instance, Ford pointed out that true interchangeability of units (base sections, wing sections, columns, heads, power units) can be realized, regardless of the make of the machine.

Such unitized machine tools built up of standard components would be easy to set up. Each station would be a machine in itself, complete with its own electrical and hydraulic circuits. Hence any given station could be cycled for set-up purposes. A number of stations could be set up simultaneously on an in-line machine, thus reducing the time to get into full production. If an operation is to be added on a part, after the line is tooled up, the in-line machine could be pulled apart, the proper machine units inserted and production resumed. Early in 1956, Ford ordered an in-line machine using the building-block concept, for manufacture of manifolds. The Ford idea met with a mixed reception among machine-tool builders, who stressed that its success on a wide scale would depend upon standardization of machine components in the industry far beyond prevalent usage.

Automation in assembly operations had lagged far behind machining operations up to 1956, when a number of companies began to build automatic assembly machines. These machines, perhaps more than any other kind of equipment, must be rigid, relatively maintenance-free and capable of long, continuous operation. They are of several types: dial indexing; indexing rectilinear; in-line transfer; or single-station. Assembly heads or mechanisms are mounted on the basic machine and interlocked mechanically or electrically to form a composite whole that operates automatically in a predetermined sequence. Operations must be held at least as close in tolerance as those used in producing the part. The assembly machines accept and assemble machined parts correctly sized. Inspection and selection make up the backbone of an assembly machine. In-process gauging (automatic sorting and rejection) eliminates scrap problems that might otherwise take all the advantages out of automatic assembly. The saving in labour costs in automatic assembly compared with manual assembly was shown to be tremendous.

Machine-tool builders, when confronted by the problem of developing a machine to handle a production operation, found that they had to design a production system rather than a machine tool. Feedback, for one thing, became an increasingly common concept. Experience with automatic machines brought out these points: (1) Three-fourths of metalworking jobs are concerned with lots of fewer than 25 pieces, so any machines designed for broad application must have great flexibility and be

GIANT FORGING PRESS said to be the largest machine in the world, stands 6 stories high (6 underground) and is capable of precision forming of intricate metal parts under 50,000-tons pressure. The entire operation of the press is under the control of one man, and of its total weight of 10,750 tons, 7,500 tons are moving parts. Developed for the U.S. air force, it went into full operation on aeroplane components at North Grafton, Mass., in 1956

st and easy to change over; (2) "float" is essential between units in a line, that is, storage of enough work between machines to allow one unit to be shut down for a tooling change without stopping an entire line; (3) easy maintenance is paramount, with convenience and accessibility stressed; and (4) too many units could not be tied together in a line, because coupled units may have to be idled unexpectedly for repairs. The trend was toward a maximum of three units linked together, with "float" between. Ceramic tools began to emerge during 1956 into the production stage from the purely experimental period. They are brittle, possess high abrasion and erosion resistance, have high hardness and high-temperature strength (but inferior low-temperature strength). They do not absorb heat as metals do, the tip remaining cool to the touch after a heavy cut. They are nonabsorbent, acid-resistant and unaffected by corrosion. They can be operated, however, with feed-and-speed combinations well beyond the capacities of most machine tools, and have the great merit of being relatively inexpensive. On two automotive finishing operations, parts per tool grind were doubled by use of ceramic tools, and the finish was improved. Large work is cut more easily with ceramics than other materials. In one case, a number of ceramic tool bits averaged 20,000 ft. of chip on a $3\frac{1}{2}$ -in. diameter workpiece, two bits got up to 70,000 ft., and the speeds were much higher than with carbide tools.

Ultrasonic equipment for cutting hard metals came into its own during 1956. Units were developed for inspection, testing, welding, brazing, soldering, machining and cleaning. Cutting action of an ultrasonic machine depends upon vibration in the elastic range or higher and is independent of hardness or brittleness of the material or its electrical conductivity. Cutting, drilling, tapping and other operations can be performed to close tolerances with no burning, checking or discoloration.

Electronic erosion as a metal-cutting process also made progress during the year. No cutting material is necessary with elec-

tronic erosion. Instead a powerful cutting force is used, being directed to the point of release by a conductor shaped to the desired contour of cut and resembling a cutting tool. The conductor is usually a soft, easily-worked material like brass. Electronic erosion, popularly called "spark machining," cuts the hardest electrically conductive materials without heat, alteration of physical properties, chemical changes or decomposition in the area surrounding the cut. It permits precise machining of the most intricate shapes. It is particularly desirable as a means for cutting the harder and tougher metal alloys.

For the first time, the U.S.S.R. revealed during 1956 that its output of machine tools had reached proportions that threatened the leadership of the United States. Soviet production in 1956 was estimated at 250,000 tons, or substantially greater than the British production and considerably more than that of West Germany. No exact comparisons could be made between machine tool production in the Soviet Union and in the United States because of the use of tonnage figures by the former and dollar figures by the latter. Nevertheless, the industry in the U.S.S.R., in physical capacity, was believed to be very close to that of the United States. (B. Fy.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Machine Maker*, 2nd ed. (1953).

Madagascar. An island (fourth largest in the world) off the southeast coast of Africa, Madagascar is an overseas territory of the French union. Comoro archipelago is administered as a separate territory. Areas and populations are:

	Area (sq.mi.)	Population 1951 census	1955 est.
Madagascar (with dependencies)	230,165	4,369,500	4,740,000
Comoro archipelago	832	164,838*	170,000

*1950 estimate.

Population: many indigenous racial and tribal groups, the Merina being the most numerous (about 900,000); 57,071 Europeans (1953) including 52,727 French; 17,376 Asians. Language: Malagasy, related to the Malayo-Polynesian group. Religion: Madagascar, Christian and pagan; Comoro archipelago, Moslem. Chief towns (pop., 1951 census): Antananarivo or Tananarive (cap.) 182,982; Tamatave 36,133; Majunga 38,042. High commissioner in 1956, André Soucoudaux. Comoros: administrator, Pierre Coudert.

History.—Elections to the French national assembly were held on Jan. 2. Roger Duveau (a former secretary of state), Rakotovelo and Tsirana, representing the U.D.S.R. (Union Démocratique et Socialiste de la Résistance), the M.R.P. (Mouvement Républicain Populaire) and the Socialist party respectively, were elected by the Malagasy college, two supporters of the Entente Franco-Malgache by the European. In the Comoro Islands Said Mohammed (U.D.S.R.) was re-elected.

A law of March 27 offered an amnesty to all persons sentenced to terms of imprisonment of 15 years or less in connection with the rebellion of 1947 and conditional liberty to all persons serving heavier sentences.

The Mandraka and Tsiazopaniry hydroelectric dams, near Tananarive, were inaugurated.

Several cyclones hit Madagascar: one, in January, destroyed the meteorological station on Tromelin Island; another, in February, did grave damage in the Tamatave area; and others, in March and in April, devastated the north and the southeast, while a disastrous drought struck the southern extremities.

(Hu. De.)

Education.—(1954) *Madagascar*: primary schools 1,861, pupils 236,041; secondary (including teacher training) (1953) 146, pupils 11,385; vocational 135, pupils 6,194. Higher institutions 4, students 378.

Foreign Trade.—(1955) Monetary unit: franc C. F. A. (Colonies Françaises d'Afrique)=2 metropolitan French francs. U.S. \$1=350 metropolitan francs. *Madagascar*: imports 21,000,000,000 fr. C. F. A., including 15,000,000,000 fr. C. F. A. from France; exports 14,000,000,000 fr. C. F. A.

A., including 9,000,000,000 fr. C. F. A. to France, 2,000,000,000 fr. C. F. A. to the U.S. *Comoro Islands*: imports 500,000,000 fr. C. F. A.; exports 500,000,000 fr. C. F. A. Principal exports: *Madagascar*: coffee 6,000,000,000 fr. C. F. A., rice 1,000,000,000 fr. C. F. A.; *Comoro Islands*: vanilla 300,000,000 fr. C. F. A.

Maine. The extreme northeastern state of the United States, Maine was admitted as the 23rd state in 1820, and is popularly known as the "Pine Tree State." Land area 31,040 sq.mi.; water area 2,175 sq.mi.; pop. (1950 census) 913,774. The largest cities and their 1950 populations are: Portland 77,634; Lewiston 40,974; Bangor 31,558; Auburn 23,134; South Portland 21,866; Augusta (cap.) 20,913; Biddeford 20,836; Waterville 18,287.

The provisional estimate by the U.S. census bureau of the population of Maine as of July 1, 1956, was 910,000.

History.—Gov. Edmund S. Muskie was re-elected on Sept. 10, 1956, for a second two-year term, defeating Republican nominee Willis A. Trafton, Jr., by 180,254 to 124,395 votes. The only other Democrat to win two terms in the 20th century was Louis Brann (1933-36). Governor Muskie secured the largest vote ever given a governor in the state of Maine. Muskie favoured a more aggressive policy on such matters as industrial development, conservation and development of natural resources, schools and highways. The seats of Republican Senators Margaret Chase Smith and Frederick G. Payne were not at stake, but the Democrats wrested the second district house seat from the Republicans with state Democratic chairman Frank M. Coffin, first Democrat to win a seat in congress in 22 years. Coffin defeated James L. Reid, Republican nominee, 55,430 votes to 48,292. In the third district, largely rural and containing the Aroostock county potato area, the Republican incumbent, Clifford G. McIntire, won with 44,095 votes to 28,612 for his opponent, Kenneth B. Colbath. In the first congressional district, Robert Hale, Republican incumbent for the past 14 years, was credited with defeating James C. Oliver by only 29 votes.

Shortly after the September election the all-Republican executive council approved the promotion of three justices and appointment of three new justices to the highest courts of the state. Promoted from the superior court to supreme court were a Republican (Sullivan) and a Democrat (Dubord). Also promoted was Robert B. Williamson (Rep.), member of the supreme court who became chief justice. Of three new justices named to the superior court, two were Democrats. The Democratic party gained seats in both houses of the state legislature, but were still far from majority control in either house. In the presidential balloting on Nov. 6, Pres. Dwight D. Eisenhower won handily in Maine with more than 249,000 votes to about 102,000 for Adlai E. Stevenson.

The Public Administration service of Chicago, Ill., completed a study begun in 1955 which surveyed the state's executive agencies and recommended drastic overhauling, including paring down more than 60 agencies to 18 major departments. Governor Muskie appointed a citizen's committee to publicize the report and make known their findings to the 1957 legislature.

A state office building at Augusta was occupied in October, after two years of construction. Economic conditions were good in Maine in 1956 in spite of unfavourable weather for the vacation industry in June and July. The tourist trade was expected to top record 1955 by a narrow margin, unemployment in industry was low, and high potato prices in the early months of 1956 had boosted the economy of northern Maine. Major in-

dustrial construction was in the electric power and paper industries.

The chief officers of Maine during 1956 were: governor (only elected state official in Maine), Edmund S. Muskie; secretary of state, Harold I. Goss; attorney general, Frank F. Harding; treasurer, Frank S. Carpenter; auditor, Fred M. Berry; commissioner of agriculture, Fred J. Nutter.

Education.—The net enrolment in the public schools April 1, 1956, was 176,944 compared with 173,209 in 1955 and 168,225 in 1954. The state general fund appropriation for the department of education for the year 1955-56 was \$9,254,357 compared with \$8,694,076 for 1954-55. Expenditure per pupil based on average daily attendance in 1954-55 was \$156.99 for elementary schools; \$355.60 for secondary schools; in 1953-54 it was \$148.54 and \$333.18. Public school teaching positions in the state (elementary and secondary) were 6,950 in 1954-55 compared with 6,916 in 1953-54. The commissioner of education in 1956 was Warren G. Hill.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Dec. 31, 1956, there was a balance (Oct. 1 est.) of \$45,300,000 in the unemployment compensation benefit fund of the Maine employment security commission, compared with \$42,657,346, a year earlier. Total benefit payments for 1956 (Oct. 1 est.) were \$6,825,000, compared with \$8,145,650 for the previous year. The state expended for health, welfare and charities for the fiscal years ending June 30, 1956, and June 30, 1955, \$18,239,680 and \$18,061,226 respectively. Ten state institutions (correctional, mental, etc.) as of Sept. 30, 1956, had a total inmate population of 5,394 and 1,459 employees, and three tuberculosis sanatoria had 231 inmates and 264 employees. The total expended on the ten institutions for the fiscal years 1956 and 1955 was \$6,554,247 and \$5,993,229, respectively (figures do not include tuberculosis sanatoria, whose expenditures are included in health, welfare and charities since transfer to the department of health and welfare in 1955).

Communications.—Highways of the state in 1956 were: state highway system, 3,285 mi.; state aid system, 7,819 mi.; local system, 9,282 mi.; total, 20,386 mi. In the year ended June 30, 1956, the state expended state and federal funds for highway and bridge purposes, exclusive of debt and interest charges, \$32,199,946, compared with \$31,758,806 in 1955. Total expenditures of the highway department for the same years were \$37,285,947, and \$35,385,043. Steam railway mileage on 9 railroads was 2,013 line mi. in 1955. As of Oct. 1956 there were an estimated 244,659 telephone instruments in Maine, compared with 230,024 in Aug. 1955. Maine had 22 commercial airports and one commercial air line in 1956. There were 19 commercial radio stations and 6 commercial television stations in Maine as of Oct. 1956. There were 357,338 motor vehicles, including trailers, registered in Maine in 1955, and 381,580 (est.) for 1956, with 391,263 operators' licences issued in 1955 and 405,000 estimated for 1956.

Banking and Finance.—During 1956 the Maine banking department supervised 32 savings banks, with two branches; 27 trust companies, with 70 branches; and 29 loan and building, and savings and loan associations. The following figures are for June 30, 1956: deposits of savings banks, \$327,093,375; total assets, \$373,503,003; trust company deposits, \$295,703,824; total assets, \$326,049,524; building and loan and savings and loan associations, total resources, \$55,926,271. There were 31 national banks in the state with combined assets on June 30, 1956, of \$307,275,000, and total deposits of \$275,272,000. Receipts, expenditures and bonded debt of the state government for the year ending June 30, 1956, were respectively: \$95,922,020; \$91,685,260; \$35,720,000. For the year ending June 30, 1955, these were respectively: \$85,366,180; \$87,798,624; \$37,300,000.

Agriculture.—Indications in October were that the potato crop would be above average in quality and quantity.

Fisheries.—During 1955 there were 255,431,299 lb. of fish landed in Maine ports, valued at \$16,083,277 to the fishermen. Corresponding figures

Table I.—Principal Crops of Maine

for 1954 were 283,905,900 lb. and \$16,855,600, respectively. This represented a decrease in quantity of 10%, and a decrease in value of 5% for 1955 compared with landings of 1954. The value of the principal species (1955) with weight in pounds in parentheses, included: lobster \$8,716,012 (22,718,091); rosefish or ocean perch \$2,577,442 (67,684,954); clams \$1,022,225 (2,871,393); herring \$1,352,969 (99,415,826).

Manufacturing.—The average weekly hours worked in manufacturing by production workers (Aug. 1956) was 42.2 and average hourly earnings were \$1.546 compared with 40.3 and \$1.446 for the same period in 1955. The nonagricultural labour force of the state employed in mid-Aug. 1956, was estimated at 290,300, a post-World War II high and 2% above Aug. 1955 when 284,500 persons had nonfarm jobs. Production of Maine industries in 1955 was valued at \$1,224,692,622, a record high in dollar volume. Paper, leather, food and lumber accounted for the gains, while there were losses in textiles and fabricated metal products. There were 105,871 industrial workers, of whom 30,606 were women. Comparable figures for 1954 were: \$1,138,778,168; 110,675; 34,762. Average annual earnings were: \$3,206 (1955); \$2,866 (1954). (E. F. D.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Maine in 1953 and 1954 whose value exceeded \$100,000. In 1954 Maine was third among the states in output of feldspar and fifth among those that sold or used mica. Maine also produced some columbium-tantalum. It ranked 44th in value of its mineral output, with 0.08% of the U.S. total.

Makarios III (MIHAIL CHRISTODOULON MOUSKOS) (1913–), archbishop and primate of the Orthodox Church of Cyprus, was born at Ano Panayia, near Paphos, Cyprus, Aug. 13. In 1942 he graduated with honours from the theological faculty of the University of Athens and was ordained priest in Nov. 1946. Shortly afterward, with a scholarship from the World Council of Churches, he studied sociology and theology at Boston university, Mass. Elected bishop of Nicosia, Cyprus, he was enthroned on June 13, 1948. At that time there was a Communist rebellion in Greece, and in Cyprus the Communist-controlled AKEL (*Anorthotikon Komma Ergatikon Laou*, or Progressive Party of Working People) was clamouring for *enosis* ("union") with Greece. Makarios decided to organize a national movement for *enosis* which would paralyze Communist influence and re-establish the church's prestige. He arrived in Greece in the autumn of 1949 and conveyed the blessings of the church and the greetings of the people of Cyprus to the national army fighting the Communist rebels. On his return he suggested the holding of a plebiscite on *enosis* which was held on Jan. 15, 1950, and produced a 95% vote for *enosis* among the Greek population. On Oct. 26, 1950, Makarios was unanimously elected by the people archbishop and *ethnarch* (national leader) of Cyprus.

When at the end of 1954 the British government stated that it was ready to grant "self-government" to Cyprus but would never recognize its right of "self-determination," a new body appeared in Cyprus in the form of EOKA (*Ethniki Organosis Kypriakou Agonos*, or National Organization of Cypriot Struggle). On Oct. 4, 1955, Makarios met Field Marshal Sir John Harding, the new governor of Cyprus, and proposed that the British government recognize in principle the right of the Cypriot people to self-determination but that the time for its application be left for further discussion. On March 9, 1956, Makarios was arrested and deported to the Seychelles Islands. On Aug. 27 the British press published extracts which were described as "irrefutable proof" that Makarios was the leader of the terrorist campaign which had started in the spring of 1955.

Malaria: see TROPICAL DISEASES.

Malaya, Federation of. The Federation of Malaya consists of the British settlements of Malacca and Penang and the protected states of Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Selangor, Trengganu and Perlis. Area 50,690 sq.mi. Pop.: (1947 census) 4,908,086, including 2,427,834 Malays (49.5%), 1,884,534 Chinese (38.4%), 530,638 Indians and Pakistanis (10.8%); (1955 est.) 6,152,000. Religion: Malays are Moslem; Indians mainly Hindu; Chinese Buddhist, Confucian and Taoist. Chief towns (pop., 1947 census): Kuala Lumpur (Selangor; federal cap.) 175,961; Penang or George Town 189,068; Ipoh (Perak) 80,894; Malacca 54,507; Taiping (Perak) 41,361; Johore Bahru 38,826; Seremban (Negri Sembilan) 35,274.

High commissioner in 1956, Sir Donald MacGillivray; chief minister, Tengku Abdul Rahman.

History.—The final chapter of more than 100 years of British rule in Malaya was opened on Feb. 8, 1956. On that day in London the act of signing the report of the conference on the constitutional development of the Federation of Malaya brought self-government into effect and with it the strong possibility of full independence for the federation within the Commonwealth by Aug. 31, 1957.

The triumphant return from the London talks of the chief minister, Tengku Abdul Rahman, and his mission colleagues gave added spur to the federation's march toward independence and thereafter the bulk of the federation's effort was geared to the problems of building a prosperous, democratic and united nation. The problems were many. Labour troubles, particularly in the country's two major industries, rubber and tin mining, struck an unhappy note earlier in the year. The chief minister made it clear that although trade unions were recognized as an essential cog in the economic machinery, he was not going to let the opportunity to win independence be marred by unreasonable demands from the workers. Firmly, yet affably, Abdul Rahman dealt with the many difficulties that could be expected to arise in a country with a multiracial population, including, for instance, the vexing question of citizenship which threatened to split the political alliance (which he led) of the United Malays National organization, the Malayan Chinese association and the Malayan Indian congress. Abdul Rahman persuaded a strong opposition to accept one of the more contentious points of the

BRITISH JUNGLE PATROL reactivated in the eight-year guerrilla war on the Malay peninsula against red terrorists, in Feb. 1956, a few hours after a five-month amnesty failed to bring agreement with the Communist leaders

Alliance party's memorandum to the Reid constitutional commission—that the Malays, as the country's real sons, be accorded special rights in the new, independent nation of Malaya.

The Alliance party's memorandum was one of more than 130 presented to the commission. Lord Reid, who headed the commission, indicated on his departure from the federation in October that the constitution they would recommend for independent Malaya would provide for one ruler to be chosen from the nine Malay rulers. He would have a constitutional status in the Commonwealth similar to that of the president of India or Pakistan. According to the commission's terms of reference, the constitution would be federal in form with a bicameral legislature.

In February the amnesty offer to the remaining 2,600 Communist terrorists was withdrawn and the government renewed its efforts to end the fight against militant communism which had begun in 1948 and had cost the federation government alone more than M\$1,000,000,000.

Following the London conference in February the chief minister also became minister for internal defense and security and, as part of his plan to bring the peoples of the country into closer touch with the emergency, he increased the number of operational home guard units.

The news which the whole country had eagerly awaited came at the November meeting of the federal legislative council. In his budget speech the federation's high commissioner, Sir Donald MacGillivray, indicated that independence for Malaya had definitely become reality; independence day would be Aug. 31, 1957. At the same meeting the 1948 Federation of Malaya agreement was amended to allow for the Malayanization of the public service and to give every expatriate officer the option to retire with compensation for loss of career at any date from July 1, 1957.

In December, almost one year after leaving the federation for the constitutional talks, the chief minister returned to London as leader of a delegation seeking a loan to assist the country in its *merdeka* (independence) development schemes.

(L. V. D.)

Education.—Schools (1954): Malay 2,086, pupils 349,556, teachers 13,218; Chinese 1,236, pupils 251,124, teachers 8,329; Indian 894, pupils 44,538, teachers 1,740; English 356, pupils 158,485, teachers 5,582; junior technical 5, pupils 768. Teachers' training colleges 5, students 1,487. Institutions of higher technical education 2, students 356, teaching staff 24. University of Malaya (Oct. 1954) students 1,043, teaching staff 161.

Finance.—Monetary unit: Malayan dollar (=about 2s. 4d. sterling) with an exchange rate of M\$3 to the U.S. dollar. Budget (1954, actual; 1956 est. in parentheses): revenue M\$12,522,239 (\$744,000,000); expenditure M\$809,306,335 (\$794,000,000).

Foreign Trade.—(Including Singapore, 1955): Imports M\$3,822,000,000; exports M\$4,156,000,000. Principal exports: rubber, tin, coconut oil, copra, palm oil.

Transport and Communications.—Roads (1953) 9,980 km. Registered motor vehicles (Oct. 1955): passenger 52,522, commercial 18,817. Railways (including Singapore, 1955) 1,700 km.; freight, ton-km. (1955) 394,800,000. Air transport (1954): 142,665 passengers arrived, or departed from federation airports.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): rubber (including Singapore) 649,400 (593,800); rice 658,000 (656,000); copra 146,000 (166,800); palm kernels (estates) 15,100 (14,700); palm oil (estates) 57,400 (54,800); tea (estates, 1954) 2,100; pineapples (1954) 66,000. Livestock (1954): sheep 27,200; pigs 398,700; goats 271,700; buffaloes 236,800; cattle (1955-56) 279,000. Sawn hardwood (1954) 1,863,000 cu.m. Fish landings (1953) 164,400 metric tons.

Industry.—Production (metric tons, 1955): tin concentrates (metal content) 62,280; cement 109,200; iron ore (60% metal content) 1,489,200; electricity 948,000 kw.hr.; (1954) coal 229,590; bauxite 169,500; gold 21,000 fine troy oz.

Malta. This British internally self-governing colony and strategic base consists of a group of three Mediterranean islands and three uninhabited islets, about 60 mi. S. of Sicily. Area of main islands: Malta 95 sq.mi.; Gozo 26 sq.mi.; Comino 1 sq.mi. Total pop.: (1948 census) 305,991; (1956 est.) 314,000. Language: Maltese (possibly of Punic [Phoenician] origin, with heavy Arabic and some Italian overlay) and English; Italian is also spoken. Religion: Roman Catholic. Principal towns (pop., 1953 est.) Valletta (cap.) 19,145, excluding suburbs; Sliema 24,839; Pawla with Tarxien 20,471; Hamrun 18,995; Birkirkara

17,774. Governor in 1956, Sir Robert Laycock. Prime minister, Dominic Mintoff.

History.—The round-table conference which began its sittings in 1955 submitted its report to the British government in December of that year. It emphasized that the Maltese came voluntarily under the British crown and were entitled to a special road to political equality, through representation at Westminster. The acceptance by the British government of three Maltese representatives in the house of commons was recommended, but it was for the Maltese people to determine clearly and unmistakably whether this corresponded to their own wishes.

In Feb. 1956 the Malta Labour government held a referendum on constitutional, economic and consultative proposals for integration, which included the principle of economic equivalence and representation at Westminster. The Nationalist party considered that the referendum was not being held in a free and democratic manner and told its supporters to boycott it; a protest was sent to the member countries of the United Nations organization except the Communist countries. The Catholic Church declared it could not accept integration until assurances were written into the Malta constitution guaranteeing its status. Out of 153,000 registered voters a little more than 60% went to the polls; 67,000 voted in favour of integration and 20,000 against.

On March 26, 1956, after a debate, the house of commons resolved to take note of the conference report which was accepted unconditionally by the government.

On the recommendation of an economic commission set up by the governments of Britain and Malta, the British government agreed to contribute up to £5,660,000 toward the total expenditure approved by the Malta parliament in the budget for 1956-57.

(A. G.)

Education.—(1955) Government schools: primary 112, pupils 52,236; secondary 7, pupils 2,372; vocational 3, pupils 337. Private schools 90, pupils 15,800. Royal University of Malta (Oct. 1954): students 411, teaching staff 52.

Finance and Trade.—Currency: sterling. Budget (1955-56 est.; 1954-55 actual in parentheses): revenue £8,968,000 (£8,202,216), expenditure £11,162,130 (£8,374,927). Foreign trade (1955): imports £20,500,000; exports £23,360,000.

United States.—More manganese is known to be consumed in the U.S. than in any other country. Domestic deposits of manganese, though many, contain low-grade ore and provide only a small part of requirements; a great deal of high-grade ore is therefore imported. The countries of origin of the chief-imports are shown in Table II.

In the first half of 1956, U.S. mine shipments of manganese were 153,600 tons; imports for consumption were 1,047,993 tons

*Preliminary. †Estimate.
†Includes ore withdrawn from bonded warehouse, irrespective of period of importation and ore received in the U.S. during period shown for immediate consumption.

10,014,349 tons metallurgical grade and 18,490 tons battery and chemical grades); and exports of ore were estimated at 7,000 tons.

Brazil.—After four or five years' development work in a deposit of manganese of good grade (48%) in the territory of Mapá, mining was scheduled to begin in Oct. 1956. The plant was equipped to produce 1,000,000 metric tons a year if needed, possibly to start with 300,000 tons yearly. The project was financed by the Export-Import Bank of Washington.

(F. E. H.; B. B. M.)

Manitoba. A central province of Canada, Manitoba was established as a province on July 15, 1870. Area 246,122 sq.mi. (26,789 sq.mi. water). Pop. (1951 census) 776,541; approximately 60% were urban. Capital: Winnipeg, pop. (1956 census) 256,683. Other cities (1956): St. Boniface, 28,636; Brandon, 24,579; Portage la Prairie, 10,374; Flin Flon, 10,155; St. James, 26,240 (newly formed city 1956).

History.—During 1956, J. S. McDiarmid represented the crown as lieutenant governor for the province; D. L. Campbell was premier. There were 57 seats in the provincial legislature with the government (Liberal-Progressive) having 35 seats.

The Manitoba Liquor act was proclaimed law in July 1956. This act was the result of the royal commission appointed in 1955 to inquire into all phases of liquor legislation and its administration in the province. Their report was published in 1956. Bernard Halstead was chief commissioner of the government liquor commission.

The report of the redistribution of electoral seats was being delayed awaiting the outcome of the new census of 1956.

Education.—In the school year 1955-56 there were 2,352 school districts; 153,233 pupils were taught by 4,228 qualified teachers and 438 permit teachers. The University of Manitoba is situated at Ft. Garry and has six affiliated colleges. There is one normal school and one technical vocational high school.

Public Health and Welfare.—Under the Manitoba Health Services act there were 13 local health units in 1956 serving a total population of more than 320,000; five laboratory and X-ray units were operating with headquarters at Selkirk, Virden, Dauphin, Neepawa and Portage la Prairie. Hospitals for mental diseases at Brandon and Selkirk and Psychopathic hospital in Winnipeg had 3,783 patients under treatment during 1955-56. There were 13 general hospitals with more than 60 beds; 26 with fewer than 60 beds; 1 contagious diseases hospital; 2 for chronic diseases and sanatoriums.

Communications.—The estimated length of all-weather roads at April 1, 1956, was: gravelled 2,923 mi., bituminous 1,069 mi., concrete 107 mi. There are seven radio stations and two short-wave stations in Manitoba and one television station. As of Dec. 31, 1955, there were 211,162 subscriber stations in the government-owned telephone system.

Finance.—At March 31, 1955, surplus over expenditure was \$506,278.97 from a revenue of \$58,824,450. For 1956-57 the anticipated revenue was \$77,322,450 and anticipated expenditures were \$59,421,295.61.

Agriculture.—Production for 1955 included: field crops \$140,493,000 (initial payments only for wheat, oats, barley); livestock \$48,471,000; dairy \$28,215,000; garden products \$6,595,000; poultry products \$22,277,000; fur farming \$3,000,000; honey \$870,000. Shipments of grain through Churchill Port amounted to 13,077,845 bushels.

Fishing and Fur.—Production of fish for the year 1955-56 amounted to 1,936,600 lb. The value as marketed was \$6,146,761; value to fishermen, \$476,843. In 1955-56 the estimated value of raw furs exported was \$1,145,737.14.

Mineral Production.—The estimated value of mineral production in 1955 was \$62,591,496, of which \$41,268,121 represented metals; the total included about 4,145,756 bbl. of crude oil, valued at \$9,516,655. Manitoba

had 11 established oil fields with 486 producing wells.

Manufacturing.—There were 1,600 manufacturing firms, giving employment in 1955 to 50,000 persons. Payrolls for production workers alone reached a total of \$121,325,000. A total of 59 new industries were established in 1955. (M. Mv.)

Marine Biology. Effects of Atomic Radiation.—Marine biologists were becoming increasingly concerned in 1956 with the practical problems that present themselves as a consequence of atomic explosions, or the possible indiscriminate disposal of atomic wastes in the oceans. More and more they were becoming convinced that fundamental studies to provide a basis for formulating a sound policy toward such matters should be undertaken at once, because within about 20 years the expected contamination would make this work impossible. They believed that biologists probably did not need to be immediately concerned with the deep waters of the oceans, since materials that might accumulate there would not be returned to the shallower layers for a 100 years or more, and in the Black sea this period would perhaps be as much as 2,500 years. On the other hand, any waste or fission products entering the surface layers especially in shallow coastal waters would in time be transported by ocean currents to localities where, if sufficiently concentrated, they would affect resources of the sea of value to man. For example, a year after the Bikini tests, artificial activity, then reduced to one-fifth the natural activity in the oceans, could be detected 3,500 mi. away.

The immediate results of contamination were gradually becoming known, partly by noting the effects which followed an atomic explosion, partly from physiological experiments. Two fission products of uranium, caesium 137 and strontium 90, have a long half-life (33 and 28 years, respectively). The effects of the former are not likely to be as serious as those of strontium because it is not stored in any particular tissue and is rather quickly excreted (H. J. M. Bowen, 1956). On the other hand, strontium 90 is one of the most hazardous fission products. Non-radioactive strontium is widely distributed on the earth and enters into various biological processes, usually associated with calcium to which it is rather similar chemically (H. J. M. Bowen, 1956). It is quickly absorbed by the blood and soft tissues and then concentrated in skeletal structures, such as shells, spicules, bone, etc. (H. J. M. Bowen, 1956). Likewise, it is absorbed and retained by plants (T. R. Rice, 1956).

Following an atomic explosion, fishes in nearby water accumulate fission products in their viscera in high concentrations, with lesser amounts in bone, skin and muscle (K. Amano, *et al.*, 1956; M. Saiki, *et al.*, 1955). On the other hand, experiments were made on frozen fish to determine what would happen if a loaded fishing boat chanced to be in the vicinity of an atomic fall-out. The results indicated that caesium readily entered through the skin and within four days the muscles were as contaminated as the skin. However, only a small fraction of the radioactive strontium or ruthenium would have passed through the skin even after eight days following exposure (W. A. Chipman, 1956).

The radioactive elements were selectively concentrated in various tissues within fishes from contaminated lakes; *i.e.*, radio-strontium and radiophosphorus in the "hard tissues" and caesium and the rare earths in the "soft tissues" (L. A. Krumholz, 1956). The radio-strontium might be taken in in concentrations 20,000

to 30,000 times greater than in the lake water (L. A. Krumholz, 1956). Such an accumulation might amount to a microcurie within the body of a single fish (L. A. Krumholz, 1956). These fish not only grew more slowly, but also had a shorter life span (L. A. Krumholz, 1956). These observations were based on freshwater organisms; however, similar, but less extreme results might be expected in a marine environment.

Productivity.—The hit-or-miss search for fishes in the productive areas of the continental shelves had been fairly successful through the centuries, but similar methods on the high seas had not proved rewarding. The potential resources of approximately 90% of the oceans had not been tapped yet, chiefly because it was not known where to search. Working out of Hawaii, the U.S. fish and wildlife service studied areas where commercial fisheries, especially tuna, might be developed. The warm surface water is deficient in nutrient salts and hence in plankton, but the underlying colder water is relatively rich in nutrients. This nutrient-rich water reaches the photic zone as a result of upwelling in the Equatorial convergence-divergence system; the shearing in a current interface in the boundary between the North Equatorial current and the North Pacific drift; and eddies and wakes in the North Equatorial current flowing around the Hawaiian Islands (O. E. Sette, 1955). Plankton is more abundant in such areas and a good quantity of tuna were taken close by with the Japanese "long line." Therefore, it seemed likely that when more was known about the hydrographic structure of the oceans, other promising oceanic areas would be located (O. E. Sette, 1955).

Scattering Layers.—The scattering layer continued as one of the important biological problems and several novel approaches added materially to the knowledge of this phenomenon. A suspended echo sounder and camera were used to make simultaneous sound and photographic records. Despite the fact that the acoustic field for the echo sounder was larger than the optical field for the camera (H. R. Johnson, *et al.*, 1956), it was found that whenever a fish was photographed, the echo recorded at the same time was strong. Sometimes with weaker echoes, photographs of salps or other small invertebrates were obtained or the photographic plate was a blank. In the latter case, it might be assumed that the scatterer was within the acoustic field, but not within the optical field.

With a suspended echo sounder operating alone, individual scatterers were followed in their upward trek as evening approached, and the rate of ascent of about 15 ft. per minute was computed. The number of individual scatterers in various layers was counted and estimates were made that one individual occurred in a volume of perhaps 650 to 2,000 cu.m. of water (H. R. Johnson, *et al.*, 1956). At midday, when the scattering layer was deepest and densest, these volumes would perhaps be significantly reduced. However, counts could not be made when scattering was so intense (H. R. Johnson, *et al.*, 1956).

A new highly sensitive bathyphotometer (G. L. Clarke and G. K. Wertheim, 1956) measured the light intensity of the noon-time depths of the deep scattering layers, with an illumination as low as 0.01 $\mu\text{W}/\text{cm}^2$ isolume. As evening approached, these layers rose and split in two. The upper layers at 40 m. had a light intensity ten times that at the noon depth. Hence, the vertical migration did not appear to follow a particular light intensity (G. L. Clarke and R. H. Backus, 1956). A modification of the photometer afforded an opportunity to record the luminescence of organisms dwelling at different depths and localities. The intensity and frequency of these flashes were distinctive for the coastal and slope waters (G. L. Clarke and R. H. Backus, 1956).

Marine Corps, U.S. The United States marine corps, which celebrated its 181st birthday on Nov. 10, 1956, engaged throughout the year in a continuing program to adapt the working principles of amphibious warfare to the requirements of the nuclear age. Maintaining itself as a thoroughly trained and highly mobile combat-ready force, the corps staged manoeuvres in widely separated parts of the world to test new tactics, techniques and equipment.

The extent to which amphibious landings had become "triphibious"—involving air as well as land and sea—was further demonstrated in 1956 through increased use of the assault helicopter. In June a marine corps battalion landing team employed assault helicopters in staging the simulated vertical envelopment of a beachhead at Dikili, Turk.

Marines participated in other amphibious exercises in North Carolina, California, Alaska, Hawaii, the Caribbean area and the far east. In February a battalion landing team took part in Operation "Firmlink," a demonstration in Thailand by the United States armed services and the Philippine army for members of the Southeast Asia Treaty organization.

A tactical air operation involving more than 200 separate air lifts from one island to another was conducted by marines in Hawaii in late September and early October. Jets, propeller-driven aircraft and helicopters were used in transport, close air support, aerial cover, reconnaissance and artillery spotting.

Marines also participated in tests of the prototype of the helicopter assault carrier U.S.S. "Thetis Bay," which was converted by the navy from an escort carrier early in the year and commissioned July 20.

The marine corps in 1956 was under the command of Gen. Randolph McCall Pate, who became the 21st commandant on Jan. 1. On June 30, at the end of the fiscal year, the corps had a strength of 200,780 men and women on active duty. Included were three marine divisions and three marine aircraft wings as authorized by public law 416, 82nd congress.

Also available for active duty in the event of a national emergency was a marine corps ready reserve of approximately 200,000 men and women who were reclassified during the year. Organized reserve units of the corps numbered 291.

As the result of an accident in which six recruits lost their lives at Parris Island, S.C., the corps undertook a reappraisal of its recruit training program. For closer supervision, two recruit training commands were formed—one at Parris Island, the other at San Diego, Calif. Each was placed under a general officer re-

responsible directly to the commandant of the marine corps. The period of recruit training was lengthened, and rigorous marine training methods were continued in the interest of maintaining the traditionally high standards of the corps.

During the year, marines were on duty around the world. A marine division and a marine aircraft wing were stationed on each of the two coasts of the United States. Another division and another wing were in the far east. An air-ground task force was maintained at Kaneohe bay, Oahu, T.H. Other marines were at U.S. navy bases and with U.S. fleets; at U.S. embassies; at North Atlantic Treaty organization and United Nations installations; and at marine corps posts and stations throughout the United States. A battalion landing team sent to the 6th fleet in the Mediterranean in March was replaced by a similar team in the fall.

Maritime Administration, U.S.: see MERCHANT MARINE.

Marriage and Divorce. Marriage and divorce rates throughout the world remained relatively steady during 1956. With few exceptions, European birth rates continued to decline slightly, although the total number of births was at a high level. Because of the rapid increase in the world's population (expected by 1980 to be 50% greater than 1950), earnest attention was being given to ways and means of limiting population growth. The International Institute for Social-Ecclesiastical Research (Geneva, Switz.), an official Roman Catholic institution, offered a prize of \$5,000, to be awarded in 1957, for the best positive answer, complying with Catholic principles, to the question of how population growth could be influenced to provide a social structure that would satisfy the requirements of complete human well-being.

United States.—Although the unadjusted marriage rate for the first half of 1956 was only per 1,000 of population, a total of 1,580,000 marriages was expected for 1956, a 3% decrease over the provisional total of 1,524,000 marriages for 1955. It was anticipated that the estimated marriage rate of almost 9.4 for 1956 would exceed the revised rates of 9.3 for 1955 (the second lowest rate since 1933) and the final rate of 9.2 for 1954 when 1,490,000 marriages were performed. No change in the birth rate of 24.9 for 1955 (4,041,000 registered births) seemed likely in 1956, although the number of births was estimated at 4,129,000. The number of divorces, including annulments, forecast for 1956 was 376,000 in contrast with 373,000 divorces in 1955 and the revised final total of 379,000 in 1954.

Findings from other studies indicated that about 12,000 divorces and annulments occurred annually in New York state of which about 30% were annulments; that 87% of all women aged 25-34 years were married; that, of wives aged 14-24 years,

Table I.—Percentage Distribution of Marriages by Age of Bride and Groom: 23 Reporting U.S. States, 1954

Age of bride (years)	First marriages	Remarriages	All marriages*	Age of groom (years)	First marriages	Remarriages	All marriages*

*Includes all minor children under 21 years of age (Connecticut), all dependent children under 17 years (Michigan) and 21 years (North Dakota), all children under 21 years (New Hampshire), total number of children (Oregon), all minor children (Mississippi), all children affected (Vermont), minor children affected (Virginia), and data not complete for Georgia, Michigan, Missouri and Wyoming.
Source: Adapted from Table B, "Divorces and Annulments, Detailed Statistics for Reporting Areas, 1954," U.S. Department of Health, Education and Welfare, National Summaries, vol. 44, no. 7, p. 139.

only 78% were living in their own households and only 71% had children; that, in 1955, 3.3% of all men and 16.7% of all women aged 15-19 years were married, in contrast respectively to 0.5% and 9.5% in 1890; that about 70% of all persons 15 years old and older were presently married; that 54% of all widows were employed; that, of married couples, about half had at least one child within the first two years of marriage; that, of all persons

MARRIAGE OF GRACE KELLY AND PRINCE RAINIER III of Monaco, April 19, 1956, at St. Nicholas cathedral, Monaco

marrying in 1954, 75.6% were single, 17.8% were divorced and 6.6% were widowed (*see* Table I); that third marriages occurred about one-seventh as often as second marriages; and that the rate of multiple marriage among women was 4% greater than among men.

Great Britain.—For England and Wales, 357,431 marriages and 664,711 births were provisionally reported for 1955. Although the number of marriages was 4.8% higher than the lowest postwar total of 341,731 in 1954, the number of births was 1.3% lower than the total of 673,651 in 1954 (the lowest number since 1942). Of the 26,816 absolute decrees and annulments in 1955 (a drop of 4.3% from the 28,816 granted in 1954), it was estimated that 10% were comprised of marriages of less than five years' duration, with the median duration of all legally terminated marriages falling between 11 and 12 years; approximately one-third of all divorces were received by childless couples. It was expected that not more than 360,000 marriages, 660,000 births and 25,000 divorces would be recorded in 1956. As of Nov. 1955 there were in England and Wales about 70,000 women living apart from their husbands and about 16,000 unwed mothers who were drawing assistance grants from the government.

Canada.—It seemed probable that marriage and birth rates in 1956 would show no significant change from those of 1955. The low marriage rate was expected to continue for several years. Of all the provinces, Quebec had shown the most rapid decline in birth rate in recent years. Although parliament had repeatedly rejected proposals to liberalize divorce laws of the country, Saskatchewan and other western provinces intensified their efforts in that direction. The Montreal Marriage Counselling centre opened on Sept. 7, 1955, reported increasing interest in its facilities.

Other Countries.—In China the birth rate continued high; Hong Kong was taking steps to expand its family planning clinics. Marriage rates in Denmark and the Netherlands were counted among the highest in Europe. In France the government increased its maternity leave of women workers to six weeks before and eight weeks after childbirth. The government-sponsored birth control program in India, including 165 clinics, experienced difficulty in getting mothers to practise the rhythm method successfully. The Pakistani government advisory Commission on Marriage and Family Laws recommended drastic changes in existing marriage and divorce legislation. Although divorce is not possible in Italy, about 4,000 court annulments and legal separations were being obtained annually; the marriage rate was reported to be the lowest in Europe. In Japan the number of abortions was estimated to exceed the 1,170,000 in 1955 which almost equalled the 1,727,040 live births for that year; it was estimated that, since the war, about 25,000 American men had married Japanese women. The code of family legislation in Rumania was revised to permit divorce to be granted upon demand of either spouse. The sex education program in Sweden, beginning with the child's first year in school and carried through continuously to age 19 years, was reaffirmed to stress the importance of love in human relationships. In the U.S.S.R. a campaign was launched against immorality, deserting husbands and bigamous marriages. The marriage rate continued to be high in western Germany; based on marriages in 1953, 39% were Protestant, 35% were Roman Catholic, 21% were mixed religiously, with 5% falling in miscellaneous categories.

In Africa, Algeria reported that 37,000 men had two wives and 1,800 had three or more; Egypt increased its birth control clinics to eight; marriage counselling facilities were expanded in Kenya and Nigeria; although there was only one divorce for every seven marriages in the Union of South Africa, the rate was two in seven in Johannesburg.

In South America the recent laws permitting divorce in Argen-

tina were repealed; it was reported that courses in eugenics were a part of the curriculum in most Brazilian schools.

Marshall, Caroline and Mariana Islands.

The Marshall, Caroline and Mariana Islands, stretching from about 1° to 20° N. lat., and from 130° to 170° E. long., constitute, with the exception of Guam (*q.v.*) in the Marianas, the Trust Territory of the Pacific Islands. The territory contains about 2,130 islands in 96 distinct island groups of which 64 are inhabited, with a combined land area of about 687 sq.mi. Truk in the centre of the territory is 4,931 mi. W. of San Francisco and 1,832 mi. E. of Yokohama. The population on June 30, 1956, totalled 65,039, exclusive of administrative and military personnel. Three-fifths of the population live on the six principal island units: Saipan, the Palaus, Yap, Truk, Ponape and Majuro. Eleven different languages are spoken in the territory, including English and Japanese. The majority of the population is Christian. Acting high commissioner in 1956, Delmas H. Nucker.

History.—Although plans existed for creating a territorial legislature, it had not by 1956 been considered feasible to implement them in view of such problems as the absence of a territory-wide political consciousness. Each of the seven administrative districts had its own native congress acting as an advisory body to the district civil administrator.

On March 9, 1956, representatives of the Marshall Islands congress submitted a petition to the United Nations visiting mission in which they reiterated their petition of April 1954, expressing the desire that the 1956 nuclear tests in the Marshall Islands should cease, or that, if considered "absolutely necessary for the eventual well-being of all the people of this world," they should be conducted with all feasible precautions. In the discussions in the Trusteeship council on the petition, the representatives of the United States pointed out that the U.S. was seeking an effective international disarmament agreement but that until such an agreement was reached and as long as there was the threat of aggression, the tests had to be continued. The many precautions which the U.S. was taking were detailed. On March 29, 1956, the Trusteeship council by a vote of 9 to 4 approved a resolution calling to the attention of the Marshallese petitioners the observations of the U.S. as the administering authority of the territory, and recommended that all necessary measures should be taken "to guard against any possible dangers," to settle forthwith all justified claims arising out of the 1954 tests, and to compensate for any losses resulting from further nuclear tests.

Education.—On June 30, 1955, there were 156 public schools, of which 149 were elementary, 6 were intermediate, and one (Pacific Islands Central school at Truk), an advanced technical and normal school. These schools had 7,387 pupils and 416 teachers. There were also 26 elementary and intermediate mission schools with 1,782 pupils and 104 teachers. Instruction is in English except in the first three grades where the native dialect is used. Educational expenditures represented 5.8% of total expenditures during fiscal year 1954-55.

Finance.—During the fiscal year ending June 30, 1956, local revenues were estimated at \$1,330,000 and U.S. appropriated funds \$5,000,000. Expenditures were estimated at \$6,566,163. A branch of the Bank of America operates on Saipan. Banking services for inhabitants of areas other than Saipan are available at the Bank of America branch on Guam.

Production and Trade.—About 30,000 ac. (47 sq.mi.), or 7% of the total land area, is under cultivation. The economy of the territory is based upon three commodities: copra, which utilizes about two-thirds of the cultivated land of the territory and whose production totalled 12,372 short tons in the year ending June 30, 1955; trochus, 315 short tons; and handicrafts, \$40,000. Experimental production of cacao, with more than 100,000 trees planted on the island of Babelthup in the Palaus, continued in 1956. Other principal crops are maize, sorghum, taro, sweet potatoes, cassava, breadfruit, bananas, papaya and citrus fruit. The production of phosphate rock on Angaur in the western Caroline Islands terminated on June 30, 1955, since the limit to which productive agricultural land could

safely be mined had been reached. A survey of mineral resources of the territory was begun in the spring of 1956.

As of June 30, 1955, the territory had 3,155 cattle, 135 carabao, 17,764 wine, 113,236 chickens, 1,564 ducks and 3,370 goats. The territory also had a small soap factory, a sawmill and a boatyard. Forested areas covered 10,000 ac., 20% of which was mangrove.

In the fiscal year ending June 30, 1955, the value of exports totalled \$4,301,582, of which phosphate rock represented \$2,744,500, copra \$1,334,115 and trochus \$119,671. Imports were valued at \$2,487,529; the most important were food, clothing and tobacco. The U.S. and Japan were the major sources and destinations of the territory's imports and exports.

Transportation and Communications.—Air transportation in the territory, except in the Saipan district, is maintained by Transocean Airlines, a commercial company which operates a fleet of 3 amphibious planes owned by the government; 3,151 passengers and 134 tons of cargo and mail were carried in the year ending June 30, 1955. There are 3 civil airfields in the territory. Pacific Micronesian Lines, Inc. operates 8 vessels under contract from the trust territory government. There were more than 353 mi. of roads in the territory in 1955. Only Saipan had paved roads. There were privately owned broadcasting stations (at Majuro and at Truk), 7 U.S. post offices and 313 telephones. A monthly newspaper is published by the trust territory government for distribution throughout the territory.

(S. Nr.)

Martinique. This French overseas island *département* in the Lesser Antilles has an area of 425 sq.mi. Pop. (1946 census) 261,595; (1954 census) 239,130, mainly coloured (Negro or mixed). Language: French and creole French. Religion: Roman Catholic. Capital: Fort-de-France, pop. (1954 census) 58,763.

Prefect in 1956, Gaston Villéger.

History.—In the elections to the French national assembly held on Jan. 2, 1956, two communists retained their seats. The third seat was held by a Socialist. For sugar cane, the year was not a good one. Heavy rains had diminished the sugar-content of the cane, and go-slow strikes had delayed harvesting.

Gen. Charles de Gaulle arrived in Martinique on Aug. 13. He visited Fort-de-France, Saint-Denis and the southern areas of the island.

(Hu. DE.)

Foreign Trade.—(1955) Monetary unit: metropolitan franc, valued at 100 fr. to U.S. \$1. Budget included in that of France. Imports 13,000,000 fr.; exports 9,000,000,000 fr. Principal exports: sugar, bananas, rum.

Maryland. One of the original states of the United States, long known as the "Old Line state" and, in later years, as the "Free state," Maryland is bounded on the north by Pennsylvania and Delaware, on the east by Delaware and the Atlantic ocean and on the south and west by Virginia and West Virginia. The total area is 10,577 sq.mi., of which 696 sq.mi. is water. Pop. (1950 census) 2,343,001; (July 1, 1956, provisional est.) 2,812,000. Urban population in 1950 was 69% of the total. Annapolis (1950 pop., 10,047) is the capital. Other cities in the state (1950 population) are Baltimore 949,708, Cumberland 37,679, Hagerstown 36,260, Frederick 18,142 and Salisbury 15,141.

History.—During 1956 the state continued the huge program for improving the public roads system which had been inaugurated in 1953 as a so-called 12-year roads program. It originally was to entail an expenditure of approximately \$568,000,000, in addition to normal expenditures on the road system, but by 1956 increasing price levels were making it difficult to complete the program within the estimated limits. Work was continued on the vehicular tunnel under Baltimore city harbour, scheduled for completion in Dec. 1957.

The state budget enacted in 1956 totalled approximately \$300,000,000 and was the largest in the history of the state. Despite the sharply increasing expenditures, a rising level of revenues continued to make unnecessary any important increase in taxes. The general assembly, at a special session in March 1956, enacted legislation to create a Maryland port authority to have primary responsibility for the administration, control and advertising of the port of Baltimore and of other ports within the state.

The principal state officers in 1956 were: governor, Theo-

dore R. McKeldin, Republican; comptroller, J. Millard Tawes, Democrat; attorney general, C. Ferdinand Sybert, Democrat.

In the Nov. 6, 1956 elections, Pres. Dwight D. Eisenhower received a margin of more than 187,000 votes over Adlai E. Stevenson. Sen. John M. Butler, Republican, and each of the seven incumbents in the U.S. house of representatives were re-elected. Seven proposed amendments to the state constitution were adopted by the voters.

Education.—In 1955-56 there were 787 public elementary and occupational schools in the state (including Baltimore city), with a total fall enrolment of 305,983 and a teaching staff of 9,991. There were 225 secondary and vocational schools, with an enrolment of 175,738 and a teaching staff of 7,849. The enrolment in Catholic schools for the entire state was 82,960. The enrolment in non-Catholic private schools was 17,239. Thomas G. Pullen, Jr., was state superintendent of schools.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of June 30, 1956, old-age assistance was being given to 10,204 persons, with a total cost of \$5,704,726 for the fiscal year ended June 30, 1956; public assistance was being given to 470 needy blind persons, with a total cost of \$300,570 for the fiscal year; aid to dependent children was being given to 6,251 families, with a total cost of \$7,172,011 for the fiscal year; and 5,075 persons were receiving aid to the permanently and totally disabled, with a total cost of \$3,189,805 for the fiscal year.

As of June 30, 1956, there were 2,035 white inmates and 2,997 Negro inmates, or a total of 5,032 inmates, in the five penal institutions under the jurisdiction of the department of correction. Of these, 72 were white females and 110 were Negro females.

Communications.—The State Roads commission expended \$130,621,566.88 for the fiscal year ended June 30, 1956. The total road mileage in the state highway system, as of Jan. 1, 1956, was 4,625.36, in the county system 13,036.85 and in the municipalities 1,342.03. As of June 30, 1956, there were 1,320 line miles and 2,800 track miles of steam railways and 22.9 line miles and 28.4 track miles of electric interurban railways. As of June 30, 1956, there were 969,631 telephone instruments in service in the state, of which 382,320 were in Baltimore city. There were 4,108,965 mi. of wire, of which 1,914,147 mi. were in underground cable as of June 30, 1956.

Banking and Finance.—On June 30, 1956, there were 96 state banks and trust companies doing business in Maryland, with total deposits as of that date of \$1,120,424,629.78 and total resources of \$1,229,691,254.76. There were eight mutual savings banks doing business in Maryland as of the same date, with total deposits of \$508,487,309.33 and total resources of \$557,589,227.90. There were 57 national banks in the state with deposits of \$904,025,000 and total resources of \$983,960,000. Total resources of all state and national banks were \$2,771,240,482.66. As of Dec. 31, 1955, savings and loan and building and loan associations were computed to have assets of \$905,158,098. State appropriations for the year ended June 30, 1956, were \$268,531,248 and expenditures were \$474,597,974. Estimated appropriations for the year ending June 30, 1957, were \$300,632,271. The general surplus as of June 30, 1956, was \$26,728,006.39, and the outstanding bonded indebtedness was \$137,075,000.

Agriculture.—Maryland farmers received an estimated \$70,053,000 from the marketing of the principal farm crops during the year 1955, as compared with \$83,426,000 in 1954. Cash receipts from livestock and livestock products amounted to \$161,248,000 as compared with \$158,328,000. Government payments during the year 1955 were approximately \$961,000 as compared with \$1,392,000 in the year 1954.

Table I.—Leading Agricultural Products in Maryland

Crop	Indicated		Average, 1945-54
	1956	1955	
Barley, bu.	3,560,000	3,256,000	2,464,000
All corn, bu.	26,235,000	21,020,000	20,922,000
Oats, bu.	2,432,000	2,911,000	1,610,000
Wheat, bu.	4,550,000	4,744,000	5,828,000
Hay (all), tons	735,000	687,000	640,000
Potatoes (Irish), cwt.	492,000	556,000	671,000*
Tobacco, lb.	46,250,000	35,525,000	38,469,000
Soybeans for beans, bu.	4,853,000	3,100,000	1,235,000
Tomatoes (market), bu.	459,000	476,000	607,000*
Tomatoes (processing), tons	110,400	68,500	161,700
Potatoes (sweet), cwt.	480,000	517,000	521,000*
Cantaloupes, crates (83 lb.)	140,000	130,000	187,000*
Sweet corn (processing), tons	86,500	55,000	84,800
Lima beans (market), bu.	120,000	102,000	116,000
Lima beans (processing), tons	2,610	2,000	2,860

Manufacturing.—The Maryland employment security board estimated the number of manufacturing establishments covered by unemployment compensation as of Dec. 31, 1955, to be 3,205 employing 264,860 persons as compared with 3,178 employing 246,003 in Dec. 1954; and the nonmanufacturing establishments to be 40,582 employing 411,469 persons as compared with 39,122 employing 385,918 in Dec. 1954.

The total payroll for the year 1955 was \$1,093,346,049 in manufacturing and \$1,265,797,742 in nonmanufacturing, making total payrolls for the year \$2,359,143,791 as compared with \$2,152,388,805 for the year 1954.

The amount of unemployment compensation benefits paid during the benefit year ending March 31, 1956, was \$15,601,531 as compared with \$32,271,505 in the benefit year ending March 31, 1955. (C. N. E.)

Mineral Production.—Maryland produces a variety of minerals. Table III shows the tonnage and value of those minerals whose value exceeded \$100,000 in 1953. In 1954 Maryland was first among the states in selenium output and produced and consumed more than 3,000,000 tons of coke; it stood 39th in the value of its mineral output, with 0.22% of the U.S. total.

Masonic Fraternity: see SOCIETIES AND ASSOCIATIONS, U.S.: *Freemasonry*.

Massachusetts. A north Atlantic state of the United States, Massachusetts was the sixth state to ratify the federal constitution. It was admitted to the union on Feb. 6, 1788. Its popular name is the "Bay state," derived from its earliest title "the Colony of Massachusetts-Bay" (1629-30). Area: 8,257 sq.mi., including 350 sq.mi. of water. Pop.: (U.S. census, 1950) 4,690,514, of which 84.4% was urban; (state census, 1955) 4,837,645. The capital is Boston (pop. 1955 census) 724,702. Important cities (with 1955 pop.) are: Worcester 202,612, Springfield 166,052, New Bedford 105,488, Fall River 105,195, Lynn 99,020, Cambridge 98,958, Somerville 97,032, Lowell 93,876, Newton 86,535, Quincy 84,495, Lawrence 76,094.

History.—The 163rd session of the legislature adjourned on Oct. 6, 1956 (the third longest session), after it had enacted 746 acts and 157 resolves. The total appropriation for general purposes amounted to \$363,219,000, an increase of \$39,070,689 over the preceding year. In addition to this total a capital outlay, covered by bonds of \$26,000,000, was provided to cover new buildings, including \$1,000,000 for a three-story underground bombproof vault to be constructed under the front lawn of the state house.

A new highway construction bill was enacted. Of the total appropriation of \$300,000,000 for this purpose, \$200,000,000 would be in a bond issue and \$100,000,000 in contract obligations for use when matching federal funds. The gasoline tax was increased one-half cent, raising the state tax to 5.5 cents.

Of major importance was a law creating the Massachusetts port authority. Like the New York port authority, this new body would finance, through bond issues up to a total of \$300,000,000, its own expansion and operating costs. It was authorized to build another tunnel or a bridge across Boston harbour, and immediately to manage and control all state-owned airports, the Summer tunnel, the Mystic river toll bridge and all the docks and

ITALIAN FREIGHTER AGROUND at Scituate, Mass., after a gale drove the ship into shore March 16, 1956

wharves operated by the Port of Boston commission. All of the above commissions and authorities were abolished.

A state senator, who as a young man had to give up his college course after the first year for lack of funds, filed a bill to create the Massachusetts Higher Education Assistance corporation. The bill was passed, so that now any student in any college who has finished one year may borrow funds from the corporation at low interest. Loans are to be paid back within a reasonable time after the borrower secures employment.

Other new legislation included a finance advisory board to advise the governor on bond issues, an interstate compact on mental health, extending insurance on deposits in savings and co-operative banks and establishing a historic districts commission for the town of Lexington.

State officials for 1955-56 were: governor, Christian A. Herter (Rep.); lieutenant governor, Sumner Whittier (Rep.); secretary of the commonwealth, Edward J. Cronin (Dem.); treasurer, John F. Kennedy (Dem.); attorney general, George Fingold (Rep.); auditor, Thomas J. Buckley (Dem.).

In the general election of Nov. 6, 1956, the state's 16 electoral votes went to President Dwight D. Eisenhower. The popular vote was about 1,390,000 for Eisenhower as against approximately 1,050,000 for Adlai E. Stevenson. In the state offices, Democrats were elected to succeed Republicans in two offices, Foster Furcolo as governor and Robert F. Murphy as lieutenant governor. The incumbent secretary of the commonwealth, treasurer, attorney general and auditor were re-elected.

Education.—In 1955 there were 1,708 public elementary schools with 23,055 pupils; 108 junior high schools with 90,938 pupils; 212 senior high schools with 138,179 pupils. The public schools of the state employed a total of 23,862 full-time teachers, principals and supervisors. Salaries for this group totalled \$123,178,178.97. The total expenditure for the public schools for support and outlay was \$221,052,349.02. John Desmond, Jr., was the state commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the fiscal year ending June 30, 1956, old-age assistance was extended to an average monthly number of 87,285 persons at an annual cost of \$83,483,572; an average monthly number of 12,786 families received assistance for the care of 31,596 dependent children at an annual expenditure of \$19,829,726; general relief was extended to an average monthly number of 12,327 persons at an annual cost of \$9,460,254. Payments for unemployment insurance for 1955 totalled \$57,606,825, a decrease of \$3,505,293 from 1954.

For the year ending June 30, 1956, the commonwealth appropriated \$4,486,800 to maintain correctional institutions, including the new state prison in Walpole (498 inmates), prison colony (802 inmates), reformatory for men (620 inmates), reformatory for women (212 inmates) and the state farm (1,585 inmates) including the criminally insane.

Banking and Finance.—Revenue receipts of the commonwealth for the year ending June 30, 1956, were \$536,602,554.37, including the sale of bonds amounting to \$134,120,000. Expenditures for state government amounted to \$492,610,369.65. The direct gross debt was \$535,280,000 less sinking fund of \$6,915,702.64 for a net debt of \$528,364,297.36. The assessed valuation of the state as of Jan. 1, 1956, was \$8,589,023,684.

As of June 30, 1956, bank deposits in the savings banks amounted to \$633,357,844; total assets of commercial departments of trust companies \$335,171,000; bank deposits in savings departments of trust companies \$2,954,000; total assets of credit unions \$134,101,420; and total assets of co-operative banks \$953,102,069.

Agriculture.—Cash receipts from marketing of farm products in 1955 totalled \$171,449,000. This included total crop cash receipts of \$54,516,000 and total livestock products of \$116,933,000.

Table I.—Principal Crops of Massachusetts

Crops	Indicated 1956	1955	Average, 1945-54
Wheat, bu.	1,392,000	1,500,000	1,665,000

Barley, all, tons	401,000	454,000	514,000
Apples, cwt.	1,123,000	1,001,000	1,275,000
Pears, bu.	70,000	82,000	142,000
Apples, lb.	7,335,000	10,740,000	11,370,000
Strawberries, bbl.	475,000	546,000	553,800

Source: U.S. Department of Agriculture.

Manufacturing.—In 1956 there were 2,069 labour unions in Massachusetts; the total membership was 574,098, an increase of 9,160 over 1955. There were 564,938 members. In 1954 the total valuation of manufactured goods was \$8,548,465,916; total manufacturing employment was 300,000 in Aug. 1956, of which 544,400 were production workers. The gross weekly payroll of production workers was \$39,170,800. (D. A. Dy.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Massachusetts in 1953 and 1954 whose value was 100,000 or more. In 1954 it ranked 41st among the states in value of mineral output with 0.14% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—Massachusetts (1955); North-eastern States, 2nd ed. (1955).

Massey, Vincent (1887—), governor general of Canada, was born in Toronto, Ont., Feb. 20.

He was educated at St. Andrew's college, Toronto, the University of Toronto and Balliol college, Oxford. He was sworn in the privy council and appointed minister without portfolio in Sept. 1925. He was appointed the first Canadian minister to the United States in 1926 and held that post until 1930. He was high commissioner for Canada in the United Kingdom, 1935-46, and chairman of the royal commission investigating national development in the arts, letters and sciences, 1949-51. He became the first Canadian-born governor general of Canada on Feb. 28, 1952.

On Jan. 9, 1956, Massey gave a state dinner and reception on the eve of the opening of parliament, which he formally opened on Jan. 10. He made a 10,000-mi. tour of the north from March 20 to April 6, being the first governor general to visit the high arctic and to fly over the north pole. During the year he paid official visits to many parts of Canada, filling speaking and other engagements.

Massey was host to a number of prominent visitors, including Great Britain's Prime Minister Sir Anthony Eden, and Foreign Secretary Selwyn Lloyd, and the president of Indonesia, Achmed Sukarno and his party.

In 1956 Governor General Massey was named to remain in office until the spring of 1958. (M. L. S.)

Mathematics. The year 1956 saw a major development in the theory of manifolds, a topic of central interest in 20th-century mathematics.

A manifold is a space which is built up by "pasting together" pieces that look like ordinary Euclidean space. If the dimension of the Euclidean space is n , the manifold is called n -dimensional. Where two pieces overlap, they give rise to competing co-ordinate systems, and the manifold is called "differentiable" if this change of co-ordinates takes place via functions which can be differentiated (in the sense of ordinary calculus). Another approach to the study of manifolds is to require instead that the pieces be simple solids (such as triangles or cubes and their

analogues in higher dimensions) and that they fit together snugly along corners and edges. This is known as "triangulating" the manifold.

Two problems had thus arisen: (1) Is every manifold differentiable? (2) Can every manifold be triangulated?

Each of these carries with it a uniqueness problem: (3) Are two differentiable co-ordinate systems on a manifold equivalent (under a differentiable transformation)? (4) Given two triangulations of a manifold, can each be further decomposed until the two triangulations look the same? This is the so-called *Hauptvermutung* (principal conjecture) of combinatorial topology.

It had been proved by S. S. Cairns that any differentiable manifold can be triangulated, so that an affirmative answer to (1) carried with it an affirmative answer to (2). In dimensions two and three, T. Rado and E. Moise, respectively, had answered all questions affirmatively.

J. W. Milnor of Princeton university found that the answer to (3) is "no." The manifold which admits two different differentiable co-ordinate systems is surprisingly simple: the seven-sphere (all points at unit distance from the origin in eight-dimensional Euclidean space). In addition he discovered an eight-dimensional triangulated manifold for which either (1) or (4) must be false. These new developments indicated that manifolds were more subtle objects than had been previously imagined. Much new research was needed to clarify the situation.

The impact of topology was visible on a century-old problem in algebra. A division algebra (over the real numbers) is a system in which all the ordinary rules of algebra hold except that the associative law $(xy)z = x(yz)$ is not required. Examples are furnished by the real numbers, complex numbers, quaternions and Cayley numbers, which have dimensions 1, 2, 4 and 8 respectively. H. Hopf had proved that the dimension of a division algebra must in fact be a power of 2. Now, H. Toda of Japan showed that dimension 16 is impossible. The proof used the intricate techniques of modern topology and required formidable computations.

In mathematical logic, the event of the year was the solution of a problem posed in 1944 by E. L. Post. The problem concerned recursively enumerable sets. These, roughly speaking, are sets of integers which can be listed by an effective computational procedure. There is an appropriate principle of classification for such sets. Post had exhibited two types and asked if there were still others. It turned out that there were infinitely many, and this was discovered nearly simultaneously by A. Muchkin of the U.S.S.R. and Richard Friedberg, a 19-year-old senior at Harvard university.

In the field of finite projective planes there was a further advance.

Let a quadrilateral $ABCD$ be given. The figure exhibits the three additional points E , F and G which are added to get the complete quadrilateral. Ordinarily the three new points do not lie on a line. But in a bizarre geometry using a number system where $1+1=0$, they are collinear. This was first noticed by G. Fano, and so a projective plane is called a Fano plane if E , F and G are always collinear. A. M. Gleason of Harvard university proved that any finite Fano plane is Desarguan and hence completely known.

The outstanding new book in the field of mathematics was the treatise *Homological Algebra* by H. P. Cartan (France) and S. Eilenberg (U.S.). A new vigorous branch of algebra was thereby officially launched. It had already shown its merit by solving several old problems that had been previously inaccessible. It was widely anticipated that even greater triumphs lay

ahead.

(I. K.)

Maurice and Laura Falk Foundation, The: see SOCIETIES AND ASSOCIATIONS, U.S.

Mauritania: see FRENCH UNION; FRENCH WEST AFRICA.

Mauritius. British colony in the Indian ocean, about 500 mi. E. of Madagascar, with island dependencies, of which the largest is Rodrigues, about 365 mi. N.E. of Mauritius. Area: Mauritius 720 sq.mi.; Rodrigues 40 sq.mi.; other dependencies (Chagos archipelago including Diego Garcia, Agalega and Cargodos Carajos or St. Brandon groups) 45 sq.mi. Pop. (1952 census, 1955 est. in parentheses): Mauritius 501,471 (549,000 including about 68% Indo-Mauritians [Indian immigrants and their descendants]); Rodrigues 13,333 (15,000 mostly of African descent); Diego Garcia and other dependencies 1,752 (2,000). Languages: English and French (official); creole French and Hindi widely used. Religion: Indo-Mauritians mainly Hindu; others mainly Roman Catholic. Chief towns (pop., Dec. 1954 est.) Port Louis (cap.) 74,950; Beau-Bassin and Rose Hill 30,400; Curepipe 23,750. Governor in 1956, Sir Robert Scott.

History.—On Sept. 25 the legislative council elected 4 out of 12 ministers, the remainder to be nominated by the governor or to be ex officio members. This was, in part, fulfilment of proposals announced in March by the secretary of state for the colonies, A. T. Lennox-Boyd, for an increase in the membership of the executive and legislative councils and the introduction of a ministerial system. The legislative council had accepted the proposals in May after criticizing the scheme of proportional representation. The increase in legislative council membership was to take place in 1958. Princess Margaret visited the colony in September. (K. I.)

Education.—(1955) Schools: primary 315, pupils 85,438, teachers 2,455; secondary 65 (including 3 government and 8 grant-aided), pupils 10,268, teachers 532; teachers' training college 1, students 184. College of agriculture, students (1952) 80.

Finance and Trade.—Monetary unit: Mauritius rupee, valued at 21 cents U.S. and 1s. 6d. sterling. Budget (1954-55 actual; 1953-54 in parentheses): revenue Rs. 121,805,177 (Rs. 97,778,504); expenditure Rs. 115,071,316 (Rs. 94,044,553). Foreign trade (1955): imports Rs. 250,472,247; exports Rs. 241,341,789. Principal exports: sugar, molasses, rum (97% of all exports), fibre. Production (metric tons): sugar (1954 *tel quel*) 499,000; molasses (1953) 40,537; rum 49,625 hl.; aloe fibre (1953) 506 metric tons.

Meany, George (1894-), U.S. labour leader, was born on Aug. 16 at New York city and was educated in the public schools of the Bronx, N.Y. In 1910 he began plumbing apprenticeship and in 1922 entered labour organizational affairs as business representative of a plumbers' local union in New York city. From 1934 to 1939 Meany was head of the New York state federation of labour and then secretary-treasurer of the American Federation of Labor, of which he was named president Nov. 25, 1952, by the federation's executive council after the death of William Green (1873-1952). Meany was confirmed as president at the union's national convention in Sept. 1953 and was re-elected to the office in 1954. Frequently critical of the Eisenhower administration, particularly after the resignation of Martin P. Durkin as secretary of labour in Sept. 1953, Meany soon was the acknowledged "first man" of the A.F. of L. Meanwhile negotiations had been under way for a merger of the A.F. of L. and its long-time rival, the Congress of Industrial Organizations. The merger was accomplished in Dec. 1955, and Meany was elected president of the combined organization. He was recipient of the 1955 Laetere medal of Notre Dame university as outstanding U.S. Roman Catholic layman in that year.

Speaking before the Democratic convention's platform committee at Chicago, Ill., on Aug. 10, 1956, Meany recommended a federal minimum hourly wage of \$1.25 and tax cuts in the lower-income brackets. At an A.F. of L.-C.I.O. executive meeting

on Aug. 28 he abstained from voting on a resolution to endorse formally the Democratic national ticket of Adlai E. Stevenson and Estes Kefauver.

Meat. The production of red meats in the United States continued at a very high level in 1956, and that of poultry at new record levels. Red meat production, not including farm slaughter, during the first eight months was 17,453,000,000 lb., 8% more than the 16,089,000,000 lb. produced during the corresponding months of 1955.

*Forecast by U.S. Department of Agriculture.

†Carcass weight equivalent.

‡Chickens, including commercial broilers and turkey, ready-to-cook basis.

Consumption per capita appeared to be about 163.5 lb., slightly above the 161 lb. of 1955 and 29% above the prewar level, and perhaps exceeding the record 163 lb. of 1908. Included were record amounts of beef indicated at 83.5 lb. per capita and large but not record amounts of pork, forecast at 66.3 lb. per capita. Veal, at 9.3 lb. per person, approximated the 1955 level but was above the 8.1 lb. of prewar, whereas lamb and mutton consumption of 4.4 lb. per capita was low compared with 4.6 lb. in 1955 and 6.7 lb. prewar. Chicken consumption amounted to a record 23.4 lb. per capita as compared with 20.9 lb. in 1955 and 13.2 lb. prewar. The record supply of turkey, 5.4 lb. per capita compared with 4.3 lb. in 1955 and 2.1 lb. prewar, included unusual numbers of the larger type fowl. Even the fish catch of 5,000,000,000 lb. was a new record, breaking the 1941 total of 4,900,000,000 lb.

Meat prices were relatively low early in the year under pressure from large pork production, which was about 16% higher during the first six months as compared with the same period of 1955, and large quantities of high-grade beef. During the first quarter of the year the index of retail meat prices stood at 93 (1947-49=100) as compared with 102 a year earlier. Meat prices, especially beef prices strengthened during the second half of the year, to a level above that for 1955. But broiler prices broke an eight-year low to less than 17 cents per pound.

Exports of meats increased in 1955-56; 52,156,000 lb. of beef and veal valued at \$14,562,000 were shipped out as compared with 42,742,000 lb. valued at \$11,449,000 in the preceding year. Pork exports also increased to 71,080,000 lb. as compared with 63,011,000 lb. in 1954-55. Imports of beef increased to 114,326,000 lb. valued at \$33,091,000 from 99,948,000 lb. valued at \$29,851,000 in 1954-55. Pork imports were slightly lower with 159,125,000 lb. as compared with 167,543,000 lb. during the previous year. Complaints about increased imports of Polish ham continued; canned pork, mostly ham, from Poland increased to 18,210,000 lb. in the first eight months of 1956 as compared with 15,037,000 lb. in the same months of 1955.

A special U.S. department of agriculture pork buying program to encourage additional consumption of pork and give assistance to the price of hogs was begun in Nov. 1955 but suspended in April 1956. Nearly 159,000,000 lb. of canned and frozen pork, about 5% of the production for that period, were purchased as well as nearly 39,000,000 lb. of lard, for a total of \$99,500,000. The products were disposed of mostly in the school-lunch program and abroad.

Meat production in the principal livestock producing countries, exclusive of the far east, set a new record of 86,522,000,000

lb., in 1955, 3% more than for the preceding year, 29% more than average for early postwar (1946-50) years and 27% more than prewar. Only South American production lagged in 1955 compared with 1946-50.

World trade in meats in 1955 was about 7% larger than in 1954; the increase continued in 1956.

Argentina authorized larger exports of chilled beef to the United Kingdom, with exports expected to total about 270,000 tons as compared with 107,610 tons in 1955. The U.S.S.R. took sizable amounts, especially of mutton and lamb. New Zealand's meat exports reached a record level in excess of 400,000 tons.

ENCYCLOPEDIA BRITANNICA FILMS.—Meat—From Range to Market (1956).

Medical Rehabilitation of the Disabled.

One of the most significant developments in medical rehabilitation in the United States during 1956 was the increased emphasis given the teaching of rehabilitation by the nation's medical schools. The first department of physical medicine and rehabilitation to be established as a major department in a medical school was that at New York university in 1946.

Since then, three-fourths of the nation's medical schools had started co-ordinated teaching programs both to bring undergraduate medical students the basic principles of rehabilitation and to train specialists within the field.

These efforts started originally with the Baruch Committee on Physical Medicine, which gave grants in 1944 to Columbia university, New York university and the Medical College of Virginia, Richmond, for this purpose. In 1954 the National Foundation for Infantile Paralysis initiated a program of three-to-five-year financial grants to 13 medical schools. By 1956 additional support to ten other medical schools was being given by the office of vocational rehabilitation, United States department of health, education and welfare. Both organizations also had extensive fellowship training programs for specialists in rehabilitation.

Among the medical schools starting new programs during 1956 were Washington university, St. Louis, Mo.; University of Southern California, Los Angeles; University of Nebraska, Lincoln; University of Vermont, Burlington; and Duke university, Durham, N.C.

The organization of these programs varies with individual medical schools. Some organize departments of physical medicine and rehabilitation; others use a multidiscipline, committee approach. In both instances, however, the objective is to teach the basic concepts of rehabilitation to medical students and practising physicians.

More than \$2,000,000 was made available during the year by the office of vocational rehabilitation to educational institutions and individuals to help relieve the shortage of rehabilitation personnel. Teaching grants were given to 154 colleges and universities to expand programs in medicine, social work, nursing, occupational therapy and physical therapy, and more than 2,000 individual traineeships were awarded.

In Great Britain there was continuing emphasis during the year on rehabilitation services for disabled miners, there being a

manpower shortage in the coal mining industry. Although miners form only 3% of the total population, miners absorb nearly 40% of the industrial injuries benefits. Of the approximately 2,750 disabled miners discharged from eight special miners rehabilitation centres, about two-thirds returned to full employment and 94.5% of this group returned to the mining industry.

The primary international professional meeting of rehabilitation workers during 1956 was the second congress of the World Confederation for Physical Therapy in New York city in June. The congress was attended by 2,300 persons, of whom more than 500 came from outside Canada and the United States. The meeting pointed up the serious shortage of trained physical therapists in the United States. The U.S. had a ratio of 1 therapist per each 22,000 population as compared with 18,000 in Canada, 6,000 in Great Britain and 2,600 in Sweden.

Throughout 1956, United Nations rehabilitation teams continued to work at demonstration and training centres in Guatemala, India, Indonesia and Venezuela. New demonstration projects were initiated in Brazil and Uganda, in the latter case in the field of rehabilitation of the blind from rural areas. In these projects, 16 long-term experts were employed by the United Nations. Short-term training and advisory missions were undertaken by UN experts in Italy, Japan, Lebanon, the Philippines and Spain. Special equipment was provided to centres in Guatemala, Japan and Spain; and 15 fellowships and scholarships were granted for the training of technical personnel.

The International Society for the Welfare of Cripples also reported increased international voluntary activities in rehabilitation during the year. These consisted of increased numbers of international fellowships and distribution of films and literature. Many English-language rehabilitation publications were translated in Spanish and French and distributed for the first time.

(H. A. Rκ.)

Medicine. The focus of medical interest during 1956 was the tranquillizing drugs. Among the first tranquillizers to appear were Chlorpromazine and Reserpine, which have their chief value in the treatment of disturbed psychotic patients. Later came the ataractic drugs, which produce peace of mind and freedom from confusion. The most widely used during 1956 was Miltown or Meproamate, sold also under the name of Equanil. Others were Atarax, Frenquel, Pacatal and Promazine (also called Sparine). The mechanism by which these drugs have their effect had not been clearly established.

Frank M. Berger, who developed Miltown, classified the tranquillizers into two groups. One group includes those that affect the autonomic nervous system comprising the phenothiazine compounds such as Chlorpromazine, Promazine and Meprazine (Pacatal), Reserpine and the related alkaloids of *Rauwolfia* and the diphenylmethane compounds such as azocyclonol and hydroxyaine or Atarax. The second class comprises the central relaxants, which include Meproamate or Miltown and Mephene-sin. The central relaxants do not affect the autonomic functions. They do relax the spastic muscles and hyperexcitable multi-neuronal reflexes.

Oral Drugs for Diabetes.—In 1956 a startling announcement referred to the development of a preparation called BZ 55, later named carbutamide, which when taken orally reduced blood sugar. It was widely used in Germany, and extensive tests were made of it in British, Canadian and U.S. hospitals. Another antidiabetic sulfonamide, Orinase, was also studied. A simple solution as to the mechanism of action of these drugs had not been made available. German investigators believed that they act by damaging the alpha cells of the pancreatic tissue and stop the production of the hormone glucagon which raises the blood sugar. C. H. Best said that some insulin must be present for

the compounds to have a hypoglycemic action, and some investigators believed that in some way these drugs increase production of insulin. Still others suggested that these products potentiate insulin by action of enzymes in the liver.

Toward the end of 1956 the Eli Lilly company, which had the rights for BZ 55 for sale in the United States, withdrew the product because of reports of unfavourable reactions. Young patients did not respond well. The drug was certainly not a substitute for insulin. The incidence of side effects was not high, but fevers, rashes and occasional cases of jaundice occurred, and in isolated instances there were effects on the blood. In the controlled clinical studies made by the Lilly research laboratories, 5.3% of 8,000 patients suffered side effects, predominantly of the allergic type such as had been reported with sulfonamides in the past.

The product called Orinase, which is also an oral hypoglycemic agent, was further tested by the Upjohn company. Orinase is known scientifically as tolbutamide. Several hundred recognized authorities in the treatment of diabetes gave Orinase in the treatment of several thousand patients over varying periods of time. While not a substitute for insulin, Orinase appears to make unnecessary the use of insulin in the management of uncomplicated diabetes of mild or moderately severe degree. The product is not, however, indicated in juvenile diabetes nor in the life-threatening complications of diabetes such as coma, acidosis, high fever, injuries or surgery in which insulin is indispensable.

Heart Surgery.—Among the most amazing advances in medicine were the new steps taken in surgery of the heart. All the valves of the heart had now been operated on surgically. The latest refinements were those which permitted operations on the heart which had been drained free of blood and which, in fact, was without movement over varying periods of time. In some types of surgery of the heart, dryness of the heart is unnecessary. These operations are done while the heart is still beating and the blood travels through the heart and the lungs and around the body. In order to close a hole in the wall which separates the right and left lower chambers of the heart, however, the surgeon works best if the blood has been detoured from the heart into a device which keeps it circulating to the brain and other vital organs while the operation is being done. This device was invented by investigators at the University of Minnesota. The device is made of different sizes of plastic tubing. The blood is led from a vein of the patient, mixed with oxygen and the carbon dioxide released, and then pumped into the patient.

Deliberate stopping of the heart by a process called "controlled cardiac arrest" is also used in such procedures. The heart is allowed to beat long enough to empty itself, and then a drug is injected which brings it to a standstill. After the surgeon has finished the operation, the beating of the heart is started again by any one of several different methods. In many instances it will begin automatically when the new blood is put into the coronary blood vessels with a drug that acts as an antidote to the first drug. Other methods include massage of the heart muscle and the application of electric shock to the surface of the heart. Thirteen such operations were done in Cleveland on children who were born with major defects of the heart, and nine of these children survived.

A survey indicated that about 50 surgeons in the United States and perhaps 20 in other countries had operated on a total of about 1,200 patients who had inadequate circulation of blood through the coronary blood vessels, to relieve the pain of angina pectoris. Relief was secured in 80% to 90% of those operated on. The usual operation involves opening the chest; roughening the surface of the heart; dusting the area with asbestos powder to cause irritation, which is accompanied by increased blood flow; and protecting the area surrounding the heart by plastic pro-

MEDICAL EXPLANATION of President Eisenhower's intestinal operation given by Maj. Gen. Leonard D. Heaton, commandant of Walter Reed Army hospital, at a press conference on June 9, 1956

cedures. Out of 185 patients who had this operation at Mt. Sinai hospital in Cleveland, O., the operative death rate was less than 1%.

The American Society for Study of Arteriosclerosis (hardening of the arteries) had a report of a startling experiment for removing the rough lining of hardened arteries. These rough linings are largely responsible for stopping blood flow as occurs in coronary thrombosis. The surgery, which was still experimental, involved the use of a thin, hollow instrument, $\frac{1}{16}$ in. in diameter and 1 ft. long, which was introduced into the clogged artery from below the point of the clogging. The tube was then drawn back and twisted so that a nick in its side scraped the artery wall free of projecting material. The procedure was carried out on two men, aged 51 and 52. Much more experience was needed before the success of this process could be evaluated.

Parkinson's Disease.—An important step in the control of Parkinson's disease, or shaking palsy, was the development of operative procedures by Irving S. Cooper and his associates in New York. Several years earlier the first step, which was used in 50 cases over a period of 2½ years, was blocking of the anterior choroidal artery at the back of the neck. The newer procedure was the injection of a chemical substance into the area of the brain from which the tremors emanate. This area is in the region of the globus pallidus. In both operative procedures an arteriogram and a pneumoencephalogram are used to determine the point of origin of the anterior choroidal artery and its course before operation and destruction are accomplished. When the area is located, a polyethylene cannula is placed so that its tip lies in the region of the mesial globus pallidus. First procaine is injected. Usually this relieves immediately the tremor and rigidity on the opposite side. When this is reached, dehydrated alcohol is slowly injected over a 20- to 30-minute period. Then the wound is closed, but the cannula is left in place and two more injections of absolute alcohol are made during the ensuing week

to enlarge the lesion and ensure a lasting result. This operation was performed 50 times, with four serious complications resulting in two deaths, one case of paralysis of one side of the body and one case of ataxia. Over-all incidence of good lasting results was reported to be 65%.

Cancer.—Research on cancer included several approaches to the disease based on the concept that the growth of cells may be stopped by growth-inhibiting substances called cytostatic agents. Gerhard Domagk utilized a substance called E-39 (10^7 ethylene-imino-quinone) which proved in experiments on mice to have the ability to stop the growth of cancer cells. The substance was used on 72 human patients by Wolf and Gerlich. Other cytostatic agents include an antibiotic, Sanamycin, which is prepared from *Actinomyces* cultures.

Another group of investigators employed certain strains of the Coxsackie virus which apparently can attack cancer cells, and experiments were made with such drugs as colchicine, urethane, Aminopterin and various hormones and radioactive isotopes. For years it had been known that X-rays may be effective in stopping cancer growth when the tumours are susceptible to the X-rays.

The theory that pituitary gland hormones affect cancer growth was verified in combined research by O. H. Pearson of the Memorial Center for Cancer and Allied Diseases in New York city and Bronson Ray of New York Hospital-Cornell University Medical centre. They removed the pituitary glands of 43 women with far-advanced breast cancer. Of these, 20 showed positive improvement, 17 did not show improvement and 6 had been operated on too recently to permit evaluation. The longest remission had been 20 months. Eleven of these women had previously improved following removal first of the ovaries and later of the adrenal glands. The pituitary gland was removed from 26 other patients who had widespread cancer, including cancer of the prostate, the breast, the ovaries and the thyroid. In only two cases was there failure to respond—one with cancer of the prostate and the other a man with breast cancer. Five of 69 patients who had the pituitary glands removed died as a result of the surgery. From Sweden R. Luft and Herman Olivcrona reported the results obtained by this technique in 50 operations. Fifteen of the patients were reported alive from six months to three years; all had been considered fatal cases.

Pulseless Disease.—From China came reports of a condition called pulseless disease, also known as Takayashu's syndrome. The condition seemed chiefly to affect young women. Absence of pulse occurs in the arms and legs with intermittent disturbances related to the shortage of blood supply. Because of occasional diminished blood supply to the brain, impaired memory, emotional instability and occasional transient paralyses were observed. Attacks of fainting took place in about one-fourth of those affected. The investigators were inclined to relate this condition to collagen disorders.

Television in Medicine.—During 1956 two of the largest medical television facilities in the United States, the Smith, Kline and French portable system and the Walter Reed Army Medical centre's fixed installation switched from field sequential to compatible colour.

The Smith, Kline and French unit is contained within a single van which can be parked conveniently near a selected programming site. The van houses master monitoring and switching facilities as well as rack-mounted equipment sufficient to permit two-camera operation. A busy schedule in support of regional and national medical meetings was begun in late September during the annual meeting of the Kansas City Southwest Clinical society.

The new Walter Reed Army Medical centre system utilizes eight-camera chains in television production facilities situated in the Walter Reed Army hospital, the Walter Reed Army Institute of Research and the Armed Forces Institute of Pathology. Complete programs can be originated separately and simultaneously or all units can be operated as a single system from a master control at the Armed Forces Institute of Pathology. The basic arrangement in each location consists of a control room, announcing booth and studio, as well as cabled remotes.

The hospital studio is used for clinical demonstrations, particularly those involving patients too ill to be moved to the more adequate facility at the Armed Forces Institute of Pathology. Live surgery sequences may be integrated into hospital programs by means of a remotely controlled camera mounted in the ceiling of a room in the operating suite which is also equipped with additional cables permitting simultaneous use of a regular studio camera.

The studio of the Walter Reed Army Institute of Research is designed primarily for the demonstration of research laboratory procedures and dental techniques. However, the building is also provided with installed cables to veterinary surgery and to a special dental demonstration unit. Simultaneous two-camera operation is possible at any of these locations.

The centre's largest television facility, situated at the Armed Forces Institute of Pathology, consists of a capacious general production studio, a video control room housing five camera controls, a master control for the entire system and a tele-cine area which houses a film camera chain and a monochrome kine-recorder. The building is also provided with numerous cabled remotes such as the autopsy suite's remotely controlled 3-V camera, similar in design to that used in the hospital surgery. Particularly noteworthy is the 3-V television microscopy unit, which is most often used in the surgical pathology laboratory, but may be easily moved to other cabled locations.

Television productions of the Walter Reed Army Medical centre are distributed over an antenaplex coaxial network on channels 2, 6 and 11 to 130 receiver and projector locations in classrooms, conference rooms and auditoriums. In addition, programs can be fed to and received from outside sources. The first off-post transmission from the system occurred on Dec. 6, 1956, and consisted of a two-hour presentation in advanced dentistry distributed by American Telephone and Telegraph to the 32nd annual Greater New York Dental meeting. (P. W. SR.)

Merchant Marine. The United States merchant marine on Sept. 1, 1956, totalled 3,179 ocean-going merchant vessels of 1,000 gross tons and over. Of the total number, 1,098 were active and 2,081 were either temporarily in-

CADETS IN TRAINING with radar equipment at the U.S. Merchant Marine academy, King's Point, N.Y., which in 1956 was given status equal to that of the army, navy and air force academies

active or laid up in the government's reserve fleets. Private steamship companies owned 1,043 of the active vessels; 55 ships owned by the government were also in service. Of the latter, private steamship companies were operating 24 under bareboat charter in their own services and 28 were being operated by lines acting as general agents for the Military Sea Transportation service. Three were operated by the Panama Canal Co.

The active fleet consisted of 724 freighters, 335 tankers and 39 passenger or combination passenger-cargo ships. The active fleet was 12 vessels less than the corresponding fleet a year before, with 7 less in the private fleet and 5 less in the government fleet. Thirty tankers, 11 freighters and 3 combination passenger-cargo ships were transferred to foreign flags from the private fleet, while the government sold 18 ships from its reserve fleets to Korea and Brazil; 5 ships were added by new construction.

Of the 1,098 active vessels, 308 were subsidized by the government to make up the difference between foreign and U.S. costs of operation. Sixteen companies owned 303 of these ships and chartered 5 others from the government.

In the 12 months preceding Sept. 1, 1956, U.S. shipyards built or converted 11 large ocean-going ships. At the end of the period there were 60 ships being built or converted, of which 45 were for private companies and 15 for government account. This was twice as many as on the same date of the preceding year. The new ships under construction were 4 new and 3 con-

erted combination passenger-cargo vessels, 6 new and 4 converted freighters, and 31 new and 12 converted tankers.

The ships under order for government account were for the most part for the Military Sea Transportation service, but there was a tanker of a new class, the "Pipeline" under order for the Maritime administration, and 4 Liberty ships from the reserve fleet were being repowered and otherwise modernized in an experimental project with a dual purpose—to determine the feasibility of upgrading the large number of war-built Liberty ships now in the reserve fleets to make them more useful in an emergency, and to try out new propulsion equipment and cargo handling gear for possible use by other merchant vessels.

Three of these converted Liberty ships had undergone their trial runs by the early part of Sept. 1956 with encouraging results. One vessel, the "Benjamin Chew," received a minimum conversion, her reciprocating steam engine being replaced by a steam turbine. Her 10-knot speed was increased to 15 knots. The "Thomas Nelson" received a new diesel engine, a new, sharper, longer bow, and new crane-type cargo handling gear. Her speed was increased to more than 17 knots. The "John Sergeant" became the first large merchant vessel to be powered solely by a gas turbine, and with this engine and a new bow she made more than 18 knots, almost double her former speed.

Of the private ships under construction, a number were being built with various types of government aid and encouragement. Twenty-eight new and converted tankers were being built as a consideration for permission to transfer older tankers to foreign flags. Three new tankers were being built with the aid of trade-in allowances granted by the government for older vessels. Six new passenger ships were being built with the aid of government construction subsidies, which made up the difference in cost between building in U.S. yards and in yards abroad. Payment for national defense features incorporated in vessels in excess of normal commercial needs and provision of government insurance or private loans obtained to assist ship construction were other aids given to encourage new building.

Applications for similar types of aid were pending for a number of other new vessels. It was expected that orders totalling \$500,000,000 would be placed with U.S. shipyards during the fiscal year ending June 30, 1957, to match the same value of work placed in the yards during the preceding year.

By Sept. 1, 1956, five shipping companies had signed long-range agreements to replace their fleets, providing for the construction of 92 ships in the next 20 years. Replacement obligations of all lines receiving operating differential subsidies totalled about 190 ships at an estimated cost of \$1,500,000,000 in the next 20 years. Together with construction planned by other lines, principally for tankers, and roll-on-roll-off or self-loading truck- and trailer-ships, it was expected that enough new ships would be ordered from U.S. shipyards each year to keep a nucleus of skilled workers regularly employed and available if needed in an emergency.

(See also SHIPBUILDING.)

(C. G. M.)

International.—For the international shipping industry the year 1956 was one of the most prosperous yet experienced. Despite the rapid expansion of tonnage which came into service, world demand for shipping space of practically every kind continued to increase, and the rise in the general level of freight rates which was a feature of 1955 continued persistently throughout 1956. The United Kingdom Chamber of Shipping indexes of tramp shipping freight rates (see Table I) give some indication of the steady rise in demand, which occurred against a background of continually increasing tonnage availability. The number of ships laid up through lack of employment throughout the world fell to negligible proportions; the number of ships scrapped through obsolescence, despite the increase in prices paid

for scrap, was reduced to the minimum and the prices of second-hand ships reached levels similar to those attained during the Korean war, even for ships which by 1956 were four years older. Liner conference tariff rates again were increased on practically every trade route, by proportions varying from 5% to 15%. In many cases these increases followed similar increases in the previous year. Operating costs also continued to rise. Wage rates paid to British merchant navy officers and crews advanced by an average of about 7½%, and this standard was followed, as was usual, by the principal maritime nations. The price of oil bunkers again increased throughout the world by an average of 7½% to 10%.

The major disturbance of the year was caused by the nationalization of the Suez canal in July by the Egyptian government. The International Chamber of Shipping immediately registered a protest against the declared purpose of the Egyptian government to exploit the canal by appropriating revenues collected from international commerce for financing internal projects, and expressed the view that the canal should be maintained as an independent international waterway. The complete blocking of the canal at the beginning of November made it necessary for all ships to be diverted via the Cape of Good Hope, thus disrupting normal sailing schedules and causing an artificial shortage of tonnage, which was accentuated by the requisitioning of about 80 dry-cargo liners and tramps for military purposes by the British and French governments. By the beginning of December most freight rates had reached record levels.

Table II.—Merchant Fleets of the World, June 30, 1956
(Each of 1,000 gross tons or more)

Country	No. of vessels	Gross tons (in 000s)	Country	No. of vessels	Gross tons (in 000s)
British Commonwealth of Nations	3,068	20,006	Spain	297	1,137
United States*	1,266†	10,552†	Argentina	146	901
Norway	1,130	7,559	Brazil	188	733
Liberia	570	5,614	Finland	228	701
Italy	616	3,933	Turkey	139	534
Panamá	510	3,871	Costa Rica	126	514
France	568	3,685	Belgium	75	483
Netherlands	546	3,542	China	141	422
Japan	626	3,519	Portugal	86	419
Germany	708	2,728	Honduras	55	342
Sweden	578	2,696	Poland	69	297

Source: Shipbuilders Council of America.

The phenomenal growth of merchant fleets registered under the flags of such nonmaritime countries as Liberia and Panamá began to cause alarm in the traditionally maritime countries. By mid-1956 the active fleets registered under these two flags combined were exceeded only by those of Great Britain and the United States. The ownership of such vessels, under what came to be known as "flags of convenience," was vested mainly in U.S. and Greek companies and citizens of other nationalities. Owners of ships registered in such countries were able to avoid the high rates of taxation applicable in most of the traditional maritime countries, or, in the case of U.S. companies, the handicaps of U.S. shipping legislation. During 1956, for the first time, a significant move among British shipowners was made to transfer their operations to "tax-free" parts of the Commonwealth such as Bermuda, in an endeavour to place themselves on an

economically competitive basis with ships registered in Liberia and Panamá. (P. DF.)

Mercury: see MINERAL AND METAL PRODUCTION AND PRICES.

Metallurgy. To strengthen the U.S. economy and to conserve national mineral resources to the best advantage, the U.S. government and industry made numerous studies and experiments. The outstanding advances in metallurgy in 1956, in the United States and elsewhere, follow.

Alloys.—Research was completed which resulted in the development of a wider range of magnesium-lithium-aluminum alloys with improved physical properties. Basic information provided by the U.S. bureau of mines contributed greatly to development of techniques for using these lightest and most ductile of magnesium alloys in fabricated parts of aircraft and missiles.

Aluminum.—The possible use of a lime-soda sintering method to recover alumina from aluminum plant residues and from high-silica bauxites was demonstrated by laboratory tests.

Anthracite.—The anthracite experiment station at Schuylkill Haven, Pa., planned to install new equipment for treating lump and briquetted anthracite in efforts to improve its usefulness as a metallurgical fuel.

Chromite.—Studies of chromites of argon showed that these ores can be smelted to yield ferrochrome-silicon and that they are suitable for refractories. The work was done in co-operation with the school of mineral engineering of the University of Washington, Seattle.

Coke.—The yield and quality of coke from 41 U.S. coals and 33 coal blends were determined by the U.S. bureau of mines. Anthracite was used experimentally and with encouraging results as a partial substitute for coke in iron production.

Copper.—A copper manganese alloy with superior vibration-damping qualities was developed. This had many important applications, from delicate instruments to large machines, where it was necessary or desirable to minimize noise and vibration.

Electrostatic Separation.—Temperature tables for 97 min-

erals were compiled by the bureau of mines and published in a technical report in May 1956. The information supplied by the tests was expected to find practical use at plants treating beach sands and rare earth ores, and might extend the use of electrostatic separation to other minerals now considered untreatable by this process. The methods and equipment used in the test were described. It was believed that the report might be an indicator of other minerals that might be recovered by the process, and also the most favourable temperature for treating them.

Electrodes.—Electrodes that are consumable, and production techniques in melting easily contaminated metals such as titanium and zirconium, were reported by the U.S. bureau of mines in Aug. 1956. Methods of producing the electrodes differ according to types of material. Five electrode-production techniques include: pressuring sponge metal or crushed chips of metal into briquettes; electrical sintering of short stacks of briquettes formed under low pressure; joining briquettes by spot or strip welding; assembling electrodes quickly from massive scrap by welding; and joining ingots made in a small furnace to produce a consumable electrode for a larger furnace.

Ferromanganese.—Ferromanganese of a standard grade was made from Artillery Peak (Ariz.) ore by concentration sintering and electric furnace smelting. This was part of the U.S. bureau of mines' long-range effort to reduce the country's dependence on foreign sources for this essential ingredient of steel.

Fluorspar.—Fluorspar deposits were examined, new methods of beneficiating fluorspar ores were under development and laboratory work on recovering fluorine from waste gases at phosphate-rock processing plants was undertaken.

Iron Ore and Steel.—The Eagle Mountain open-pit iron mine in California had been developed so that by 1956 it was yielding 2,250,000 tons of ore a year. It required much study and planning before this lower-grade ore could be utilized commercially. The limonitic brown ores of Texas were found to be usable after grinding and magnetic separation recovered more than 80% of the iron in concentrates. The area had estimated reserves of approximately 140,000,000 tons of commercial grade ore.

In western Canada the only basic steel producer installed in its Vancouver (B.C.) mill a process for heating steel ingots by electrical induction. The heating time for ingots was reduced 75%, which increased production by 30% and lowered fuel costs about \$1 a ton. An official stated that the mill could now compete with Japan, where labour costs were about one-fifth of those in Vancouver.

Lepidolite.—Lepidolite concentrates, tests showed, can be prepared by a combination of roll crushing, screening and flotation from the Brown Derby pegmatite deposits of Colorado.

Tantalum-Columbium.—A new method of separation by solvent extraction was developed by the U.S. bureau of mines and reported in Aug. 1956. This separation of the tantalum and columbium from ores can produce both tantalum and columbium oxide at greater than 99% purity and appeared to be satisfactory for industrial application.

Titanium.—In producing titanium in inert atmospheres, experiments resulted in the development of a successful technique for using argon instead of helium in the reduction step of the magnesium-reduction process for producing titanium sponge.

Zinc.—A new process was devised for salvaging 99.99% pure zinc from zinc-bearing wastes of the galvanizing industry.

Metal Prices and Production: see MINERAL AND METAL PRODUCTION AND PRICES.

"PING-PONG" VIBRATION TEST of cobalt-nickel alloy developed by Westinghouse Electric Corp. and demonstrated in 1956. Steel tuning fork on the left vibrates as the ball hits it, while the alloy fork on the right—magnetized by its atomic structure—is still. The new metal was to be used principally for high-temperature steam turbine blades, increasing the efficiency of electric power plants

Meteorology. In the laboratory as well as in the atmosphere meteorologists sought during 1956 to analyze the complex flow of the atmosphere with the many different forms of waves, eddies and vortexes, large and small, and the associated interactions of air masses and air parcels at different temperatures and humidities. These are the phenomena that produce the endless changes in weather from day to day and determine the average or "prevailing" conditions called climate. If these processes of the atmosphere could be reproduced in the laboratory where the unknowns could be identified and studied one by one, progress in meteorology would be greatly facilitated. Moreover, the impossibility so far of obtaining data representative of the atmosphere and its variables throughout its vast expanse and depth over the globe to enable researchers to study the phenomena quantitatively had greatly impeded progress in meteorology.

Cloud Physics.—A conference was held at the Institute of Atmospheric Physics in Tucson, Ariz., during April 10–12, 1956. With leading researchers in this field from Australia, Canada, England, France and other countries of western Europe, Japan and the United States in attendance, this conference examined thoroughly the existing knowledge of the scientific basis for weather modification and "artificial rain making." It brought into perspective the principles involved in the processes of condensation and precipitation as they occur in clouds and led to some clarification of the status and limitations of cloud seeding as a means of inducing rain or snow.

Among the many other research studies in cloud physics carried on during the year in Australia, Europe and North America were those by the meteorological department of The University of Chicago, by the Geophysical Research directorate of the U.S. Air Force and by the physical research division of the U.S. Weather bureau. Working with artificial cloud chambers in the laboratory, one of these an enormous gas storage sphere near Waco, Tex., in which the behaviour of cloud droplets could be observed under conditions approximating those of the free atmosphere, and also at mountain observatories, the research efforts of these institutions made real progress toward bringing a better understanding of the mechanism of precipitation as it occurs in nature. Among the noteworthy research papers were those on laboratory measurements of the growth and collection efficiency of raindrops, a subject of basic importance in the formation of rain by coalescence of drops in warm, shower-type clouds, and on the hyperelectrification of raindrops by atmospheric electric fields. Other papers by the physical research division, which had accomplished a remarkable number of fundamental measurements and conclusions, dealt with drop size distribution, terminal velocities of falling drops and other constants vital to computations in cloud physics. An investigation by the Smithsonian Astrophysical and the Harvard College observatories into meteors and rainfall brought evidence contrary to an earlier conclusion by an Australian physicist that periodic incidence of cosmic dust caused the observed singularities in rainfall. Although the question was still under debate, the consensus appeared to be that meteoric debris is not a major source of nuclei for condensation of moisture in the atmosphere.

Solar-Weather Relationships.—Another conference directed toward fundamental factors in weather and climate was the six-week seminar during June and July at the High Altitude observatory of the University of Colorado, Boulder. This seminar brought together astronomers and meteorologists with special competence in solar-weather relationships for the purpose of examining systematically the complex effects of the radiant energy received from the sun as it heats the earth's surface and the atmosphere at various levels, and in different ways influences the general circulation of the atmosphere. Return to intensive

study of solar energy as the initial force in shaping weather and climate, a subject more or less neglected since synoptic and dynamic meteorology came to claim the time and attention of most meteorologists, was characteristic of the increasing awareness of the many pressing meteorological problems in agriculture, aeronautics, national defense and other major activities, and the need to get down to fundamentals in seeking solutions. In other parts of the world, also, astronomers, geologists, meteorologists and physicists were re-examining the spectrum of solar energy and its effects on the earth's atmosphere in the light of modern nuclear theory and recent observations of radiation and heat transfer phenomena.

Prominent among the hundreds of other subjects of weather research reported during 1956 through the bulletins and journals of the American Meteorological society, the Royal Meteorological society (London) and in the summaries and other technical periodicals from the increasingly numerous technical meetings and seminars, national and local, were numerical weather prediction, radar meteorology and the causes and behaviour of severe storms. The general circulation of the atmosphere and its problems in hydrodynamics, including the theory of the jet stream, were also treated in numerous technical papers.

Other Developments in Meteorology.—For obtaining much needed basic observations representative of significant conditions in different parts of the atmosphere all over the globe, new methods of sounding were being developed. The transisonde, a long-distance balloon carrying a radio telemetering device to give temperatures, humidities and winds, established new records in tests over the Pacific. One transisonde launched in Japan was carried by the westerlies at altitudes of many thousands of feet clear across the Pacific, North America and the North Atlantic until it finally landed in western Europe. New high-altitude records in collecting atmospheric data were attained almost monthly in the tests of several types of rockets and guided missiles. In December the initial experimental firing of a first-stage prototype of the three-stage rocket vehicles, designed to send a 20-in. satellite into its orbit 300 mi. above the earth during the 1957–58 International Geophysical year, reached an altitude of about 125 mi. and gave high promise of new and important atmospheric data to come.

On Sept. 7 a new altitude record for obtaining high-level data by free balloon was established when a plastic bag 180 ft. long rose to a level slightly above 142,000 ft. It was inflated with helium and carried almost 50 lb. of recording equipment and control devices.

Great networks of weather observing stations were planned for the meteorological program in the International Geophysical year. The program provided for six radiosonde stations in Argentina, five in Brazil, four in Chile, two in Peru and three in Venezuela to give upper air data from South American areas which had in the past shown serious gaps in observations of the general circulation and its effects on weather elsewhere, not only in the southern hemisphere but also in the northern. These stations were part of the world-wide system of meteorological stations to be augmented for the special studies in the geophysical sciences during the International Geophysical year. In order to study the causes and characteristics of exchange of air masses between tropical and polar regions and the evolution of zonal flow with its occasional jet streams at very high speeds, the observational networks would provide for five chains of stations along well-spaced meridians, three of these chains extending from north polar to south polar regions. These three were along the meridians 10° E., 140° E. and 80° W. For this purpose it was planned to establish also approximately 60 new meteorological stations in the antarctic which would enable meteorologists for the first time to chart the weather and analyze the outflow

of air from the earth's largest source of cold air.

Through use of larger radiosonde balloons, daily ascents up to 30 km. (about 100,000 ft.) were expected at more than 75 well-distributed stations throughout the western hemisphere. Plans called for similar soundings at stations in other parts of the world operated by one or another of the nearly 50 co-operating countries participating in the International Geophysical year.

The observations in polar regions would include measurements of direct and diffuse solar radiation, net heat flux near the ground and atmospheric ozone, in addition to the regular standard meteorological observations, surface and upper air. At the seven U.S. weather stations in the antarctic there would also be measurements of carbon dioxide and other geochemical components of significance in testing recent theories pertaining to the role of these elements or compounds in inducing changes in climate and possibly in evolution of ice ages. (See also INTERNATIONAL GEOPHYSICAL YEAR, 1957-58.)

Numerical Weather Prediction.—The more comprehensive synoptic weather observations, surface and upper air, anticipated in the International Geophysical year program were urgently needed for further development of the newest and most sanguine phase of modern meteorology, namely the analysis of the general circulation and the forecasting of weather by numerical treatment based on use of the electronic computer. This technique, which had come to the front in meteorological news and popular interest since 1954, was seen likely to bring revolutionary procedures in weather forecasting techniques during the next five to ten years.

Perhaps the most significant work brought out in this branch of the science during 1956 was published in the quarterly journal of the Royal Meteorological society in April. It reported that patterns similar to those of the general circulation of the earth's atmosphere had been for the first time derived mathematically. This experiment demonstrated that the electronic computer could be made to serve in a sense as the "wind tunnel"

long needed by meteorologists for testing hypotheses about the general features of the major wind systems of the globe. The experiment assumed initially an atmosphere at rest. Terms representing latitudinal temperature differences were then introduced together with certain other factors. Although the two-level mathematical model greatly oversimplified the process compared with its mechanism in the free air, it eventually evolved flow patterns similar to those in the general circulation with typical features such as a jet stream and perturbations suggestive of the cyclones in the secondary circulation. This experiment was another confirmation of the part played by cyclonic systems as a driving force in zonal flow. In another experiment based on mathematical treatment it was confirmed that convectional instability, heat of condensation and other factors now neglected because of the complexities in their treatment must be included in the equations if vertical motions and their influence on formation of clouds and rain were to be derived. These two experiments during 1956, each involving many weeks of study and computer model design, were indicative of the future progress to be made by this new technique.

Throughout 1956 numerical weather prediction was used daily by the U.S. weather bureau to produce prognostic charts for guidance of weather forecasters in most parts of North America.

Weather Modification.—Possibly a most important future use of numerical weather prediction was seen in the first tentative computations or estimates of the consequences of large-scale weather modification. In recent years the many claims and promises that had been publicized of plans to regulate all outdoors to suit the desires of man had appealed to popular fancy and many people had come to believe that "weather control" would soon be a practical accomplishment. Few had paused to inquire about the natural consequences of large-scale modification of present weather regimes. In fact, meteorologists could not with assurance foretell, for example, what would eventually evolve from an artificial warming of polar regions designed to reduce the rigours of wind in mid-latitudes and open up the polar lands to easier habitation, cultivation and development. Some of the fairly immediate results were easy to conjecture. If most of the ice covering the arctic regions and Greenland were warmed and melted either by direct artificial heating (atomic energy) or by dusting over vast areas with particles that would have a greenhouse effect on radiation from the sun and lead to general warming of the arctic, one result would be to add water to the oceans and raise sea level everywhere several feet. This would have its effects on port installations all over the world. Moreover, regions like southern California and the Mediterranean that receive much of their water supply from winter rains accompanying the cold fronts of polar air masses which move southward as high-pressure systems would find this source of water much curtailed as a consequence of the reduced temperature contrasts between the tropics and the arctic. Some meteorologists theorized that a warming of polar regions would so modify the general circulation and the water content of the atmosphere that the imbalance would set in motion forces which would eventually make the region colder and could bring on another ice age.

As regards artificial rain making, hailstorm suppression, fog dispersal at airports and other aspects of local weather control, many claims were made during 1956 as in previous years since 1947 when cloud seeding came to be exploited, but conclusive evidence of practical results was still lacking. Cloud seeding appeared to be ineffective in increasing rainfall by significant amounts except under the relatively infrequent conditions of an abundant supply of supercooled clouds in upslope winds which constantly replenished the supply of droplets and in these circumstances rain usually would follow from natural causes without artificial seeding.

"AUNT SUE? HOW'RE YOUR CORNS?" a 1956 cartoon by Dobbins of the *Boston Post* (Mass.)

TORNADO approaching Grand Rapids, Mich., April 3, 1956

The Tucson conference in April had reviewed the exhaustive statistical treatment of results under these special upslope wind conditions. Although the evidence was questioned by some, the statistics seemed to indicate that seeding by silver iodide from ground generators had increased rainfall under these limiting conditions by amounts of 10% or 12% on the average, and perhaps by almost twice this amount in rare cases. There was no evidence to show that this method would be of any value in inducing rain in warm clouds or over flatlands. Thus it was excluded as a practical means for increasing rainfall in the great majority of localities suffering from water shortages. An Australian experimenter reported that he had induced rain to fall from warm cumulus clouds by seeding with water drops discharged in great quantities from aircraft, but the results as rain on the ground where it was needed were inconsequential and the method was relatively costly. Meteorologists in general appeared to believe that cloud seeding offered no hope for relief of water shortages in drought-stricken regions.

Experiments in hailstorm suppression and fog dispersal by artificial means were still being made but results so far did not appear to be economically worth while.

Investigations during the previous year of atomic bomb explosions in relation to weather anomalies had discovered no evidence that A-bombs or H-bombs had increased the number of severe storms or influenced the weather in any large-scale manner as suspected by many people. Nothing found in these studies during 1956 gave any reason to believe that bombs so far exploded anywhere in the world had caused permanent or large-scale changes in weather. With a view to the physiological effects of radioactive debris to be expected in event of hostile bomb attacks, the weather bureau in co-operation with the Federal Civil Defense agency inaugurated regular daily predictions of fallout sectors as determined by the current upper winds in proximity to principal cities.

Droughts, Floods, Hurricanes and Tornadoes.—In total economic losses from various kinds of unfavourable weather and destructive storms, the continuing drought probably exceeded all other bad weather damage in the United States during 1956. Except for spring floods in the Columbia and Sacramento river valleys and a few adjacent streams, the cases of flooding and the flood damage in the United States during the year were below the annual average. Hurricanes were somewhat below the annual average in number and were much below average in intensity and damage except for great destruction in Puerto Rico from Hurri-

cane "Betsy," as shown in Table II. Most of the hurricanes remained at sea, thus doing less damage. Tornadoes, principally during the spring months, caused numerous deaths and destroyed millions of dollars worth of property but their number, severity and destructiveness were not exceptional compared with annual averages. Blizzards and hailstorms also were within the normal limits of annual occurrences in the U.S.

At the close of the year the drought in many of the southwestern states had reached such disastrous proportions that the president of the U.S. planned an inspection tour of the stricken farmlands early in Jan. 1957. The drought's serious effects came not only from below average rainfall during 1956 but also from the many successive years of subnormal precipitation. The water reservoirs for many towns and cities were dangerously low, and river navigation in some stretches of the principal rivers was about to be suspended because of the shallow waters.

New Mexico and western Texas were among the driest states. At Albuquerque, N.M., rainfall had been below normal for the past 11 years and the first eight months of 1956 brought only 52% of normal rainfall for that period. The longest previous record of successive years with below normal precipitation in that locality during the past century was the four-year period 1922-25. At Roswell, N.M., the rainfall had been below normal since 1951 and during the first eight months of 1956 was only 37% of normal. The average annual rainfall for Roswell from 1878 to 1902 was 17.5 in. but from 1902 to 1955 it was slightly less than 12 in. per year. At Fort Bayard, N.M., there had been an average deficiency in rainfall of more than 4 in. per year for the past 12 years with the total amount during that period averaging only 11.3 in. per year. At Santa Fe, N.M., the rainfall during the five-year period 1951-56 averaged 4.2 in. per year below normal. Previous drought periods, none with several year deficiencies as great as this, were 1857-63, with 3.95 in. below the normal, and 1866-73, with 3.8 in. below. At El Paso, Tex., the 1950-56 deficiency averaged 1.4 in. per year compared with a slightly larger average annual deficit of 2.2 in. during the four-year period 1891-94. In studying alternate dry and wet spells it is to be noted that El Paso had four years of wet weather from 1880 to 1884, with average annual precipitation of 14.6 in., followed immediately by a ten-year dry period with average just slightly more than 7 in. per year.

Based on the known past shifts in rainfall patterns some meteorologists saw reason to think that the present long dry spell

Table I.—Some of the Tornadoes and Severe Local Storms in U.S., 1956

Place	Type of storm	Dates	Destructive path	Casualties (persons)	Property damage
Texas	Snow, strong winds	Feb. 1-6	Widespread in northern and central Tex.	20 deaths	More than \$1,000,000
Aberdeen, Miss.	Tornado, hail	Feb. 16	1¼ mi. long, 100-300 yd. wide	1 death, 55 injured	\$500,000 to \$1,500,000
Northern Calif. and Oregon.	Heavy rain and snow, wind	Feb. 19-22	Widespread in northern Calif. and southern Ore.	Few	\$500,000 to \$1,000,000
St. Clair and Clinton counties, Ill.	Tornado, hail	Feb. 25	40 mi. long, 200-500 yd. wide	6 deaths, 20 seriously injured	\$1,500,000 or more
Marion, Ind.	Tornado, hail	March 6	3 to 4 mi. long, 50 yd. wide	1 death, 30 injured	\$1,000,000 to \$2,000,000
New England	Freezing rain, "ice storm," strong winds	March 8	Boston and many other parts of New England	1 death, 20 injured	No estimate (not heavy)
McClain, Creek counties, etc., Okla.	Tornado, heavy rain	April 2	55 mi. long, 300 yd. wide	5 deaths, 100 injured	About \$1,000,000
Cowley Co. and north-eastward through Elk, Coffey counties, etc., Kan.	Tornado, hail, heavy rain	April 2	75 mi. long, 900 yd. wide, average	2 deaths, about 30 injured	More than \$1,500,000
Berlin, Wis.	Tornado	April 3	Varied	7 deaths, 50 injured	\$500,000 or more
Allegan, Kent counties, Mich.	Tornado, hail	April 3	65 mi. long, 300 yd. wide, average	18 deaths, 300-400 injured	\$5,000,000 to \$10,000,000
Henderson Co., Tenn.	Tornado	April 3	20 mi. or more long, variable width	3 deaths, 6 injured	About \$1,000,000
Flint, Mich.	Tornado	May 12	Several miles long, variable width, few hundred yards	6 deaths, more than 100 injured	About \$4,000,000

in the southwest would give way to a wetter period within the next year or two. Sometimes droughts are temporarily relieved by rains from great quantities of moisture carried into the air by tropical cyclones (hurricanes) and subsequently transported northward by winds with the trough of an extratropical cyclone. This occurred in 1952 in portions of Arizona, and again in 1956 when the first small tropical cyclone of the year came from the Gulf of Mexico and passed over the lower Mississippi valley, bringing several inches of rain to dry southern states. See Table III for other data on droughts.

Some Special Features of the Weather During 1956.—

During the first week in January a record-breaking gradient of atmospheric pressure developed over New England, the Canadian maritime provinces and the western North Atlantic. A low that remained almost stationary for several days deepened to a centre reading 29 in. or lower while to the north a very cold polar air mass built up to a central pressure of slightly more than 31 in., the highest ever recorded for that part of eastern Canada. The frontal systems between these air masses brought to the New England and Canadian coastal areas a succession of snow, sleet and freezing rain. Eventually the winds carried colder air into the southern states and warmer maritime air into New England so that the north-south temperature distribution was reversed. In some places in the northeast temperatures were 20° above normal, and in the south, 15° below normal for that season, making the winter weather for a few days actually warmer in the northeast than it was in the southeast. On Jan. 31 a minimum temperature of -70° F. was reported from Verkhoyansk, eastern Siberia, the place long noted as the coldest on record in the northern hemisphere.

During February western Europe had the most severe winter weather in many years. Arctic air was carried southward and westward from the U.S.S.R. and Siberia by the winds of a huge anticyclone over northern Europe and by cyclonic circulation over southern Europe and the Mediterranean. In Austria temperatures were 20° below normal, and in Spain, 10° below normal. Heavy snows occurred in central Europe, Italy and southern France. Millions of olive trees along the Mediterranean were destroyed by freezing. Rivers were frozen for long distances and ice jams had to be freed by explosives. A low temperature of

5° F. was reported in Sicily on Feb. 9. Avalanches from the heavy snows and later thawing in Austria and Yugoslavia caused many deaths. In Australia, near Sydney, the worst floods in the recorded history of that region occurred during February. Twenty inches of rain fell in one night near a village on the Queensland border.

During March 19 heavy snows and blizzard conditions struck most of the northeastern U.S. with 18 to 20 in. of snow recorded in New York city. Winter returned to Europe in April when heavy snow fell in many districts all the way from Denmark to Italy. Florence, It., had its lowest April temperature (3.5° F.) since 1813. Destructive spring tornadoes occurred in the U.S. as shown in Table I. On July 4, Elizabeth, Colo., had a heavy hail storm that piled in drifts four feet deep in some places.

During August unseasonable snow in the Alps necessitated closing of the St. Gothard pass for the first time in 60 years during midsummer. A low temperature of 19° F. was reported in Munich on Aug. 30.

In September Hurricane "Flossy" developed off the coast of Mexico, crossed the Yucatán peninsula and the Gulf of Mexico and reached northwest Florida on Sept. 24. Although it caused many millions of dollars damage to crops and property, it brought about 50,000,000,000 tons of rain to parts of Florida, Alabama and Georgia, enough to replenish dry farmlands and depleted reservoirs.

During Nov. 19 to 22, 1956, heavy snowstorms brought early winter tie-ups in traffic to many parts of the plains states, the Great Lakes region and upper New York state. Snowfall was exceptionally deep in the vicinities of Erie, Pa., and Adams,

Table II.—Hurricanes, 1956

No.	Name	Dates	Places of greatest damage	Remarks
I	Anna	July 25-26	Tampico, Mex.; streets flooded, many houses destroyed	A short-lived storm. Formed in Gulf of Campeche and attained hurricane force for only few hours
II	Betsy	Aug. 9-19	Puerto Rico; many millions of dollars damage, several persons killed. Heavy damage also in Guadeloupe I.	Wind gusts reached 115 m.p.h. Storm first located 1,200 mi. E.S.E. of Puerto Rico. It crossed this island, then curved northeastward and remained at sea
III	Carla	Sept. 5-11	No damage reported on land and damage to shipping at sea was not great	A tropical cyclone but did not reach true hurricane intensity. Formed just north of eastern end of Cuba and moved northeastward at sea
IV	Dora	Sept. 10-12	Vicinity Tuxpan, Mex.; 27 persons killed, extent of damage still unavailable. Did not reach hurricane intensity	Formed in Gulf of Campeche, moved westward into Mexico and dissipated over land
V	Ethel	Sept. 11-13	Remained at sea and damage, if any, was slight	Formed 250 mi. E.S.E. of Miami, Fla., moved northeastward over ocean
VI	Flossy	Sept. 21-29	Northwestern Florida, Georgia and South Carolina; many millions of dollars damage to crops and property, 15 deaths due directly or indirectly to storm	Formed off coast of British Honduras, crossed Yucatán, then turned northeastward and reached Florida-Louisiana coast Sept. 24, then across states and to sea at Cape Hatteras on Sept. 27
VII	Greta	Oct. 30-Nov. 6	Rough seas and high swells on coasts of Dominican Republic, Puerto Rico and Leeward I.; estimated \$2,000,000 damage, 1 death	Formed between Haiti and Jamaica, looped in its path north of Puerto Rico, then moved northeastward to sea

arthage and Copenhagen, N.Y., where amounts ranging from 20 to 40 in. in 36 hours piled drifts up to 7 or 8 ft. high and paralyzed all traffic for a day or more. The meteorological conditions leading to these heavy snow showers were of more than usual interest. Unseasonably cold air from Canada had moved southward across the relatively warm waters of the Great Lakes. This provided the additional moisture and the thermal instability to build up huge cumulo-nimbus clouds and snow showers which were channelled into rather narrow lanes southeast of the lakes by the persistent northwest winds. Localities outside these lanes had much less snow, thus giving large differences in snowfall within distances of a few miles and posing a difficult problem to the forecaster. In December normal seasonal weather returned to most of North America.

Methodist Church. The general conference, the delegated law- and policy-making body of the Methodist Church, was held in Minneapolis, Minn., April 25-May 7, 1956. The 766 delegates, divided equally between ministers and laymen, listened to their bishops' formal message read by Bishop Fred Pierce Corson of Philadelphia, Pa., then divided into legislative committees among which were distributed for study and action a record number (4,986) of memorials, petitioning for changes in policy and organizational changes.

Important actions taken by the general conference accomplished the following: granted full clergy rights to women; changed the 130-year-old official weekly, *Christian Advocate*, to a professional monthly for ministers, to be known as the *New Christian Advocate*; launched a "popular" monthly magazine called *Together*, slanted toward the laity; terminated five "house organs" previously published by church boards and authorized a new periodical, the *Methodist Story*, to combine their functions and to serve general cultivation and promotional purposes; declared "there must be no place in the Methodist Church for discrimination or enforced segregation"; created a 70-member commission to conduct a four-year study of racial segregation and of the church's jurisdictional structure; adopted a twofold emphasis for 1956-60, to improve the organization and general effectiveness of the local church, and to raise \$37,000,000 for the financial support of Methodist schools and colleges; authorized two new theological seminaries, one in Ohio, one probably

Kansas City; appropriated \$1,000,000 to establish on the campus of American university, Washington, D.C., a school for foreign service; endorsed planned parenthood; and provided for 60 new bishops to be elected by overseas central conferences. The ninth World Methodist conference brought 2,500 delegates and official visitors from 40 countries to Lake Junaluska, N.C., Sept. 1-12, 1956. Begun in 1881 and meeting decennially through 1951 (Oxford, Eng.), the 1956 session was the first gathering of representatives of the world's independent Methodist bodies to meet on the new quinquennial schedule.

The 1956 conference was on the theme "Methodism in the Contemporary World." Sixty-five addresses were delivered.

The World Federation of Methodist Women met Aug. 27-31, 1956, also at Lake Junaluska. Previously independent, the federation voted to become a part of the World Methodist council.

The Methodist Church had in 1956 a membership of 9,313,278, not including 1,187,805 preparatory members; 39,854 preaching places; raised \$56,774,061 for benevolences, raised \$384,490,613 for all purposes.

Official totals announced by the secretaries of the World Methodist council for the 27 Methodist bodies comprising that

organization were: members, 18,000,000; constituency, 40,000,000.

(R. SY.)

Mexico. A federal republic of Middle America lying between the United States on the north and Guatemala and British Honduras on the south, Mexico has an area of 760,373 sq.mi. Population (est., 1955) 29,679,000. Capital: Mexico City. Chief cities (pop., 1950 census): Federal District, including Mexico City, 3,050,442; Guadalajara 377,016; Monterrey 333,422; Puebla 211,331; Mérida 142,858; Torreón 128,971; San Luis Potosí 125,662; León 122,726; Ciudad Juárez 122,566; Veracruz 101,221; Tampico 94,345; Aguascalientes 93,358; Chihuahua 87,000; Tijuana 59,952; Saltillo 69,842; Mexicali 64,609; Morelia 63,245; Pachuca 58,658; Culiacán 48,963; Matamoros 45,737. Language: Spanish, with an estimated 6.29% (1940) speaking Indian tongues only. Religion: predominantly Roman Catholic. President in 1956: Adolfo Ruiz Cortines.

History.—Mexico entered 1956 faced with several major challenges, including a 3% annual population increase which was severely taxing the nation's housing, employment, schooling and food resources; expensive rehabilitation programs in Gulf coast and interior regions which had been damaged severely by floods and hurricanes late in 1955, and the marketing of Mexico's cotton crop on what appeared to be a ruinous world market.

As 1956 drew to a close, Mexico appeared to have moved toward a solution of the latter two problems, though the population increase remained to plague the nation's leaders. Pres. Adolfo Ruiz Cortines announced plans to rehabilitate the devastated regions, and for public works projects to reduce the possibility of damage from future storms.

Treasury Minister Antonio Carillo Flores pronounced Mexico healthy economically, noting that reserves had totalled \$410,000,000 at the end of 1955, highest in Mexican history and double the 1954 figure. He also pointed out that much of the fugitive capital which left Mexico following the peso devaluation of 1954 had returned, reflecting a growing confidence in the nation's economy. Among wage earners, however, there was widespread unrest because of rising prices. The cost-of-living index rose from 473 to 548 by the end of 1955 (1939=100).

Antonio J. Bermudez, director-general of Pemex, Mexico's government-owned oil company, announced in Oct. 1955 that Mexico might become self-sufficient in refined petroleum by mid-1956—the goal set after the nation expropriated foreign oil properties in 1938.

Japan and the German Federal Republic, among other countries, made spirited bids for increased trade with Mexico during 1956. Japan held its first industrial fair in Mexico City, and announced its wares in a series of full-page advertisements in the city's daily newspapers. Twenty west German bankers and industrialists visited Mexico to discuss expanded trade, and in 1956, western Germany supplanted Saudi Arabia as Mexico's best customer for silver.

At mid-year the government reported it would spend in 1956 about \$13,520,000 on highway construction and repairs. The marine ministry announced that Mexico had spent \$25,600,000 on "phase one" of its "March to the Sea" program of port development. This two-year phase was concentrated on bettering facilities in 16 major ports. Navy Minister Gomez Maqueo said that another \$25,000,000 would be expended by 1959 in the second phase, the development of numerous small harbours along the Gulf and Pacific coasts.

In public health, a campaign to wipe out malaria was announced. In co-operation with the United Nations International Children's Emergency fund and the World Health organization, Mexico planned to spend \$20,000,000 (of which Mexico would

supply \$12,000,000) over a five-year period. The campaign would concentrate on areas where about 16,000,000 persons were exposed to the threat of malaria.

The Mexican statistics bureau announced that half of all children between the ages of 6 and 14 would be unable to attend school in 1956 because of classroom shortages and predicted that the dilemma would become even worse.

Even more grave, however, was the disproportion between population increase and capital available for investment, according to Clemente Serna Martinez, president of the Confederation of National Chambers of Commerce. More capital must be invested to provide jobs for Mexico's growing working force, and to halt the exodus of Mexican labour to jobs in the United States.

Under a migrant labour contract with the United States, extended to Dec. 31, 1956, Mexico reduced its quota of migrant labourers to 200,000. This was a decrease of 80,000 from the 1955 total. Mexican farm operators protested that they did not have enough workers to harvest their own crops, and urged the government to halt the flow of *braceros* to the United States.

A 77-day student strike at the National Polytechnic institute, widely regarded as communist-inspired, was halted when President Ruiz Cortines met with a student committee to discuss reorganization plans for the institute. The president reportedly rebuked the students for the protracted strike which demanded, among other things, dismissal of the U.S.-educated director. He was too strongly U.S.-oriented, some students contended, but he was not dismissed.

(C. D. HE.)

Education.—In 1952 there were 25,613 primary schools with 75,958 teachers and 2,925,933 pupils; 544 secondary schools with 14,528 teachers and 85,663 pupils; 87 normal schools with 2,658 teachers and 13,281 pupils; and 591 technical schools with 11,704 teachers and 78,506 pupils. In 1951 the 39 institutions of higher learning, including 14 universities, had 7,350 teachers and 54,457 students. According to the 1950 census, 37.7% of the total population was illiterate. In 1954, only half the children of school age were in attendance.

Finance.—The monetary unit is the peso, valued at 7.99 cents U.S. currency during 1956. The 1956 budget totalled 6,700,000,000 pesos, about 49% of which was earmarked for economic development. Ordinary government revenue in 1955 was 7,000,000,000 pesos. According to the president's annual message to congress on Sept. 1, 1956, the public debt totalled 7,452,000,000 pesos on June 30, 1956, of which the domestic debt was 3,223,000,000 pesos, foreign debt 1,445,000,000 pesos and international credits for Nacional Financiera, S.A., 2,784,000,000 pesos. Currency in circulation (May 31, 1956) was 4,776,000,000 pesos; demand deposits, 5,720,000,000 pesos. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$599,000,000. The cost-of-living index (Mexico City) stood at 126 in Aug. 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled 7,772,984,294 pesos; dutiable imports, 9,899,458,591 pesos; imports entered in free trade zones, 1,147,620,032 pesos. Leading exports were cotton (30%), coffee (13%), lead (8%), petroleum and products (8%) and copper (7%); leading dutiable imports, machinery, apparatus and tools (29%), metals, minerals and manufactures (19%) and chemicals and drugs (13%). Leading customers were the U.S. (74%), Japan (6%), the U.K. (4%), Germany (4%) and the Netherlands (2%); leading suppliers, the U.S. (77%), Germany (4%), Canada (4%), the U.K. (3%) and Italy (2%).

Total railway mileage (1951), including auxiliary lines, was 14,575. All-weather highways (Dec. 31, 1954) totalled 16,155 mi.; dirt roads, about 62,000 mi. On Jan. 1, 1954, there were 253,354 automobiles, 179,564 trucks and 19,898 buses. According to *Lloyd's Register of Shipping*, the merchant marine had 67 vessels (100 tons and over) aggregating 171,979 tons on June 30, 1955. Telephones (Jan. 1, 1955) numbered 348,679.

Agriculture.—Production estimates in 1955-56 included maize 2,893,000 metric tons; wheat 825,000 tons; rice (rough) 179,000 tons; coffee 1,400,000 bags of 132 lb. each (exports 1955: 1,390,000 bags); cotton 2,250,000 bales of 500 lb. gross weight each (exports 1955: 352,420 tons); oranges and tangerines 17,637,000 boxes of 70 lb. each; limes 2,260,000 boxes of 80 lb. each; tobacco (1955) 83,775,000 lb.; henequen 209,400,000 lb. Sugar production included an estimated 917,000 tons of centrifugal sugar and 120,000 tons of *piloncillo*.

According to U.S. department of agriculture estimates, there were 16,000,000 cattle, 5,300,000 sheep and 7,900,000 pigs on Jan. 1, 1956; in Dec. 1952 (UN estimates) there were 3,000,000 horses, 9,000,000 goats, 1,000,000 mules and 2,800,000 donkeys.

Manufactures.—Production figures for 1955 included cement 2,050,000 metric tons; pig iron 327,600 tons; steel 525,600 tons; cotton yarn 5,880 tons; woven cotton fabrics 33,360 tons; wheat flour 383,800 tons; paper 171,698 tons; sulphuric acid 124,306 tons, tires 893,000 units. Installed electric energy capacity at the end of 1955 totalled 1,930,000 kw.; production (1955) was 7,000,000,000 kwhr.

Minerals.—Production in 1955 (excluding coal, petroleum and sulphur) totalled 1,041,303 metric tons valued officially at 3,520,802,997 pesos. Most important were zinc 269,399 metric tons; lead 210,815 tons; copper 54,676 tons; silver 47,956,548 fine oz.; gold 382,874 oz.; mercury 1,030

tons; iron ore (metal content) 429,246 tons; cadmium 1,295 tons; manganese 35,807 tons; antimony 3,818 tons; bismuth 351 tons; graphite 29,341 tons; tin 615 tons; tungsten 341 tons. In 1955, 89,400,000 bbl. of crude petroleum and 3,409,974,226 cu.m. of natural gas were produced. Coal production was 1,339,200 metric tons; sulphur (from all sources) 520,800 tons. (J. W. Mw.)

Michigan. One of the north central group of states of the United States, Michigan was the 26th state admitted to the union; it is popularly known as the "Wolverine state." Land area: 58,216 sq.mi. (excluding 39,960 sq.mi. of Great Lakes water surface); pop.: (1950 census) 6,371,766; (July 1, 1956, est.) 7,516,000. Of the state's population in 1950, 70.7% was urban and 29.3% rural; whites composed 92.9% of the population, nonwhites 7.1%. Capital: Lansing (pop. 1950 census) 92,129. Larger cities were (1950 census): Detroit, 1,849,568; Grand Rapids 176,515; Flint 163,143; Dearborn 94,994; Saginaw 92,918.

History.—At the time of the preliminary adjournment of the 1956 state legislature on April 7, Democratic Gov. G. Mennen Williams, acknowledging that the Republican legislature's accomplishments afforded "more reason for joy than he had anticipated," remarked that several important problems had been left unsolved, among them a school-aid formula which would provide equal opportunities for school children of rich and poor districts alike; the need for a vast expansion in the state parks program; the improvement of sanitation and housing standards for migrant workers; more and better mental and chronic health facilities and sufficient manpower to operate them. Fourteen bills, in fact, were left over for action at the reconvening of the legislature on May 10. Among them, three important appropriation measures, relating to capital outlay, mental health and public health, respectively, provoked inter-chamber disputes, but ultimately the legislature decided to appropriate \$40,000,000, \$60,000,000 and \$16,000,000, respectively, for these purposes. With *sine die* adjournment on May 12, total appropriations had reached a record \$329,500,000.

The budget was balanced without the imposition of new taxes, despite an over-all total of \$765,000,000 and a general budget of about \$330,000,000 (both figures establishing new highs). The list of measures adopted included an increase in old-age pensions from \$70 to \$80 per month; the removal of the boys' vocational school from its crowded quarters in Lansing; stiffer penalties for the distribution of obscene literature; a rewriting of the state milk law; the appropriation of \$217,000,000 for a school-aid program; and the setting up of machinery to convert Wayne university (hitherto controlled by the city of Detroit) into a state institution. Among the measures rejected were bills to take the state out of the retail liquor business; to restore capital punishment; to prohibit political contributions by labour unions; to give the vote to 18-year-olds; to provide pensions for legislators; to establish a \$1.25 minimum wage; and to revise the industrial safety law.

Governor Williams called the legislature into special session on June 13, to deal particularly with three issues: correction of a bond issue provision in the 1955 highway construction law; increases in the amount and duration of unemployment compensation benefits; an appropriation to avert the use of convict labour in the completion of a new prison at Ionia. The first of these issues was speedily disposed of. However, the governor's proposal to increase unemployment compensation benefits and to lengthen the maximum period met with sharp opposition. On June 15, the legislature adjourned for five days; on June 20, it recessed until July 17; on July 18, after passing a law expanding the state's polio vaccination program, it recessed until Aug. 9 (two days after the primary election). On Aug. 10, the Republican majority,

Agriculture.—Estimated production of ten major field crops in 1956 was 2% above the 1945-54 average, but 5% below the high outturn of 1955. The indicated total tonnage of the seven fruit crops was one-fifth above average and one-fourth above 1955. The field grain tonnage was expected to be 15% below the 1955 record production, reflecting mostly the lower oat acreage and yield. There were near-record crops of apples, grapes and pears.

Manufacturing.—Michigan's chief industry, automobile manufacturing, experienced a considerable decline in production during 1956, particularly during the early and middle months of the year. For the first six months total production was 25% lower than for the corresponding period in 1955. Unemployment was accordingly high, approximately 200,000 in the automobile industry alone, over a considerable period, but tending to decrease somewhat in the fall. (L. G. V. V.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Michigan in 1953 and 1954 whose value exceeded \$100,000. In 1954 Michigan was first among the states in salt output with 25% of the national total, second in iron ore output, third in bromine, stone and titanium output. The state rated 14th in the value of its mineral output, with 2.01% of the U.S. total.

Middle Eastern Affairs. The year 1956 was one of the most eventful years in the recent history of the middle east. The previous year had weakened the western position in the eastern Mediterranean, because the conflict between Greece and Turkey regarding the future of the island of Cyprus disrupted the Balkan alliance between Greece, Turkey and Yugoslavia. This conflict continued unabated throughout the year 1956. The weakening of the Balkan alliance undermined also the strength of NATO (the North Atlantic Treaty organization) in the middle east, for in the Cyprus dispute Britain and Turkey on the one hand and Greece on the other hand occupied opposite sides, though all three were members of NATO. Nor did the Middle East Defense organization (MEDO), to which Britain, Iraq, Iran, Pakistan and Turkey belong, show in 1956 any effective progress. The organization was conceived to form a connecting link with the Atlantic alliance in the west through Turkey, and with the Southeast Asia Treaty organization (SEATO) to the southeast through Pakistan, and so to complete the system of western defense. The premier of Iraq, Nuri es-Said, was regarded as the most reliable friend of the west in the Arab world. At the beginning of 1956 there had been hope that other middle eastern Arab countries would join and strengthen the MEDO, but this hope was not realized.

Opposition to the Middle East Defense Organization.—The leadership of opposition to MEDO—i.e., opposition to a prowestern attitude among the Arabs—was assumed in the middle east by Egypt. Under Egyptian pressure the two most probable candidates for joining MEDO, Lebanon and Jordan, refused their co-operation. To counteract Iraq, Egypt entered into military pacts with Syria and Saudi Arabia. By a treaty signed in Damascus, Syria, on Oct. 20, 1955, Egypt and Syria established a joint command for peacetime and wartime of all their forces, including the troops stationed on the Palestine frontiers. The commander in chief of the unified command was to be responsible to a supreme council composed of the ministers of foreign affairs and defense of the two countries. Later in the same month a similar agreement was concluded between Egypt and Saudi Arabia. In a meeting which took place in Dec. 1955 in Riyadh, the capital of Saudi Arabia, under the chairmanship of King Saud, it was decided to appoint Maj. Gen. Abd el-Hakim Amer, Egyptian war minister, as commander in chief of the joint forces.

The struggle for Arab leadership between Egypt and Iraq centred in the beginning of 1956 on the kingdom of Jordan. Jordan's ruler was a cousin of the king of Iraq, and Jordan had had throughout its existence close treaty relations with Great Britain, from which Jordan received an annual subsidy of about \$33,000,000. A British effort to make Jordan adhere to the

MEDO led to nation-wide riots which forced the Jordanian government to affirm its opposition to joining any western-sponsored alliance. As a result of popular pressure the British commanding officer of the Jordanian Arab legion, John (later Sir John) Bagot Glubb, was abruptly dismissed on March 2, 1956. With this step the formerly very great British influence in Jordan came practically to an end. The new commander of the Arab legion, Gen. Radi Inab, inclined toward close co-operation with Syria and Egypt.

The Iraqi minister of the interior, Said Kazaz, the most influential member of the cabinet after the premier, explained Iraq's position in an interview on April 3, 1956; he said that Iraq felt more strongly than any other Arab state the danger of communism, because it was situated much closer to the "iron curtain." He believed that antiwestern feeling in Iraq was found only among a small minority and that it was caused by the Palestine problem. "The work of responsible people is to defend the country from Communists and from Zionism," Said Kazaz declared. "As long as you have 1,000,000 refugees living in misery, the feeling will exist and will gain strength. This is the root of all recent disorder in the middle east." In order to mitigate the bitter tensions between Israel and its Arab neighbours and to help stabilize the turbulent middle east, the secretary-general of the United Nations, Dag Hammarskjöld, in the spring of 1956 visited the middle east on behalf of the United Nations.

Communist Influence in the Middle East.—The growing prestige of Egypt as potential leader of the Arab world was strengthened by the support which the Soviet Union gave to the Egyptian premier (later president), Gamal Abdel Nasser. Nasser originally followed a policy of neutralism; he rejected any ties to the western powers and hoped—co-ordinating his efforts with those of India and Yugoslavia—to maintain a balance of power between the western world and the Soviet bloc. During 1956, however, Egypt became more and more estranged from the west and drew more closely to the communist orbit. Egypt had hoped for some time to receive arms from the west, but when these arms were not forthcoming Egypt accepted armaments from communist-dominated countries. With the armaments, technicians and instructors from communist lands arrived. Simultaneously Egypt's trade with eastern Europe and with communist China expanded, and many cultural missions were exchanged between Egypt and communist countries. Encouraged by communist sympathies as well as by those of other Asian and Afri-

an peoples, Nasser became the chief mover in a campaign to just all western influence from the middle east.

Egypt formed the centre of moral and material support for the North African movements of independence from France. In 1956 the French position in North Africa became seriously undermined. France had to recognize the sovereignty of its former protectorates Tunisia and Morocco, which became members of the United Nations, while in Algeria great French military efforts were unable to suppress the widespread Arab revolt and to re-establish orderly French rule. Similarly the tenuous remnants of British influence in the middle east, which had been dominant there in the period between World Wars I and II, practically vanished with the evacuation of the last British troops from the Suez Canal Zone and with the removal of British leadership from the Jordanian Arab legion. Nasser, on the other hand, was indefatigable in his efforts to strengthen his leadership in the Arab and Mohammedan world. The new Egyptian constitution of 1956 for the first time proclaimed Egypt to be an integral part of the Arab world.

Nasser regarded Egypt as the keystone of an Arab federation including all the lands from Morocco to the border of Iran and from the Mediterranean in the north to the southern borders of the Sudan, and although both Morocco and Iraq were hesitant to recognize Nasser's leadership, his position was enhanced by the new strength which the Egyptian army had gained with communist help and by the establishment of the joint command which united the armies of Syria and Saudi Arabia under Egyptian leadership.

The Suez Canal Conflict.—Nasser's regime had hoped for western financial help for the building of a high dam at Aswan to harness the Nile river in an effort to expand Egypt's agricultural area and thus to combat the poverty of the Egyptian masses. Although this western help had been promised, the United States abruptly withdrew its offer, and with similar abruptness the Egyptian government surprised the world by seizing full control of the Suez canal on July 26, 1956, and announced that profits from the waterway would be used to build the high dam at Aswan. Nasser promised that the stockholders of the Universal Suez Maritime Canal company, mostly French and British, would be repaid and that the great waterway would be kept safely open for international navigation. Nasser's announcement of the seizure of the Suez canal provoked sharp protest from Great Britain and France. The protest was directed not so much against the nationalization of the assets of the Suez Canal company as against the unilateral control of the internationally important waterway by Egypt alone. The Suez Canal company was organized in Egypt in 1856 under a franchise to build the canal and to operate it until 1968, when all its assets were to pass to Egypt. In a convention signed at Constantinople in 1888 all the great powers joined in guaranteeing the free, open and secure use of the canal without discrimination, for all time.

In a joint statement of Aug. 2, 1956, the United States, Britain and France did not question Egypt's right to exercise full sovereignty over the canal zone, including the right of nationalization of foreign property. But they expressed their apprehension that Egyptian operation of the canal threatened the freedom and security of passage through it. The British government, in order to assure the continuity of the operation of the canal as guaranteed by the convention of Oct. 29, 1888, consistent with legitimate Egyptian interests, sent out an invitation for a conference of all interested countries to meet in London on Aug. 16, 1956. Twenty-two nations participated in this conference, and 18 of them agreed to ask Egypt to enter into negotiations for the establishment of an international agency to operate the canal. Four countries—the U.S.S.R., India, Indonesia and Ceylon—refused to join in the decision. The 18 nations selected a committee

of five under the chairmanship of Robert Gordon Menzies, the Australian prime minister, to visit Cairo and to negotiate with Egypt. The mission failed in its purpose. The Egyptian government insisted that Egypt was willing and able to control the Suez canal operation alone and to guarantee not only free passage but also smooth transit for all ships. The resignation of French, British and other European pilots seemed to weaken Egypt's position, but by the end of September the expectation of the Egyptian government of being able to handle the canal traffic seemed borne out by the fact that the convoys were running smoothly through the shallow and narrow waterway under the guidance of mostly Egyptian pilots.

France and Britain took a very serious view of Egypt's action. France especially was worried lest the much-increased prestige of Nasser throughout the Arab world would make the maintenance of French rule in North Africa more difficult. French and British circles demanded energetic action. Both countries concentrated armed forces in the middle east. The United States tried to achieve the common purpose of assuring international operation of the waterway by peaceful means, and if need be by economic pressure. Upon the suggestion of the United States, representatives of the 18 governments that joined in the proposals submitted by Menzies to, and rejected by, the Egyptian government, met in London on Sept. 19, 1956, and decided to establish a Suez Canal Users' association. This association, it was declared, had the purpose to promote safe, orderly, efficient and economical transit through the canal of vessels of member nations; to seek the co-operation of the Egyptian authorities for this purpose; to receive and disperse revenues from the dues which any users of the canal might pay to the association; and finally to study means that might render it feasible to reduce dependence by the seafaring nations on the canal. At the same time the two main parties to the issue—the British and French governments, on the one hand, and Egypt on the other hand—informing the United Nations Security council of the situation that had arisen. The matter was under the consideration of the United Nations when, on October 29, 1956, Israeli forces started

"THE CHALLENGE," a 1956 cartoon by Haynie of the Greensboro Daily News (N.C.)

an invasion of Egypt and within a few days drove across the Sinai peninsula almost to the Suez canal. (For these and subsequent events, see *SUEZ CANAL CONFLICT*; *UNITED NATIONS*.)

Arab Unity.—Most observers believed that there lay ahead in the middle east a long period of instability, which might prove dangerous to western interests, while the Soviet Union could only gain from it. In 1956 the Russians seemed to have achieved what they had hoped for during the last century, a strong foothold in the strategically important middle eastern area. Of even greater significance for the future was the effect upon the middle eastern peoples of the position which the U.S.S.R. had assumed as spokesman for their interests; thus the Russians had come to be regarded as the friends of Egypt and of the Arab world. The conflict between Egypt and the western countries had solidified Arab support of Egypt; the long-sought goal of Arab unity, though not yet achieved, seemed nearer at the end of 1956 than at any preceding time. The accord for united action signed between Egypt, Syria and Saudi Arabia in Cairo in March 1956 was strengthened in many ways during the succeeding months. A military alliance between Egypt, Saudi Arabia and Yemen was signed in Jidda, Saudi Arabia, on April 21. In September Nasser flew again to Saudi Arabia to meet there with Saudi Arabian and Syrian leaders. The communiqué issued after the conference stated that "It gave a great deal of its attention to consolidating Arab security, warding off the Israeli threat and taking such steps as to complete the Arab policy drawn up in Cairo so that its implementation may continue with resoluteness and determination. . . . The conference supports Egypt fully in every attitude she takes and also backs Egypt's declared readiness to reach peaceful settlement that would safeguard Egypt's national interests and conform with the aims of the United Nations."

In mid-September King Saud of Arabia and the young King Faisal of Iraq met for the first time, and the meeting was believed to prepare for a reconciliation of and future co-operation between the two dynasties, which for many decades had been separated by a bitter family feud. One of the main elements cementing Arab unity at the end of 1956 was the Arab countries' growing fear of and hostility toward Israel and their desire to come to the help of Jordan in its conflict with Israel. At the end of Sept. 1956 the unrest on the Israel-Jordan frontier again reached dangerous dimensions and aggravated the general unrest in the middle east; thus in 1956 the area promised to form one of the west's chief concerns and the main immediate battleground between western and Soviet interests.

Nor was the problem of Cyprus brought nearer to a solution by the end of 1956. The talks which the British governor general, Field Marshal Sir John Harding, had conducted for five months were terminated without success at the end of February, and on March 9 Archbishop Makarios (*q.v.*), the political and spiritual leader of the Greek community on the island, was arrested and deported by the British government, which suspected him of backing the terrorists in Cyprus. The Turkish government continued to oppose strongly any step by which Britain would surrender its sovereignty over Cyprus. It regarded such a step not only as a threat to the position of the Turkish minority in the formerly Turkish possession but even more as a threat to the strategic security of nearby Turkey. A change in the political status of Cyprus, the Turks claimed, would upset the delicate balance established by the treaty of Lausanne, which after many centuries of bitter conflict had made peace between Greece and Turkey possible.

Migration: see *IMMIGRATION, EMIGRATION AND NATURALIZATION*; *REFUGEES*.

Migratory Labour. The migration of workers from state to state to plant, cultivate and harvest the agricultural crops of the United States began about the beginning of the 20th century. But it was not until World War I that migrants began to be recognized as a significant source of seasonal farm labour. In the beginning, single men followed the grain and the fruit harvests of the middle west and the west coast. Later the migratory group began to include families, and many destitute dust-bowl farm families became migrants in the 1930s. During World War II the demand for seasonal workers increased and southern Negroes and their families swelled the ranks of the migrant workers.

There is no accurate count of agricultural migrants, but it was estimated that in 1956 there were in the United States approximately 650,000 migrant workers and their families, including Americans of Mexican origin, Negroes, Puerto Ricans and, in smaller numbers, native whites. Of these it was estimated that about 150,000 were nonworkers; *i.e.*, young children and aged persons. Relatively large-scale specialized agricultural production requires during short peak seasons more workers than can be recruited locally. The migrant helps to fill this gap. Among the crops for which migrants are used in large numbers are cotton, sugar beets, and small fruits and vegetables, such as strawberries, asparagus and beans. The migrants are recruited through the Farm Placement division of the state employment services, through crew leaders who contract to supply a series of employers with needed labour, or directly by the farmer himself.

There are four principal routes of migration in the United States: one along the east coast starting in Florida and moving with the fruit and vegetable crops as far north as New York and back to Florida. Another begins in Texas and travels to the north central and mountain states for work in sugar beets and in the vegetable and fruit harvests, returning to Texas in the late fall. The third route also begins in Texas and moves westward to the cotton fields of Texas and California and back to Texas for winter crops. The fourth, a west coast line, flows from southern California to Oregon and Washington, and back again to southern California in the late fall.

Migrant agricultural workers labour under many disadvantages. Their work is irregular, subject to interruptions caused by weather and crop conditions. They work for many employers for short periods. They lack the protection of labour laws. They do not have the protection of workmen's compensation laws if they are injured at work or of unemployment insurance if they are out of work. They must travel long distances during the season, and their transportation is often by truck, uncomfortable and frequently unsafe. Housing for the seasonal worker is often unsatisfactory and inadequate, and they have no choice as to where they will live. Too often the migrant and his family are crowded into labour camps, without adequate sanitary facilities, screens or proper cooking equipment. The health, welfare and other community services available to the community are usually denied to the migrant because of the restrictions of residence laws.

One of the most serious aspects of migratory labour is the effect upon the children. To eke out low family earnings, even very young children work in the fields with their parents. Although the employment of children under 16 years during school hours has been reduced appreciably by the enforcement of the Fair Labor Standards act and the child-labour laws of some states, neither the federal act nor most state laws apply to employment

side school hours. Moving from place to place during the school year, the children's educational progress is impeded. Some states receive these children in the public schools but in some nonresident children are not admitted and in others the compulsory school law is not enforced for migrants because of the lack of school facilities, difficulties of adjusting the school curriculum, or because of an unwillingness to have the migrant children in the local schools. At best most of them are retarded in their school progress; at worst they receive no schooling at all. In 1950, Pres. Harry S. Truman appointed the President's Commission on Migratory Labor. The report and recommendations submitted by this committee greatly stimulated interest in the migrant.

In 1950 the National Council on Agricultural Life and Labor was organized by church, labour and farm groups to serve as a clearing house on the problems of migrants and to encourage action in behalf of the migrant on the part of federal and state legislatures.

In 1954, Pres. Dwight D. Eisenhower appointed the President's Committee on Migratory Labor. This is a continuing committee of cabinet status with a work group made up of representatives of the departments represented on the committee. The objective of this committee is to provide a co-ordinated federal approach to the full utilization of existing resources in the extension of programs and services for migrants. In addition to its co-ordinating function, the committee through its working group deals with specific problems such as housing and transportation. In 1956 suggested standards for labour camp codes and for safe transportation were developed and made available to the states as a guide for action. The committee through its constituent federal agencies worked closely with the state agencies and with other interested groups in other ways to improve the working and living conditions of migrants and their families.

By 1956, 12 states had official state migratory labour committees. In a few of the other states, though no official committee had been appointed, there had been governmental investigations and recommendations that resulted in some community action. In many states throughout the country state agencies co-operated with county or local committees in developing programs to meet migrants' needs and many communities planned and carried out such programs on their own initiative. These actions provided the evidence that a beginning had been made in breaking down the indifference to migrants.

Mindszenty, Joseph (1892—), cardinal and primate of Hungary, was freed from Communist captivity in 1956 after eight years of imprisonment. He was released on Oct. 30 by Hungarian revolutionary forces during their abortive revolt against soviet control. Almost immediately, however, the cardinal was forced to take refuge in the Soviet embassy at Budapest, Hung., when soviet troops overran Hungary, ruthlessly crushed the rebellion and installed a new pro-Soviet puppet government.

Joseph Cardinal Mindszenty was born March 29, 1892, at Gimindszent, Hung., of peasant parents, adopting his surname from his native town; his family name was Pehm. Ordained to the priesthood in 1915, he was named bishop of Veszprém, Hung., in March 1944 and archbishop of Strigonia (Esztergom) the following October. He was created cardinal, with 31 others, at the papal consistory of Feb. 18, 1946, in Rome, It. During World War II he had defied the German occupational authorities and had been imprisoned for four months in 1944 for speaking against the nazi-

sponsored government of Hungary. Under the communist regime that seized control of Hungary in 1947, Cardinal Mindszenty was to undergo worse treatment. On Dec. 26, 1948, he was arrested on charges of treason and "espionage on behalf of the imperialists" and subjected to six weeks of interrogation. After a mock trial in Budapest in Feb. 1949 he was sentenced to life imprisonment by the Communist tribunal in Budapest. In 1955 he was reportedly offered his freedom in return for a promise not to preach publicly in Hungary, but he declined. Following his liberation, he appealed to the United Nations for immediate aid to Hungary against Soviet oppression, declaring that "a man who is drowning needs (more than) messages."

Mineral and Metal Production and Prices.

After the fine record experienced in 1955 in the production of minerals and metals in the United States, a levelling off was expected in some quarters. However, with respect to many commodities, including all of the principal metals, production in 1956 was even greater than in 1955. There was increased demand for all of the main metals, such as aluminum, copper, lead, zinc, iron and steel. Aluminum consumption had in fact become so large that the search for new sources of bauxite was greatly accelerated. On July 16, 1956, the U.S. extended the suspension on duty of bauxite for another two-year period.

Canadian interests were proceeding with expansion of the Jamaican bauxite facilities at a cost of \$28,000,000, to meet the needs of the Kitimat smelter. Jamaica's target was 543,000 tons annually by 1957.

In India, there was activity, both government and private, in all kinds of mineral production, especially petroleum, but also manganese, iron, coal and steel.

The feasibility of building an alumina reduction plant on the Coroni river in Venezuela was being studied.

The demand for copper remained strong during the year, and the United States was trying to improve its techniques of treating and mining its low-grade copper ores. This policy extended also to iron, manganese and lead.

Studies were made on mineral taxation and many tax proposals were examined by the U.S. bureau of mines in co-operation with the treasury department to determine their effects on mineral industries.

There were many strikes in the various metal plants and mines but none seriously interfered with the total output for the year. At one time a strike idled about 40% of the aluminum capacity, and production was said to have been reduced by 59,000 tons, but before the end of 1956 some of this was made up. The strikes were settled and new three-year pacts were made in the copper, zinc, lead and aluminum plants. There was also a steel strike which shut down 90% of the mills during the month of July.

It was believed that mergers of the coal companies would benefit both operators as well as workers. This was a new viewpoint for labour but such mergers would lessen competition within the industry and enable it to present a united front. The coal industry faced increasing competition from gas and oil fuels as well as from atomic energy and water power.

Copper prices were highest in 1955 since 1865, and they rose still higher in 1956. Prices of most of the other mineral and metal commodities also rose during the year.

An excellent table on world production of minerals by hemispheres (eastern and western) was compiled in the division of foreign activities of the U.S. bureau of mines (see *Mineral Trade Notes*, Jan. 1956).

(See also GEOLOGICAL SURVEY, U.S.; and separate articles on the various mineral commodities for further details.)

Mineralogy. During the year 1956 the following new minerals were described: nekoite, a calcium silicate, Ca₃S₁₆O₂₁H₁₂, from Crestmore, Calif., by J. A. Gard and H. F. W. Taylor (*Mineralogical Magazine*, xxxi:15-20 [London]); tavorite, hydrous lithium iron phosphate, LiFe(PO₄)(OH) and barboselite, hydrous iron phosphate, Fe^{III}Fe^{III}₂(PO₄)₂(OH)₂, both from the Sapucaia mine, Minas Gerais, Braz., by M. L. Lindberg and W. T. Pecora (*American Mineralogist*, 40:952-966); abernathyite, a uranium mineral, K(UO₂)(AsO₄)·4H₂O, from the Fuefrol No. 2 mine, Emery county, Utah, by M. E. Thompson, Blanche Ingram and E. B. Gross (*ibid.*, 41:82-90); osumilite, a complex silicate, from Sakkabira, Kyusyu, Jap., by Akoho Miyashiro (*ibid.*, 41:104-116); coffinite, a uranous silicate, probably U(SiO₄)_{1-x}(OH)_{4x}, from uranium deposits in the Colorado plateau, by L. S. Stieff, T. W. Stern and A. M. Sherwood (*ibid.*, 41:675-688).

The third and fourth parts of the interesting "Jade Story—European" by Elsie Ruff were published in *Journal of Gemmology*, vol. v, pp. 141-152 and 274-291 (London, Eng.). In his article "Emerald" (*ibid.*, vol. v, pp. 185-221), Robert Webster discussed in great detail the lore, nature, occurrences and the imitation and synthesis of the gem mineral. The results of a comprehensive investigation of the mineral chalcedony were reported by C. R. Pelto (*American Journal of Science*, vol. 254, pp. 32-50). The high temperature and pressure methods developed by the General Electric company were applied and were described by R. H. Wentorf, Jr., in "The Formation of Gore Mountain Garnet and Hornblende" (*ibid.*, vol. 254, pp. 413-419).

The following texts were published: *Mineral Facts and Problems*, Bureau of Mines Bulletin 556 (Washington, D.C.). More than 50 authorities contributed to this encyclopedic volume. *The Microstructures of Diamond Surfaces*, by S. Tolansky (London); *Petrographic Mineralogy*, by E. E. Wahlstrom (New York); *Microscopic Petrography*, by E. W. Heinrich (New York); *My Hobby Is Collecting Rocks and Minerals*, by D. E. Jensen (New York); *Echt Oder Synthetisch?*, by K. F. Chudoba and E. J. Gübelin (Stuttgart, Germany).

The November-December, 1955, issue of the *American Mineralogist* (40:945-1155) was dedicated by his colleagues and friends to Edward Henry Kraus of the University of Michigan on the occasion of his 80th birthday in recognition of his services to mineralogy, the Mineralogical Society of America, and the University of Michigan. Kraus was chairman of the organization committee and first president of the Mineralogical Society of America, and its honorary president since 1954. Aside from the dedication article by W. F. Hunt (pp. 945-951), the publication also contained other articles on a wide range of subjects.

Arthur F. Buddington of Princeton university was selected to receive in 1956 the Washington A. Roebling Medal of the Mineral Society of America. The society also designated Julian R. Goldsmith of The University of Chicago as the recipient of its annual award for 1955 for meritorious achievement by a young scientist, and George C. Kennedy of the Institute of Geophysics of the University of California at Los Angeles for the 1955 award. (See also MINERAL AND METAL PRODUCTION AND PRICES.

(E. H. KR.)

also under various minerals.

Minnesota. A north central state, admitted to the union on May 11, 1858, Minnesota includes the northernmost land in the United States—the northwest angle. Minnesota is variously known as the "land of the sky-blue waters," "land of 10,000 lakes," "North Star state" and "Gopher state." The water area covers 4,059 sq.mi. of its total area of 84,068 sq.mi. Population: (July 1, 1956, est.) 3,241,000; (1950 census) 2,982,483, of which 54% lived in cities of 2,500 or more. The three largest cities were (1950 pop.): Minneapolis 521,718; St. Paul, the capital, 311,349; Duluth 104,511. Next in size were Rochester 29,885; St. Cloud 28,410; Winona 25,031; and Austin 10,000.

History.—Minnesota's economy, particularly industrial development, was marked by steady expansion during 1956. Though farm prices remained depressed, gross farm income maintained level about \$8,000,000 above that of 1955 as the year drew to close. Personal income reached an all-time high at \$5,500,000, an increase of 7% over the previous year. Nonagricultural employment also set a record of 918,000 in Sept. 1956. In 1950 dollar value of manufactures exceeded cash farm receipts for the first time in the state's history. The spread in favour of manufactures continued to widen in 1956, a clear indication that manufacturing was gaining a more influential position in the state's economy.

Visible signs of industrial growth were the establishment of a Remington Rand UNIVAC plant in St. Paul, a large International Business Machines plant in Rochester and the erection of a \$5,000,000 plant in Breckenridge of Spencer Kellogg & Sons, Inc., for processing soybeans and flax.

The supreme court of Minnesota invalidated the major reorganization act of 1955 because of a far-reaching clerical error in the printing of the bill. Gov. Orville L. Freeman's administration undertook a "Minnesota self-survey," a top-to-bottom analysis of the management, personnel, operating procedures and needs of the state government.

In the general election on Nov. 6, Dwight D. Eisenhower carried Minnesota with a plurality of about 100,000 out of a total vote of 1,340,000. An unusual feature of the election was that approximately 80,000 more Minnesotans voted for state offices than for president. The Democratic-Farmer Labor party succeeded in re-electing all but one of the incumbents in its state administration. They were: governor, Orville L. Freeman; lieutenant governor, Karl F. Rolvaag; secretary of state, Joseph L. Moovan; attorney general, Miles Lord. The one exception was ex treasurer Arthur Hansen, who was defeated by a Republican, Val Bjornson. The lone Republican among the chief state officials, Stafford King, state auditor, and the U.S. senators, Edward J. Thye (Rep.) and Hubert H. Humphrey (Dem.-F.L.), were not subject to election during 1956. All nine members of the U.S. house of representatives from Minnesota (five Democratic-Farmer Labor and four Republican) were re-elected. Two were state supreme court justices Leroy E. Mattson and William P. Murphy. (R. W. F.)

Education.—Approximately \$297,194,038 was spent for education by the 3,364 public-school districts in Minnesota for 1955-56. This amount provided for 368,885 pupils in 3,364 elementary schools, 228,078 in 658 secondary schools, 3,358 pupils in area-vocational schools, 1,711 in 9 junior colleges and 78 in 5 teacher training departments. These pupils were taught by 13,798 elementary teachers, 11,393 secondary teachers, 198 teachers in area-vocational schools, 125 teachers in junior colleges and 5 teachers in teacher training departments. In addition, five teachers' colleges were operated from public funds. For the support of these public elementary and secondary schools, the state contributed \$79,599,445 revenue from state funds and the state income tax. Dean M. Schweickhard was commissioner of education.

Public Insurance and Assistance, Public Welfare and Related Programs.—In June 1956 about 93,758 persons received financial assistance, which amounted to \$61,362,895 for the 1956 fiscal year. As of March 31, 1956,

there were 18,799 children receiving services from public welfare agencies. Children receiving services from physicians under the Minnesota Crippled Children's program during 1954 totalled 4,782.

About 640,000 workers were covered by the Minnesota Employment Security law during 1955. Their wages amounted to \$2,365,531,000 for the year. An estimated \$21,777,921 was paid in unemployment compensation benefits during 1955.

In Sept. 1956 the state prison and two reformatories had a total of 2,032 inmates. June counts showed the eight state mental hospitals as having 11,156 patients, the unit for alcoholics 196 inmates and the six units for mentally deficient and epileptic 5,086 patients. Gillette State Hospital for Crippled Children had 130 patients. As of Sept. 1956 the two special schools for the blind and deaf had 364 pupils.

On June 30, 1956, 386 inmates at the state reformatory for men at St. Cloud were the responsibility of the Youth Conservation commission. Of this number, 54 were in the diagnostic centre and 332 in the reformatory proper. On June 30 also, there were two young women at Shakopee who had been committed to the Youth Conservation commission.

In addition, there were 52 young men who had been committed through the criminal courts of the state who were then in residence at the Willow River Forestry camp, and 22 committed by the juvenile courts who were at the Thistledeew Lake Forestry camp.

Communications.—The systems of highways and streets maintained by various governmental units as of Jan. 1, 1956, totalled 122,757 mi. These included 11,817 mi. of state trunk highways, 43,598 mi. of county roads, 55,437 mi. of township roads, 9,222 mi. of municipal streets in addition to those on the trunk highway system, and 2,683 mi. of state and national park, forest and institutional roads. Fiscal year (ending June 30, 1956) expenditures for construction and maintenance of the trunk highway system, including right of way, totalled \$71,691,369. There being no indebtedness, investment of available unencumbered cash brought \$1,226,313 in interest to the highway funds.

As of Dec. 31, 1954, railroad main-line trackage totalled 8,328 mi. for the 22 railroads operating in the state. Another 4,350 mi. was reported for other tracks—second main line, siding, yards and switching tracks.

Of the 436 airports in the state, 97 were municipally owned, 19 were public seaplane bases, 23 were public airports privately owned and one was a military airport—at Camp Ripley. There were also 296 private landing fields.

Banking and Finance.—Minnesota's 680 state and national banks reported total resources of \$3,972,062,949 on June 30, 1956, compared with \$3,873,249,500 for 681 banks on June 30, 1955. Represented were 499 state banks, 1 mutual savings bank and 3 trust companies reporting deposits of \$1,308,079,942, an increase of \$51,840,942, and resources of \$1,428,055,949, an increase of \$60,733,949. Deposits for 177 national banks were \$2,289,180,000, a decrease of \$530,400, with resources totalling \$2,544,007,000, an increase of \$38,079,500.

The 76 state- and federal-chartered savings, building and loan associations reported resources of \$880,227,893 in 1956 as compared with \$754,298,245 the previous year. This represented 39 state-chartered associations with resources of \$203,930,694 and 37 federal savings and loan associations with resources of \$676,297,199.

The 352 state-chartered credit unions reported assets of \$65,307,492 as of Dec. 31, 1955, and the federal credit unions had \$4,467,984 in assets.

Net disbursements of the state government totalled \$579,466,243.51 for the fiscal year ending June 30, 1956, compared with \$532,836,605.10 in 1955. Total state indebtedness in bonds and certificates was raised by a net of \$264,451 during the year to \$83,774,017 as of June 30, 1956. The four principal state trust funds totalled \$283,439,639 as compared with \$262,486,282 in 1955. Individual balances were as follows: internal improvement land \$394,401,881; swampland \$24,485,025.73; permanent school \$214,948,942.13; permanent university \$43,611,266.55.

Agriculture.—Minnesota farmers received \$1,247,344,000 during 1955 from crops, livestock and livestock products, thereby retaining the rank of fifth among states. Of this total cash income, \$846,495,000 came from the sale of livestock and livestock products, while the remainder of \$401,049,000 was derived from the sale of crops.

Manufacturing.—Minnesota's estimated manufacturing employment was 227,746 in Sept. 1956, a 3% increase over 1955. Weekly earnings averaged about \$79.94. Wages in manufacturing industries covered by unemployment

compensation totalled \$905,936,000 in 1955. Value added by manufacturing in 1954 was \$1,604,731,000.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Minnesota in 1953 and 1954 whose value exceeded \$100,000. In 1954 Minnesota led the states in production of iron ore and was tenth in the value of its mineral output, with 2.52% of the total U.S. mineral output.

Missions, Foreign (Religious). The slow but steady growth of the Christian churches in Japan continued in 1956, but less than 1% of the population was enrolled. In South Korea rapid increase in the numbers of Christians, both Roman Catholic and Protestant, continued, but it was accompanied by sharp divisions among the Presbyterians, the largest of the Protestant denominations. Nothing was heard of the Christians in North Korea. Some contact was resumed between the Protestants of China and the Christians of other countries. Bishop Manikam of a Lutheran church in India, and a recent secretary of the International Missionary council and the World Council of Churches, visited churches on the Chinese mainland; at the request of fellow bishops of the Anglican communion on the mainland, Bishop Hall of Hong Kong met with them in Shanghai; and Archbishop Mowll of the Church of England in Australia, and a former missionary in China, accepted an invitation to visit the mainland. In the summer of 1956 Bishop K. H. Ting of the Anglican communion in China attended several Christian gatherings in Europe. However, it appeared that the Protestant leaders in China did not wish resident missionaries; and the government continued to induce the Catholics to form a church independent of Rome. It also coerced small Protestant groups which dissented from that larger body of Protestants which co-operated with the Communist regime.

On Formosa a mass movement toward Christianity among the aborigines continued, and churches were growing among the Chinese who had come from the mainland.

Before the end of 1956 about two-thirds of the 1,200,000 Catholics in north Vietnam had migrated to south Vietnam to escape Communist rule, and their resettlement had been largely accomplished. In February and March 1956 important conferences were held in Bangkok, Thailand, by Protestants. One of them concerned theological education in southeast Asia. Difficulties were experienced in obtaining visas for missionaries, whether Catholic or Protestant, to enter Indonesia, Burma and India, and in India a report adverse to missions was made by a government commission which had been appointed to study the situation. Missionaries and churches in Egypt were disturbed by a government ruling which required instruction in Islam to Moslem pupils in Christian schools, provision in each of those schools for a mosque for Moslem worshippers and a holiday on Friday, the Moslem sacred week day.

In Africa south of the Sahara the striking growth persisted

AUCA INDIAN of Ecuador, a member of a primitive tribe that killed five evangelists in Jan. 1956. The photograph, taken by one of the missionaries, shows the model aeroplane and machetes given to the Aucas in an attempt to establish friendly relations

in the numbers of Christians, both Catholic and Protestant, which had been a feature of recent years. The Philippines and at least three countries in South America saw a phenomenal burgeoning of Pentecostal and Assemblies of God groups of varied origin. It was not new, but it was becoming more striking; and much group leadership was indigenous. Similar groups were multiplying in southern Italy.

The emphasis in Protestant circles upon theological education was maintained, and found expression not only in east and south-east Asia and Africa, but also in Madagascar. On a global scale, the World Council of Churches and the older International Missionary council, for several recent years in close co-operation, moved toward integration. If it were achieved, the International Missionary council would be absorbed by the World Council of Churches and the latter would give even more attention than formerly to the world-wide missionary enterprise. (K. S. L.)

Mississippi. A southern state of the U.S., admitted to the union in 1817, Mississippi is popularly known as the "Magnolia state." Area: 47,716 sq.mi. (47,248 sq.mi. land and 468 sq.mi. water): pop.: (1950 census) 2,178,914, (July 1, 1956 provisional est.) 2,124,000. Capital: Jackson (1950 est.) 98,271. Other cities of more than 20,000 population: Biloxi 37,425; Greenville 29,936; Gulfport 22,659; Hattiesburg 29,474; Laurel 25,038; Meridian 41,893; Natchez 22,740; Vicksburg 27,948. Of the state's population in 1950, 607,162 or 27.9% were urban.

History.—The elected officials of the state for 1956–60 were: governor, J. P. Coleman; lieutenant governor, Carroll Gartin;

retary of state, Heber Ladner; attorney general, Joe E. Patton; state treasurer, Robert D. Morrow; auditor of public accounts, E. B. Golding; superintendent of public education, W. L. Tubb; commissioner of insurance, Walter Dell Davis; state collector, William F. Winter (appointed to fill unexpired term on death of Mrs. Thomas L. Bailey in April); state land commissioner, Robert E. Graham; supreme court clerk, Tom Q. Hays.

From January to March 1956 the legislature passed all but one of Governor Coleman's many requested bills. His recommendations that failed were repeal of the "black market" liquor law (Mississippi is a legally dry state), a 30-day limit on special sessions, and an open door policy designed to admit the press to observe operation of all state agencies.

Governor Coleman vetoed a record 41 bills, including one forbidding investigations by the Federal Bureau of Investigation of civil rights violations, a bill to appropriate \$5,000 to buy white supremacy books, another to require that the white supremacy oath be taught in the schools, another to tighten libel laws and a bill that would have halted tax exemptions to churches hindering integration. Two important racial segregation bills were vetoed. One was a resolution of "interposition" stating that the state could interpose its laws to counteract the U.S. supreme court segregation decisions. The other bill set up a state sovereignty commission as a "watchdog group" to preserve segregation and to explain Mississippi's position to the nation. The highway bond was voted money to expand. A \$10,000,000 bond issue for colleges and universities put the state in debt for the first time in 24 years.

Some dissident Democrats and States Righters split from the party to put up their own slate of electors in November, pledged to elect U.S. Sen. Harry Byrd of Virginia for president and Rep. John W. Williams of Mississippi for vice-president. Mississippi Republicans also were divided. The "Lily White" faction walked out of the G.O.P. convention but returned later to share votes with the rival "Black and Tan" group. The rivals later split again to put separate groups of electors on the ballot.

Mississippi voted for Adlai E. Stevenson over Dwight D. Eisenhower, 144,498 to 60,685. Of the Republican votes, 4,313 were cast for the "Black and Tan" ticket. States Righters ranked third with 42,966 votes. The Republican vote was the largest in Mississippi's history. The state also approved a constitutional amendment to allow the legislature to set the same day for paying ad valorem taxes and buying auto tags.

Education.—In 1955-56 there were 769 white elementary schools in Mississippi and 1,563 Negro elementary schools, a total of 2,332. The enrollment in elementary schools was 449,576 of whom 212,241 were white and 237,335, Negroes. The state had 463 approved white high schools and 173 approved Negro high schools. The enrollment of these approved high schools and enrollments in nonaccredited schools gave a total enrollment of 96,418 in 1955-56. There were 10,200 elementary and high school teachers (including superintendents and principals), and 7,030 Negro elementary and high school teachers (including superintendents and principals), a total of 17,230 teachers. The total enrollment in white elementary and high schools was 775,744; in Negro elementary and high schools, 270,250.

Public Insurance and Assistance, Public Welfare and Related Programs.—In July 1, 1955, to June 30, 1956, the state department of public welfare in Mississippi paid \$24,119,870 to 78,976 recipients of old-age assistance; \$1,602,732 to 4,200 recipients of aid to the blind; \$3,800,417 to 69 families for aid to dependent children; and \$1,002,007 to 4,513 recipients of aid to the permanently and totally disabled. The state-county plan of foster home care for children maintained 484 children in 214 homes at a cost of \$132,320.14.

Communications.—As of June 30, 1956, the state maintained 8,289.5 mi. of highways; the counties maintained approximately 53,032.6 mi. In the year 1955-56 the state maintenance expenditures were estimated at \$1,220,50. The maintenance expenditures on county highways were \$50,514.49. The total mileage of railroads in the state on Dec. 31, 1955, was 3,838.28.

Banking and Finance.—On June 30, 1956, there were 170 state banks in Mississippi with 26 branch banks and 62 branch offices; there were 27 national banks. The resources of state banks were \$748,636,741.55 and the deposits were \$683,545,024.80; the resources of the national banks were \$292,579,464.14 and the total deposits were \$268,541,013.56. As of June 30, 1956, there were no bonds against the full faith and credit of the state of Mississippi and the highway bonds payable from the gasoline

tax amounted to \$69,546,000 as of the same date. The total receipts for the state of Mississippi for the year ended June 30, 1956 were \$200,731,239.36 and the total expenditures of the state for that fiscal year were \$193,942,551.51.

Agriculture.—The 1954 census reported 215,915 farms of a total 20,702,412 ac. In 1955 the total harvested acreage of principal crops was 5,333,000 ac. In 1955 receipts from farm marketings were \$554,119,000 of which \$402,014,000 were from crops and \$152,105,000 were from livestock products; the value of farm products consumed in farm households was \$79,568,000.

Manufacturing.—Mississippi gained 13 new industries in 1956 through Nov. 6, employing a total of 2,715 people. (A. B. Bu.; W. D. B.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities in 1953 and 1954 whose value exceeded \$100,000. In

1954, Mississippi was second among the states in output of bentonite (14%) and ranked 25th in the value of its mineral value, with 0.79% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

Missouri. A west north central state of the United States, popularly known as the "Show Me" state. Area: 69,674 sq.mi., of which 448 sq.mi. are water. Pop.: (1950 census) 3,954,653 (61.5% urban, 38.5% rural; 90.2% white, 9.8% nonwhite); (July 1, 1956, est.) 4,255,000.

Capital: Jefferson City (1950 census) 25,099. Largest cities (1950 census): St. Louis 856,796; Kansas City 456,622; St. Joseph 78,588; Springfield 66,731; University City 39,892; Joplin 38,711; Independence 36,963.

History.—On Jan. 24, 1956, a constitutional amendment was approved by the voters providing for a \$75,000,000 bond issue, the proceeds to be used for repairing and rebuilding present state buildings and for new construction of the penal and correctional institutions, mental hospitals and institutions of higher learning.

The 68th general assembly convened in extra session on Feb. 27, 1956, and adjourned on April 27, 1956. It appropriated and allocated the \$75,000,000 authorized by the constitutional

amendment adopted on Jan. 24, 1956. The assembly also proposed an amendment to the constitution, to be submitted to the voters on Nov. 6, 1956, authorizing the investment of state funds not needed for current operating expenses in short term U.S. obligations or interest-bearing time deposits.

In the general election on Nov. 6, 1956, the popular vote for president gave Adlai E. Stevenson a narrow margin over Dwight D. Eisenhower, 919,000 to 914,000. The vote for U.S. senator was Thomas C. Hennings, Jr. (Dem., incumbent), 1,015,936, Herbert Douglas (Rep.) 785,048. Ten Democrats and one Republican were elected to the U.S. house of representatives.

In the same election James T. Blair, Jr. (Dem.), defeated Lon Hocker (Rep.) for governor by more than 75,000 votes. The other state officers elected were also Democrats: Edward V. Long, lieutenant governor; Walter H. Toberman (incumbent), secretary of state; M. E. Morris, treasurer; and John M. Dalton (incumbent), attorney general. Haskell Holman (Dem.), state auditor, who was elected in 1954, continued in that office; the election for state auditor would not be held until 1958.

As a result of the election on Nov. 6, 1956, both houses of the state legislature continued Democratic, the house of representatives consisting of 93 Democrats and 64 Republicans, the senate of 21 Democrats and 13 Republicans. The voters also approved the constitutional amendment proposed in the extra session of the 68th general assembly.

Education.—For the school year ended June 30, 1956, the public school system consisted of 2,001 districts operating elementary schools (excluding kindergarten), with 539,060 pupils and 18,256 teachers; 574 districts operating secondary schools, with 167,729 pupils and 7,317 teachers. Hubert Wheeler was state commissioner of education.

On Nov. 30, 1956, 17,799 veterans were enrolled in universities, colleges and other schools in the state, 2,318 were receiving training on the farm and 1,449 were taking on-the-job training.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ended June 30, 1956, unemployment insurance totalled \$20,780,094, paid to about 105,034 persons. For the year ended June 30, 1956, old-age assistance amounted to \$78,220,706, aid to dependent children \$17,051,415, general relief \$3,118,375, pensions for the blind \$256,487, aid to the blind \$2,918,880 and aid to the disabled \$8,361,923. In June 1956, 129,248 persons received old-age assistance, 20,383 families (54,406 children) aid to dependent children, 9,164 general relief, 342 blind pensions, 4,456 aid to the blind and 13,367 aid to the disabled.

During the year ended June 30, 1956, the state penitentiary had an average of 3,427 inmates per day, the intermediate reformatory (Alcoa) 525; and the expenditures of these institutions amounted to \$3,096,767. For the year ended June 30, 1956, the three state training schools (Boonville, Chillicothe and Tipton) had an average population of 333 boys (white) and 130 girls (106 white, 24 Negro); and for the same period their expenditures totalled \$742,072, in addition to \$89,371 for the office of the state director and placement department of the training schools. On Sept. 1, 1956, the training school for girls (white) at Chillicothe and the training school for girls (Negro) at Tipton were combined on one campus—the training school for girls at Chillicothe.

Communications.—On Dec. 31, 1956, Missouri had 24,115 mi. of state highways and 74,778 mi. of rural roads. During 1955 the state highway commission spent \$105,062,085 (state and federal funds), of which \$71,592,790 was for construction and \$18,026,858 for maintenance. Early in 1955 railroad mileage totalled 6,732. On Dec. 21, 1956, there were 102 public airports. There were 1,464,679 telephones in use on Dec. 31, 1956.

Banking and Finance.—On June 30, 1956, Missouri had 509 state banks with deposits of \$2,799,272,000 and resources (loans and investments) of \$2,635,455,000; 76 national banks with deposits of \$1,611,704,000 and resources (loans and investments) of \$1,589,530,000. On June 30, 1956, there were 117 state chartered savings and loan associations with resources of \$476,703,797, and 40 federal savings and loan associations with resources of \$483,584,103.

During the fiscal year ended June 30, 1956, receipts in all state funds totalled \$388,381,232, plus transfers of \$141,522,418; disbursements, \$385,686,411. General revenue receipts for the same period were \$161,436,775, of which \$99,582,192 was derived from the sales tax and \$35,389,808 from the income tax. On June 30, 1956, the balance in the state treasury was \$145,946,182. The state debt (road bonds) on July 1, 1955, was \$6,500,000, and on June 30, 1956, \$3,000,000.

Agriculture.—During 1955 cash income from crops and livestock was \$932,614,000 and cash income from government payments was \$8,831,000. The value of Missouri's 1955 crops, harvested from 13,550,000 ac., was \$608,736,000; the value of the 1956 crops was estimated at \$662,916,000. During 1956 the production of corn was the largest since 1948, the production of wheat the largest since 1919 and the production of soybeans the largest on record. The seed and hay crops were reduced by the 1956 drought.

Manufacturing.—The average number of persons employed in manufacturing industries in 1953 was 405,061, an increase of 26,803 over 1952 (revised figures). Salaries and wages in 1953 totalled \$1,552,445,000; in

1952 (revised figures), \$1,360,676,000. The value added by manufacture of products in 1953 totalled \$2,786,829,000, compared with \$2,422,709,000 in 1952 (revised figures).

Mineral Production.—The estimated total value of all mineral production in Missouri for 1956 was \$159,235,000. The total value of all mineral production in the state for 1955 was \$151,073,022, for 1954, \$130,392,000, and for 1953, \$128,297,000. (R. P. Br.)

ENCYCLOPÆDIA BRITANNICA FILMS.—Middle States, 2nd ed. (1955).

Mitchell, James Paul (1900—), U.S. government official, was born at Elizabeth, N.J., on Nov. 12. He attended New York university but did not graduate, beginning work instead with the Western Electric company at Kearny, N.J., and becoming personnel manager of the company in 1936. Later he was named a special labour adviser to the director of the Works Progress administration in New York state, and from 1942 to 1945 he was director of the U.S. army service forces' division of industrial personnel in Washington, D.C. He then returned to private business, as director of personnel and industrial relations for R. H. Macy & Co., New York city department store. In 1947 he was elected vice-president of Bloomingdale Brothers department store in New York city. On April 6, 1953, Pres. Dwight D. Eisenhower appointed Mitchell assistant secretary of the army in charge of manpower and reserve affairs. On the following Oct. 8 Eisenhower named him secretary of labour.

In a speech before the annual convention of the American Federation of Labor at Los Angeles, Calif., on Sept. 20, 1955, Mitchell berated the A.F. of L. for its failure to make "an objective appraisal of the Eisenhower administration's achievements" in behalf of U.S. labour. Relations between Mitchell and the A.F. of L. and the Congress of Industrial Organizations were somewhat strained thereafter. On Feb. 1, 1955, the A.F. of L.

Executive council accused him of tolerating violations of minimum wage rates on government construction projects—a charge Mitchell promptly denied. Mitchell also urged a 90-cent hourly national minimum wage, against the \$1.25 minimum asked by F. of L. and C.I.O. officials.

He opposed federal intervention in the national steel strike the summer of 1956.

Mohammedanism: see ISLAM.

Mollet, Guy Alcide (1905–), French statesman, was born at Flers, Orne, Dec. 31. He joined the Socialist party in 1921 and in 1932 was elected secretary of the Fédération de l'Enseignement, a Socialist teachers' trade union. At that time he was teacher of English at the Arras lycée. Mobilized in Aug. 1939, he was wounded and made prisoner of war in June 1940 and repatriated in Feb. 1942. He engaged in resistance activities and at the end of World War II emerged as captain of the F.F.I. (French forces of the interior). In 1945 he was elected mayor of Arras and in Sept. 1946 became secretary-general of the French Socialist party. He was elected to the constituent assembly of 1945 and 1946 and from Nov. 1946 sat in three successive national assemblies. He was minister of state in the Léon Blum cabinet (Dec. 1946-Jan. 1947) and in the René Plevin cabinet (July 1950-March 1951). He failed to form a government in March 1951 and served as deputy premier in the Henri Queuille cabinet (March-July 1951). On Jan. 31, 1956, he formed a coalition cabinet of Socialists and Radicals. In May he visited Moscow, and on June 5, at Luxembourg, he signed with Konrad Adenauer, Federal German chancellor, an agreement on political integration of the Saar with the German Federal Republic. After the seizure of the Suez canal in July, he denounced Pres. Gamal Abdel Nasser of Egypt as an imitator of Hitler. On Sept. 10–11, after the failure of the Eisenhower mission to Cairo, he conferred in London with Sir Anthony Eden. He was again in London on Oct. 30, when an Anglo-French ultimatum was sent to Cairo.

Molybdenum: see MINERAL AND METAL PRODUCTION AND PRICES.

Monaco. A sovereign principality on the Mediterranean coast, 9 mi. E. of Nice, Monaco is bounded on all land sides by the French département of Alpes-Maritimes and united to France by customs union. Area: 0.6 sq.mi. Pop. (1956 census): 20,422, including 2,696 Monegasques, 11,209 French, 4,490 Italians, 655 British and 1,372 others, wholly divided between the three communes Monaco-Ville, Monte Carlo and La Condamine. Language: French. Religion: Roman Catholic. Sovereign, Prince Rainier III; minister of state, Henri Soum, a French civil servant; president of the national council, Louis Aureglia.

History.—The historic event of 1956 was the marriage of Prince Rainier to Grace Kelly, the U.S. film actress. The civil wedding took place on April 18 and the religious ceremony the following day, in the Roman Catholic cathedral of St. Nicholas in Monte Carlo. The marriage was solemnized by the bishop of Monaco, Msgr. Barthé, in the presence of the papal legate to France and representatives of 24 countries. Guards of honour were provided by the Monegasque army (160 men) and by detachments from the British, French, Italian and U.S. navies.

The public interest in the wedding was great; journalists alone, from all over the world, numbered 1,380. This overwhelmed the palace and its public relations officers. Special stamps of eight values were issued and were on sale for one day only: April 19.

After the religious ceremony Prince Rainier and Princess Grace Patricia left Monaco in their honeymoon yacht, the "Deo Juvante II." They came ashore at Pollensa, Majorca, on April 22. On May 12 they were in Madrid, where Gen. Francisco Franco invited them to lunch at El Pardo palace. They returned to Monaco at the end of May, and on Sept. 11 they arrived in New York, remaining in the United States until November. In August it was announced that Princess Grace was expecting a baby.

Finance.—Budget (1954 est.): revenue 2,121,371,000 fr.; expenditure 2,512,555,000 fr.

Money Markets: see BANKING.

Mongolian People's Republic. This people's republic of eastern Asia is bounded north by the U.S.S.R. and east, south and southwest by China. Area (1954 Soviet est.) 591,119 sq.mi. Pop. (1956 est.; no census ever taken): 1,000,000. Language: Mongol. Religion: Lamaistic Buddhism. Capital: Ulan Bator, pop. (1956 est.) 120,000. First secretary of the Mongolian People's Revolutionary (Communist) party in 1956, D. Damba; chairman of the presidium of the great khural, Z. Sambu; chairman of the council of ministers, Yumzhaghiyin Tsedenbal.

History.—A. I. Mikoyan, first vice-chairman of the Soviet council of ministers and a member of the presidium of the Communist party of the Soviet Union, visited Mongolia in April 1956. Negotiations were conducted in Ulan Bator between representatives of the Soviet and Mongolian governments on "the further consolidation of the economic relations between the two countries."

An agreement was signed by Mikoyan and Tsedenbal on assistance during 1956–60 by the U.S.S.R. to Mongolia in building houses in Ulan Bator with a total domestic floor space of 430,500 sq.ft. It was decided to transfer to Mongolia the Soviet-Mongolian joint stock company, the Ulan Bator railway, as well as the narrow-gauge railways Solovyevsk-Bayan-Tumen and Choibalsan-Tamtsak-Bulak, with all service buildings, installations and rolling stock.

In August it was announced in Peking that Communist China had given Mongolia a grant-in-aid of 160,000,000 tugriks for the construction of a textile factory, a glass factory and a paper mill, as well as roads, bridges and other public works. More than 10,000 Chinese came to Mongolia in 1955 to help fill manpower needs in industry, agriculture and building construction.

For the first time a U.S. correspondent, Jack Raymond of the *New York Times*, and Lisa Larsen, a *Life* magazine photographer, were granted visas to visit Mongolia in August. Mongolian officials confirmed to them that more than 25 years earlier forced collectivization of herdsmen, who comprise 75% of the population, had been abandoned by the regime. Only 20% of the great herds of horses, cattle, camels, yaks, sheep and goats, totalling 27,000,000 head, had been included under the collectivization program.

Mongolia applied for membership of the United Nations but its application failed to find support of the Security council.

Education.—Schools (1953): primary 377, higher primary 31, secondary 24, vocational 16, pupils (all schools) 80,000. Teachers' training colleges 3; secondary teachers' training institute at Ulan Bator. Mongolian State university at Ulan Bator with 1,300 students.

Finance.—Budget (1953): balanced at 436,700,000 tugriks; three-quarters of expenditure invested in national economy and cultural development. Monetary unit: tugrik at par with the Soviet rouble.

Transport and Communications.—Railways (1956): about 1,180 mi. Highways (1955): about 3,000 mi.

Economy.—Livestock (1955): more than 22,000,000 head of cattle, sheep, horses and camels. Coal extraction at the Nalaikha basin (1953): about 300,000 metric tons.

Montana. A northwestern state of the United States, popularly known as the "Treasure state," Montana was admitted to the union on Nov. 8, 1889, as the 41st state. It is the largest of the northwestern states and the third largest in the United States, with an area of 147,138 sq.mi., including a water area of 1,260 sq.mi. The population by the 1950 official census was 591,024. The urban population was 258,034 or 43.7% compared with 37.8% in 1940. Of the state's total population, 572,038 or 96.8% were white, of whom 528,919 were native-born. Other racial groups totalled 18,986, with 16,606 Indians and 1,232 Negroes. The July 1, 1956, U.S. bureau of the census estimate of population was 638,000. The population of the principal cities (1950 census) was: Helena, the capital 17,581; Great Falls 39,214; Butte 33,251; Billings 31,834; Missoula 22,485; Bozeman 11,325; Anaconda 11,254; Kalispell 9,737; Miles City 9,243; Havre 8,036.

History.—Incumbents in the principal elective state offices, whose terms were to expire in Jan. 1957, were: J. Hugo Aronson (Rep.), governor; George M. Gosman (Rep.), lieutenant governor; S. C. Arnold (Rep.), secretary of state who was appointed by Governor Aronson in June 1955 for the unexpired term of Sam W. Mitchell (Dem.); Arnold H. Olson (Dem.), attorney general; Edna Hinman (Rep.), treasurer; John J. Holmes (Dem.), auditor; Mary M. Condon (Dem.), superintendent of public instruction.

The Montana legislature regularly meets only in odd-numbered years and there was no session in 1956. A second "Little Hoover commission" set up by the legislative assembly in 1955 was given an appropriation of \$40,000 and charged primarily, in the light of rising expenditure demands, to study the state's tax structure during the interim between the 1955 and 1957 sessions. The 12-member commission, six senators and six representatives, was quickly organized, held a number of preliminary meetings, and asked that all types of industries and trade organizations present their tax studies. Payment of the commission's travel expenses, however, was blocked by the attorney general and the secretary of state, who constituted a majority of the three-man board of examiners, and a district court order was secured preventing the state auditor from processing claims against the commission's \$40,000 appropriation. After struggling unsuccessfully for a year

to begin its job, the commission was declared unconstitutional by the Montana supreme court by a vote of three to two.

The controversial oil and gas lease law permitting oil and gas leases on state lands "for a primary period of 10 years, and as long thereafter as oil and gas in paying quantities shall be produced thereunder," received increasing attention as the 1956 political campaign progressed. Enacted by almost unanimous majorities of both houses of the legislative assembly in 1953, this law was attacked by the attorney general as a "give away law" and was declared unconstitutional by the Montana supreme court by a vote of three to two, on the ground that it violated the federal enabling act under which Montana became a state. The case was then appealed to the United States supreme court, which reversed the Montana supreme court decision. According to Montana law, money from oil and gas leases and bonuses is used for the public schools and stoppage of this source of revenue during the two-year period of court litigation resulted in a loss of from \$5,000,000 to \$10,000,000 for the state school fund.

In the Nov. 1956 general election, Montana gave its electoral votes to Pres. Dwight D. Eisenhower. The following were elected to the principal state offices: governor, J. Hugo Aronson (Rep.) (re-elected); lieutenant governor, Paul Cannon (Dem.); secretary of state, Frank Murray (Dem.); attorney general, Forrest H. Anderson (Dem.); treasurer, Horace F. Casey (Dem.); auditor, John J. Holmes (Dem.) (re-elected); superintendent of public instruction, Harriet Miller (Rep.). A constitutional amendment prohibiting the use of money raised for highways for any other purpose was approved by the voters.

Education.—During the school year 1955-56 there were 1,210 public elementary schools in the state with 4,064 teachers and an enrolment of 94,267 pupils. The number of public high schools was 176 with 1,701 teachers and 31,403 students. The total cost of operating public elementary and secondary schools for the fiscal year 1955-56 was \$40,106,405, not including expenditures of \$9,351,091 for capital outlay, and \$6,517,208 for debt service. In addition to the public schools, there were 61 private elementary schools with 346 teachers and 12,736 pupils, and 18 private high schools with 178 teachers and 3,074 students.

Social Insurance and Assistance, Public Welfare and Related Programs.—Approximately 20,000 persons received public assistance in Montana during the fiscal year 1955-56. Grants totalling \$12,503,320 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (8,818) \$6,131,975; aid to dependent children (families 2,001, children 5,357) \$2,539,349; aid to needy blind (436) \$340,551; aid to disabled (1,429) \$1,104,665; general assistance (806) \$346,441; medical care \$476,935; hospitalization \$1,489,145; burial \$74,259. Unemployment benefits of \$3,869,687 were paid to 16,949 persons an average of \$23.58 per week for 12.12 weeks, or \$267.11 per claimant. Correctional institutions with their average populations and total expenditures for 1955-56 were: Montana state prison, 567 inmates, \$437,850; state industrial school, 113 inmates, \$246,267; vocational school for girls 56 inmates, \$123,874.

Communications.—As of July 1, 1956, the total road mileage of Montana was 72,925, of which 9,944 mi. were classified as state highways. The local road system, rural and municipal, totalled 62,981 mi. with 14,250 mi. surfaced with oil or gravel. During the fiscal year 1955-56 the state highway commission spent \$29,339,694, including federal aid funds, of which \$19,039,768 was for construction and \$10,299,926 for maintenance and administration. Municipal, military and forest service airports totalled 139, and there were 320 privately owned airfields used by farmers and ranchers within the state. There were 1,093 registered aircraft, and 1,471 registered air pilots. Motor vehicle registrations on Aug. 31, 1956, amounted to 221,869 passenger cars, 94,984 trucks and 22,086 trailers. The railway mileage was 5,241. The number of telephones, including 23,600 for Rural Electrification administration and connecting companies, was 200,530. There were 81 weekly newspapers and 15 dailies.

Banking and Finance.—Montana's 113 state and national banks reported total resources of \$722,603,288 on June 30, 1956, compared with \$696,393,811 on June 30, 1955. The resources of the 73 state banks were \$364,397,521 and their deposits were \$323,265,402. Resources for the 4 national banks totalled \$358,205,767, with deposits of \$335,149,819. During the fiscal year Montana banks increased loans throughout the state by \$43,000,000. Building and loan associations numbered 15 with resources of \$52,267,836, a growth of 310% since World War II, and a gain of \$6,285,932 over the previous year. For the fiscal year 1955-56 treasury receipts for the state totalled \$112,438,087 and disbursements \$109,243,111. The state's bonded debt on Aug. 1, 1956, was \$37,780,000 as compared with \$36,780,250 a year before.

Agriculture.—The 1956 agricultural outlook for Montana was grim during the first part of the growing season, because of continued cold and dry weather. The prospect brightened somewhat when rainfall in July measured a little above normal for the state as a whole, but this was insufficient to promote recovery of crops injured by dryness in large areas of central and eastern Montana. Forecasts by the U.S. department of agriculture

Table I.—Principal Crops of Montana

Crop	Indicated 1956	1955	Average 1945-54

are indicated a smaller yield than in 1956 for all of the crops of Montana, with the exception of potatoes, and in the majority of cases even lower yields than for the ten-year average 1945-54.

Manufactures.—The total value added by manufacture (preliminary report 1954 census of manufactures) in approximately 873 manufacturing plants in the state was \$141,222,000, compared with \$142,045,000 in 1953 and \$138,952,000 in 1952. Estimates of the Montana unemployment compensation commission indicated that manufacturing industries employed an average of 21,100 wage earners during the fiscal year 1955-56, a gain of

power generated, kw.hr.	5,211,010,000	4,616,507,000	3,750,235,000

from the preceding year. Salaries and wages of these employees totaled \$95,908,843 as compared with \$81,208,586 for 1954-55. The average monthly employment for all Montana, excluding agriculture, during the period was 162,500. Manufacturing payrolls represented 7.8% of aggregate incomes in Montana in 1955 as compared with 23.8% nationally, and leaves the state one of the lowest in the nation in percentage growth in manufacturing employment. (E. E. R.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in 1953 and 1954 whose value was \$100,000 or more. In 1954 Montana was second among the states in chromite, manganese and output, third in silver (since 1943), fourth in fluorspar, phosphate

and lead output and fifth in copper output. It ranked 24th in the output of its mineral output, with 0.9% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Montana* (1955); *Northwestern Montana* (1956).

Montreal. A city in the province of Quebec and metropolis of Canada, Montreal was founded in 1642 as Ville Marie. The 1951 census gave the city proper a population of 1,035,200 (1955 est., 1,080,000) and that of greater Montreal 2,440,000 (1955 est., 1,565,000).

The port of Montreal is the largest in Canada. Deep-sea anchorage (commercial) during 1955 numbered 1,905 with a net tonnage of 5,492,538. Coastal and inland commercial traffic including fishing vessels totalled 3,288 ships of 3,629,759 tons. A total of 2,542 scheduled air operations took place at Dorval airport, including 43,359 commercial air-line arrivals and the same number of departures.

The assessed value of real estate in fiscal 1955-56 was \$2,099,264,466, of which \$1,671,166,486 was taxable. During 1955, 8,416 building permits were issued for new buildings. Enrolment in public schools during 1954-55 was: Protestant 20,904, Catholic 111,122.

The principal developments of the year in Montreal were linked to massive building projects. Housing schemes and new buildings in all sections of the city were expanding the metropolitan area and giving the central districts a changed look. Traffic had been greatly improved by various measures including new streets and street-widening projects, but principally by the elimination of streetcars in main arteries. Streetcars were expected to vanish completely from the city by the end of 1956. The new municipal government had concentrated on traffic problems, and there had been progress in slum clearance and a long-promised concert hall-theatre building.

A much-needed new air-line terminal at Dorval airport was also under long-term construction, as was the new hotel for the Canadian National railways.

A building development was under way which when completed was expected to result in a project equivalent to New York city's Rockefeller Center.

The biggest construction job locally was the Lachine section of the St. Lawrence Seaway development, which was halfway to completion. The total budget for the entire Canadian section of the seaway was \$300,000,000, with the local Montreal section costing \$120,000,000 plus \$50,000,000 for the nearby Beauharnois power project.

Mormons. During 1956, the Church of Jesus Christ of Latter Day Saints continued advances on a number of fronts. The temple at Los Angeles, Calif., was completed. The California state legislature passed resolutions conveying to the officials and members of the church congratulations upon the completion and dedication of the temple and commending the church and its people upon the contributions made to the progress of the commonwealth of California.

The church continued its enlarged building program. There were 568 buildings under construction or being remodelled, including 70 in the south sea islands. During the year, 100 chapels were completed and dedicated. Construction of the temple in Great Britain was begun.

The first baccalaureate service of the church school in Hawaii was held in the spring.

Members of the Council of the Twelve Apostles made special church missionary tours: Elder Henry D. Moyle in South America and Elder Adam S. Bennion in Europe. The Relief society of the church completed and dedicated a central office building in Salt Lake City, Utah, building costs being contributed in considerable part by members of the society. Active membership of the society was more than 163,500; about 133,258 were in the stakes of the church (mostly in the United States), and about 30,285 in the missions of the church (both in the United States and in foreign countries).

The missionary work of the church was pushed forward in the United States, Europe, South Africa, the near east, the far east, the Latin-American countries and the Pacific islands. (See also CHURCH MEMBERSHIP.) (J. R. CL.)

Morocco. An independent sultanate of northwest Africa, with both Mediterranean and Atlantic coast lines, Morocco was divided until 1956 into French Morocco, Spanish Morocco (see SPANISH COLONIAL EMPIRE) and the international zone of Tangier (*q.v.*). Areas and populations are shown in the table.

	Area (sq.mi.)	Population (1955 est.)
French Morocco	154,054	8,470,000
Spanish Morocco†	20,364	1,157,297
Tangier	135	183,000
Total	174,471	9,668,995

*1950 census.

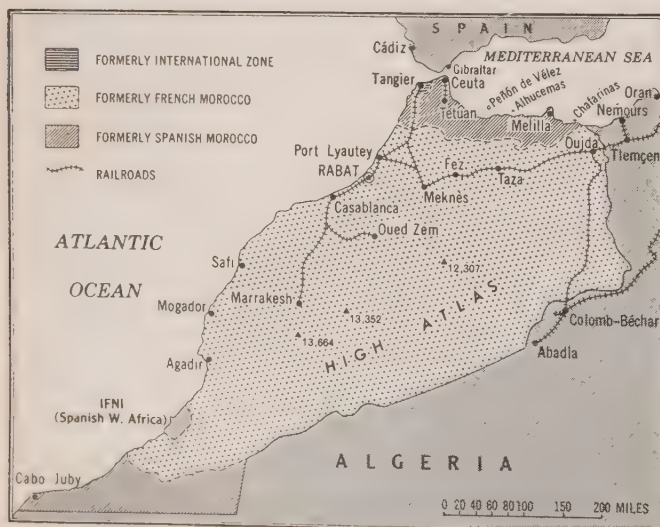

†Alhucemas, Ceuta, Chafarinas, Melilla and Peñón de Vélez (area 82 sq.mi.; pop. 141,302) remained possessions of Spain and were not included in the new state of Morocco.

Population, mostly Arabs and Berbers who are Moslem and speak Arabic (64%) or Berber (22%) or are bilingual (14%). Chief towns (pop., 1952 census): Rabat (cap.) 156,209; Casablanca 682,388; Marrakesh 215,312; Fes 179,372; Meknès 140,380. Sultan, Mohammed V ben Yusuf; prime minister in 1956, M'Barek ben Mustafa el-Bekai.

History.—With Mohammed V restored to his sultanate, Moroccan diplomacy in 1956 was mainly concerned with securing the independence and unity of the country.

A Franco-Moroccan statement of March 2 declared that the treaty of Fez (March 30, 1912) no longer reflected the needs of modern conditions and could no longer govern relations between France and Morocco. France recognized Morocco's independence, which implied the right of the state to conduct its own foreign relations and to maintain its own army. The Rabat agreement of May 28 defined the future relations between the two countries on a basis of equality and of mutual respect between independent powers; their foreign ministers were to confer periodically; neither state was to adopt any policy conflicting with the other's interests; and treaties previously made by France in the name of Morocco were to be recognized as valid. André Dubois, the last resident general (appointed on Nov. 9, 1955), was accredited as French ambassador to Morocco.

In March disturbances broke out in the Spanish zone. The sultan paid a visit to Madrid. On April 7 agreements were signed between Spain and Morocco: Spain recognized Morocco as an independent and fully sovereign state; visas were no longer required in order to pass from zone to zone; the unity of the empire was to be respected; the freedom and the rights of the Spanish inhabitants were guaranteed; the sultan's legislative sovereignty was recognized; and power was to be transferred from Spanish to Moroccan officials.

MOROCCO, showing the Spanish, French and international zones which were joined to form an independent sultanate in 1956

An outburst of enthusiasm welcomed the sultan on his return. Difficulties subsequently made themselves felt. The continued presence of French and Spanish forces gave rise to patriotic impatience. Tangier was still an international zone, but the Moroccan delegation was withdrawn from the local assembly, which suspended its sessions. The death of Thami el-Mezuari el-Glaoui in January put an end to large-scale feudalism, and his supporters in Marrakesh were assassinated. The "army of liberation," a product of the period of dispute with France, remained in control of several areas: while recognizing the sultan's leadership, it retained its freedom of action and showed a spirit of independence.

It remained uncertain what course the country would follow in politics. The sultan promised to set up a national consultative council in October, the members of it being nominated by himself. Rivalry continued between the Istiqlal and Democratic parties, both of which were represented in the Bekai government. The Istiqlal sought control of affairs; and in August its national council proposed the resignation of Istiqlal members from the government, the formation of a single-party cabinet, the abrogation of the treaty of Algeciras (April 7, 1906, consecrating the economic internationalization of Morocco), the withdrawal of foreign troops, the incorporation of Colomb-Béchar and of Mauritania into Morocco, support for the insurgents in Algeria and economic independence for the country.

The arrest by the French on Oct. 22 of the five Algerian nationalist leaders, flying from Morocco to Tunis, caused a crisis. Morocco broke off diplomatic relations with France. A new Bekai government, formed on Oct. 27, excluded the Democratic Independence party. Nevertheless, unofficial relations with France continued and many French officials remained in Morocco.

On Nov. 12 Morocco was admitted to the membership of the United Nations. (See also FRANCE; FRENCH UNION.)

Motion Pictures. A number of seeming paradoxes appeared to characterize U.S. motion-picture developments during 1956. By the end of November, it was expected that foreign grosses from the rental and sale of U.S. motion pictures would top the spectacular mark of 1955, while there was a general drop in motion-picture attendance in the U.S. and a corresponding drop in domestic theatre box-office returns. At the same time, certain pictures with impressive qualities and footage were rolling up astonishing domestic grosses. The overall drop in national attendance occurred despite an increase in pictures produced and released as compared with the previous year.

Industry Statistics.—The average weekly attendance at motion-picture theatres for 1956 was expected to be about 42,000,000 as compared with an average of about 45,000,000 for 1955. However, there were strong indications that a number of new pictures would brighten prospects considerably for the end of the year and the early part of 1957.

United States theatre grosses, excluding taxes, were estimated to be \$1,194,100,000 in 1955, as compared with \$1,150,700,000 in 1954, an increase of \$43,400,000. This reflected, to some extent, the benefits derived from the cut in the federal excise tax

an over-all 20% on admission prices to 10% on tickets over cents which went into effect on April 1, 1954. With many theatres still in financial distress, the industry pressed for further relief and succeeded with the passage of the King bill. Effective Sept. 1, 1956, the federal tax was reduced further to 10% on admissions exceeding 90 cents. It was estimated that an additional 9,000 theatres would be exempted from the federal tax on admissions as a result of the new measure, and that the box-office gross would be augmented by \$50,000,000 on an annual basis.

While it was expected that the domestic gross for 1956 would show a decrease from the prior year's figure, this would be offset to some degree by the new tax relief and by good box-office pictures in release at the close of the year.

An industry source indicated that at the beginning of 1956, there were 19,200 motion-picture theatres in operation in the U.S., composed of 14,613 indoor theatres and 4,587 drive-in theatres. This total represented a small increase from the previous year, largely in the number of drive-in theatres. A U.S. Bureau of the census report underscored the tremendous development of the drive-in theatre. In 1948 there were 811 such theatres with revenue of \$47,000,000. In 1954, 3,775 drive-ins did a total business of \$228,000,000.

On Jan. 1, 1955, an estimated 108,537 theatres were exhibiting motion pictures in approximately 120 countries and territories throughout the world. This was an increase of 9% over a 1951 estimate of 99,543 theatres.

According to the U.S. department of labour, employment in the U.S. motion-picture industry was averaging about 224,600 during the first seven months of 1956. The annual average for 1955 was 230,700.

Industry sources estimated total capital invested in the industry at \$2,738,700,000, broken down as follows: studios (production), \$142,000,000; distribution, \$25,700,000; theatres, \$50,000,000; nontheatrical, \$21,000,000. Profits for most motion-picture corporations during 1956, with a few exceptions, were below those of previous comparable periods.

Production.—By the end of Nov. 1956, the U.S. Production Code administration had approved 312 feature pictures, including 24 domestic and 48 foreign. For 1955 the entire year's total was 305, including 269 domestic and 36 foreign.

For 1956, 11 national distributors had scheduled for release 312 new feature pictures. This compared with 274 actual new releases for 1955.

Of 269 pictures analyzed in November, 116 or 43% of the total were produced in colour. This compared with 50% (154 pictures) in all of 1955.

The interim analysis showed further that of those 269 pictures, 109 or roughly one-third, were produced in one of the new wide-screen processes; i.e., CinemaScope, VistaVision, SuperScope, etc. CinemaScope led with a total of 60, followed by VistaVision with 17. A new process, sponsored by Republic Pictures, called Surama appeared with three pictures produced. In 1955 there were 115 pictures, or roughly 37% of the total approved by the Production Code administration, that had been produced in these processes.

Foreign Sales of U.S. Films.—Although domestic revenues in 1956 fell off somewhat compared with the previous year, foreign picture sales increased. It was estimated that revenue from abroad would equal or surpass the \$215,000,000 estimate of 1955, with annual dollar receipts running from \$175,000,000 to \$180,000,000. The increasing importance of the foreign market was shown by the fact that U.S. companies were receiving from 45% to 50% of their total revenue from abroad.

World film rentals for U.S. pictures continued to fluctuate around the \$650,000,000 level. Popularity of U.S. films abroad

JUBILANT ACTRESS Anna Magnani of Italy receiving the news that she had won the award of "Best Actress of the Year" by the U.S. Academy of Motion Picture Arts and Sciences on March 21, 1956

continued high, approximately 68% of the world's screen time being devoted to them. The world-wide weekly audience for U.S. films was estimated at 260,000,000.

Foreign Exports of Films to the U.S.—A film industry journal reported that a total of 138 foreign features were released in the U.S. in 1955, compared with 174 during 1954. This, however, was not a fair measure of foreign film imports, since a great many foreign language pictures, such as Mexican, Chinese and Japanese, which were brought in in large numbers, were exhibited chiefly in immigrant areas. For example, in 1955 a total of 247 positive prints of Mexican feature pictures alone were imported. (Britain sent in as many as 1,335 such positive prints.) In the first half of their fiscal year ended Sept. 30, 1956, the New York state censors reviewed 298 imported pictures against 244 in the same period in 1955 and 211 in 1954. Leading film exporters to the U.S. were Great Britain, Mexico, Italy, Japan, Hong Kong, Argentina, west Germany, the U.S.S.R. and France.

Among the outstanding foreign features released in the U.S. during late 1955 and 1956 were: *A Kid for Two Farthings* (British); *Richard III* (British); *Wee Geordie* (British); *Diabolique* (French); *Fruits of Summer* (French); *Letters From My Windmill* (French); *Proud and the Beautiful* (French); *Rififi* (French); *La Strada* (Italian); *The Magnificent Seven* (Japanese); *Marcelino* (Spanish); *The Silent World* (French); *Private's Progress* (British); *Golden Demon* (Japanese); *The Last Ten Days* (German); *The Ladykillers* (British); *Vitelloni* (Italian).

New Developments and Organizational Changes.—In May 1956 control of Warner Bros. Pictures, Inc., was purchased by a group headed by Serge Semenenko of the First National Bank of Boston and Charles Allen, Jr., investment banker. RKO Theatres Corp. acquired the assets of the Cleveland Arcade Co., including its controlling stock of Gera Corp. The merged organization's name was changed to RKO Industries Corp. American Broadcasting-Paramount Theatres, the nation's largest motion-picture theatre circuit and owner of the ABC television network, announced that it would enter the field of motion-picture production. This was later implemented by the formation of Am-Par Pictures Corp.

The Rank Organization, Great Britain's large integrated motion-picture enterprise, announced that it would form a distribution company in the United States in order to achieve wider reception of British pictures in that country.

The U.S. department of justice's antitrust suit against dis-

nated motion-picture companies, charging conspiracy to withhold 16-mm. pictures from television and other nontheatrical outlets, went to trial in California in Oct. 1955. On Dec. 6, 1955, the court found for the defendant producers and distributors. Judge Léon Yankwich, in his opinion, ruled that the testimony concerning the alleged restrictive practices warranted the conclusion that whatever similarity existed in the pattern for marketing 16-mm. films was based on the similarity of the problem with which producers were confronted. Further, he stressed that each defendant had to consider the effect of the release of 16-mm. films on the business of its primary source of income, the regular theatre.

Nevertheless, Dec. 1955 saw the beginning of the release of large blocks of major company pictures for telecasting. About five months after General Teleradio, subsidiary of General Tire & Rubber Co., purchased RKO Radio Pictures, the entire film inventory of RKO, comprising 740 features and 1,100 short subjects, was sold to C. & C. Super Corp. for \$15,200,000. It was the most significant of all television deals to that date because it broke the solid ranks of the major studios.

In March 1956 Warner Bros. followed the lead set by RKO by selling their pre-1948 film library to PRM, Inc., in a \$21,000,000 deal. Linked with PRM in the transaction was Associated Artists Production, the film distributing firm that would release the pictures to television and to theatres as reissues.

In May 20th Century-Fox announced that an arrangement had been concluded on a straight guarantee and profit percentage basis with National Telefilm Associates whereby the latter would release to television 52 20th Century-Fox pictures. Later in the year, this operation was expanded by a new agreement wherein N.T.A. acquired the television distribution rights to 156 pre-1948 features, optioned 234 more, and 20th Century-Fox acquired a 50% stock interest in N.T.A.'s subsidiary, N.T.A. Film Network.

At the same time, Loew's announced (1) that they would handle their own television distribution of pre-1949 M-G-M pictures; (2) that they would extend production to include special pictures for television; and (3) that they would acquire television station ownership. As a start, the company began to place its library of 725 features in 12 markets.

Columbia Pictures also revealed that they were turning over a large block of features to Screen Gems, their television subsidiary company.

Trend in Film Subjects.—There appeared to be no clear-cut trend which characterized the film subjects of 1956. The so-called "big" pictures leaned heavily on the presold values of well-known novels, plays, classics and historical themes, as, for example, *Around the World in 80 Days*, *Giant*, *The Ten Commandments*, *Tea and Sympathy*, *Friendly Persuasion*, *War and Peace*, *Moby Dick*, *The King and I*, *Bus Stop*, *Lust For Life*, *Alexander the Great*, *The Man in the Gray Flannel Suit*, *Carousel* and *Teahouse of the August Moon*. For the rest, there was the usual preponderance of western and adventure melodramas, dramas of the social problem, romantic and military variety, comedies, science fiction yarns, musicals, etc.

One development was the advent of several pictures exceeding or approaching three hours in length for the first time since *Gone With the Wind* (220 minutes). They were: Cecil B. De Mille's crowning epic *The Ten Commandments*, produced in VistaVision at a record cost of \$13,000,000 (219 minutes); Paramount's brilliant production of *War and Peace*, also VistaVision (208 minutes); George Stevens' fine filming of Edna Ferber's *Giant* (200 minutes); and the highly successful Todd-AO production of *Around the World in 80 Days* (170 minutes), a rib-tickling version of the Jules Verne classic, replete with 40 stars of international fame.

Two outstanding musicals appeared in 20th Century-Fox's new

CinemaScope 55 process which elicited high praise, namely *Carousel* and *The King and I*. Other musicals well received were *High Society*, *Meet Me in Las Vegas*, *The Court Jester*, *Anything Goes* and *The Opposite Sex*.

Among the outstanding comedies of the year were *Teahouse of the August Moon*, *Bus Stop*, *The Solid Gold Cadillac* and *You Can't Run Away From It*.

Documentaries and Short Subjects.—Several beautifully produced colour studies of nature and marine life received widespread acclaim. The French production *The Silent World*, Cannes festival winner, was an unusual feature dedicated to undersea life, made by Capt. Jacques Yves Cousteau and his crew of aqualung skin divers and technicians. *Secrets of the Reef* was a fascinating study of the microscopically minute details of marine life on a coral reef off Florida. Walt Disney's newest "True-Life Adventure" feature, *Secrets of Life*, recorded the hidden wonders of the plant, insect and animal kingdoms. *The Animal World* attempted to depict the development of animal life since the beginning of time.

A growing number of short subjects were enhanced by being produced in CinemaScope and VistaVision. Some of the outstanding CinemaScope shorts of 1956 were 20th Century-Fox's *The Dark Wave* (problem of epilepsy), Warner's *Journey to the Sea* (Rhine river travelogue) and Columbia's *Wonders of Manhattan*. Paramount's VistaVision process contributed beautiful scenic studies in *VistaVision Visits Gibraltar*, *VistaVision Visits Panama*, *VistaVision Visits Japan* and *VistaVision Visits Austria*. Other notable short subjects included Universal's *Everybody Dances* (national dances throughout the world), Disney's *Man in Space* (space travel to come), M-G-M's *The Wedding in Monaco*, Warner's *Green Gold* (life in Ecuador), Universal's *A Time Out of War* (unusual Civil War story), the University of Southern California's *The Face of Lincoln* and Warner's *Out of the Desert* (scenes from Egypt).

Polls and Awards.—The Academy of Motion Picture Arts and Sciences announced in 1956 the following awards for 1955:

BEST PRODUCTION.—*Marty* (Hecht & Lancaster—United Artists).
ACTOR.—Ernest Borgnine (*Marty*).
ACTRESS.—Anna Magnani (*The Rose Tattoo*).
SUPPORTING ACTOR.—Jack Lemmon (*Mister Roberts*).
SUPPORTING ACTRESS.—Jo Van Fleet (*East of Eden*).
DIRECTION.—Delbert Mann (*Marty*).
MOTION-PICTURE STORY.—Daniel Fuchs (*Love Me or Leave Me*).
SCREENPLAY.—Paddy Chayefsky (*Marty*).
STORY AND SCREENPLAY.—William Ludwig and Sonya Levien (*Interrupted Melody*).
SCORING, MUSICAL.—Robert Russell Bennett, Jay Blackton and Adolph Deutsch (*Oklahoma!*).
SCORING, COMEDY OR DRAMA.—Alfred Newman (*Love Is a Many-Splendored Thing*).
SONGS.—"Love Is a Many-Splendored Thing" (*Love Is a Many-Splendored Thing*); music, Sammy Fain; lyrics, Paul Francis Webster.
SHORT SUBJECTS.—One-reel: *Survival City* (20th Century-Fox). Two-reel: *The Face of Lincoln* (University of Southern California presentation. Cavalcade Pictures, Inc.). Cartoon: *Speedy Gonzales* (Warner Bros.).
ART DIRECTION.—Black and white: Hal Pereira and Tambi Larsen (*The Rose Tattoo*). Colour: William Flannery and Jo Mielziner (*Picnic*).
CINEMATOGGRAPHY.—Black and white: James Wong Howe (*The Rose Tattoo*). Colour: Robert Burks (*To Catch a Thief*).
COSTUME DESIGN.—Black and white: Helen Rose (*I'll Cry Tomorrow*). Colour: Charles Le Maire (*Love Is a Many-Splendored Thing*).
FILM EDITING.—Charles Nelson and William A. Lyon (*Picnic*).
DOCUMENTARY SHORT SUBJECT.—*Men Against the Arctic* (Walt Disney—Buena Vista).
DOCUMENTARY FEATURE.—*Helen Keller in Her Story* (Nancy Hamilton presentation).
SOUND RECORDING.—Fred Hynes (*Oklahoma!*).
SPECIAL EFFECTS.—*The Bridges at Toko-Ri* (Perlberg-Seaton—Paramount).
Film Daily's poll of the ten best pictures included: *Mister Roberts* (Warner Bros.); *Marty* (United Artists); *East of Eden* (Warner Bros.); *Blackboard Jungle* (M-G-M); *Bad Day at Black Rock* (M-G-M); *A Man Called Peter* (20th Century-Fox); *Trial* (M-G-M); *Love Me or Leave Me* (M-G-M); *Summertime* (United Artists); *Love Is a Many-Splendored Thing* (20th Century-Fox).
Daily Variety's poll for 1955 included: best picture, *Marty* (United Artists); best actress, Anna Magnani, *The Rose Tattoo* (Paramount); best actor, Ernest Borgnine, *Marty*; supporting actress, Jo Van Fleet, *East of Eden* (Warner Bros.); supporting actor, Jack Lemmon, *Mister Roberts* (Warner Bros.); best screenplay, *Marty* (Paddy Chayefsky); best director, Delbert Mann (*Marty*); best original, *Love Me or Leave Me* (Daniel

U.S. AND FOREIGN MOTION-PICTURE PRODUCTIONS OF 1956

Top, left: Sir Laurence Olivier and Claire Bloom in the film version of Shakespeare's *King Richard III*. The Olivier production was the first important motion picture to have its *première* on television before release to theatres. Top, right: Scene from *Picnic*, an adaptation of the play by William Inge, starring Kim Novak, William Holden, Rosalind Russell and Betty Field. Left: Giulietta Masina, Italian actress in her first major role as a circus performer's assistant in *La Strada* ("The Road"), with Anthony Quinn. Right: Gregory Peck as Captain Ahab in the John Huston production of Herman Melville's novel, *Moby Dick*. Bottom: Scene from *Giant*, with Elizabeth Taylor, James Dean and Rock Hudson. Based on a novel by Edna Ferber, the film was directed by George Stevens

Fuchs, M.-G.-M.).

New York Film Critics' awards for 1955 were: best picture, *Marty* (United Artists); best actor, Ernest Borgnine, *Marty*; best actress, Anna Magnani, *The Rose Tattoo* (Paramount); best director, David Lean, *Summertime* (United Artists); best foreign-language pictures, *Diabolique* and *Umberto D.*

Motion Picture Daily box-office hits of 1955 included: *Battle Cry* (Warner Bros.); *Blackboard Jungle* (M.-G.-M.); *The Bridges at Toko-Ri* (Paramount); *The Country Girl* (Paramount); *Lady and the Tramp* (Disney); *The Left Hand of God* (20th Century-Fox); *The Long Gray Line* (Columbia); *Love Is a Many-Splendored Thing* (20th Century-Fox); *Love Me or Leave Me* (M.-G.-M.); *A Man Called Peter* (20th Century-Fox); *Mister Roberts* (Warner Bros.); *Not as a Stranger* (United Artists); *The Seven Little Foys* (Paramount); *The Seven Year Itch* (20th Century-Fox); *A Star Is Born* (Warner Bros.); *Strategic Air Command* (Paramount); *To Hell and Back* (Universal); *There's No Business Like Show Business* (20th Century-Fox); *20,000 Leagues Under the Sea* (Disney); *Vera Cruz* (United Artists).

Box-office All-American favourites of 1955 were: June Allyson, Grace Kelly, Humphrey Bogart, Marlon Brando, Jane Wyman, William Holden, Doris Day, James Stewart, Gary Cooper, Bing Crosby, John Wayne, Elizabeth Taylor. (M. L.N.)

Educational Motion Pictures.—In 1956 the cost of producing instructional, training, institutional and public relations motion pictures in the U.S. was estimated at \$90,000,000. This gross output included the sales of 156 commercial studios and 19 specializing organizations in the school and religious film fields. The Audio-Visual Commission on Public Information, formed during the year, was striving to put educational film expenditures in schools on an equitable basis with expenditures for textbooks. "Gateway to Learning," the commission's first publication, explained to school officials and the general public the advantages of audio-visual materials.

The television industry made several notable contributions. Its documentary programs were utilized as regular 16-mm. classroom films, and it was experimenting with closed-circuit techniques, not only at the college level but also in the Hagerstown, Md., public schools, which were supplied with closed-circuit equipment by radio and television equipment manufacturers. Accredited courses for home study were launched by educational television station WTTW in Chicago, Ill., and a grant from the Ford foundation enabled Encyclopædia Britannica Films, largest and oldest of the classroom film producers, to begin filming physics experiments from the programs of the Pittsburgh, Pa., educational television station.

The total of classroom films available to the schools on a worldwide basis (through translated versions) exceeded 2,000 titles by the end of 1956. Contributing to this greatly expanded teaching resource were the 56 new films added to the Encyclopædia Britannica Films library of 800 titles. Coronet Films' total of 664 catalogued titles included 67 new releases during 1956. Sixty new titles by Young America Films and the Text-Film division of McGraw Hill included the adaptation of television programs such as "You Are There" and "See It Now." Social studies were predominant among the classroom films produced in 1956, and American history and world history were the favoured themes.

Encyclopædia Britannica Films noted a sharp increase in the use of audio-visual educational materials, and reported its biggest fiscal year. Pursuing its goal of "bringing the world to the classroom," it produced such films as *The Oregon Trail* and *Roger Williams*. The release of nearly all of Metro-Goldwyn-Mayer's feature films for 16-mm. school use made hundreds of additional titles available.

The Academy of Motion Picture Arts and Sciences honoured as the best two-reel documentary film of the year *The Face of Lincoln*, produced by the department of cinema, University of Southern California.

Industry's concern with improving human relations and with new industrial processes accounted for several widely used films. *This Is Automation*, sponsored by General Electric, gave a useful exposition of these techniques; *The Ford People* (Ford Motor Co.), *The Living Circle* (United Fruit Co.), *Teamwork* (Bethlehem Steel Co.) and *The Dragon Slayer* (du Pont) were

widely shown examples of industrial relations themes on film.

At midyear the Films committee of the Association of National Advertisers and the National Education association co-operated in improving film standards through the publication of a "Criteria for Business-Sponsored Educational Films."

The plight of the aged was dealt with by the National Social Welfare assembly in *A Place to Live*. Ten thousand physicians attending the annual proceedings of the American Medical association in Chicago viewed 75 medical films; delegates to the San Francisco congress of the American College of Surgeons in October saw 85 films on latest surgical and medical technique. A high light of the American Medical association meeting was the showing of a group of Russian medical films, the first brought to the U.S. in many years and the result of a diplomatic exchange.

A first international medical film exhibition was scheduled for June 1957 under the auspices of the American Medical association committee on Medical Motion Pictures. Late in 1956 a new film series on "Medicine and the Law" was announced, and the first title, *The Medical Witness*, was shown at Seattle, Wash., in November.

The American Bar association was producing a training film series on jurisprudence, seeking to improve courtroom procedures and to lower the number of untried cases on dockets throughout the land.

United States government agencies, led by the department of defense, the military services and the U.S. Information agency, were active in producing and distributing training and informational films. The bureau of mines sponsored as its latest addition to a "state" film series *Idaho and Its Natural Resources*, which was released in the fall.

At the annual National Audio-Visual convention in Chicago in July, more than 2,000 professional workers in trade, industrial and educational film operations saw the latest equipment and discussed the problems of their respective fields. (O. H. C.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Bring the World to the Classroom* (1938); *Making Films That Teach* (1954); *New Tools for Learning* (1952); *Using the Classroom Film* (1945).

Technical Developments.—Although 1956 was mainly a period of evaluation of wide screens previously adopted by the industry, two new systems made their appearance.

Thrillerama.—Thrillerama employs two motion-picture cameras mounted on a common base and two conventional projectors locked together in the theatre booth. This system is similar to Cinerama, which uses three cameras and three projectors operating in synchronism for photography and projection. Thrillerama results in a screen aspect ratio (width to height) of 3½ to 1. "Thrillerama Adventure" was first shown in Texas in August.

Technirama.—Technirama is a new large-screen system developed by Technicolor, which employs a standard 35-mm. negative moving horizontally through the camera and exposing an eight-perforation frame (two normal 35-mm. frames). The camera lens has an anamorphic ratio of 1.5 to 1. When the Technicolor prints are made by the imbibition process, the negative image size is reduced and a 1.3 anamorphosis added in the printer, resulting in a 2 to 1 anamorphic print similar to a CinemaScope print with a screen aspect ratio of 2.35 to 1. This horizontal negative film movement with an eight-perforation frame is similar to VistaVision, except that VistaVision has not made anamorphic prints.

Film Splicer.—An electronic method of film splicing, utilizing radio frequency power to weld film, was developed by E. I. du Pont de Nemours & Co. Du Pont's new polyester film base Cronar does not fuse properly with application of regular film splicing. This method was, therefore, developed to splice Cronar base. However, it was found that the present triacetate safety base film also responds favourably to the electronic splicer. Such splicers were being manufactured and were to be tried out in

Summary Statistics of Canadian Motion-Picture Production
(Private industry)

Year	Salaries and wages	Gross revenue Production	Printing and laboratory
1952	\$1,006,918	\$1,331,393	\$1,274,137
1953	1,150,890	1,592,779	1,230,493
1954	1,549,233	2,106,131	1,456,405
1955	1,460,421	2,456,038	1,817,784

the increase in the amount of film production for television.

(F. R. Cy.)

Great Britain.—In 1955 the latest attendance figures in the United Kingdom had indicated that the motion-picture industry had not suffered unduly by the opening of the Independent Television authority's programs on Sept. 22, 1955. But some figures published in 1956 showed a rather more serious situation. In his statement to the annual general meeting of the Rank Organisation Ltd. on Oct. 5, 1956, the chairman, J. Arthur Rank, said that as the I.T.A. stations had opened independently of each other it had been possible to measure their effect over the first six or seven months of their operation. This had shown a 10% fall in motion-picture attendances in the regions covered by the new stations compared with the rest of the country.

The fall in attendances was not confined to those areas served by the new television stations. Official statistics published by the board of trade on Oct. 17, 1956, showed that the average weekly attendance rate for the second quarter of the year was 21,500,000, 9% less than for the same quarter of 1955. In 1950 (the first year for which official statistics were collected) the equivalent figure was 26,300,000, about 10% above the 1955 rate. Because of seasonal fluctuations, these figures did not give a completely accurate picture of the annual decline; nevertheless it was true to say that in the seven years from 1950 to 1956 British motion pictures had lost about one-fifth of their domestic audience.

In Great Britain nearly one-third of the gross box-office receipts in 1956 were removed from the industry by the entertainments tax, a percentage which, with only slight reductions, had existed for a decade. Faced with a declining attendance rate and increasing operating costs, the British film industry set up a committee, known as the All-Industry Tax committee, to present its case for entertainments tax reduction to the chancellor of the exchequer. This case was presented early in 1956 but, presumably because of prevailing national economic difficulties, the case failed. The industry's contention was that unless there was a very substantial reduction in the rate of tax many theatres would have to close their doors, thus reducing even further the potential earnings of film makers and of the exchequer itself.

This contention was turned into fact when the Rank organization announced in October that during the next few months it proposed to close 79 theatres which in the previous year had paid £455,453 in entertainments tax and £316,870 in film rental. Nor were these the only closings announced during the year.

(D. Cw.)

Other Countries.—Various influences, commercial, technical, artistic and personal, loosened the rigid patterns of the film industry and made 1956 a year of variety and originality, rather than one of much conventional accomplishment.

Epic in size and subject, *War and Peace*, an adaptation of Tolstoy's novel, was filmed in Italy, directed by Hollywood's King Vidor and played by a mainly Anglo-American cast. Performances of real distinction came from Henry Fonda as Pierre, Mel Ferrer as Prince Andrey, Audrey Hepburn as Natasha and Herbert Lom as Napoleon, although the film, which ran for three-and-a-half hours and reputedly cost more than £1,000,000 to make, was not altogether free of stiffness.

Of British films, *A Town Like Alice*, honourably documentary in manner, dealt with British women prisoners of war

studios and exchanges in 1956. This dielectric splice is stronger, can be made more rapidly and is entirely automatic.

Improved Black and White Negative.—Eastman Kodak Co. early in 1956 made available to the motion-picture industry a new plus X panchromatic negative film (type B). This film is a high-speed, fine-grain negative material suited for both interior and exterior lighting conditions. It has approximately the same speed as the previous plus X film but a much lower granularity so that the graininess observed in a print made from this negative is greatly reduced. In addition, the acuteness, the factor which expresses the ability of a film to reduce sharp images, is much higher than that of the older film. These properties, graininess and acuteness, assumed greater importance since the adoption of wide-screen processes by the industry.

Drive-In Theatres.—The construction of new drive-in theatres continued, with a trend toward theatres of larger capacity and with screens of extremely large size. A drive-in located on Long Island, N.Y., for example, had a capacity of 2,509 cars and occupied more than 30 ac., with the back ramp about 1,200 ft. from the screen. The screen itself was 60 ft. x 142 ft.

RF Lamp.—Sylvania Electric Products, Inc., developed, with the co-operation of the Motion Picture Research council, a new uniform light source known as the RF (radio frequency) lamp. In some types of motion-picture film printing it is extremely desirable to have a light source of uniform brightness. This lamp, the first such developed, consists of a disk which is heated to incandescence by radio frequency energy so that there are no actual electrical contacts with the source of illumination. The disk itself provides a very uniform light source which is necessary in properly exposing motion-picture film in printing processes. It was placed in use in several laboratories in Hollywood, Calif.

Curved Film Gate.—The use of larger screens in theatres and drive-ins necessitated more light and consequently more heat on the film during projection. This tended to make the film buckle and breathe, that is, actually move in the projector aperture while it was being exposed on the screen, with a resulting lack of sharpness on the screen. A new type curved film gate was developed which, while not a new invention, had been perfected so that it held the film in a curved position in the aperture, giving the film added stiffness to withstand this intense light and heat. This added stiffness minimizes film movement in the aperture, resulting in a picture of improved quality on the screen.

(W. F. Ky.)

Canada.—The signs apparent in 1955 that the spread of television in Canada might result in the establishment of a Canadian entertainment film industry turned out in 1956 to be soundly based.

In 1956 a Canadian corporation was formed to produce in Canada a series of 26-min. dramatic entertainment film programs for world television release. In Dec. 1956 this program went on the air in the United States, and was scheduled for an early 1956 release over the Canadian Broadcasting system network. Other Canadian film production for television in 1956 consisted entirely of documentary shorts and commercial spot films. At the end of 1956 several other entertainment series were reported either in production or planning stages by other Canadian producers.

The Canadian government film production agency (the National Film Board of Canada) moved from Ottawa, Ont., to Montreal, Que., during 1956, into newly constructed studios and offices which cost \$8,500,000.

A tabulation from the report of the Canadian government bureau of statistics, covering Canadian motion-picture production in the private industry for all purposes, is shown in the table.

Industry leaders estimated that the 1956 figures would show an increase of about 50% over 1955, resulting altogether from

marched back and forth across Malaya by their Japanese captors. A striking performance by Virginia McKenna and honest direction by Jack Lee could not quite conceal the film's origins in a best-selling novel by Nevil Shute. It was unlucky enough to be disqualified from the Cannes festival on the grounds that it might offend the Japanese.

Yield to the Night, released shortly after the agitation for the abolition of capital punishment, was a study of a woman condemned to hang. The crime was told in a sometimes overelaborate flashback, but the scenes in the condemned cell were bleakly harrowing. The film was notable for the sullen, straightforward playing of the murderess by Diana Dors, with the wardress of Yvonne Mitchell outstanding in a fine supporting cast.

The Ladykillers starred the septuagenarian Katie Johnson as the landlady who unwittingly takes in gangsters. Of these, Alec Guinness and Peter Sellers made this a suitably ghoulish comedy with which to take leave of Ealing Studios. *Pacific Destiny*, an inadequate version of Sir Arthur Grimble's delightful *Pattern of Islands*, was charmingly true in feeling and quality for the South Sea islands, and their inhabitants.

Gene Kelly's experimental ballet film *Invitation to the Dance*, of which he was star, director and choreographer, was chosen to open the Edinburgh film festival with a performance before the queen. In three parts—mime, modern ballet and combined human and cartoon dance-fantasy—it could not be called a satisfactory whole, but was a decidedly appealing experiment.

Festival results reflected a new informality, replacing old hard and fast categories. At the Venice festival a new policy designed to raise the standard found no film fit to be awarded the Golden Lion of St. Mark. At Cannes the Grand Prix went to a French documentary, *The World of Silence*, the first choice, *The Red Balloon*, being a short and therefore ineligible.

A fascinating novelty from Australia was *Jedda*, a primitive but moving story of an aboriginal girl adopted by a white woman and faced with a choice between worlds. Another simple story of the Australian bush with considerable charm was *Smiley*, with Colin Petersen as a child hero of more than average appeal, Chips Rafferty as the local sergeant and Ralph Richardson as the parson.

The outstanding continental film was René Clair's *Les Grandes Manoeuvres* (*Summer Manoeuvres*; U.S. title *The Grand Maneuver*). This bitter romance of a Don Juan who falls in love too late was played with immense style and elegance by Michele Morgan and Gérard Philipe. Also from France came *Le Défroqué*, a powerful religious drama with Pierre Fresnay as the unfrocked priest, and *Les Diaboliques*, a macabre murder mystery. French entries well received at the Venice festival were René Clement's *Gervaise*, whose star, Maria Schell, won one of the Volpi cups for acting, and Claude Autant-Lara's comedy *La Traversée de Paris*, for which the comedian Bourvil won the other cup.

Two Spanish films were among the leading entries at Venice: *Calle Mayor* (*Main Street*) by J. A. Bardem, whose harsh and brilliant *Death of a Cyclist* had been shown earlier in the year, and L. G. Berlanga's gentler comedy *Calabuig*.

Although Italy sent no great film, L. Emmer's *The Bigamist* was an amusing and lighthearted village satire, with Vittorio De Sica as a wonderful burlesque counsel for the defense.

From Sweden came *Smiles of a Summer Night*, a supremely well acted, exceedingly stylish piece, of an amorality widely compared with Restoration comedy. Two Austrian films of great interest were *Der Letzte Akt* and *Es geschah am 21 Juli*, G. W. Pabst's contributions to the history of Hitler's Germany.

India sent *Two Acres of Land*, a touching story of an evicted Bengal farmer. Japan's *Harp of Burma* was highly regarded at Venice.

The U.S.S.R. continued to send pictures aimed more at art (opera or ballet) than propaganda. Most memorable were the superbly mounted *Boris Godunov* and a series of Shakespearean performances, including *Twelfth Night* and *Othello*.

(F. B. Lt.)

Motor-Boat Racing. During 1956, motor-boat racing records were established in almost every class of inboard and outboard racing boats, with special emphasis on the stock outboard category. There was tremendous interest in the big unlimited inboard hydroplanes, whose activities in the United States reached from coast to coast, although two west coast craft dominated the scene. Bill Wagonner's "Shanty I" won the national championship for the class Aug. 5, at the Seafair regatta at Lake Washington, Seattle, Wash., and also the Seafair trophy, which carried the richest prize ever known in power-boat racing circles, \$11,000. At Detroit, Mich., "Shanty I," again piloted by Lieut. Col. Russ Schleeh of the air force, successfully defended the Harmsworth trophy, symbol of international supremacy on the water, against the challenge of J. G. Thompson's "Miss Supertest II," representing Canada. The other west coast boat, "Miss Thriftway," owned by Willard Rhodes of Seattle, Wash., and driven by Bill Muncey, after being disqualified by the judges, was finally declared winner of the Gold cup event. Second place was awarded to "Miss Pepsi," owned by Roy Dossin of Detroit, Mich., and driven by Chuck Thompson. "Miss Thriftway" later went on to win in the President's cup races at Washington, D.C.

Donald Campbell again drove his jet-powered "Bluebird" to a new world's record for other than propeller-driven boats with an average of 225.36 m.p.h. on Sept. 19, at Lake Coniston, Eng. Norman Buckley, also of Great Britain, established a new one-hour mark for unlimited inboard boats in his "Miss Windermere III," covering 79 mi. in the one-hour run. The world's championship for the 800-kg. class was won by E. Selva of Italy.

The complete destruction of S. Sayres's "Slo-Mo-Shun IV" during qualifying trials on Aug. 30 at the Gold cup race eliminated any further attempts by this craft to raise the propeller-driven record of 178.497 m.p.h. which it held.

Winners in the stock outboard national championships were: class JU runabout, Billy Schumacher, Seattle, Wash.; AU run-

JET SPEEDBOAT, Donald Campbell's "Bluebird," streaking through the waters of Lake Coniston, Lancashire, Eng., to set a new world's speed record of 225.36 m.p.h. in Sept. 1956

out, Dean Chenoweth, Xenia, O.; BU runabout, Dave Kough, Hawthorne, N.J.; CU runabout, John Culver, Dayton, O.; DU runabout, John Jackson, Cincinnati, O.; "36," Ed Branding, Lake Villa, Ill.; A stock hydro, Dean Chenoweth; B stock hydro, Dave Kough; C stock hydro, Bill McClung, Portsmouth, Va.; and stock hydro, Bill Holloway, Monroe, Mich.

The racing outboard champions were: class M, Eric Molinar, Hollywood, Calif.; A, Orlando Torigiani, Bakersfield, Calif.; Kieth Sorenson, Laresta, Calif.; C, Doug Creech, Charlotte, N.C.; F, Ralph Homes, Phoenix, Ariz.; CSR, M. Tarnakis, Bakersfield, Calif.; CSer.H, Henry Wagoner, Fresno, Calif.; RR, Lon Stevens, Lodi, Calif.; and FRR, Chuck Parsons, Oakland, Calif.

National inboard champions crowned in 1956 were: hydros, Jack Colcock, Seattle, Wash.; 136, Sid Johnson, Cambridge, Md.; 135, Frank Neely, El Monte, Calif.; 225, Mac Wiefering, Dayton, Ky.; 266, Bill Ritner, Sr., Camden, N.J.; seven-litre, B. Bartley, Pittsburgh, Pa. (L. EL.)

Motor Transportation. The year 1956 was a period of growth for motor transportation and the automotive industry in the United States. Although motor vehicle factory sales fell considerably short of the high 1955 mark, 1956 was expected to be rated among the top three or four years in terms of vehicle output. Preliminary estimates indicated 1956's production of approximately 6,000,000 passenger cars and 1,150,000 trucks for a total of 7,150,000 vehicles, making 1956 the fourth best automotive sales year on record. It would be the fourth time that U.S. motor vehicle production topped 7,000,000 in a single year, the other years being 1950, 1953 and 1955.

During the ten years since the close of World War II, the U.S. automotive industry had produced a grand total of 67,000,000 motor vehicles, more than were built in the first four decades of the century. The number of cars, trucks and buses in use throughout the nation exceeded 65,000,000 in 1956—a 90% increase in a decade.

One of the most important milestones of the year was the adoption by congress of a new and greatly expanded federal highway program. This legislation, designed to remedy the major inadequacies of the interstate highway system, would greatly improve the efficiency of highway transportation. Another development was the heavy investment of the automotive industry in plant expansion, modernization and new equipment during 1956. Capital outlays by the industry in 1956 totalled approximately 1,000,000,000, topping all previous records.

A third high light of the year was the re-establishment of the National Automobile show in New York city, after a 16-year interval. The revival of this event, which had been a major tradition of the industry for more than 40 years prior to World War II, was as a fitting climax to this great automotive decade.

The show, sponsored by the Automobile Manufacturers association, was the largest and most spectacularly staged in automobile show history. Held in the huge new Coliseum Dec. 8 through 1956, the show included two complete floors of passenger exhibits and one floor of new truck models. The 1957 models of all U.S. passenger car makes and the products of 11 truck manufacturers were on display.

The wholesale value of the new motor vehicles sold in the year was approximately \$11,900,000,000, bringing the total for the decade to \$95,800,000,000. The wholesale value of motor vehicle replacement parts and accessories sold in the domestic market during the year reached \$1,750,000,000, only slightly above the previous year. For the entire postwar decade, replacement parts totalling \$20,000,000,000 in wholesale value had been

CONVERTIBLE FREIGHT CAR, the "Railvan," operating on the Chesapeake and Ohio railway in 1956. Rubber tires under the car could be lowered to convert the car into a motor truck van for highway travel

The mileage travelled by motor vehicles in the United States in 1956 reached a new all-time high of 605,000,000,000, bringing the cumulative ten-year total to 3,950,000,000,000 mi. During the same period 386,000,000,000 gal. of gasoline were consumed, including 49,500,000,000 gal. in 1956 alone.

Total expenditures on highways by federal, state and local agencies for the year were \$8,220,000,000, of which \$5,513,000,000 went into capital outlays and \$2,707,000,000 was spent on maintenance, administration and interest costs.

The percentage of families owning cars in the United States reached an all-time high in 1956. More than 74% of the nation's families owned cars, as compared with 68% in 1947; 10% owned more than one car. The number of licensed drivers in the nation reached a high of 77,000,000, compared with 54,500,000 a decade earlier.

Municipal Government. Taxation and traffic were rated by a number of the largest cities in the United States as their biggest problems early in 1956, according to a report by the Citizens Budget commission of New York city. Problems related to city growth and change, such as housing and slums, population changes and suburban growth, were generally rated second; while such matters as air pollution, street cleaning and water supply were in the lowest categories, except in Los Angeles, Calif., which rated air pollution as its topmost problem. These findings were probably characteristic of the great majority of U.S. cities, regardless of their size.

Traffic and Transportation.—Traffic congestion continued to challenge the best efforts of city officials and experts alike. Long-range relief was anticipated under certain of the provisions of the comprehensive \$33,000,000,000, 13-year federal aid highway program enacted by congress in June 1956, which provided for the establishment of a 41,000 mi. network of superhighways linking 42 state capital cities and 90% of all cities of more than 50,000 population. Of the \$27,500,000,000 to be expended for modernization of the interstate system—to be defrayed 90%

by the federal government and 10% by the states—an estimated \$15,000,000,000 was to be spent on improving highways in and around cities, which would include new expressways through more than 50 congested metropolitan areas. Another estimated \$5,000,000,000 was to be spent within urban areas for urban extensions of the federal aid primary and secondary systems, these costs to be divided evenly between the federal government and the states. While the program was generally hailed as an impressive new aid in solving the problems imposed by traffic strangulation, not many cities were prepared for the effect it would have on such immediate and future problems as the physical layout of the city; relocation of houses, businesses, industries and public utilities; urban renewal programs; increased city costs; effects on land values and the city tax base.

The acute financial crisis afflicting rapid transit systems was summarized in a study by David S. Arnold of the International City Managers' association published in the Sept. 1956 issue of *Public Management*. Most were either losing money or just breaking even; some had been abandoned or passed by default into municipal ownership. In New Jersey and Pennsylvania, the Delaware River Port authority endorsed and recommended to state authorities a plan for construction of a \$242,000,000 rapid transit system linking southern New Jersey with central Philadelphia. The San Francisco (Calif.) Bay Area Rapid Transit commission had under consideration a \$1,890,000,000 plan for a rapid transit system to operate through many cities in nine counties, going underground in San Francisco and Oakland and underwater between these two cities. Chicago, Ill., became the first city in the country to build a rapid transit system into a new expressway—the Congress Street expressway; several other cities had considered similar proposals.

Approximately 115 cities were reported as having made transportation studies in recent years. Important new studies undertaken in 1956 included the Chicago Area Transportation study, a three-year \$1,850,000 co-operative project sponsored by the U.S. bureau of public roads and state, county and city agencies, covering an area of 1,400 sq. mi. within a radius of 30 mi. of the central business district; studies for the city of St. Louis, Mo., and St. Louis county arranged through the Citizens' Metropolitan Transit committee, including land use and population development, mass transit facilities, and highway patterns in the area; and an intensive origin and destination survey in the New York city region, sponsored jointly by the U.S. bureau of public roads and seven state, city and special agencies in both New York and New Jersey to determine the traffic needs of the region within a 100-mi. radius of the city. A similar transportation analysis was being made in the Washington, D.C., metropolitan area under a special congressional appropriation to the National Capital Planning commission. These studies, while independently launched, were all part of a series of highway needs surveys generated by enactment of the nation-wide federal highway program.

Metropolitan Areas.—Under a \$250,000 grant from the Stern Family fund to the Governmental Affairs institute and the Institute of Public administration, a series of studies of the governmental and political science aspects of metropolitan problems was going forward. In June 1956 the Metropolitan St. Louis survey, financed by a \$250,000 grant by the Ford foundation to St. Louis university and Washington university (St. Louis) jointly, and a supplementary \$50,000 from the McDonnell Aircraft Corporation trust, commenced a series of governmental, social and economic studies of the city of St. Louis and St. Louis county. The Haynes foundation announced a grant to the University of California at Los Angeles for a three-year study of certain aspects of the problems of government in metropolitan areas, the field work to be done in the Los Angeles area. In New

York city, grants totalling \$480,000 were made by the Rockefeller Brothers fund and the Ford foundation jointly to the Regional Plan association, a private agency, for a three-year study of the economy and population growth of the area over the next 25 years.

Two significant new permanent conferences were created in 1956. The first National Conference on Metropolitan Problems was held on April 29 to May 2 at Michigan State university, under the leadership of Frank C. Moore, former lieutenant governor of New York and president of the Government Affairs foundation, which sponsored the meeting jointly with 19 other professional groups. It was voted to form a "Continuing Conference on Metropolitan Problems" to serve as a co-operating agency, encourage research, prepare publications and sponsor meetings. A major step was taken in the tri-state New York-New Jersey-Connecticut area when Mayor Robert F. Wagner of New York city met in June with 53 representatives from suburban communities to consider their common problems; a steering committee was designated to provide for a permanent organization. The emergence of this continuing New York Metropolitan Regional Conference of Mayors and County Officials was considered to be the forerunner of some type of "local federalism" for the 550 governmental units in the region for the joint handling of problems of a regional scope, such as traffic, transportation and water supply.

Various other local groups were also studying the metropolitan aspects of their governmental problems in 1956.

Municipal Finance.—The U.S. census bureau's latest available annual report on the finances of the 481 cities with populations exceeding 25,000 (as of 1950), covering their 1955 fiscal years, continued to show substantial rises to record high levels in revenue, expenditure and debt. Total revenue reached \$8,019,000,000, an increase of 6.5% over 1954, and general revenue (which excludes income from utilities and employment retirement systems) amounted to \$6,374,000,000, an increase of nearly 7%. Total expenditure was \$8,363,000,000, an increase of 6.5% over 1954; general expenditure totalled \$6,524,000,000, an increase of almost 7%. Outstanding gross debt rose 8% to a total of \$13,175,000,000. For the third consecutive year, the increase in the cities' long-term nonguaranteed indebtedness exceeded that of their full faith and credit debt.

The growth in the use of municipal nonproperty taxes was indicated in the 1956 supplement to *Where Cities Get Their Money*, published by the Municipal Finance Officers association. Only 417, or about one-third, of the 1,347 municipalities with populations of more than 10,000 did not use any of the 14 nonproperty taxes and two service charges (garbage and sewer) included in the study. A comparison of nine of the nonproperty taxes with 1951 data showed that whereas 564 municipalities imposed 939 such taxes in 1951, 664 municipalities were utilizing 1,241 such taxes in 1956. Public utility gross receipts taxes were the most commonly used. Income and sales taxes gave the highest per capita yield and the number of municipalities with more than 10,000 population adopting the former increased from 24 in 1951 to 48 in 1956, while the number adopting the sales tax increased from 92 to at least 171 as of Feb. 1, 1956. Altogether, at least 441 municipalities of all population sizes were estimated to be using an income tax in 1955, and 900 municipalities in 10 states used a sales tax.

Surveys in 1956 by the Citizens Budget commission, New York city, substantiated the development of a definite trend toward performance budgeting and an accompanying development of standards for measuring municipal costs in the effort for greater economy and efficiency.

Home Rule; Charter Revision; Personnel.—The Kentucky legislature in 1956 authorized its legislative research commission

to make a comprehensive study of home rule for Kentucky cities and counties, to be completed by June 15, 1957, and the findings to be reported to the 1958 legislative session. New York's governor appointed a special commission to investigate the status of home rule in that state.

St. Louis, Mo., elected a charter Board of Freeholders to revise its 1914 charter. Duluth, Minn., abandoned its commission form of government and adopted the mayor-council plan; the new charter provided for an administrative assistant to the mayor, appointed by him for an indefinite term and vested with broad powers, of which however he might be deprived by the mayor at any time. Chicago revised its planning organization, effective Jan. 1, 1957, by making its planning staff into a full-edged department, directly responsible to the mayor, and converting the 15-man Chicago Plan commission into an advisory board to the new department, to which also the functions of the Housing and Redevelopment Co-ordinator were transferred.

U.S. census bureau data on city government employment released in March 1956 showed that as of Oct. 1955 there were 1,436,000 paid employees, an increase of 1% over Oct. 1954; and the payrolls approximated \$414,000,000, or 4% more than in 1954. The report pointed out that 218,000 of these employees, or 15%, were engaged on a part-time basis and received only minimal compensation. Considered in relation to rates of pay for full-time work, they were equivalent to only 44,000 full-time employees. The "full-time equivalent" total of city employees, therefore, amounted to 1,262,000 in Oct. 1955. The average monthly earnings of full-time employees amounted to \$331 on that date, compared with \$321 in 1954 and \$294 in 1952.

Federal Legislation.—Federal legislation in 1956 was exceptionally beneficial to municipalities. Outstanding was the Federal Aid Highway act. The Water Pollution Control act authorized, among other things, \$500,000,000 for grants to municipalities at the rate of \$50,000,000 a year for the next 10 years, to be expended for construction of municipal sewage treatment plants. The federal government would defray up to 30% of the costs, or \$250,000, whichever was smaller, and the municipalities the remainder; 50% of the funds had to go to cities of 125,000 population or less. Other measures authorized: participation of municipalities in a \$5,000,000,000 new flood insurance program; sponsorship by smaller municipalities of water supply projects in connection with federal flood control projects, under amendments to the Watershed Protection and Flood Prevention act; eligibility by local civil defense agencies to receive federal surplus property; liberalized social security coverage, including extension to firemen and policemen on a voluntary basis in five states; provision of 35,000 new public housing units for each of the next two years, subject to an approved "workable program," and various liberalizations of the urban renewal program, including increase of planning assistance grants from \$5,000,000 to \$10,000,000, and extension of such assistance to communities in disaster areas. Congress also appropriated \$1,750,000 for a 1957 census of governments to provide data on the number of local government units, municipal finance and employment, and for the first time on the relationship of assessed value of property to market value. As a follow-up of the report of the Kestnbaum Commission on Intergovernmental Relations submitted in 1955, Pres. Dwight D. Eisenhower appointed a special assistant to advise him on the co-ordination of federal programs as they affect state and local government, particularly in the metropolitan areas.

Urban Redevelopment and Renewal.—As of July 31, 1956, Federal Urban Renewal administration was providing federal assistance for 386 approved urban renewal projects located in 233 communities in 28 states, Washington, D.C., Alaska, Hawaii and Puerto Rico, which represented an increase of 84

over the year before. Capital grant reservations amounted to more than \$670,000,000, or \$225,000,000 more than at the same period in 1955. While almost all the major cities participated in the program, a good percentage of smaller places was included.

Redevelopment for residential use predominated, but cities were increasingly undertaking redevelopment projects for industrial and commercial purposes. Moreover, the newer approach of renewal through rehabilitation of old neighbourhoods, with spot clearance where needed, initiated under the 1954 housing act, was well under way in 1956.

Considerable interest was expressed in the Milwaukee (Wis.) procedure of ordering demolition at the owners' expense, without compensation, of buildings that failed to meet the housing standards, under police power, rather than including them with other buildings in a slum clearance project and paying compensation under eminent domain on the income-producing value of the property.

Under the program of planning assistance grants to small communities and to metropolitan and regional areas, more than \$1,250,000 had been granted by Sept. 1956 to state agencies for aid to 203 small communities in 12 states and 5 metropolitan or regional areas in 3 states, and to 11 metropolitan or regional agencies direct in 8 states.

(See also CIVIL DEFENSE, U.S.; TOWN AND REGIONAL PLANNING; URBAN TRANSPORTATION, U.S.; also under individual large cities.) (L. GU.; A. M. DS.)

Canada.—Estimated revenues of Canadian municipalities, excluding special purpose grants in excess of \$60,000,000, rose from \$907,000,000 in 1954 to \$957,000,000 in 1955, an increase largely attributable to real property taxes which in turn rose from about \$703,000,000 to \$754,000,000. Provincial education grants at \$199,000,000 (not included above) were \$25,000,000 higher than in 1954. Debenture borrowings were in excess of \$258,000,000 in 1954, and \$293,000,000 in 1955, while aggregate outstanding debt in the same years rose from \$2,192,000,000 to \$2,412,000,000. An unusually high demand for funds throughout the economy since midyear 1955, coupled with monetary policies designed to restrain the expansion of credit, contributed to increased municipal borrowing costs by as much as 1½% and 2% by Nov. 1956. The effects were seen in stretched-out capital programs, the uneven character of marketings and recourse to borrowings in the United States.

In the first nine months of 1956, U.S. borrowings of Canadian municipalities reached an estimated \$84,000,000, compared with \$40,000,000 in the same period in 1955, and \$26,000,000 in 1954. Demands continued that more costs and functions, particularly in education and welfare, be assumed by provincial governments. Trends to metropolitan government continued under pressure of urban growth and its dispersion and the desire to broaden fiscal bases and adopt modern administrative techniques developed by private business and suited to large-scale organization.

Further integration of services in metropolitan Toronto's 13 constituent municipalities was achieved in 1956 by the creation of a unified police force and a single licensing commission. In Alberta, a royal commission in 1956 recommended metropolitan development of Calgary and Edmonton by amalgamation with fringe municipalities, and proposed mandatory membership in district planning commissions. By 1956, seven counties had been organized in rural Alberta, combining in a central council the hitherto separate functions of local governments, school boards and, for the most part, hospital districts. A parallel development in the province had been the creation, largely since 1953, of about 50 coterminous boundary areas in which municipal and school district boundaries were made to coincide. (M. O'C.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Baltimore Plan* (1953); *Cities—How They Grow*, 2nd ed. (1953); *City Water Supply* (1941); *Defending the City's Health* (1941); *The Living City* (1953).

Munitions. U.S. Army.—A listing of the United States army's munitions items of interest for the year 1956 follows:

Aircraft Detector.—An electronic aircraft detector, so light and compact it can be hooked onto a helmet, was unveiled by the air research and development command. It is for use primarily by the ground observer corps to spot low-flying enemy aircraft.

Anti-Tank Weapon.—This new $8\frac{1}{2}$ -ton weapon is armed with six 106-mm. recoilless rifles and a calibre .30 machine gun. It also carries four calibre .50 spotting rifles. Known as Ontos, the vehicle was designed for direct sea-to-land invasion. It has a top speed of 40 m.p.h. and can climb a 60% slope.

Automatic "Brain."—The air force and Hughes Aircraft company announced the development of an electronic system which flies interceptor aircraft automatically from take-off to touch-down and which can accurately seek out enemy bombers before they strike their targets. The pilot's only function in the new, almost completely automatic system is to take off and land the aeroplane.

Bridge Trailer.—A special trailer was developed by the corps of engineers' Research and Development laboratories, Fort Belvoir, Va., to transport and launch a complete bay of the army's new division floating bridge. Towed by a standard five-ton bridge truck, it features a tilting bed with rollers which facilitate the launching of an assembled bay into the water.

Cargo Carrier.—A new five-ton eight-by-eight cargo carrier designed and manufactured for army ordnance by Reo Motors, Inc., had a novel wheel arrangement, which, with steering action on the four front wheels, facilitates cross-country manoeuvrability.

Electric Rail Cutter.—A portable electric rail cutter was developed by the Ty-Sa-Man Machine company to expedite the construction and repair of military railroads.

Flying Carpet.—The army, envisioning a new concept in battlefield mobility, unveiled its own flying carpet—a 200-lb. Aerocycle that combines the principles of the helicopter and motorcycle. The 44-h.p. Aerocycle has two rotary blades under a stand-up perch that carries the infantryman to his destination. It has an estimated top speed of 65 m.p.h. and a range of 150 mi.

Hypersonic Gun.—A gun that fires projectiles at velocities 11 times the speed of sound was designed and built for the Aberdeen Proving Ground Ballistics Research laboratory by the Universal Winding company of Providence, R.I.

Jungle Destroyer.—A giant jungle destroyer called a "tree crusher," travelling on the largest rubber tires in the world, was developed by Le Tourneau-Westinghouse. Designed to uproot heavy trees and underbrush, the six-wheeled Goliath has three times the wallop of an M-24 tank yet has such light ground pressure that it can roll over a pocket watch without damaging it. The wheels of the machine are 4 ft. wide and 10 ft. tall.

Landing Craft Retriever.—A diesel-electric-powered landing craft retriever, developed for the transportation corps by Le Tourneau-Westinghouse company, straddles and picks up damaged landing craft in water as deep as eight feet and brings it safely to shore over grades as steep as 20%.

Locomotive.—At a ceremony in Washington, D.C., on July 14, 1956, the first U.S. diesel-powered mechanical hydraulic transmission locomotive produced for military use was formally accepted by the department of the army. The 48-ton experimental locomotive has a diesel-mechanical power plant instead of the familiar diesel-electric system.

Long-Range Radio.—An army Jeep radio with a range of up to 2,000 mi. was developed by the signal corps Engineering laboratories, Fort Monmouth, N.J.

Miniature Magnetron Tube.—The world's smallest continu-

ous-wave, self-contained magnetron tube, 50 times more powerful than the tube it would replace, was designed and constructed at the signal corps Engineering laboratories.

Miniature Walkie-Talkie.—The smallest walkie-talkie FM radio ever built, this transistorized instrument is tiny enough to be carried in a shirt pocket or strapped to a helmet, yet powerful enough for two-way communication over $\frac{1}{4}$ -mi. range.

Ninety-Millimetre Self-Propelled Air-Borne Gun.—The T-101 90-mm. self-propelled anti-tank gun has a light, tanklike body with a hull built entirely of lightweight metals. Its light weight enables it to traverse muddy, marshy or sandy terrain and snow and permits it to be air-dropped.

Portable Television Transmitter and Receiver.—Under the supervision of the televisual branch of the army signal corps Engineering laboratories, the Radio Corporation of America built an 8-lb. hand-held television camera and a 47-lb. back-carried transmitter for use on the battlefield.

Radiation Test Cell.—A new chamber for the study of atomic radiation was being constructed for the air research and development command at Dayton, O. The new facility, called a radiological hot cell, would be used by Wright Air Development centre engineers to study materials or equipment that had been placed in an atomic reactor and were themselves radioactive, and it also would enable them to subject materials or equipment to radiation.

Shock Absorber.—A collapsible rubber bag that resembles a barrel was developed by the Firestone Tire and Rubber company to absorb the landing shock in parachute drops of heavy weapons and equipment. In use, four to ten of the cushions are placed underneath a magnesium pallet carrying up to 25,000 lb. of equipment.

Test Projectile.—A new artillery projectile made of paper and water was developed by the army in order to provide an inexpensive shell for test firing. Made initially only for the 105-mm. howitzer, the new shell costs about \$1. Its weight and resistance to the expansion of the propellant gases make it possible to test operation of the howitzer's recoil system.

Tiny Repeater.—A cheap and easy-to-use device that lets a combat soldier talk for more than 30 mi. over his field telephone was being perfected at the army signal corps Engineering laboratories.

Transistor.—A new type of transistor, claimed to be ideally suited for guided missiles and for more efficient electronic brains, was revealed by the Bell Telephone laboratories.

Voice-Powered Radio.—The power of the human voice was tapped by the army signal corps Engineering laboratories to operate a new radiotelephone device. Completely independent of wires and batteries, the voice-operated equipment weighs only $1\frac{1}{2}$ lb. and continues to operate as long as the user keeps talking into it. (R. S. T.)

Guided Missiles.—The year 1956 saw considerable progress in guided missile development and production, a \$2,000,000,000 item in the department of defense budget. Where, at the close of 1955, there had been only eight missile types in production, by the end of 1956 there were more than a score, and seven of them were in actual operational service.

The major development of 1956 was an increased emphasis on the intercontinental ballistic missile. The budget for the fiscal year 1957 (July 1, 1956–June 30, 1957) called for an expenditure of more than \$600,000,000 on this single development item, an increase of about 50% over the previous year.

The air force announced in 1956 that it was starting work on a second intercontinental ballistic missile project known as Titan, to be developed by the Glenn L. Martin company at its Denver (Colo.) division. It was felt that a second project, employing a different technical approach, would speed development of the

imate weapon."

Convair division of General Dynamics corporation started construction of a special plant for its SM-65 Atlas, the first of the intercontinental ballistic missiles. The \$41,000,000 plant, located near La Jolla, Calif., was expected to be ready for full operation in the fall of 1957. Meanwhile, Convair continued development of the Atlas at its San Diego, Calif., plant while the U.S. air force started construction of a launching site for the missile at its missile test centre at Patrick air force base, in Florida. First firings were expected in mid-1957, although the missiles would not have the ultimate range.

While rapidly developing its offensive capability, the U.S. air force was also considering the defense. Although it was at first believed that there would be no defense against an 18,000-m.p.h. ballistic missile, the U.S. air force had let at least three study contracts for "antimissile missiles," about which little had been disclosed.

As an intermediate measure, the department of defense also placed considerable emphasis on the intermediate-range ballistic missile, which would be capable of flying 1,500-2,000 mi. Under air force cognizance, Douglas Aircraft company started development of one such weapon, named Thor, while the army and navy jointly began work on a similar missile, the Jupiter C (one of several models of the Jupiter missile). Development status of the new projects remained secret.

The following is a round-up of U.S. missile types in service, production or development:

Surface-to-Surface.—In addition to Titan, Thor and Jupiter three other new missiles made their appearance, all army artillery types. The army made first test firings of the Dart, an anti-tank powder rocket developed by Aerophysics Development corporation. Douglas Aircraft started development of Little John, an improvement of the army's unguided close support rocket, the Honest John. Also in an early stage of development was the army's Sergeant, an advancement of the Firestone Corporal, a 100-mi.-range artillery missile.

Among the older types remaining in production were the pilotless bombers, the Martin Matador (U.S. air force) and the Chance Vought Regulus (navy); the short-range (about 200 mi.) ballistic missile Redstone, being built by Chrysler Corp.; the Firestone Corporal and the Honest John. Development was continued on the Northrop Snark and North American Navaho, the air force air-breathing long-range missiles of the pilotless variety. Martin also continued development of the close support rocket LaCrosse for the army and marine corps.

Air-to-Air.—Douglas was working on a new missile in this category, the Ding-Dong, which would carry an atomic warhead for use against attacking bombers. The Hughes Falcon joined the operational inventory; it was used in the Convair F-102 interceptor which started into service with the air defense command during 1956. Douglas Sperry continued to turn out Sparrow missiles, in three different versions, for the navy. Philco Corporation prepared for production of its Sidewinder (navy), a type similar to the Falcon.

Surface-to-Air.—Joining the list of production missiles was the Talos, built by McDonnell Aircraft corporation, a ramjet-powered missile which the air force also planned to use for base defense. In wide service use and in full production was the much-improved Nike (Douglas), and Nike B, a longer-ranging version, being readied for production. Also being built in quantity were the army's Loki (East Coast Aeronautics) and the ship-defense missile Terrier, built for the bureau of ordnance by General Electric. In development was an advanced version of the Terrier, known as the Tartar, and Raytheon's Hawk, about which nothing was disclosed.

The Boeing Airplane company started test firings of the long-range

THE SIDEWINDER, an air-to-air missile developed by the U.S. navy and tested by the Mediterranean fleet in 1956. Planned for defensive purposes, the missile was capable of destroying fighter and bomber planes at altitudes from sea level to 50,000 ft. Pilot standing beside missile wears high altitude flight suit

(200 mi.) ramjet interceptor Bomarc, which was not yet ready for introduction to service.

Air-to-Surface.—Fairchild Engine and Airplane corporation started production of its Petrel, an antisubmarine weapon launched from a plane like a guided aerial torpedo. The Petrel could be used either as an air-to-surface or air-to-underwater missile. Fairchild also started development of the Goose, a similar type of advanced design. Both are propelled by low-powered expendable jet engines. Also in production were Eastman Kodak's Dove (navy) and Bell Aircraft's Rascal, both designed for launching from aircraft at surface targets. Still in development was a similar type known as the Martin Bullpup (navy).

(J. J. HY.)

U.S. Navy.—Progress continued at an accelerated pace during 1956 in the development and production of new weapons by the U.S. navy. Increased funds appropriated for research and development were utilized primarily on guided missile and special weapons programs. Funds for production and procurement of naval armament also increased, a reversal of the downward trend of the previous two years. Procurement of so-called conventional weapons continued to decline.

The world's first guided missile cruiser, U.S.S. "Boston," com-

missioned in 1955, proved in fleet tests and public demonstrations the deadly striking power of the supersonic rocket-propelled anti-aircraft missile Terrier. A second guided missile cruiser, U.S.S. "Canberra," also equipped with Terrier, joined the fleet. Construction was started on a new guided missile destroyer, the U.S.S. "Gyatt," to launch Terrier.

Terrier's weapons control equipment automatically evaluates the threat of approaching targets and selects the units to engage them. The launching equipment automatically selects the missiles to be fired, loads them onto the launchers and points them in the direction ordered by the fire control equipment. After Terrier is fired, radar guides the missile to its target.

The marine corps organized its first anti-aircraft missile battalion using a land-based Terrier launching system.

A second surface-to-air guided missile, Talos, larger and more powerful than Terrier, proved in tests that it is a highly effective long-range weapon against aircraft. Prototype production of the missile was completed at the Naval Industrial Reserve Ordnance plant, Mishawaka, Ind., operated by Bendix Aviation corporation. Work was under way on fire control and launching components for shipboard installation of Talos. Conversion of the light cruiser U.S.S. "Galveston" to a guided missile ship for launching Talos was started.

Development of a third surface-to-air guided missile, Tartar, progressed satisfactorily. A solid-propellant rocket, Tartar is smaller than Terrier. The missile would be used in destroyers and as the secondary battery for large ships.

The transsonic surface-to-surface missile Regulus, powered by a turbojet engine, became fully operational in the fleet from both submarines and several types of surface ships.

Joint development by the army and navy was initiated on the intermediate-range ballistic missile Jupiter, which would be capable of being launched from both ship and land.

Significant progress was made in the field of air-launched guided missiles, with three being released to the fleet for operational use.

An attack squadron on board the carrier U.S.S. "Intrepid" was equipped with the air-to-air missile Sparrow I. Other carriers, including the U.S.S. "Forrestal," were scheduled to have Sparrow I-equipped aircraft.

Sparrow I, powered by a solid-propellant rocket motor, reaches a speed of 1,500 m.p.h. within seconds after launching. Launched from jet fighters against high-speed aircraft and other missiles, guidance signals deflect Sparrow I's wings and direct it to intercept the target, even under evasive action.

A second air-to-air missile, Sidewinder, developed at the Naval Ordnance Test station, China Lake, Calif., was also placed in operational use in the fleet. This was one of the simplest and least expensive guided missiles developed. Evaluation tests proved it extremely effective against high-performance aircraft.

The air-to-surface Petrel, designed primarily for use against enemy ships at sea, became operational and gave patrol aircraft a new offensive power. Outfitting with Petrel of selected squadrons in both the Atlantic and Pacific fleets was begun. Launched from well outside the range of the target's air defense, Petrel would save plane and pilot from the hazards of anti-aircraft fire. Petrel is one of the navy's more complex guided missiles, both electronically and dynamically, with an intricate electronic brain which enables the missile to think its way to the target.

Considerable research and development effort was placed on the underwater ordnance program. A guided missile nuclear-powered submarine was included in the 1956 shipbuilding program. Emphasis continued on development of small, low-cost, high-speed torpedoes that could be launched from aircraft, submarines or surface vessels. A new air-drop torpedo was in production, and an experimental high-speed torpedo was in prototype

production.

Development, production and procurement programs for atomic naval weapons were under way.

Despite the emphasis on development and production of guided missiles and nuclear weapons, naval preparedness for any type of emergency must also depend upon conventional weapons. Substantial improvements were made in the design of critical components of gun mounts and fire control systems. Two completely automatic anti-aircraft guns, the five-inch .54-calibre and three-inch .70-calibre, were evaluated and approved for fleet use. A new air-to-air and air-to-ground rocket reached fleet evaluation stage.

Flakelol I, a nonstrategic magnetic core material, was developed by the U.S. Naval Ordnance laboratory, White Oak, Md., for use in electronic filters and communications systems. The new material has higher permeability, lower eddy current losses and lower density than the high nickel content alloys previously used in magnetic powder cores.

A dry lubricant, Teflon, was studied and evaluated for use in rifles, torpedoes, machine guns and missile parts. Teflon's low coefficient of friction eliminated previous difficulties in operation of many types of weapons. (F. S. W.)

(See also ARMIES OF THE WORLD; ATOMIC ENERGY; AVIATION; MILITARY; JET PROPULSION; NAVIES OF THE WORLD.)

Muscat and Oman. This is a sultanate in close treaty relationship with Great Britain, occupying regions extending northwest and southwest from the most easterly point of Arabia, together with an enclave in Trucial territory stretching southward for about 45 mi. from Cape Musandam. Total area: about 82,000 sq.mi.; pop. (1955 est.) 550,000, including many Baluchis, western Indians and Negroes in chief towns and on the coast. The dependency of Gwadar, an enclave on the south coast of Makran (Pakistan), comprises a port (pop. about 6,000) and about 300 sq.mi. of adjoining country. Chief towns (1954 est.): Muscat (cap.) 3,500; Matrah 8,500. Sultan, Said bin Taimur.

History.—The sultan of Muscat and Oman returned to his capital city, Muscat, early in Jan. 1956 after travelling through territories over which his sovereignty had been forcefully reasserted, with the British government's approval. By removing the pro-Saudi imam of Oman the sultan unified his domain and gave it a cohesive administration which it had not had for a long time.

Drilling by the Iraq Petroleum company was vigorously pursued in Oman but at a depth of more than 4,000 ft. oil had still not been found. (E. S. AH.)

Museums. **United States.**—Museums during 1956 offered new exhibits and activities designed to give deeper pleasure and understanding. To illustrate the typical operations of a railway, the Franklin institute, Philadelphia, Pa., began the installation of an H-O gauge working model with 800 ft. of track, 300 cars and 30 locomotives. A moving mural, 90 ft. long which showed in turn the characteristic animals of the more recent geological periods, highlighted the fossil mammals hall in the Carnegie museum, Pittsburgh, Pa. Visitors to the University of Oklahoma museum, Norman, were able to look at an exhibit of birds and at the same time hear the bird calls over a telephone receiver. With other exhibits they could listen to Indian music or the sounds of a tropical forest. Similarly, in the new museum at Petersburg National Military park, in Virginia a diorama of the interior of a soldier's hut could be studied while listening to a letter which had been written home by a soldier. The National museum, Washington, D.C., modernized its exhibits with the opening of the Birds of the World hall and a series of

displays tracing the history of iron and steel in America. The Metropolitan Museum of Art, New York city, completed the installation of its splendid collection of European arms and armour in ten galleries, while the Milwaukee (Wis.) Public museum opened an oceanic hall illustrating the life and culture of Pacific islands. The mediaeval hall of the Virginia Museum of Fine Arts, Richmond, was finished. In Philadelphia the Commercial museum reopened after extensive remodelling of its building and revision of its exhibits, and the St. Augustine (Fla.) Historical society also installed a complete new set of exhibits.

Museums provided unusual educational activities for children and adults, specialists and the general public. At a dinosaur night at the Chicago Natural History museum visitors saw new exhibits and motion pictures of dinosaur fossils. The Museum of Fine Arts, Houston, Tex., organized a fine arts forum on the American heritage and the southwest. The Wedgwood International seminar held by the Philadelphia Museum of Art gave experts and collectors opportunities for discussions on Josiah Wedgwood and his pottery. The Springfield (Mass.) Museum of Fine Arts conducted a seminar on the economics and design of merchandise packages, accompanied by a special exhibition of packaging. A month-long institute of the maritime history of the United States was offered by the Marine Historical association at its Mystic (Conn.) seaport restoration. The American Museum of Natural History, New York city, organized a study tour

Mexico and Central America for travellers with scientific interests. The Boston (Mass.) Museum of Fine Arts and Tufts University offered a four-year undergraduate course in the fine arts, while the Metropolitan Museum of Art collaborated with New York university in a graduate course to train curators. To make their special exhibitions better and to conduct them more efficiently, 12 art museums formed a Museum Exhibitions association to assemble and circulate temporary shows among the group.

Museums carried on various important research projects. Colonial Williamsburg (Va.), at a cost of \$500,000, began a five-year study of life in 18th-century America. The American Museum of Natural History and New York university started a three-year investigation of sedimentation in Long Island sound, and in Philadelphia, 50,000 specimens of deep-sea molluscs were added to the research collections of the Academy of Natural Sciences. The Philadelphia Museum of Art acquired a collection of geographic art by John Sloan illustrating his development.

Museums continued to build. The Seattle (Wash.) Art museum and the Brooks Memorial Art gallery, Memphis, Tenn., completed additions, while the Atlanta (Ga.) Art association opened its new buildings. The Los Angeles (Calif.) Municipal Art gallery designed by Frank Lloyd Wright was dedicated, and construction started on his building for the Solomon R. Guggenheim museum in New York city. Congress appropriated \$33,712,000 to build a museum of history and technology for the Smithsonian institution, Washington, D.C. The national park service began its ten-year Mission "66" program which included plans for about 100 new visitor centres in the parks, each to contain a small museum. (See also SMITHSONIAN INSTITUTION.)

(R. H. LS.)

Accessions to Art Galleries and Art Museums.—Mr. and Mrs. Robert Sterling Clark put on display in their museum at Williamstown, Mass., 50 paintings by ten 19th-century French artists. Another area of their vast but previously scarcely known collection may now be seen in ten canvasses by J. B. C. Corot, and by Edgar Degas (including the notable "Entrance of Masked Figures") and others by Gustave Courbet, Camille Pissarro and Henri de Toulouse Lautrec.

At the National Gallery of Canada at Ottawa, four great paintings were purchased from the Liechtenstein collection.

SUNBURST CONSTRUCTION AND SCULPTOR, Richard Lippold. The gold wire design was commissioned by the Metropolitan Museum of Art, New York city, and completed for exhibition in 1956. More than two miles of wire, and 14,000 hand-welded joints were used in the construction, the full title of which is "Variation Within a Sphere, No. 10: The Sun"

These were "St. Catherine" by Simone Martini, "The Entombment" (1614) by Rubens and two exquisite paintings by Jean Baptiste Chardin, "The Governess" and "The Return From Market," both painted in 1739. Considered the greatest family collection in the world, this remarkable assemblage of art objects was started by the princes of Liechtenstein in the 15th century.

Claude Monet, the great French Impressionist painter, came into prominence as one of his huge late water lily paintings was acquired by the Museum of Modern Art and another one by the Art Institute of Chicago.

A rare Etruscan bronze figure of a woman dating from about 440 B.C. was purchased by the Fogg Art museum at Harvard university. A remarkable 8th-century Indian Buddha went to the Seattle Art museum, purchased from the Margaret E. Fuller fund.

From the duke of Beaufort the Metropolitan Museum of Art purchased a remarkable Roman sarcophagus of the 3rd century A.D. Around three sides are figures in high relief representing Dionysus, the four Seasons and the bounty of Nature.

The Baltimore Museum of Art acquired a rare collection of 200 objects of oceanic art, the gift of Mr. and Mrs. Alan Wartzburger. Masks, figures, shields, jewelry and other objects illustrate with amazing completeness this fascinating primitive culture.

As a bequest from Curt Valentin, the Minneapolis Institute of Arts received four important German paintings, Ernst Kirchner's "Modern Bohemia," Lyonel Feininger's "Hopfgarten," Max Beckmann's "Mountain Landscape, Bavaria" and Emil Nolde's "Heavy Seas at Sunset." They also acquired "Dining Room in the Country" (1913), an important painting by Pierre Bonnard.

An important English painting, "Dell in Halmington Park" by

John Constable, went to the William Rockhill Nelson Gallery of Art in Kansas City, which also acquired a marble bust of Benjamin Franklin (1768) by Jean Antoine Houdon.

The City Art museum, St. Louis, acquired a remarkably fine Frans Hals, "Portrait of an Unknown Woman," painted 1648-50, formerly owned by Count Maurice Zamoyski of Warsaw.

In memory of Curt Valentin, a group of friends presented to the Museum of Modern Art Auguste Rodin's monumental bronze of Balzac.

A "Fête Champêtre" by Jean Baptiste Joseph Pater was the gift of Mr. and Mrs. William D. Vogel to the National Gallery of Art in Washington, D.C.

A rare Spanish still life (c. 1605) by Juan Sanchez Cotan was the gift of Mr. and Mrs. Leigh Block to the Art Institute of Chicago.

Mr. and Mrs. Ralph Cohn, New York, presented to the Smith College Museum of Art at Northampton, Mass., a marble torso by the French sculptor Hans Arp, a significant recent piece completed in 1953.

The Newark museum through its members' fund purchased an important work of the 18th-century American painter John Hesselius (1728-78), the "Portrait of Mrs. Richard Sprigg."

The Metropolitan Museum of Art paid a tribute to contemporary art by commissioning the United States sculptor Richard Lippold to make for it a giant construction in fine gilded wire. This extraordinary piece, entitled "The Sun," is remarkable not only for the intricacy of its craftsmanship but for the compelling, awe-inspiring effect on the spectator. (F. A. Sw.)

International.—A milestone was reached in 1956 in the annals of museums with the celebration of an "International Campaign for Museums" which took place during October. A strange and colourful poster heralded the campaign throughout the world and in many countries new museums were opened and special activities were organized. The fourth triennial conference of the International Council of Museums was held in Switzerland in July. About 300 delegates attended.

Great Britain.—Although the total grants to the national museums in the civil estimates showed a net increase of about £90,000 and this allowed for an intake of 80 further members of staff, the lot of the local museums continued to deteriorate. One exception was the Bowes museum at Barnard castle whose financial future was guaranteed by the Durham county council. The appeal to the government for assistance by the Museums association, the Arts council and the Carnegie United Kingdom trust, submitted at the end of 1955, was rejected.

A report prepared by a working party appointed by the National Institute of Adult Education stressed the total inadequacy of provision made for museums from public funds both nationally and locally and encouraged the closer association of museum administration with that of public education. The third report of the Reviewing Committee on the Export of Works of Art made strong recommendations to the government that the level of purchase grants to national and local collections be raised and that a fund be established for emergency purchases.

At Stoke-on-Trent, Staffordshire, the first large museum to be built in Great Britain since before World War II was opened to house the City Museum and Art gallery's collection. Several new galleries were reopened at the City Museum and Art gallery, Plymouth; and at the Fitzwilliam museum, Cambridge, the Lower Marlay gallery was redecorated as the permanent home of the museum's porcelain collection.

The Museums association held its annual conference in conjunction with the Dutch Museums association in Amsterdam, Neth. A scheme for the extension of the museums diploma to South Africa was established and an architecture committee was set up to advise on museum design and equipment.

Commonwealth.—In Australia new galleries were opened at the Museum of Applied Science, Victoria, including a bay devoted to atomic physics, and the Victoria government supported a scheme for a further extension to the museum. The Royal Ontario museum, Toronto, was reorganized under a single director. New museums in Canada included the Alexander Graham Bell museum at Baddeck, N.S., and the United Counties museum at Cornwall, Ont. The Glenbow foundation of Calgary was established at Alberta to assist museums and support research in archaeology and history. In New Zealand work was begun on the extension to the Auckland War Memorial museum, estimated to cost £370,000.

In Ceylon funds were established for the publication of an atlas of antiquities, of which the four national museums contained a rich collection. In Pakistan a science gallery and an educational museum were opened at Lahore and the Abasin Art centre was established at Peshawar. Under the supervision of the curator of the Sarawak museum plans were laid for the development of museum facilities in Brunei and North Borneo. In South Africa plans were made for the establishment of an open-air museum of South African history at Pretoria.

Europe.—In Austria five more galleries were opened at the Museum of Army History in Vienna. Progress was made on the new building for the Historical museum, and at the North Austrian State museum a museum of Danube culture was opened and the collection of the historic *Rechtsaltertümer* was rearranged. New museums opened in Bulgaria at Sofia, Perushitsa, Russé, Vratsa, Nesebar and Pliskov. In France a new museum opened at Grignan and new galleries were completed in museums at Autun and Bourges. Many provincial museums and galleries were reopened.

A museum of Chinese art opened in Budapest to house examples of ancient, modern and applied Chinese art. New museums were established in Italy at Rome, Milan, Palestrina, Brescia, Velletri and Capua. In the Netherlands the Singer Memorial museum was opened at Laren and new galleries were completed at the Historical museum, Rotterdam. In Norway a maritime section was opened at the Borgarsyssel museum, the district museum of Östfold. A new museum building was opened at Jönköping, Swed., and an annex for contemporary art was completed at the National museum in Stockholm.

Asia.—A national museum of history and culture was opened in Taiwan (Formosa). In Indonesia plans were put forward by the United Nations Educational, Scientific and Cultural organization for the creation of a national museum.

Middle East.—One of the city gates of Nineveh, the Nergal gate, was restored to serve the ancient capital as a small local museum. Prehistoric stone implements were added to the collection of the Iraq museum through excavations in the Zagros mountains.

Musial, Stanley Frank (1920—), U.S. baseball player who was voted "player of the decade" in 1956, was born at Donora, Pa., on Nov. 21. After graduation from high school he joined the St. Louis Cardinals farm system, playing first for Williamson, W. Va., in the Mountain States league. In 1941, after several more seasons in the minors, he was called up by the Cardinals late in the season and was a major factor in the Cardinals' world championship victory the following year. Except for military service in 1945-46 he remained thereafter with the Cards, becoming one of the great baseball stars of all time. Prior to his selection as outstanding player of the decade, Musial had been named most valuable player in the National league three times (1943, 1946 and 1948), and had led the league in batting six times (1943, 1946, 1948, 1950, 1951 and 1952). In 1956 Musial also established a new

national league record for extra base hits, exceeding the old mark of 1,071 set by Melvin T. (Mel) Ott of the New York Giants between 1926 and 1947.

Classical.—The year 1956 passed under the sign of music. Mozart, for it was the bicentennial of his birth. All over the world, opera houses, symphony orchestras and chamber music organizations offered performances of Mozart's music; in Salzburg, his birthplace, the festivities continued throughout the year. Many little-known works by Mozart were revived and performed on special occasions.

The international exchange of musical organizations reached its peak in 1956. European symphony orchestras travelled from one country to another with a facility formerly attainable only by individual artists. The Berlin Philharmonic orchestra made its second U.S. tour under the direction of its permanent conductor, Herbert von Karajan, in the autumn. The Vienna Philharmonic orchestra gave concerts in the United States later in the year. The New Orleans orchestra, directed by Alexander Holsberg, made a highly successful tour through Latin America. At the most spectacular event in orchestral travels was the extensive European tour of the Boston Symphony orchestra, under the direction of Charles Munch and Pierre Monteux, culminating in a series of concerts in Leningrad and Moscow early in September. This was the first time that an American symphony orchestra had visited the U.S.S.R.; the artistic success was tremendous. At its concerts in the Soviet Union, the Boston Symphony presented works by the U.S. composers Walter Piston, Aaron Copland and Paul Creston, which were heard with interest by the Russian audiences.

Previous to the concerts of the Boston Symphony orchestra, the U.S.S.R. heard George Gershwin's opera *Porgy and Bess*, performed by an all-Negro cast from the United States. The final performance took place at the Leningrad Palace of Culture on Dec. 26, 1955. The authentic presentation of this U.S. opera aroused enormous interest and produced a deep impression on Russian musicians, to judge by the accounts in the Soviet press.

Festivals of modern music were prominent during the year. The 30th annual music festival of the International Society for Contemporary Music (I.S.C.M.) took place in Stockholm, Sweden, from June 3 to June 10. Twenty-six works from 19 countries were given, and a concert of Swedish works was also presented. The growing interest in the method of composition known as dodecaphonic (the 12-tone system) was reflected in this festival; 17 works were composed in this technique.

The first program of the I.S.C.M. festival comprised the following works: *Concerto da Camera* for flute, English horn and string orchestra, by Arthur Honegger; *Suite* for brass instruments, percussion and string orchestra, by Rudolf Kelterborn (Switzerland); *Thirteen Sketches for Thirteen Instruments*, by Jean Radic (Yugoslavia); *Sinfonia da Camera*, by Sven Erik Bick (Sweden); *El Amor Pasa* for soprano, flute and chamber orchestra, by Ahti Sonninen (Finland); and *Triple Concerto* for flute, clarinet and bassoon, by Niels Viggo Bentzon (Denmark).

The second concert of the I.S.C.M. festival was devoted to chamber music. It included the *Second String Quartet* by Henri Dutilleul (France); *Kontrapunkte* by Karlheinz Stockhausen (Germany); a chorale motet by Anton Heiller (Austria); *Wind Quartet* by Finn Mortensen (Norway); *Violin Sonata* by the 22-year-old composer Torarinnsonn Leifur (Iceland); and *Sixth String Quartet* by Hilding Rosenberg (Sweden).

The third concert of the I.S.C.M. festival included the following works: *Variations* by Barry Moss (New Zealand); *Ectophrase* for electric instruments, percussion and string orchestra by Shiroshi Mayuzumi (Japan); *Idyll of Theocritus* for soprano

and orchestra by Roger Sessions (U.S.), originally commissioned by the Louisville orchestra and performed by that organization earlier in the year; *Violin Concerto* by Mario Peragallo (Italy); and *Fourth Symphony* by Guillaume Landré (Netherlands).

The fourth concert of the I.S.C.M. festival consisted entirely of Swedish music; *Ritornello for Orchestra* by Ingvar Lidholm; *Cantata* by Hilding Hallnas; *Missa Brevis* for three-part chorus by Lars Erik Larsson; and *Sinfonia Espressiva* by Gosta Nyström.

The fifth concert of the I.S.C.M. festival presented chamber music works: *Second String Quartet* by Barbara Pentland (Canada); *Trio* for flute, oboe and bass clarinet by Joaquín Homs Oller (Spain); *Psalm VIII* for soprano, flute, cello and piano by Luigi Cortesi (Italy); *Elegia Appassionata* for piano, violin and cello by Giseler Klebe (Germany); and *Second String Quartet* by Alan Rawsthorne (Great Britain).

The sixth concert of the I.S.C.M. festival contained the following orchestral works: *Sinfonia Concertante* by Hanns Jelinek (Austria); *Violin Concerto* by Benjamin Frankel (Great Britain); *Music for Orchestra* by Marcelle de Manziarly (France); *Piano Concerto* by Alexei Haieff (U.S.); and *Pampeana No. 3* by Alberto Ginastera (Argentina).

The annual International Festival of Music in Venice (Sept. 11 to Sept. 23) attracted a great deal of attention because of the world première of a new sacred work by Igor Stravinsky bearing the Latin title *Canticum Sacrum ad Honorem Sancti Marci Nominis* ("Canticle to Honour the Name of St. Mark"), conducted by the composer at St. Mark's basilica. This work exploits the techniques of both mediaeval and ultra-modern music. The scoring suggests old instrumental sonorities, and the Latin text enhances this archaic impression, but the structure of the music is based on a serial progression of notes serving as a theme, a procedure related to the 12-tone method of composition.

Other works given at the Venice festival included *Symboli Chrestiani* for baritone and orchestra by Nicolas Nabokov; *Suite Concertante* for violin and orchestra by Bohuslav Martinu;

CANADIAN PRODIGY, 23-year-old Glenn Gould of Toronto, recording at a New York city studio in March 1956. His first record, the *Goldberg Variations* of J. S. Bach, was a classical best-seller

Concerto for harmonica and orchestra by Alexandre Tcherepnin; a work for wind quintet by Gian Francesco Malipiero; *Concerto Breve* for ballerina and orchestra by his nephew, Riccardo Malipiero; and a *Concerto* for piano and wind quintet by the American composer Wallingford Riegger. A concert of French choral music given at the Venice festival presented Henri Barraud's *Te Deum* and Daniel Lesur's *Cantique des Cantiques*.

The first International Festival of Contemporary Music was given in Warsaw, Pol., from Oct. 10 to Oct. 21; 20 concerts were played, featuring modern works by Polish, Russian and western European composers. The Warsaw festival was remarkable in that it broke the ban on western modern music. Works by Stravinsky, Schoenberg, Alban Berg and other composers previously regarded as decadent were performed for the first time in eastern Europe. Contemporary Polish music was represented by Grazyna Bacewicz, Tadeusz Baird, Witold Lutoslawski, Artur Malawski, Kazimierz Sikorski, Stanislaw Skrowaczewski, Michal Spisak, Antoni Szalowski and Boleslaw Woytowicz. Three large works by Karol Szymanowski were also presented.

In Great Britain, musical activities were maintained by a number of orchestral and chamber music organizations. The annual Edinburgh festival (Aug. 19–Sept. 8) featured a variety of classical and modern works. The 31st Haslemere festival was given in July under the direction of Carl Dolmetsch; as in preceding years, programs were devoted to old European music, performed on modern reproductions of recorders, harpsichords, lutes and other instruments in use during the 16th, 17th and 18th centuries. The most remarkable single event of the British music year was the performance of the new *Eighth Symphony* by the dean of British composers, Vaughan Williams (Manchester, May 2).

In the United States, a festival of American music was given in February at the Juilliard School of Music in New York city, on the occasion of its 50th anniversary. It consisted of six concerts of specially commissioned works: a piano concerto by Roger Sessions (Feb. 10); cello concerto by Peter Mennin (Feb. 10); opera *The Wife of Martin Guerre* by William Bergsma (Feb. 15); *Diaphony* for brass, two pianos, organ and timpani by David Diamond (Feb. 22); *Festival Folk Fantasy* for chorus, folk singer and amplified piano by Roy Harris (Feb. 22); *Fifth Symphony* by Walter Piston (Feb. 24; the first performance of his *Sixth Symphony* preceded that of the *Fifth*; it was given by the Boston Symphony orchestra in Nov. 1955).

The 41st May Music festival at Cincinnati presented a varied series of concerts, including the world *première* of the cantata in ten movements *Images of Youth* by the resident composer, Felix Labunski.

The 12th Festival of Chamber Music in the Library of Congress at Washington, sponsored by the Elizabeth Sprague Coolidge foundation (Oct. 19–21), offered world *premières* of the following works: song cycles by Luigi Dallapiccola and Irving Fine; *Suite for Cello and Piano* by Paul Creston; *Violin Sonata* by Peter Mennin; *String Quartet* by Henry Cowell; and the madrigal-opera *The Unicorn, the Gorgon and the Manticore* by Gian Carlo Menotti.

Numerous other works of special interest were given for the first time in 1956: *Violin Concerto* by Miklos Rozsa (Dallas, Jan. 5); *Symphony in E Flat* by Ernest Bloch (London, Feb. 15); *Second Symphony* by the Chilean composer Juan Orrego-Salas (Minneapolis, Feb. 17); *Captain Lovelock*, opera by John Duke (New York, Feb. 20); *11th Symphony* by Heitor Villa-Lobos (Boston, March 2, composer conducting); *Fifth Symphony* by Paul Creston (Washington, April 4); *Second Symphony* by Gail Kubik (Louisville, April 7); *The Trial at Rouen*, opera by Norman Dello Joio (NBC-TV Opera Theater, April 8); *First Piano Concerto* by the American composer Benjamin Lees

(Vienna, April 26); *Pantaloone*, opera by Robert Ward (New York, May 17); *The Tempest*, opera after Shakespeare by Frank Martin (Vienna, June 17); *The Ballad of Baby Doe*, folk opera by Douglas Moore and John Latouche (Central City, Colo., July 7); *Second Symphony* by Ned Rorem (La Jolla, Calif., Aug. 5); *Fourth Piano Concerto* for piano left-hand and orchestra by Sergei Prokofiev (west Berlin, Sept. 5; posthumous performance); *Susannah*, opera by the U.S. composer Carlisle Floyd (New York, Sept. 27); *Incantation* for piano and orchestra by Bohuslav Martinu (New York, Oct. 4); *Portrait* for violin and orchestra by Bernard Rogers (Cleveland, Oct. 18). The *Third Symphony* by Ernest Toch was performed by the Pittsburgh Symphony orchestra on Dec. 2, 1955, and received the Pulitzer prize of 1956. *The School for Wives*, opera by the Swiss composer Rolf Liebermann, commissioned by the Louisville orchestra, was produced in Louisville, Dec. 3, 1955. (N. Sv.)

Popular.—Most of the popular songs of 1956 had little to recommend them artistically, and the best of them were either revivals from the past or imitations of tried and true materials. The Elvis Presley hysteria began with a rhythmic monstrosity called "Blue Suede Shoes" and continued through "Heartbreak Hotel" to the primitive "Hound Dog." Eventually "the Pelvis" arrived at a straightforward ballad, "Love Me Tender," which served as the title of his first motion picture and was copied note for note from the old "Aura Lee," also known as "Army Blue" and "The Violet." Meanwhile the "Rock 'n' Roll Waltz" was dominating "Your Hit Parade," with other hits making use of the same savage rhythm.

Of the old-timers, "The Yellow Rose of Texas" (published in 1858) held its own through the closing months of 1955, to be superseded by "Autumn Leaves," which profited by a film of the same name, and finally "My Prayer," written by Jimmy Kennedy and Georges Boulanger in 1939.

"Poor People of Paris" was a fairly good song with a French background, and the Italian influence was evident in "Whatever Will Be Will Be" ("Che Sera Sera"), which was topping the "Hit Parade" toward the end of the year. It may have been significant that the theme song from Kurt Weill's *Threepenny Opera*, generally known as "Moritat," became a solid success, even though its composer deliberately wrote it as a vulgar tune. A folklike song called "Sixteen Tons," popularized by Tennessee Ernie Ford, suggested a relationship with the ancient "Down in a Coal Mine." A pseudo-religious influence made itself felt in the reminiscent "The Bible Tells Me So."

Both motion pictures and television played a part in the development of hit songs for 1956. "Love Is a Many-Splendored Thing," from the film of the same name, won the motion picture academy award as the best screen song of the year, with a helpful background in "One Fine Day" from Puccini's *Madama Butterfly*. The top musical award of television went to "Love and Marriage," introduced in a telecast of *Our Town* and obviously based on the nursery jingle "Strut, Miss Lizzie." Two songs from the movie version of *Picnic* became popular, the original having the title "Moonglow," while the picture's theme was clearly derived from its harmonic sequence. "Lisbon Antigua" also had a screen background.

Two new musical shows stood out in 1956 and actually supplied some material for the "Hit Parade." *My Fair Lady* had a spectacular success, with Alan Jay Lerner and Frederick Loewe profiting by the Bernard Shaw play *Pygmalion*, as well as the performances of Julie Andrews, Rex Harrison and Stanley Holloway. At one time two songs from this musical comedy, "I Could Have Danced All Night" and "On the Street Where You Live," appeared simultaneously among the favorites. There was also "Standing on the Corner," from Frank Loesser's *The Most Happy Fella*, which, aside from this interpolation and a comic

ditty about Dallas, came close to being an actual grand opera in Broadway terms.

Richard Rodgers, Cole Porter, Irving Berlin and other outstanding creators of popular music were conspicuously absent from the air and the best-seller lists. Before the year had ended, composers representing A.S.C.A.P. (the American Society of Composers, Authors and Publishers) and the Songwriters Protective association were suing Broadcast Music, Inc., for conspiring against publicizing their materials, and a congressional committee was investigating this agency of the National Association of Broadcasters as a possible monopoly in restraint of trade.

(S. SP.)

Music in Industry.—Functional background music successfully broke through the noise barrier in industry during 1956. Work music had been used in industry for nearly 18 years. However, noisy locations such as metalworking and fabricating plants and rooms with batteries of punch card, teletype and electric calculating machines presented a seemingly insuperable noise barrier to music. Noise builds up tension and anxiety in workers, causing fatigue and accidents, and affecting production adversely.

It had long been known that music tends to reduce or delay fatigue and consequently increases muscular endurance. Hence it was deemed important to bring the beneficial qualities of scientifically planned background music to workers in noisy areas.

Since most audible noise is in the low register, background music suppliers had relied on the broadest possible frequency range to make music audible at low volume over noise, a method only moderately successful. Muzak corporation, the pioneer in the field of industrial music, during 1956 demonstrated a newly perfected technique known as "controlled dynamics." In this the normally softer passages in the music are controlled so that they do not drop out of hearing behind the noise, and the passages of peak loudness are controlled to prevent "blasting," so that music not only penetrates but also masks out noise. "Controlled dynamics," coupled with wide frequency range recordings, proved successful in numerous factory installations. (X.)

Recordings.—In his short lifetime, Wolfgang Amadeus Mozart wrote more consummate masterpieces of music than any composer who lived before him or since. In 1956, the 200th anniversary of his birth, all those incomparable works of art were recorded in performances in the U.S. and Europe that would have been beyond the most hopeful dreams of the prodigious music maker from Salzburg. His opera *Don Giovanni* was sung and played by the soloists and chorus of the Vienna State Opera and the Vienna Philharmonic conducted by Joseph Krips with Caesare Siepi in the title role on the London label. *The Magic Flute*, conducted by Ferenc Fricsay, and the *Coronation Mass*, under Igor Markevitch, were on Decca, and a memorial performance of the *Requiem* sung in St. Stephen's cathedral in Vienna on the anniversary of Mozart's death was on Archive. The *Last Quartets*, the four final proofs of his genius with chamber works, were played by the Budapest quartet on Columbia, and on Epic the monumental *C Minor Mass* was recreated by the Vienna Symphony orchestra and chamber choir under Rudolf Moralt. Twenty-four of his songs were set forth most skillfully by Anny Felbermayer on Vanguard. Symphonies 32 and 40, the hallowed *G Minor*, were performed superbly by the Philharmonic symphony of London under Erich Leinsdorf for Westminster, and Symphonies 36, 39, 40 and 41, the *Jupiter*, were done with appropriate strength and insight by the Chicago symphony under Fritz Reiner. Insight and a way with wit were Reiner's qualifications for leading a chamber group through the rollicking parody Mozart scholars refer to as K. 522 and Mozart lovers call *The Musical Joke*.

The complete piano sonatas of Beethoven were done up definitively by Artur Schnabel, and RCA-Victor added a complete

piano score to the luxurious set it released in the fall of 1955. Other excellent records on the same label were the Tchaikovsky *Piano Concerto No. 1*, played by the visiting Russian Emil Gilels accompanied by the Chicago symphony under Reiner, and the Prokofiev *Sonata No. 1 in F*, played matchlessly by Gilels' fellow countryman David Oistrakh. On Vanguard, the piano curios of the first notable U.S. pianist-composer, Louis Moreau Gottschalk (1829-69), were played by the young American Eugene List in a collection titled *The Banjo. The Creation*, Haydn's ennobling oratorio, was done by the chorus, soloists and orchestra of the Vienna State Opera under Mogens Woldike. On Decca the same work was done as well by the Berlin Philharmonic and choir of St. Hedwig's cathedral under Igor Markevitch.

A new work of an altogether different order was Carl Orff's sensuous *Trionfo di Afrodite*, for which the performing forces were the Bavarian Radio orchestra and chorus under Eugen Jochum. On the Bartok label, Bela Bartok's *Cantata Profana* was played and sung by the New Symphony orchestra and chorus under Walter Susskind. Roger Sessions' *Black Maskers Suite* was played by the Eastman-Rochester Symphony orchestra under Howard Hanson, and Charles Ives's four sonatas for violin were carefully—and bravely—encountered by Rafael Druian on Mercury. To follow its Minneapolis Symphony orchestra readings of the full-length ballet scores of *The Nutcracker* and *Swan Lake*, the same label followed with the same performers in a full-length, or four-record, *Sleeping Beauty* which Antal Dorati conducted with his accustomed care. Westminster provided excellent recordings of Buxtehude organ works played by Alf Linder, the Corelli *Concerti Grossi* of Opus 6 played by a string trio, and the Brahms symphonies sounded out majestically by the Philharmonic Promenade orchestra of London conducted by Sir Adrian Boult. On Angel the Khatchaturian violin concerto was played by Oistrakh with the composer conducting the Philharmonia orchestra, and the Richard Strauss showpiece for voices, instruments and actors of high and low degree was played by the same Philharmonia and sung by an assortment of soloists under the restrained supervision of Herbert von Karajan. The year's project for Walter Giesecking, who in 1955 recorded all the piano works of Mozart, was all the piano works of Ravel. The quality remained high. On Columbia, the astonishing young pianist Glenn Gould played the Bach *Goldberg Variations* with a combination of intelligence and taste. The omnipresent Oistrakh played the Shostakovich *Concerto for Violin and Orchestra* with the New York Philharmonic symphony under Dimitri Mitropoulos. The score of *The Fairy's Kiss*, one of ballet's loveliest creations, was conducted by its composer, Igor Stravinsky, and played by the Cleveland orchestra.

Some good records had no music on them. For Caedmon T. S. Eliot read *The Love Song of J. Alfred Prufrock* and *Ash Wednesday*. For Angel, Sean O'Casey read an introduction to his *Juno and the Paycock* before an accomplished crew of Abbey theatre actors read through the play. For RCA-Victor, the Irish actress Siobhan McKenna and a Broadway cast recorded Bernard Shaw's *Saint Joan*, and for Westminster Miss McKenna read a delightful assortment of Irish ballads and poems. A musical-comedy version of Shaw's *Pygmalion* called *My Fair Lady* was the hit of the Broadway season. The songs of the show were superbly recorded by the cast on Columbia.

With Shaw in song form a hit, there were reasons to assume that Tin Pan alley had lifted itself to new levels of literacy. But to conclude that would be to overlook such records as "Hound Dog" and "Heartbreak Hotel." Elvis Presley sang them, nobody wanted to understand what they were about, and the few who came into the knowledge regretted it. They sold more records, millions more, than Shaw and Mozart combined. (J. J. RY.)

Jazz.—The jazz picture in 1956 looked brighter than at any

me since the beginning of World War II. Jazz centred around clubs, and recordings flourished on both the east and west coasts. The deaths of Clifford Brown and especially Charlie Parker created a deep void in the new progressive movement in jazz which Miles Davis seemed to be filling as well as anyone. While Davis' contributions were identifiable as coming directly from the Gillespie-Parker influence in developing more fully the art of improvisation, they offered freshness and uniqueness. Al Cohn, Stan Getz and Lester Young led in the development of tenor saxophone stylings, while the best known of the alto saxophonists were Lee Konitz and Paul Desmond, with altoist Phil Woods one of the most promising newcomers.

The trombone duo of Jay Jay Johnson and Kai Winding had tremendous box-office success, while Bill Harris, Bob Brookmeyer, Carl Fontana and Urbie Green stood for their less commercial jazz work.

Challenging compositions and arrangements came from the hands of experimenters who worked hard at shaping new concepts and sounds. Charlie Mingus, Lennie Tristano, Jimmy Giuffrè, Art Tatum, Art Farmer, Jack Montrose, Gerry Mulligan, John Lewis and Stan Getz were making great inroads on musical thinking while it was believed the Modern Jazz quartet might well prove to be the most important influence of the decade.

The recent trend had been toward a more "intellectual" jazz influenced by many of the techniques of the European school. Contrapuntal effects and the use of lengthier and newer forms were among the devices being tried. The higher literacy of modern musicians and experiments by musicians who enjoyed the advantage of classical training were providing jazz with classical overtones. Although the value of these contributions awaited further review, their influence should not be underestimated.

(M. E. HL.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Brass Choir*, 2nd ed. (1956); *Producing Good Music* (1956); *Listening to Good Music* (the string quartet) (1955); *The Percussion Group*, 2nd ed. (1956); *Playing Good Music* (the string quartet) (1955); *The String Choir*, 2nd ed. (1956); *Symphony Orchestra*, 2nd ed. (1956); *The Woodwind Choir*, 2nd ed. (1956).

Mutual Security Program: see FOREIGN AID PROGRAMS,

Narcotics. The 11th session of the United Nations Commission on Narcotic Drugs held at Geneva, Switz., April 23 through May 18, 1956, included considerable discussion of the second draft of the Single Convention on Narcotic Drugs, which was intended to codify and replace the nine existing international narcotic treaties.

The Economic and Social Council urged governments to send their comments on the revised draft of the single convention to the secretary-general before Jan. 1, 1957, so that a study of these comments might be made and an analysis of them presented at the 12th session of the Commission on Narcotic Drugs. All countries that had not already ratified the International Opium Protocol of 1953 were invited to do so immediately so that this protocol would enter into force as soon as possible.

Technical Assistance.—Governments of opium-producing countries were invited to explore the possibilities of obtaining technical assistance, especially in their efforts to substitute other crops for opium poppy production. Under existing arrangements the United Nations specialized agencies, particularly the World Health Organization and the Food and Agriculture Organization, countries in need of such assistance could apply for it in developing appropriate administrative, social and economic measures to cope with their problems. This assistance was available in the form of advice, fellowships, scholarships and seminars. The Economic and Social Council unanimously agreed that spe-

cial consideration be given to the request of Iran for technical assistance to enable that country to enforce the recent Iranian law banning cultivation of the opium poppy, in addition to the need of Iran for technical assistance for other purposes.

The Economic and Social Council invited the commission to give further consideration to the request of Afghanistan to be included among the countries which may produce opium for export.

Illicit Traffic.—As in previous years, the far east had the heaviest illicit traffic. Hong Kong appeared to be the crossroads for much of the traffic. The situation in the near and middle east was almost equally serious. India had been exercising strict control over legal trade in opium at all stages to prevent diversion into illicit channels. Turkey reported taking all possible steps to prevent leakage of opium into illicit traffic.

The Commission on Narcotic Drugs was deeply concerned about the illicit traffic in Thailand, and requested the secretary-general to invite the governments of Thailand, Burma and Cambodia to send informed representatives to attend the discussions on illicit traffic at the 12th session.

Opium and opium derivatives, particularly morphine and heroin, were by far the most important drugs seized in the internal as well as international illicit traffic.

Raw Opium.—Traffic in raw opium showed no decline. Incomplete reports for 1955 indicated 49,100 kg. had been seized, 35,524 kg. in Thailand. That country had prohibited production of opium since 1949, but the large seizures of opium and crude morphine in 1955 revealed an extremely serious situation there.

Prepared Opium.—World seizures of prepared opium totalled 1,551 kg., most of which were made in the far, near and middle east. This indicated continuance of the deep-rooted habit of opium smoking, despite the legal prohibition of this practice in most of those countries. Thailand was attempting to suppress opium smoking by 1957. Cambodia prohibited all opium smoking on Jan. 1, 1955. Considerable traffic in morphine hydrochloride originated in the forests beyond the northern frontier of Thailand, smuggled by highway and railroad, and mostly destined for illicit export to Singapore and Hong Kong. The appalling illicit traffic in these areas, as well as in the Federation of Malaya, created extremely difficult control problems.

Heroin.—Most governments had taken measures for the prohibition of heroin. Egypt had prohibited the manufacture and import of this drug and had stopped its use for medical purposes. In March 1956 Italy prohibited the manufacture, import and export of heroin, and exercised strict control over its distribution.

Large quantities of morphine and heroin were seized in Hong Kong, Thailand, Lebanon and Turkey, with indications of a similar situation in other countries. In 1955 Lebanon authorities seized about 3½ kg. of heroin. World seizures for the year were 143 kg., of which about 85 kg. were in North America, and more than 41 kg. in the far east.

Cocaine.—The long-term decline in quantities of cocaine seized throughout the world continued, although illicit traffic persisted in the far, near and middle east, Europe and North America. More than 10 kg. were seized, nearly 7 kg. of which were seized in North America. Vigorous enforcement activities broke up one of the principal cocaine smuggling gangs from Bolivia. The Commission on Narcotic Drugs discussed the progress in control of coca leaf production and chewing of coca leaf in Peru, where the recently created Coca Monopoly had the exclusive right to manufacture cocaine.

Cannabis.—Illicit traffic in cannabis continued in most parts of the world, but was a serious problem in only a few areas, where it was largely a domestic rather than an international problem. Lebanon continued to have heavy illicit traffic in this

drug, and during 1955 Lebanese authorities seized more than 1,227 kg. of hashish. More than 1,000,000 kg. of cannabis were seized throughout the world, the greatest quantities in South Africa.

Synthetic Drugs.—Fourteen countries reported the manufacture of synthetic narcotic drugs. Five new synthetic drugs were placed under international control by provisions of the 1948 protocol.

United States.—The president's interdepartmental committee on narcotics, the senate subcommittee on improvements in the federal criminal code, and the house subcommittee on narcotics concluded studies of the narcotics problem and issued reports of their findings. The recommendations of these three committees were largely responsible for the prompt enactment by the 84th congress of the Narcotic Control act of 1956. Salient features of this act include:

Broader authority for officers and agents of the bureau of narcotics and customs bureau to make searches, seizures and arrests in investigating and prosecuting violators of the federal narcotic laws;

A minimum sentence of 10 years and a maximum sentence of death for unlawful sale of heroin by a person over 18 years of age to any person under 18;

Denial of probation, suspension of sentence and parole for any narcotic violation except a first offense for possession-type offenses;

Minimum mandatory sentence of 5 years for first offenses of sale of narcotic drugs or marihuana, and 10 to 40 years for subsequent offenses, plus fines up to \$20,000;

Authority for the bureau of narcotics to conduct training programs for state and local narcotic enforcement officers.

The narcotic control law enacted by the Ohio state legislature in 1955, providing imprisonment of 20 to 40 years for unlawful sale of narcotic drugs, the most severe of all state narcotic control laws, virtually stopped the illicit narcotic traffic in that state during the first year of its operation. (H. J. A.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Drug Addiction* (1952).

Nasser, Gamal Abdel (1918–), Egyptian president was born at Beni Mor, Asyut province, upper Egypt, Jan. 15. He studied at El-Nahda-el-Misria secondary school in Cairo and at the military college. On graduating he was sent to a rifle battalion at Mankabad (Asyut). He was posted in 1939 to Alexandria, and in Nov. 1942 he was appointed lecturer at the military college and soon afterward founded the secret Free Officers' movement. He fought well in the Palestine war of 1948–49, but the Israeli victory gave further impetus to his ideas and plans. He was determined to get rid of the Farouk regime, which had failed to supply adequate munitions to the army.

In May 1952, then a lieutenant colonel, Nasser approached Maj. Gen. Mohammed Naguib and offered him the post of leader of the planned revolution. The coup d'état of July 23 succeeded, and Naguib became the head of state and later president of the republic and premier. The real power, however, was held by the Revolutionary Command council (R.C.C.) composed of 11 officers and controlled by Nasser, although Naguib was its nominal chairman. The relations between Naguib and Nasser became embittered because the former thought the revolution was going too far and wanted a return to a parliamentary regime. Nasser opposed such a move, which would mean a return of the old regime. Naguib's popularity was great, however, and it was only after several shuffles of office that Nasser emerged secure as premier on April 18, 1954, and Naguib in November of that year was removed entirely from office. In the spring of 1954 Nasser published a 73-page book entitled *The Philosophy of the Revolution* in which he suggested that Egypt was the natural leader of the Arab world.

July 27, 1954, was for Nasser a day of great triumph: together with Antony Head, the British secretary of state for war, he initialled an agreement stipulating the evacuation of the Suez Canal Zone by the British forces within 20 months. On Oct. 19,

he signed the final text of the Anglo-Egyptian treaty.

On June 22, 1956, a national plebiscite approved Nasser as Egypt's president for six years. On July 18–19, on the island of Brioni, Yugoslavia, Marshal Tito, Jawaharlal Nehru, the Indian premier, and Nasser met together. A common communiqué published on July 20 aired neutralist views on the current world issues. On July 26 Nasser nationalized the Suez Canal company. Between Sept. 3 and 9 he conferred five times with R. G. Menzies, chairman of a committee of five appointed by 18 of the 22 nations attending the London conference on Suez. On Oct. 30 he rejected the Anglo-French ultimatum and declared that Egypt would resist all aggressors. On Nov. 16 he had talks with Dag Hammarskjöld, secretary-general of the United Nations, about the entry of the UN police forces into the Suez canal area.

National Geographic Society. In 1956, the fifth season of the National Geographic society "Calypso" oceanographic expeditions directed by French navy Capt. Jacques Yves Cousteau, these projects were carried on: In April, 20-ft. sediment cores were taken from the Mediterranean floor off the Balearics for study of the sea's ancient past. In May and June biologists of the Paris Museum of Natural History aboard the "Calypso" were successful in collecting new species of marine life around São Tomé and neighbouring equatorial islands off Africa's west coast.

During the following weeks Captain Cousteau and Harold E. Edgerton, of the Massachusetts Institute of Technology, directed the successful lowering of the new Edgerton electronic-flash ultimate-depth camera by braided nylon cable of $\frac{1}{4}$ -in. diameter to the 25,000-ft. floor of the Romanche trench, one of the deepest points in the Atlantic. They also used nylon cable, which is virtually weightless in water, to anchor the "Calypso" in this record depth for such operations, and to anchor a radar buoy which enabled them to chart the topography of the trench accurately over a range of several square miles.

In early September the "Calypso" served off Monaco in original deep-level experiments with radiocarbon to determine whether carbon can be assimilated by means other than photosynthesis. The research ship's season concluded with six weeks'

work in hydrology and biology in the eastern Mediterranean.

At Bloemfontein, U. of S.Af., from June to December, E. C. Liphert directed further photography of Mars with the 27-in. refracting telescope of the Lamont-Hussey observatory during the planet's closest approach to earth in 30 years. This National Geographic society-Lowell observatory expedition added about 20,000 photographs to the 20,000 taken at the same site in 1954, showing the planet's faint atmospheric envelope and its markings indicating the existence of simple plant life. The project was part of the International Mars committee program carried on at 22 observatories around the world. Within the same program the society supported a spectroscopic study of the red planet's atmosphere from an observation post high on Mauna Loa volcano, Hawaii, by C. C. Kiess and C. H. Corliss of the national bureau of standards.

Their research indicated no detectable water vapour or oxygen enveloping Mars.

In September at Goteborg, Swed., the society launched a world-wide cosmic-ray mapping program jointly sponsored with the Bartol Research foundation of the Franklin institute, Philadelphia, Pa., with Canadian, Swedish and other U.S. groups co-operating. A three-ton cosmic-ray monitor built by the Bartol laboratory was to travel on different ships and routes throughout the International Geophysical year, 1957-58, recording fluctuations in cosmic rays across ocean reaches never before covered. Scientists would relate data of the cosmic-ray map thus obtained to outbursts of energy on the sun, to the deflecting effect of the earth's magnetic field at varying latitudes and to possible sources of the rays; and might be enabled to pinpoint more exactly the so-called geomagnetic equator, poles and co-ordinates.

Reporting in the November issue of the *National Geographic Magazine* on his 1954 and 1955 field studies of Indian sites on northern islands of Hudson bay, Smithsonian institution archaeologist Henry B. Collins radiocarbon-dated the lost civilization of Dorset Eskimos as contemporary with Christ. He described similarities of its tools to those of European Mesolithic men who vanished 8,000 years ago as well as to those of the Sadlermiuts of the Hudson bay region who survived to early 20th-century years.

Boston cardiologist Paul Dudley White early in the year led an expedition to the Mexican Pacific coast calving habitat of the gray whale to obtain electrocardiograms of this 30-ton species, aided by a National Geographic research grant. He planned to renew with improved equipment this quest for clues to the mysteries of the human heart.

The National Geographic society-University of Miami pelagic fish life history program, begun in 1950, continued successful research in identifying previously unrecognized larval and infant forms of important food and game fishes.

Staff writer Andrew H. Brown and photographer John E. Belcher accompanied Adm. Richard E. Byrd to Antarctica early in the year, and contributed illustrations to Admiral Byrd's account of the first phase of Operation "Deepfreeze" in the *National Geographic Magazine* for Aug. 1956.

The last of 1,758 photographs to complete the sky atlas of the National Geographic society-Palomar observatory sky survey was taken with the Schmidt 48-in. wide-angle telescopic camera on May 11, 1956. The work of assembling and forwarding sections of this unprecedented "portrait of the universe" to observatories and scientific institutions continued throughout the year. The survey was started in 1949.

In August a second large edition of the society's 432-page book, *Adrians of the Americas*, first published in late 1955, came from the presses.

The society's members at the year's end numbered 2,150,000. thousand colour pictures filled 840 colour pages in the year's 2 issues of the *National Geographic Magazine*. "Round About

the Nation's Capital," Alaska, the United States and "Lands of the Bible Today" were 1956 subjects of large-scale map supplements in colour prepared by the cartographic division. Forty-five staff-drawn maps and diagrams illustrated articles on regional geography.

The society's news service staff continued to send an average of six bulletins weekly through 1956 to daily newspapers, press associations and other news outlets covering geography behind headline news and progress of expeditions and researches. Geographic school bulletins for classroom use were sent weekly during the school year to 35,000 teachers and students.

Officers of the society during 1956 were: chairman of the board of trustees, Gilbert Grosvenor; president and editor, John Oliver La Gorce; vice-president and associate editor, Melville Bell Grosvenor; vice-president and secretary, Thomas W. McKnew; treasurer, Robert V. Fleming; research committee chairman, Lyman J. Briggs; vice-chairman, Alexander Wetmore.

(J. O. L. G.)

National Guard. By the end of Aug. 1956 the U.S. army national guard consisted of 5,369 units and 403,371 officers and enlisted men, and the air national guard consisted of 609 units and 63,403 officers and airmen. These units and personnel were located in more than 2,500 cities and towns throughout the United States, including each of the 48 states, the territories of Hawaii and Alaska, the Commonwealth of Puerto Rico and the District of Columbia.

On Feb. 1, 1956, the last national guard unit remaining on active duty with the army, one of the 2,161 national guard units which were ordered to active duty during the Korean emergency, was released from federal service and returned to state control.

During 1955-56 the national guard continued to fulfil both its basic mission of providing a reserve force capable of immediate mobilization in the event of a national emergency and its added mission of participating in the active defense of the continental United States. The air national guard successfully completed its first year of participation in the air defense augmentation plan of the air defense command. Seventeen air national guard squadrons, operating from strategic bases on a five-minute runway alert status, flew more than 19,000 hours under air defense command control while carrying out nearly 27,000 intercepts and scrambles.

The army national guard, in joint participation with the regular army in the anti-aircraft defense of the continental United States, expanded its anti-aircraft artillery program so that, by the end of Sept. 1956, 85 army national guard anti-aircraft artillery batteries had assumed the 24-hour on-site defense of 11 major industrial and population areas, replacing a like number of active army batteries.

During 1955-56 the 48th infantry division, Georgia-Florida national guard, was converted to an armoured division, three regimental combat teams were converted to an armoured cavalry regiment, a field artillery group and an armour group; and one armour group was reorganized as an armoured cavalry regiment. Eight of the air national guard's 27 tactical flying wings were reorganized from fighter-interceptor (day fighter) to air defense (all weather), with eight more wings to be similarly reorganized at a future date. By Sept. 1, 1956, the air national guard had converted 71 of its 81 fighter-interceptor and tactical reconnaissance squadrons from conventional to jet aircraft, with the remaining 10 squadrons scheduled for conversion prior to July 1, 1957.

During 1955-56, as in past years, the national guard participated in hundreds of rescue and relief missions, fought fires and floods, flew missions of mercy and responded in all types of local and state emergencies.

National Labor Relations Board. During the ninth year of administration of title I of the Labor Management Relations act, the National Labor Relations board interpreted some phases of the statute for the first time and made a number of changes in policy.

During the 1956 fiscal year, Pres. Dwight D. Eisenhower designated Boyd Leedom as chairman and appointed a new member, Stephen S. Bean of Massachusetts, to the five-member board. At the close of fiscal 1956 the board was composed of Chairman Boyd Leedom and members Abe Murdock, Ivar H. Peterson, Philip Ray Rodgers and Stephen S. Bean. Theophil C. Kammholz was the general counsel.

Unfair Labour Practice Cases.—The board had occasion for the first time to interpret section 502 which provides: "... nor shall the quitting of labor by an employee or employees in good faith because of abnormally dangerous conditions for work at the place of employment of such employee or employees be deemed a strike under this act." A group of buffers, who were subject to a no-strike agreement, walked out when the plant's ventilating and cooling system broke down. They were thereupon discharged for striking in violation of the no-strike agreement. As the failure of the blower system created "abnormally dangerous" working conditions, the board held that the walkout was not a "strike," but constituted protected activity for which the buffers could not be lawfully discharged.

The board also adopted a new standard for payment of back pay to employees who had been illegally discharged. Formerly it was sufficient for such employees to show only registration with the United States employment service to prove a "reasonable" effort to obtain work during the period of discrimination. During fiscal 1956 the board changed this rule so that registration was considered only one of the elements in the determination of the "reasonableness" of the employee's effort to obtain employment; the ultimate judgment in each instance was to be made on a case by case basis.

Representation Cases.—The board eliminated the "neither" or "no union" choice on the ballot in the so-called "severance" elections; in these elections employees voted whether or not they wished to sever themselves from a larger bargaining unit. The board noted: "Nothing in the act nor its legislative history ... expressly or impliedly requires that employees in a ... severance election be afforded an opportunity to return to non-union status."

The board also revised its policy concerning a union's failure to file annually the financial statements required by section 9 (g) of the act. In setting aside the certifications of exclusive bargaining status of unions who had failed to make such timely filings, the board announced this policy: (1) upon expiration of a union's fiscal year, 90 days may be granted to comply with sec. 9 (g), provided the union has filed a certificate of intent to renew its compliance or a letter to that effect; (2) additional time will be granted only where circumstances beyond the union's control prevent timely compliance; and (3) failure to comply will result in dismissal of a petition or immediate denial of the use of board processes, and revocation of any board action taken on behalf of the noncomplying union during the 90-day grace period.

The board also laid down new guide lines to determine whether certified bargaining rights succeeded to a union which was the product of a merger of two labour organizations. The board pointed to the following elements in reaching its conclusion that

a merged union acquired the bargaining rights of the unions which joined together to form it: (1) the merger was achieved in a democratic manner inasmuch as there was knowledge, participation and approval on the part of rank-and-file members; (2) the two unions were comparable in size and had equal representation on matters relating to consolidation; (3) the merger procedures followed the requirements of the constitutions of both unions; and (4) the employees involved and hundreds of employers considered the consolidated union as the continuance of the constituent unions.

Case Activity.—During the fiscal year ended June 30, 1956, the five-member board issued decisions in 1,609 proceedings, compared with 1,977 in the preceding year. Of the 1,609 proceedings, 202 involved unfair labour practices and 1,407 questions of representation.

The general counsel issued unfair labour practice complaints in 442 proceedings during fiscal 1956, compared with 375 in the previous year. His staff closed 5,030 unfair labour practice cases without the necessity of formal action, compared with 5,329 in fiscal 1955.

Unfair labour practice cases and representation cases filed during fiscal 1956 totalled 13,388. Petitions for representation elections numbered 8,123, and charges of unfair practices against either employers or unions, or both, totalled 5,265 cases.

The board conducted a total of 5,075 representation elections during the 1956 fiscal year. Union representation was chosen by a majority of employees in 3,270 elections, or 64% of those held. Valid ballots were cast by 90% of the 473,992 who were eligible to vote. Bargaining agents were chosen to represent units totalling 296,974 employees, or 63% of those eligible to vote.

Unions affiliated with the American Federation of Labor and the Congress of Industrial Organizations won 2,941 out of 4,818 representation elections in which they participated. Unaffiliated unions won 329 out of 551 elections.

Of the unfair practice cases filed during the 1956 fiscal year, 1,743 involved charges against unions. This was 33% of the unfair labour practice cases filed. Charges of unfair practices were made against employers in the remaining 3,522 cases, or 67%.

Back pay totalling \$1,388,314 was awarded to 2,160 employees found to have suffered discrimination by employers or unions, or both. A total of 1,566 employees were reinstated in jobs after being illegally discharged because of their union activities or because they refrained from such activities.

Petitions for injunctions to halt alleged unfair labour practices were filed by the general counsel in 79 instances during fiscal 1956. The courts granted relief in 21 instances; denied applications in 5; 43 were settled, withdrawn or dismissed; and 10 still pending at the end of fiscal 1956. (*See also* LABOUR UNIONS; STRIKES.)

National Parks and Monuments. One of the highlights of 1956 was the initiation of Mission "66," a comprehensive conservation, development and staffing program to enable the United States national park system to serve an estimated 80,000,000 visitors yearly by 1966. In that year, the national park service would celebrate the 50th anniversary of its establishment as a bureau of the department of the interior.

The appropriation by congress of about \$68,000,000 (39% more than was provided in the previous year) enabled the service to make an auspicious start on this program. By Sept. 1, 1956, work had been initiated on road, trail, campground, building, utility and various other projects in 79 of the 180 areas admin-

Areas Administered by the National Park Service (Sept. 1, 1956)

Type of area	Number	Federal land (approximate acreage)

*Largest and oldest national park is the Yellowstone in Wyoming (also includes small portions of Idaho and Montana). Established in 1872, the park contains more than 2,000,000 ac.

ered by the service. Work was also under way on a number privately financed facilities, including a multimillion dollar development at the new Canyon village in Yellowstone National park, Wyo., a marine service building at Flamingo bay in Everglades National park, Fla., and large-scale cabin developments at Abasco bay in Grand Teton National park, Wyo., and on the south shore of the Grand Canyon, Ariz.

Legislation enacted by congress assured preservation of portions of beautiful St. John Island, one of the U.S. Virgin Islands in the Caribbean, as the 29th national park. Before the park could be established 5,000 ac., out of an authorized total of approximately 9,500 ac., had to be federally owned. Slightly more than 5,000 ac. had already been acquired by Laurance S. Rockefeller for the purpose.

Two nationally significant historic areas were given national monument status—Old Fort Union, N.M., onetime outpost on the old Santa Fe trail, and the laboratory at West Orange, N.J., where Thomas Alva Edison achieved his notable discoveries. Edison's home, "Glenmont," located a short distance from the laboratory, was designated as a national historic site in nonfederal ownership, as was also Chimney Rock, Neb., a notable landmark on the old Oregon trail.

Congress granted authority for the establishment of three new historical areas as units of the national park system—Pea Ridge National Military park, Ark.; Horseshoe Bend National Military park, Ala.; and Booker T. Washington National monument, Va. Their establishment hinged on acquisition of the needed lands by the federal government.

Addition of Mikveh Israel cemetery to Independence National historical park, Philadelphia, Pa., was authorized on completion of a satisfactory agreement between the Mikveh Israel congregation and the national park service.

Castle Pinckney National monument, S.C., and Verendrye National monument, N.D., were abolished, and authority was granted by congress to abolish Fossil Cycad National monument, D., on Sept. 1, 1957. These actions were in line with the department of the interior's policy of eliminating from the national park system areas of less than national significance.

In the interest of more effective and economical operation, Zion National monument, Utah, was abolished. The land formerly in the monument was added to Zion National park.

Public use of the various units of the national park system increased. In the first seven months of 1956 there were approximately 31,600,000 visitors, or about 3,000,000 more than were recorded in the corresponding months of 1955. An all time single-month record was established in July 1956 when 10,280,877 visitors were tallied. The visitor count for the 1955 calendar year was 50,007,838, an increase of about 2,000,000 over the 1954 total and approximately 28,000,000 more than were recorded in 1953.

The need for prompt action by federal, state and local authorities in setting aside seashore areas for public use and enjoyment

was stressed in "Our Vanishing Shoreline," a report presenting the findings of an extensive survey of the Atlantic and Gulf coast regions made by the service with the assistance of the U.S. coast guard, fish and wildlife service, and various other federal, state and private organizations. The survey disclosed that only a small amount of seacoast was left undeveloped for potential public use and that much of this small portion was rapidly disappearing.

For outstanding service to the national park service in the field of conservation, the department of the interior Conservation Service award was presented to Walt Disney, Burbank, Calif.; Laurance S. Rockefeller, New York city; David E. Finley, Washington, D.C.; Harland Bartholomew, St. Louis, Mo.; and Frederick Law Olmsted, Palo Alto, Calif.

Other significant developments of the year 1956 were the redesignation of Bedloe's Island, New York harbour, site of the Statue of Liberty, as Liberty Island; and the discovery, during the course of archaeological operations at Yorktown battlefield, Colonial National Historical park, Va., of the remains of British redoubt number 10 where, on Oct. 19, 1781, George Washington signed the articles of Lord Cornwallis' surrender.

(C. L. W.)

England and Wales.—No further national parks were designated during 1956. The minister of housing and local government confirmed the order setting up the Northumberland National park (398 sq.mi.), and confirmation of the order for the Brecon Beacons National park was awaited. The nine national parks already established covered an area of 4,731 sq.mi. During the year the national parks commission gave increased attention to "areas of outstanding natural beauty," and designated the following areas: Gower peninsula (73 sq.mi.); Quantock hills (38 sq.mi.); Llyn (60 sq.mi.); and Surrey hills (160 sq.mi.). Each of these awaited confirmation by the minister.

Australia.—*Queensland.*—There were 249 national parks in 1956, covering an area of 788,119 ac. Increased attention was given to the provision of better access facilities for visitors to the parks, who numbered 500,000 during the year.

South Australia.—An area of approximately 2,000 ac. situated about 8 mi. E. of Mt. Barker and comprising the reserves known as McDonald reserve and Ferris reserve, was placed under the control of the national park commissioners. An area of 22 ac. of virgin bushland, situated at Mypolonga, about 40 mi. E.S.E. of Adelaide, was taken over and named the Nixon-Skinner reserve. About 400,000 people visited the Belair National park during the year.

Tasmania.—An area of 430 ac. of bushland and gorge, bordering on the Roger river, was established as a national park. Consideration was given to reserving an area of approximately 50,000 ac., embracing the Arthur range in the southwest, as a national park.

Victoria.—The only development during the year was the addition of 370 ac. to the Fern Tree gully national park. This park had a total area of 926 ac. The Buchans caves national park was visited by 37,852 persons.

Western Australia.—Provision was made for the establishment of a new national park of 9,043 ac. on the southern coast near Albany. Attention was also being given to the establishment of another park south of Pinjarra, a town situated about 50 mi. from Perth.

Canada.—During the year a record number of 3,639,151 persons visited the national parks and national historic parks. Considerable progress was made in the construction of the Trans-Canada highway through Banff and Yoho national parks.

India.—In 1956 the Haily National park was the only national park in India. Situated at the foot of the Himalayas in the state of Uttar Pradesh, it extended over an area of approximately

125 sq.mi. The establishment of national parks in the states of Saurashtra, Orissa, Madras, Bihar, Madhya Pradesh and Assam was under consideration.

New Zealand.—The Abel Tasman National park was extended by the inclusion of 137 ac. An addition of 29,580 ac. was made to the Fiordland National park.

South Africa.—Considerable development took place in the Kruger National park. A new water scheme for the Pretoriusskop rest camp was completed, and 5,000 ac. were set aside for scientific research on veld management. A record number of 101,058 persons visited the park during the year.

Tanganyika.—The Serengeti National park remained the only national park in Tanganyika, although investigation of other potential parks continued throughout the year. Nearly 3,000 people visited the park.

Navies of the World. At the end of 1956 there were three great navies, those of the United States, the U.S.S.R. and the United Kingdom. Other major fleets were those of France and Italy, followed by those of the Netherlands, Sweden, Spain, Turkey, Canada, Australia, Argentina, Brazil and Chile. There were also 45 lesser navies. The comparative strengths in ships, of and above the escort categories, of the navies of the world were as shown in Table I.

Among the naval events of the year were: the collision between the U.S. heavy cruiser "Columbus" and the U.S. destroyer "Floyd B. Parks" off Luzon, Phil., on March 11; the maritime Exercise "Dawn Breeze" of the North Atlantic Treaty organization during March 20–25; the largest commonwealth maritime exercise ever held in far eastern waters, known as "Monsoon," concluded early in April; the completion and commissioning on April 14 of the U.S. giant aircraft carrier "Saratoga," the largest aircraft carrier in the world; the Allied naval and air Exercise "Medflex Dragon," covering the whole of the Mediterranean area, during April 11–20; the visit to Portsmouth on April 18 of the Soviet naval squadron, comprising the cruiser "Ordzhonikidze" and the destroyers "Sovershenny" and "Smotryashchi," which brought the Soviet statesmen N. A. Bulganin and N. S. Khrushchev to the United Kingdom; the six-day NATO combined anti-submarine exercise designated "New Broom V" which began in the Atlantic on May 1; the collision between the U.S. battleship "Wisconsin" and the U.S. escort destroyer "Eaton" in the Atlantic on May 6; the provisional acceptance into service on May 8 of the British experimental high-speed submarine "Explorer," the first with turbine machinery using hydrogen peroxide; the laying down of the U.S. giant atomic-powered radar picket submarine, "Triton," which was to be propelled by two

*Other naval forces with four or fewer escort vessels are those of Cuba, Belgium, Ireland, Iran, Uruguay, Ecuador and Burma. Minor warships are possessed by Bulgaria, Ceylon, Finland, Germany (East), Germany (West), Haiti, Honduras, Hungary, Iceland, Iraq, Panamá, Paraguay, Philippines and Vietnam (South).

nuclear reactors; the commissioning of the British guided-weapons trials ship "Girdle Ness" on July 24; the ordering of a new U.S. nuclear-powered guided-missile cruiser, designed to be the first atomic-powered surface warship in the world; the SEATO (Southeast Asia Treaty organization) combined sea-air Exercise "Albatross" which began on Oct. 2 with British, United States, Australian and Thai forces participating; and the completion in October of the U.S. submarine "Sea Wolf," the second to be atomic powered but the first with an intermediate reactor and a liquid metal coolant.

U.S. Naval Strength.—Three giant aircraft carriers of 60,000 tons were being built, the "Independence," "Kitty Hawk" and "Ranger," and a sixth ship of this class, of which the "Forrestal" and "Saratoga" were the forerunners, was projected. Twelve aircraft carriers of the "Midway" and "Essex" classes were being converted with the angled deck and the enclosed bow. The heavy cruiser "Canberra" was converted to a guided-missile ship, and three sister ships, "Helena," "Macon" and "Toledo," were also adapted for guided missiles. Eleven destroyer leaders (frigates), 24 large destroyers, 13 destroyer escorts, 13 more nuclear-powered submarines and 6 large submarines of conventional design were under construction or projected. In addition to the ships enumerated in Table I, there were 310 minesweepers and minelayers, 25 escorts, 116 patrol vessels, 562 amphibious craft, 550 auxiliaries and 1,800 service craft. The U.S. navy comprised a total of 4,500 vessels at the end of 1956.

U.S.S.R.—Six more of the class of large cruisers of which the "Sverdlov" was the prototype were under construction, bringing the number of this type up to 22 units. Among the new Russian destroyers were 32 of the flush-decked fleet-and-escort types, and new frigates numbered 12. A large number of ocean-going long-range submarines were completed.

British Naval Strength.—The modernization of the fleet aircraft carrier "Victorious," being completely rebuilt into a bigger ship, was nearing completion. The intermediate fleet aircraft carrier "Hermes" was still under construction. The light fleet aircraft carriers "Hercules" and "Leviathan" were still sus-

ended. The construction of the long-suspended cruisers "Blake," "Defence" and "Tiger" was resumed. Four fleet escort ships (superdestroyers) and 11 general-purpose frigates were under construction or projected. Twenty-six new frigates of the anti-aircraft, aircraft direction and two anti-submarine types were being built. Six new submarines were under construction. Warships other than those shown in the table included 3 fast minesweepers, 61 ocean minesweepers, 91 coastal minesweepers, 104 inshore minesweepers, 42 fast patrol boats, 28 seaward defense boats, 33 trawlers, 62 landing craft and many miscellaneous ships and auxiliaries.

France.—Two fleet aircraft carriers were under construction. The anti-aircraft cruiser "Colbert" was launched. Five more new destroyers were completed and one was under construction; 6 new frigates were completed and 12 were under construction, and 10 submarines were being built or were projected.

German Federal Republic.—The projected strength of the newly formed west German navy, which would not be attained

until 1960, was 170 ships and 20,000 men.

Italy.—Two large destroyers, four frigates and three corvettes were being built or were completed. A number of minesweepers were acquired from the United States.

Netherlands.—Eight large destroyers were completed or were under construction. Eight submarines were being built or were projected, and 32 coastal minesweepers were completed or were in various stages of construction.

Sweden.—Two large destroyers were ordered, and 4 destroyers, 12 submarines, a large minelayer, 15 motor torpedo boats and 8 coastal minesweepers were being built.

Canada.—The light fleet aircraft carrier "Bonaventure" was being completed in Great Britain, and 12 destroyer escorts, 6 coastal minesweepers and 3 seaward patrol craft were being built. A number of destroyers and frigates were converted for anti-submarine duties.

Australia.—Three "Daring" class destroyers and four fast anti-submarine frigates were being built.

Navy, U.S. Department of: see GOVERNMENT DEPARTMENTS AND BUREAUS, U.S.

Nebraska. Known as the "Cornhusker state," Nebraska is situated in the west north central portion of the U.S. Area: 77,227 sq.mi., including an estimated 564 sq.mi. of water. Population: (1950 census) 1,325,510; (July 1, 1956, provisional est.) 1,414,000. In 1950 the urban population constituted 46.9% of the total.

Capital city: Lincoln, pop. (1950) 98,884; largest city: Omaha, pop. 251,117.

History.—In the Nov. 1956 general election, Nebraska's electoral votes went to Pres. Dwight D. Eisenhower by a wide margin. State officials for the 1956-58 term (all Republicans and all re-elected except for the office of lieutenant governor), were: governor, Victor E. Anderson; lieutenant governor, Dwight Burney; state treasurer, Ralph Hill; state auditor, Ray C. Johnson; secretary of state, Frank Marsh; attorney general, Clarence S. Beck.

The members of the state board of education, who are elected on a nonpartisan basis, were: Frank E. Landis, W. Ray Hill, A. J. Crabtree, Morris E. Jacobs, Hamilton Mitten and Raymond M. Gilmore.

MISSILE LAUNCHERS mounted in launching position aboard the U.S.S. "Boston," U.S. guided missile cruiser. Photograph was taken during manoeuvres in Caribbean sea in March 1956

Five constitutional amendments were voted on, and the following three were approved at the election: (1) to allocate all money received from fines and penalties for violations of the laws prohibiting the overloading of vehicles upon the public roads and highways as follows: 75% in a fund for state highways, and 25% to the county general fund of the county where the fine or penalty is paid; (2) to authorize the legislature to tax grain and seed produced or handled in the state upon some basis other than its valuation; (3) to authorize the legislature to fix the salaries of executive officers without the present restriction that such salaries may not be changed more than once in any eight-year period. A proposed ton-mile tax law initiated by petition was defeated by the voters.

Education.—Of the 5,196 school districts authorized to provide only elementary education during 1954-55, 3,787 were in operation providing instruction for 54,846 pupils under the direction of 4,341 teachers. Elementary instruction was also provided in 469 high school districts to 141,911 pupils under the direction of 4,697 teachers. There were 438 high schools in operation with enrolment of 62,548 under the direction of 3,431 teachers. Total expenditures for public elementary and secondary schools in 1954-55 were \$74,669,763. The state university is located in Lincoln; there are three other universities, a municipal university in Omaha, Creighton (Catholic) in Omaha and Nebraska Wesleyan (Methodist) in Lincoln. There are 13 four-year colleges and 4 junior colleges. There are 258 private, parochial and denominational schools in the state, with a total enrolment in 1954-55 of 37,819. The state holds 1,628,705 ac. of land, valued at \$30,378,205 in 1956, as a permanent endowment for its public schools. The permanent public school endowment fund was \$14,064,573. The commissioner of education in 1956 was Freeman Decker.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the biennium 1955-57 the legislature appropriated \$37,039,131 for public assistance, \$20,320,200 of which would be from federal funds. During the first six months of 1956 there was an average case load of 809 persons per month receiving aid to the blind with average payments of \$65.19; 17,498 persons per month receiving old-age assistance with average payments of \$52.50; 2,696 families receiving aid for dependent children with average payments of \$98.77; and 858 persons receiving aid to the totally and permanently disabled with average payments of \$55.70. During 1955-56 a total of \$16,484,422 was expended on these public assistance programs.

The state maintained 17 charitable, mental, reformatory and penal institutions under the supervision of the state board of control. On July 1, 1956, the total population of these institutions numbered 8,811. The state had 136 hospitals with 14,290 beds.

Communications.—The total road mileage of the state in 1956 was 94,387, of which the state maintained approximately 9,900 mi. There were 5,783 mi. of steam railway. The 1955 legislature appropriated \$88,480,279 for highway purposes for the 1955-57 biennium, approximately \$35,240,000 of which was to come from federal funds. During 1955-56 a total of \$41,211,287 was expended for highway purposes.

There were 248 airports in the state, 5 of which were state-owned and 66 municipally owned. There were 22 daily newspapers and 447 other newspapers and periodicals of all kinds published in the state. The state had 26 radio stations and 9 television transmitters.

Banking and Finance.—The state budget for the 1955-57 biennium was \$237,321,487, the largest in its history. For the fiscal year ending June 30, 1956, the state's revenues were \$128,016,270, expenditures were \$112,093,658. Federal grants furnished approximately \$31,527,820. The net long term debt of the state was nil.

Table I.—Principal Crops of Nebraska

Crop	Indicated 1956	1955	Average, 1945-54
Corn, bu.	111,726,000	107,424,000	220,863,000

Source: U.S. Department of Commerce, 1954 Census of Manufactures, preliminary report.

On June 30, 1956, there were 293 state banks in the state with total resources of \$434,790,998 and 123 national banks with total resources of \$1,111,450,000. There were 44 co-operative credit associations with assets of \$6,720,937.

Agriculture.—A total of 96.8% of the land area is in farms. In 1956 there were approximately 100,846 farms in the state with a total area of 47,466,828 ac. The average size of farms was 470.9 ac., and 38.6% of the farms were operated by tenants.

Manufacturing.—There were (1956) 1,281 manufacturing establishments (exclusive of printing and newspaper establishments, bottling companies and bakeries with less than 5 employees) with 55,532 production workers. About 48% of all manufacturing employees in the state were engaged in the processing of foods. (J. W. Rs.)

Mineral Production.—The tonnage and value of those minerals produced in Nebraska in 1953 and 1954 whose value exceeded \$100,000 are shown in Table III. Nebraska ranked 35th among the states in value of mineral output in 1954, with 0.3% of the U.S. total.

Table III.—Mineral Production of Nebraska

Mineral	1953		1954*	
	Quantity	Value	Quantity	Value
Total.		\$33,281,000		\$42,393,000
Clays	176,000	187,000	164,000	164,000
Natural gas (000 cu.ft.)	6,748,000	911,000	6,801,000	796,000

ENCYCLOPEDIA BRITANNICA FILMS.—*Northwestern States*, 2nd ed. (1956).

Necrology: see OBITUARIES.

Negroes, American. Developments concerning racial de-segregation continued to form the most significant events affecting Negroes in the United States during 1956. While desegregation in public education, housing, parks and recreational facilities continued to receive considerable attention, the most dramatic changes were in the area of public transportation. In two southern cities—Montgomery, Ala., and Tallahassee, Fla.—Negroes organized and carried out mass refusals to patronize local public transit companies because of discriminatory treatment of Negro passengers. The Montgomery movement, which began Dec. 5, 1955, originally sought improved treatment for Negroes within the community's traditional pattern of segregation, but when the Montgomery bus company and city officials refused to grant these first requests, Montgomery Negroes challenged both city and state segregation laws in the courts and won a decision from a federal court three-judge panel in June 1956 declaring intrastate bus segregation unconstitutional. The U.S. supreme court upheld the panel's ruling in November. As the year ended Montgomery city officials were requesting a rehearing of the case and had not ended bus segregation. Meanwhile, Montgomery's 50,000 Negroes continued to refuse to ride the city's racially segregated buses.

Earlier, in April 1956, the U.S. supreme court had refused to review a lower court ruling forbidding racial segregation on intrastate buses in Columbia, S.C. Since the supreme court's action in this case was taken on technical grounds, it did not at that time clearly settle the constitutionality of municipal and intrastate bus segregation. The implications were clear, however, and desegregation of municipal bus service occurred in at least 16 southern communities during the spring of 1956.

Significant changes were also made in the area of interstate travel accommodations during 1956. On Jan. 10 an Interstate Commerce commission order of Nov. 1955 took effect, forbidding segregation of interstate passengers on common carriers and separation of passengers in railroad and bus waiting rooms. Compliance was not consistent throughout the south, but the Southern railroad, the Louisville and Nashville and several other lines operating in the south ceased their practices of segregating passengers on trains and removed signs indicating race in their waiting rooms. While some southern cities in almost every south-

THEA GIBSON receiving trophy from R. H. McMann, president of the U.S. Lawn Tennis association, for placing second in the women's singles championships at Forest Hills, N.Y., Sept. 9, 1956. Earlier in the year Miss Gibson captured tournament titles in France, Italy and Great Britain

In state desegregated waiting rooms in 1956, several southern cities refused to remove signs designating "colored" and "white" waiting rooms, or removed one set of signs, only to replace them with another.

Early in May 1956 the Civil Aeronautics administration banned use of federal funds to build segregated airport passengers' facilities. When Jackson, Miss., refused to comply with the new ruling, funds requested for renovating facilities at that city's municipal airport were withheld.

Public School Desegregation.—Border states made a great deal of progress in desegregating public schools during 1956, but met resistance to the ending of segregation in public education increased in the deep south. A *Southern School News* survey of Oct. 1956 reported 208 newly desegregated public school districts in the 17 formerly segregated states since Sept. 1955, bringing the total number of districts desegregated since May 17, 1954, to 7797. The same survey showed that 319,184 Negro and 2,000,000 white children were attending school in "integrated situations," that is, in situations where Negro children were attending desegregated schools or were enrolled in districts where desegregation had begun. An estimated 2,400,000 Negro children in the southern and border states were still going to school under segregated conditions.

There were no desegregated districts in eight states—Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina and Virginia—and only one in Tennessee. The same eight states which had made no move to desegregate their public schools also passed numerous pieces of pro-segregation legislation during 1956, most of it designed to evade the supreme court's school decision.

Higher Education.—Desegregation proceeded at a steady pace in formerly segregated colleges and universities in the south, with a total of 164 formerly all-white and at least 27 formerly all-Negro institutions of higher learning changing racial policies up to May 1956. In October, 110 of the 208 tax-supported white public colleges in the south admitted or were willing to admit Negro students, and an estimated 2,000 Negroes were enrolled in formerly white institutions. All state-supported institutions of higher learning in Kentucky, Maryland, Missouri, Oklahoma and West Virginia were open to qualified students, regardless of race, by the fall of 1956.

Five states—Alabama, Florida, Georgia, Mississippi and South

Carolina—continued to enforce segregation in all their state-supported colleges in 1956, though all these states except South Carolina had at least one private college admitting students of both races. Suits challenging segregation practices at the college level were in process in three states—Alabama, Florida and Georgia—and two of them, Alabama and Florida, had already received lower court orders to admit Negro students.

Employment and Income.—Pres. Dwight D. Eisenhower's Committee on Government Contracts, charged with obtaining fair employment practices in businesses and industries working under contract with the federal government, stated in its third annual report, Oct. 1956, "The nation's business and industrial leaders are responding in encouraging numbers to the philosophy that Equal Job Opportunity is both good business and good citizenship." The committee cited particular gains in employment-on-merit practices in the aircraft, oil refining, petrochemical, meat packing, atomic energy and communications industries.

Parks and Recreation.—Following supreme court action in 1955 banning segregation in state parks and municipal golf courses, park desegregation increased considerably in 1956. Cities completely desegregating municipal park facilities in 1956 included Baltimore, Md.; Tulsa and Oklahoma City, Okla.; and San Antonio, Beaumont and Austin, Tex. At least 11 southern cities (including Pensacola, Fla.; Winston-Salem, N.C.; and Portsmouth, Va.) ended segregation in their city golf courses, and Corpus Christi, Tex., opened its municipal swimming pool to all citizens of the city.

Housing.—Segregation and discrimination in housing remained an acute problem for Negroes in the U.S., but a few isolated gains were reported in both public and private projects during 1956. Washington, D.C., for example, completed desegregation of all of its 5,308 public housing units in January, and the St. Louis (Mo.) Housing authority, under court order to end segregation in its public projects, integrated one formerly white unit in January.

Outstanding Achievements.—The Women's International League for Peace and Freedom presented its 1956 Jane Addams Children's Book award to Arna Bontemps for his *Story of the Negro*, and two books by Langston Hughes, *A Pictorial History of the Negro* and *I Wonder as I Wander*, and one by Margaret Just Butcher, *The Negro in American Culture*, were well received. In the fall of 1956, soprano Mattiwilda Dobbs was highly praised as she made her debut as Gilda in *Rigoletto* with the New York Metropolitan Opera, thus becoming the third Negro singer to be featured at the Metropolitan and the first Negro to sing a non-Negro romantic lead.

(P. VN.)

Nehru, Jawaharlal (1889—), Indian statesman, was born at Allahabad, United Provinces, Nov. 14. For his early career see *Encyclopædia Britannica*. Arrested in 1942, following Congress' call for civil disobedience, he was released in 1945, and in 1946 took a leading part in the negotiations with the British on Indian independence. In September of that year he became prime minister of an all-Indian interim government. On Aug. 15, 1947, he was appointed prime minister and minister for external affairs of the independent dominion of India, posts in which he continued when his country became a republic on Jan. 26, 1950, and in which he was

confirmed by the 1951-52 general elections.

During 1956 domestic problems engaged much of Nehru's attention. On May 15 he presented to parliament India's second five-year plan. More than once he rebuked the rioters in Bombay and Ahmedabad who violently opposed the provisions of the States Reorganization bill, and he continued to denounce Portugal for the retention of Goa. In the Kashmir dispute he remained adamant in his support of India's claims.

In world affairs he pursued a policy of neutrality and the maintenance of friendly relations with all countries. He criticized both the SEATO (Southeast Asia Treaty organization) and Baghdad pacts and the supply of U.S. arms to Pakistan. He attended the Commonwealth prime ministers' conference in London in July, and on his return journey to India, after visiting Konrad Adenauer the German chancellor in Bonn, Ger., he met Marshal Tito, president of Yugoslavia, and Gamal Abdel Nasser, president of Egypt, on Brioni on July 18, and had further talks with Nasser in Cairo, Egy., on July 20.

When the Suez canal crisis arose Nehru urged the nations involved to reach a peaceful settlement. On Nov. 1 he wrote in a letter to United Nations Sec.-Gen. Dag Hammarskjöld that he was "profoundly shocked" that the British and French, instead of trying to stop Israel's aggression against Egypt, were themselves invading Egyptian territory, and warned that this was "likely to lead to the gravest possible consequences all over the world." (See also INDIA.)

Nepal. Nepal is a Himalayan kingdom lying between India and Tibet. Area: 54,510 sq.mi. Pop. (1954 census) 8,431,537. Aboriginal stock is Mongolian, with Hindu admixture. Language: Gorkhalis (Gurkhas) speak Parbatia, of Sanskrit origin; Bothias use Tibetan; Newars, from southern India, speak Gubharius, resembling Tibetan but with many Sanskrit words. Religion: Buddhism overlaid with Hinduism. Chief towns (pop. 1941 est.): Kathmandu (cap.) 108,805; Patan 104,928; Bhatgaon 93,176. King: Mahendra Bir Bikram; prime minister in 1956, Tanka Prasad Acharya.

KING MAHENDRA AND QUEEN RATNA OF NEPAL riding through the streets of Kathmandu after coronation May 2, 1956

History.—After many years of unrest, the way was apparently being paved during 1956 for a democratic government. As the existing parties could not agree on a coalition, the young king Mahendra reigned after his father's death (March 13, 1955) with the help of five advisers. On Jan. 27, 1956, at the king's invitation, Tanka Prasad Acharya formed the fifth government to be set up since the insurrection of Nov. 1950 against the oligarchical rule of the Rana family. The new cabinet was composed of four Praja Parishad representatives and three former royal advisers. However, the Nepali congress, the biggest political organization in the country, presided over by Subarna Shamsher, the commander of the Nepali forces during the insurrection, remained in the opposition. King Mahendra was crowned and enthroned in his capital on May 2, the world's only Hindu monarch, the ninth king of the Shah dynasty founded in 1742.

On Sept. 20 an agreement was signed at Kathmandu between Nepal and the People's Republic of China. Nepal would establish a consulate general at Lhasa, Tibet, while China would open a consulate general at Kathmandu. Nepal would establish three trade agencies in Tibet, while China might open an equal number of trade agencies in Nepal.

Education.—Schools (1954): primary 921, pupils 26,186, teachers 1,278; secondary and technical 399, pupils 46,105, teachers 2,246. Institutions of higher education 21, students 1,316, teaching staff 143.

Finance and Banking.—Monetary unit: Indian rupee and Nepalese rupee (called *mohur*) with an official exchange rate of N.Rs. 150 = I.Rs. 100 (for nonessential imports N.Rs. 175 = I.Rs. 100), and N.Rs. 7.14 to the U.S. dollar. Budget (1953-54 est.): revenue N.Rs. 42,500,000, expenditure N.Rs. 52,500,000; (1954-55 est.) revenue N.Rs. 43,600,000, expenditure N.Rs. 59,500,000.

Foreign Trade.—With India (April-Dec. 1952): imports Rs. 32,200,000, exports Rs. 58,600,000. Principal exports: grain, jute, timber, oilseeds, clarified butter, potatoes, medicinal herbs, cattle, hides and skins. Principal imports: textiles, cigarettes, iron and steel, cement, motor fuel, machinery, sugar.

Transport and Communications.—Roads (1955): 350 mi. suitable for motor vehicles. Railways (1955) 127 km.

Nervous System: see PSYCHOSOMATIC MEDICINE.

Netherlands. This kingdom of northwest Europe is bounded north and west by the North sea, east by western Germany and south by Belgium. Area: 12,524 sq.mi. Pop.: (1947 census) 9,625,499; (1956 est.) 10,852,000. Language: Dutch. Religion (1947): Roman Catholic 38.50%; Dutch Reformed 31.03%; Reformed Churches 7.93%; nonchurch members 17.04%. Chief towns (pop., 1954 est.): Amsterdam (official capital) 858,702; Rotterdam 704,646; The Hague (seat of government) 590,755; Utrecht 241,723; Haarlem 165,142; Eindhoven 149,460; Groningen 140,456; Tilburg 126,939; Nijmegen 116,989; Enschede 113,513; Arnhem 114,002. Ruler, Queen Juliana; prime minister in 1956, Willem Drees.

History.—The quadrennial election for the second chamber took place on June 13, 1956. It coincided with a dissolution of the states-general because of a revision of the constitution, the main feature of which was an increase in the number of chamber members: for the second chamber from 100 to 150, for the first chamber from 50 to 75. These increases, however, were to be effective after a second reading of the revision bill by the newly elected states-general. The bill was voted by the new second chamber on July 11 and by the first chamber on Aug. 21. The chambers met under the new constitution on Nov. 6.

Electioneering was keen, especially between the two largest contestants, the Labour party and the Catholic People's party (C.P.P.). The outcome for the second chamber was (1952 figures in parentheses): Labour 34 seats (30), C.P.P. 33 (30), Anti-Revolutionary party 10 (12), Christian Historical union 8 (9), People's Party for Freedom and Democracy (Liberal) 9 (9), Political Reform party 2 (2), Communists 4 (6). These shifts must be considered remarkable under the system of proportional representation.

Party dissensions, made apparent during the campaign, proved to be of great importance when a new cabinet had to be formed. After the election Queen Juliana invited successively five political leaders of different parties to form a new government. All failed. The main point of dissension between the Labour party and the C.P.P. was the policy intended to encourage the people in acquiring personal property. On Sept. 18, the constitutional date for the annual opening of the session of parliament, the old cabinet was still in office; so the queen's address confined itself to generalities concerning foreign affairs.

On Oct. 12, after a four-month crisis, Willem Drees (Labour) succeeded in forming a new cabinet; the new coalition consisted again of members of the Labour party (5), the Catholic People's party (5), the Anti-Revolutionary party (2) and the Christian Historical union (1). An elastic formula for the personal property issue was found.

Not until Oct. 23 could Drees announce a general outline of his policy. He reaffirmed the traditional stand in foreign affairs, but he laid full stress on the economic, social and financial problems raised by the continued boom of prosperity. The gold and currency reserves of the Netherlands bank had fallen from 4,655,000,000 florins on June 27, 1955, to 4,317,000,000 florins on June 26, 1956. This decrease was considered a token of an excessive national spending. Consumption was again stimulated by some slackening of wage controls, to which the previous government, under parliamentary pressure, had agreed in March. In addition to a 3% bonus on wages, to be paid out of 1955 profits, the government allowed a differentiated increase in wages up to 6%, to be effected on or before Sept. 1. Because of the scarcity of manpower, negotiations between employees and trade-union leaders resulted in wage increases up to the maximum for about 85% of the total working population.

Drees announced the firm intention of the new government to maintain the hitherto successful policy of price stabilization and to consider measures for checking various forms of national spending; price controls would be mainly of general character. Government spending had also to be reviewed, as the budget, presented by the old cabinet in September, showed a deficit of 786,000,000 florins. During 1956 the Netherlands bank raised the bank rate three times from 2½% on Jan. 1 to 3¾% on Oct. 22.

Dutch-Indonesian relations worsened during the year. On Aug. 4 the Indonesian government repudiated the whole of Indonesia's debt to the Netherlands (estimated at 649,000,000 florins). The issue of sovereignty over Netherlands New Guinea continued to divide the two countries. There was much anger in the Netherlands, even in pro-Indonesian circles, at the manner in which the Djakarta trials against Dutchmen charged with subversive activities had been conducted and influenced by Indonesian mobs.

In June the foreign press spread rumours about dissension at the Netherlands royal court. This had been made acute by the presence of a woman faith healer whose services had been employed by the queen because of a congenital partial blindness of Princess Marijke, the youngest daughter of the royal couple. Three elderly statesmen advised Queen Juliana and Prince Bernhard, by their personal request, and consequently changes in the royal household were announced in a joint statement by the queen and the prince. Rumours concerning the possibility of the queen's abdication were strongly denied.

(See also EUROPEAN UNITY; INDONESIA; NETHERLANDS ANTILLES; NETHERLANDS NEW GUINEA; SURINAM.) (M. Ry.)

Education.—Schools (1954): primary 7,597, pupils 1,451,000, teachers 41,034; advanced elementary 981, pupils 157,000, teachers 5,733; secondary 378, pupils 98,876, teachers 7,931; vocational (1953) 1,018, pupils 280,480, teachers 12,000. Teachers' training colleges (primary) 86, students 12,774. Institutions of higher education 10 (including 6 universities), students (1953) 28,206.

Finance and Banking.—Monetary unit: gulden or florin, with an exchange

rate of 3.829 guildens to U.S. \$1 in March 1956. Budget (1955 est.): revenue 6,015,000,000 guildens, expenditure 6,625,000,000 guildens, (1956 est.) revenue 6,102,000,000 guildens, expenditure 6,682,000,000 guildens. Internal debt (1955) 16,431,000,000 guildens; external debt 2,013,000,000 guildens. Currency circulation (Dec. 1954) 3,728,000,000 guildens, (Dec. 1955) 4,101,000,000 guildens. Deposit money (Dec. 1954) 5,444,000,000 guildens, (Dec. 1955) 5,866,000,000 guildens. Gold and foreign exchange reserves of the Central bank (March 1955) U.S. \$1,274,000,000, (March 1956) U.S. \$1,296,000,000.

Foreign Trade.—(1955) Imports 12,189,000,000 guildens; exports 10,211,000,000 guildens. Main sources of imports: Belgium-Luxembourg 18%; Germany 18%; other continental E.P.U. (European Payments Union countries) 13%; U.S. and Canada 15%; U.K. 9%; other sterling area 7%; Latin America 6%. Main destinations of exports: Germany 17%; Belgium-Luxembourg 14%; other continental E.P.U. 26%; U.K. 12%; other sterling area 9%; U.S. and Canada 7%; Latin America 6%.

Transport and Communications.—Roads (1954): 4,127 km. Motor vehicles in use (April 1955): passenger 244,750, commercial 102,580. Railways (1955) 4,600 km.; passenger-km. (1955) 7,477,000,000; freight, ton-km. (1955) 3,432,000,000. Navigable inland waterways (1955) 6,917.7 km., including 2,634.8 km. for ships of more than 400 tons. Shipping: merchant vessels of 100 gross tons and over (July 1955) 1,716; total tonnage 3,695,610. Cargo in Netherlands ports (metric tons, 1955): loaded 23,604,000; unloaded 56,412,000. Air transport (1955): passenger-km. 1,485,444,000; freight, ton-km. 60,072,000. Telephones (Jan. 1955) 1,021,202. Licensed radio receivers (1954) 2,487,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 350,000 (397,000); rye 465,000 (512,000); barley 264,000 (207,000); oats 582,000 (465,000); potatoes 4,078,000 (3,999,000); rapeseed 19,000 (17,000); linseed 27,000 (24,000); dry peas 131,000 (93,000); flax fibre 40,900 (35,900). Livestock (Sept. 1955): cattle 2,989,000; sheep 378,000; pigs 2,364,000; horses used in agriculture, 220,000. Meat production (metric tons, 1954): beef and veal 181,000; pork 231,000; mutton and lamb 7,000. Dairy production (metric tons, 1954) milk (delivered) 5,892,000; butter 76,800; cheese 156,000. Fish landings (1954): 300,800 metric tons.

Industry.—Fuel and power (metric tons, 1955): coal 11,892,000; lignite 255,600; crude oil 1,023,600; manufactured gas (delivered) 2,004,000,000 cu.m.; electricity 11,184,000,000 kw.hr. Production (metric tons, 1955): pig iron 670,800; crude steel 973,200; zinc, smelter, 28,440; tin, smelter 27,000; cement 1,101,600; cotton yarn 69,840; wool yarn 28,800; rayon filament yarn 31,200; rayon staple fibre 12,720. New and rebuilt dwellings completed (1955): 60,816. Merchant vessels launched (100 gross tons and over, 1955) 396,800 gross tons. Index of production (Feb. 1956: 1953 = 100) 113.

ENCYCLOPÆDIA BRITANNICA FILMS.—Holland (1955).

Netherlands Antilles. An integral part of the kingdom of the Netherlands, yet sovereign and autonomous in its control of its domestic affairs, the state known as the Netherlands Antilles consists of six islands in the Caribbean, in two groups (of three islands each) more than 500 mi. apart. The three Leeward Islands consist of Curaçao (173 sq.mi.) with a population (1955 estimate) of 122,550, Aruba, 50 mi. west of Curaçao, with an area of 69 sq.mi. and a population (1955 estimate) of 55,483, and Bonaire, 40 mi. east of Curaçao, with an area of 95 sq.mi. and a population (1955 estimate) of 5,661. These three are about 40 mi. from the coast of Venezuela. Northeast of them, in the so-called Lesser Antilles, and lying between St. Thomas (of the Virgin Islands) and Antigua, are the three Windward Islands, St. Martin (17 sq.mi., the northern part constitutes a French colony), pop. (1955 estimate) 1,607; St. Eustatius (7 sq.mi.), pop. (1955 estimate) 1,055; and Saba (5 sq.mi.), pop. (1955 estimate) 1,117. The total population of the 366 sq.mi. at the end of 1955 was estimated to be 187,473. Willemstad on Curaçao is the capital; pop. (1953 est.) 44,062.

History.—A. A. M. Struycken was governor until Oct. 25, 1956, when he departed for the Netherlands to become vice-premier. F. E. J. van der Valk then became acting governor, and Ephraim Jonckheer continued to serve as prime minister. The first important test of the new constitution of the Netherlands, so far as concerns the Netherlands Antilles, arose when the governor objected to the appointment as minister of justice and deputy prime minister of a lawyer (S. W. van der Meer) who had been minister of social policy and deputy minister of justice and had continued this professional practice, even opposing his own ministry in court. The prime minister insisted that the governor had nothing to say as to who should occupy any post in the cabinet, and took the matter to The Hague. The prime minister of the Netherlands acted as arbitrator, and secured acceptance of the principle of incompatibility of independent prac-

tice of the legal profession with tenure of the ministry of justice. Van der Meer relinquished his practice and became minister of justice.

In April the government of Aruba contracted for the construction of the largest sea water distillation plant in the world, producing 2,700,000 gal. of potable water daily, at an estimated cost of about 50 cents per gallon. That government also contracted for the establishment of a large hydroponic farm, modelled on the Robins hydroponic farm in Puerto Rico, and expected to produce an ample supply of fresh vegetables. (C. E. Mc.)

Education.—On Jan. 1, 1956, there were 59 elementary schools with 511 teachers and 17,884 pupils, 49 higher elementary schools with 17,653 pupils, 3 secondary schools with 611 students and 4 technical schools with 799 students.

Finance.—The monetary unit is the Netherlands Antilles gulden or florin, valued at 53.0264 cents U.S. currency, official rate, in 1956. The central budget for the fiscal year ending March 31, 1957, estimated revenue at 44,433,000 florins and expenditure at 44,385,000 florins. The public debt at the end of 1955 was 6,071,000 florins. The cost-of-living index (Curaçao) stood at 106 in June 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled 1,513,740,000 florins; imports were 1,565,967,000 florins. Almost all the exports consisted of petroleum products, and about 90% of the imports consisted of crude petroleum, principally from Venezuela. The U.S. supplied about two-thirds of the nonpetroleum imports.

The highway mileages of the islands of the Netherlands Antilles in 1952 were as follows: Curaçao 220; Aruba 165; Bonaire 32.5; St. Martin 17; Saba 4.5; and St. Eustatius 2.5. On Dec. 31, 1955, 10,992 motor vehicles were in use on Curaçao and 5,896 on Aruba. Telephones (Dec. 31, 1955) totalled 5,684. In 1955, 13,022 vessels entered the ports of Curaçao and Aruba.

Manufactures.—Exports of refined petroleum products produced by the three refineries—two on Curaçao and one on Aruba—totalled 37,527,643 metric tons in 1955, including 23,239,375 tons of fuel oil, 3,297,218 tons of ordinary gasoline and related products and 1,177,854 tons of aircraft gasoline. (J. W. Mw.)

Netherlands New Guinea.

The western part of the island of New Guinea in the western Pacific, with adjacent smaller islands, is constitutionally part of the kingdom of the Netherlands. Area: 160,618 sq.mi. Pop. (1955 est.): 700,000 (of whom about 400,000 are in districts under regular Dutch administration), mainly Papuans but including about 10,000 Europeans and 13,000 Asians. Principal towns: Hollandia (cap.), pop. (1954 est.) 11,322; Manokwari, Sorong, Biak, FakFak and Merauke. Governor in 1956: Jan van Baal.

History.—In 1956 activities in the field of economic development of the territory were continued. Special attention was paid to the agrarian development and the extension of the sea and air communications.

Of the mechanized experimental rice polder near Merauke the first rice crop of 150 tons was harvested. Sea and airport accommodations were further improved. Ocean steamers could now berth at Manokwari and Biak. The construction of a ship repair establishment with transverse slipway and workshops at Manokwari for ships up to 2,500 tons was nearing completion. A medium large sawmill constructed at Manokwari, with an annual capacity of 12,000 cu.m. of sawn timber, started production. Priority was given to the building of houses for native workers in the towns. A new hospital at Hollandia was in construction.

The fight against malaria and yaws was continued on a large scale. The indoor-spraying with DDT insecticide proved a success. By the end of 1956 about 300,000 persons had been inoculated with PAM serum. On Jan. 1, 1956, the Education and Subsidy ordinance came into force. This meant that an important step was made toward a systematic development of education among the Papuan population.

Education.—Schools (1954): primary 557, pupils 28,949, teachers 879; post-primary (including 1 Roman Catholic secondary) 4, pupils 289, teachers 14; vocational 4, pupils 204, teachers 10 (excluding specialized training courses); primary teachers' training courses, students 220.

Production.—Oil (1954) 554,265 metric tons; (export value 1955) 26,444,000 guildens; sawn hardwood (1954) 16,000 cu.m.

Netherlands Overseas Territories: see NETHERLANDS ANTILLES; NETHERLANDS NEW GUINEA; SURINAM.

Nevada. A state of the mountain group of western states, Nevada was the 36th state to be admitted to the union, on Oct. 31, 1864; it is popularly called the "Sagebrush state" or the "Silver state." Land area 109,789 sq.mi.; water area 751 sq.mi. Pop. (July 1, 1956, provisional est.) 247,000. Population statistics according to the 1950 census were rural 68,458, urban 91,625; white 149,907, nonwhite 10,176; total 160,083. The principal cities with 1950 populations and 1955 population estimates in parentheses are: Carson City, the capital, 3,082 (4,500); Reno, 32,497 (44,500); Las Vegas, 24,624 (44,750); Sparks, 8,203 (13,000); Elko, 5,393 (6,500); Ely, 3,558 (6,155).

History.—A number of important events occurred in Nevada in 1956. A special session of the Nevada legislature convened in January and enacted an entirely new code of laws for the government of Nevada's elementary and secondary schools. Additional funds were appropriated for the schools, for the University of Nevada, for state grants to aid in the construction of hospitals, and for increased old-age assistance payments.

Floodwaters which roared through western Nevada caused an estimated \$3,831,522 in damage to public property and farm lands. Controversies arose over the withdrawal of public domain lands for military purposes and over the disposition of state land to private persons. Nevada's "right-to-work" law was upheld by a court decision granting a preliminary injunction against picketing. A flash flood near Reno claimed the lives of four persons.

Nevada voters turned out in record-breaking numbers for the general election in Nov. 1956. The incumbent, Sen. Alan Bible (Dem.) defeated Clifton Young (Rep.) for the United States senate seat. Walter S. Baring (Dem.) defeated Richard W. Horton (Rep.) in the contest for Nevada's single seat in the lower house of congress. Although Nevada voters were registered almost two to one for the Democratic party, Republican candidates Dwight D. Eisenhower and Richard M. Nixon carried the state by a substantial majority.

On July 1, 1956, elected officers were: governor, Charles H. Russell; lieutenant governor, Rex Bell; secretary of state, John Koontz; state controller, Peter Meriardo; state treasurer, Dan W. Franks; surveyor general, Louis D. Ferrari; inspector of mines, Mervin J. Gallagher; superintendent of state printing, J. A. McCarthy; clerk of the supreme court, Ned A. Turner; superintendent of public instruction, Byron F. Stetler; attorney general, Harvey Dickerson.

Education.—In June 1956 Nevada had 198 elementary schools with an average daily attendance of 31,595; teachers numbered 1,406. High schools totalled 36, with an average daily attendance of 8,908 and a staff of 495 teachers. Kindergarten average daily attendance was 3,075 in 18 kindergartens with 68 teachers. Average daily attendance for all schools was 43,578. Average annual salaries paid to high school teachers was \$4,678, to elementary teachers \$4,276 and to kindergarten teachers \$4,366. State-wide expenditures for elementary and secondary education, all schools, was \$20,978,406 for the year, of which \$6,493,406 was provided as state aid.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the fiscal year ended June 30, 1956, \$2,780,709 was expended by the state health and welfare departments. In addition, \$1,922,587 was expended for old-age assistance benefits to 2,596 persons, who received an average monthly amount of \$61.34. On June 30, 1956, the state prison had 353 men and 11 women inmates; total expenditures for the fiscal year were \$364,221. The Nevada school of industry had 50 boys and 24 girls under school control; total expenditures for the fiscal year were \$109,935. The state hospital for mentally ill persons had 446 patients in average daily residence during the fiscal year; expenditures for the fiscal year were \$570,106. The state children's home had 40 boy and 31 girl residents during the fiscal year, and the cost to the state was \$149,336.

Communications.—During the fiscal year ended June 30, 1956, the total disbursements for highways were \$15,865,255. There were approximately 6,236 mi. of road in the designated state highway system, including secondary roads. Railroad mileage totalled 1,647 in 1955. Motor vehicle registrations on June 30, 1956, totalled 149,382. There were 444 registered aircraft and 27 public airports in 1955.

Banking and Finance.—On July 1, 1956, there were 36 individual banking institutions in the state, of which 30 were branches, 3 were national banks and 3 were state banks. The resources of Nevada banks totalled \$310,104,820, and deposits were listed as \$287,466,363.

The receipts of the state for the fiscal year ended June 30, 1956, amounted to \$65,539,255; the disbursements to \$58,139,456. There was a treasury balance of \$20,572,342. The state had bonds outstanding in the amount of \$2,938,000 for the construction of office and institutional buildings. The par value of bonds and securities held by the state totalled

5,034,702, and they produced an income of \$386,241. Nevada has no income taxes or inheritance taxes. A graduated tax on gambling netted the state \$5,799,185, and a state property tax of 42 cents on each \$100 valuation netted \$2,476,534. The total assessed valuation of the state for the fiscal year 1955-56 was \$557,294,908.

Agriculture.—The total farm value of the principal crops in 1954 was 4,706,000; the total acreage harvested was 365,000. In 1954 the cash come from crops sold was \$5,646,000; from livestock sold, \$33,948,000.

Table I.—Principal Crops of Nevada

Crop	Indicated 1956	1955	Average 1945-54
Barley, bu.	629,000	455,000	722,000
Potatoes, cwt.	396,000	352,000	248,000
Wheat, bu.	439,000	249,000	492,000
Hay, tons	718,000	495,000	609,000
Cattle, bu.	258,000	205,000	277,000
Wool, bu.	126,000	120,000	91,000

Manufacturing.—Manufacturing in Nevada is limited in scope and production. In 1947 there were 126 industrial establishments in the state, employing approximately 2,667 persons and paying approximately \$8,409,000 in wages for the year. The value added by manufacturing was approximately \$27,777,000. Expenditures for new plants and equipment totalled \$959,000 in 1947. Chemicals and allied products were being manufactured in ever-increasing quantities at the Basic Magnesium project at Henderson, Nev. (J. E. SPR.)

Mineral Production.—Table II shows the tonnage and value of those minerals produced in Nevada in 1953 and 1954 whose value exceeded \$100,000 (except for talc, an important commodity). In 1954 the state was 6th among the states in tungsten output; second in output of diatomite and mercury, with 27% of the national output of mercury; third in barite and copper; fifth in molybdenum; and produced some magnesium metal. It ranked 28th among the states in the value of its mineral output, with 0.64% of the U.S. total.

Table II.—Mineral Production of Nevada

(In short tons, except as noted)

Mineral	Quantity	Value	Quantity	Value
	1953	1954*	1953	1954*
Total	100,000	\$73,523,000	84,000	\$89,138,000
Asbestos	100,000	615,000	84,000	517,000
Copper	62,000	35,502,000	70,000	41,428,000
Diatomite	102,000	3,563,000	79,000	2,767,000
Fluorite	702,000	1,975,000	654,000	2,217,000
Gold ore	497,000	2,648,000	393,000	2,025,000
Iron ore	4,000	1,145,000	3,000	833,000
Manganese ore	25,000	432,000	13,000	165,000
Mercury (flasks, 76 lb.)	3,000	628,000	5,000	1,315,000
Lead and gravel	2,266,000	2,089,000	3,531,000	2,957,000
Pearl (oz.)	697,000	631,000	560,000	507,000
Silver	1,036,000	1,400,000	1,833,000	2,011,000
Tungsten concentrate (60% WO ₃)	11,000	73,000	6,000	54,000
Vanadium	4,000	13,824,000	5,000	20,048,000
Zinc	6,000	1,337,000	1,000	224,000

ENCYCLOPÆDIA BRITANNICA FILMS.—*Far Western States*, 2nd ed. (1956).

New Brunswick. Second largest of the four Atlantic provinces of Canada both in area and in population, New Brunswick was one of the four original provinces of the confederation in 1867. Area: 27,985 sq.mi. Pop.: (1951 census), 556,697; (official est., June 1, 1955), 558,000. Capital, Fredericton, pop.: (1951 census) 16,018 (1956 est.) 20,377. Largest city, Saint John (seaport), pop. (1951 census), 17,779. Other cities (1951 census): Moncton, 27,334 and Edmundston, 10,753.

History.—The Progressive-Conservative government of Premier Hugh John Flemming was returned to office on June 18, 1956, winning 37 of the 52 seats; all members of the executive council were re-elected. The great Beechwood hydroelectric power development on the upper St. John river proceeded ahead of schedule. Summer troop training operations were carried out as usual at Camp Gagetown where several large construction projects were either completed or under way, contracts valued at \$28,000,000 being let during the fiscal year ended March 31, 1955. Work began late in Sept. 1956 on a 22-mi. addition to the Canadian National railways to run from Bartibog to Tomogonops between Newcastle and Bathurst, being built to bring out ore of lead, zinc and copper from the Heath Steele mines. Thousands from Maine and New Brunswick attended New Brunswick's first Potato Blossom festival at Andover, N.B., on July 18, 1956, for the coronation of the Potato Blossom queen.

Education.—Expenditures for education for the year ending March 31, 1956, were \$8,125,896, while revenues for the same period were \$267,338. For the school year ending June 30, 1955, the total enrolment in provincially controlled elementary and secondary schools was 116,069, the average daily attendance 103,742 and number of teachers 4,550.

Public Health and Welfare.—Revenues for the year ending March 31, 1956, were \$3,748,849. The federal government contributed for the year ending March 31, 1955, \$12,945,905 in old-age security pensions to 27,014 pensioners; in family allowances \$15,073,324 for 210,640 children. For the same period 5,808 received in old-age assistance \$2,577,682 (Canada's share 50%), 731 received in blind allowances \$342,277 (Canada's share 75%), and 177 disabled persons received \$76,366 (Canada's share 50%). Mothers' allowances totalled \$1,300,821 in behalf of 2,087 mothers and 6,051 children. The total provincial expenditure for the above pensions and allowances was \$2,720,760. As of May 1956 there were 45 New Brunswick hospitals with 4,464 beds.

Transportation and Communication.—On March 31, 1956, there were 12,997 mi. of roads of which 2,246 were surfaced. For the year ending Dec. 31, 1955, there were 106,648 motor vehicles registered. As of July 1, 1956, there were three active commercial airports. Railway mileage, Dec. 31, 1954, was 1,834.4 mi. Number of telephones at the same date totalled 94,378 (17.3 per 100 of population). In Oct. 1956 there were two television stations (Saint John and Moncton) and ten radio stations.

Banking and Finance.—Revenues for the fiscal year ending March 31, 1956, totalled \$56,708,397 and expenditures were \$56,541,059. Subsidies from Canada totalled \$18,490,070. On March 31, 1956, the total funded debt less sinking funds of \$48,219,243 was \$168,637,401. The net debt was \$108,489,171, a decrease for the year of \$281,749. For the year ending Sept. 30, 1955, 161 credit unions, with total assets of \$9,154,079, lent \$4,865,332 to members.

Agriculture.—The cash income from sale of farm products in New Brunswick for 1955 totalled \$47,324,000, while the net income from farming operations was \$27,273,000. For 1955 the wheat harvest was 40,000 bu.; oats, 4,110,000 bu.; barley 127,000 bu.; buckwheat, 173,000 bu.; potatoes, 15,510,000 bu.; and hay 916,000 tons. Estimates for 1956 were larger for all except potatoes and hay. On Dec. 1, 1955, there were 180,000 cattle, 70,000 hogs, 38,000 sheep, and 25,000 horses on farms. There were 1,291,000 poultry on farms on June 1, 1956.

Fisheries, Furs and Forestry.—In 1955, 254,978,000 bd.ft. of lumber were cut, spruce forming far the largest amount. Fisheries statistics for 1955 showed that 152,514,000 lb. of fish valued at \$6,431,000 were landed (lobster, cod and smelt in that order). For the 1954-55 season 61,171 pelts were produced, valued at \$356,725.

Manufacturing.—In 1954, 22,107 employees in 1,057 establishments were paid \$55,709,428 to produce goods with a selling value of \$287,350,600, from materials costing \$157,215,921. The gross value of products of the three leading industries, with number of employees in parentheses, were: pulp and paper \$88,761,805 (4,046); fish processing, \$20,026,400 (2,742); sawmills, \$17,509,665 (2,496).

Mining.—At the end of Dec. 1955 there were in effect 41,624 mining claims. Mining production for the calendar year 1955 totalled \$14,320,000 (mostly nonmetallics, bituminous coal amounting to 869,888 tons). Extensive mineral exploration continued during the year with extremely large deposits of base metals (lead, zinc and copper) in the Bathurst and Newcastle areas. Tungsten and manganese were also being mined in the province. (M. P. BE.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Maritime Provinces of Canada* (1943).

New Caledonia: see PACIFIC ISLANDS, FRENCH.

Newfoundland and Labrador. A province of Canada, Newfoundland joined the confederation in 1949. Area: Newfoundland Island, 42,734 sq.mi.; Labrador, 112,630 sq.mi. Pop.: (1951 census) Newfoundland 361,416, Labrador 7,890; in Oct. 1955 the official estimate for both was 416,000. The capital is St. John's, pop. (1951 census) 52,873; largest towns are (1951 census) Bell Island 10,291; West Corner Brook 6,831; Wabana 6,460.

History.—The Liberal government which had been in power since 1949 under Premier J. R. Smallwood was returned for the third time in the election on Oct. 2, 1956. In the landslide victory, the Liberal government received 32 of the 36 seats; the Progressive-Conservative party won the remaining 4 seats. The lieutenant-governor in 1956 was Sir Leonard C. Outerbridge; chief justice, Sir Albert Walsh.

In October a transatlantic telephone relay station was opened, one of the major links in the new communication system joining Canada with the United States and Great Britain by submarine cable telephone.

Mining operations in 1956 were focused on encouraging uranium prospects and on new discoveries of copper and asbestos. The M. J. Bohlen mining interests were spending \$15,000,000 at Tilt Cove, \$5,000,000 at Gull Lake and \$5,000,000 at Little Bay in developing copper mines and concentrating mills; and \$25,000,000 at Baie Verte to develop vast asbestos deposits.

Forests contributed about 33% of Newfoundland's income as compared with 14.7% from mining and 11% from fishing. The huge Bowater pulp and paper mill in 1956 increased production to nearly 350,000 tons of newsprint per year; the Anglo-Newfoundland Development company increased production to almost 250,000 tons. The royal commission on forestry recommended a third paper mill.

Expansion of U.S. military installations in Newfoundland, which employed more than 5,000 local civilians in 1956, continued in aiding prosperity.

Education.—In 1954 there were 93,000 students and about 2,700 classrooms with 2,650 teachers. A new \$10,000,000 university was contemplated, the site having been chosen and plans prepared. The education department had \$7,900,000 operating expenses in 1954.

Public Health and Welfare.—In 1954 there were slightly more than 1,600 general hospital beds in Newfoundland, 54 in nursing stations and 431 in cottage hospitals. There were slightly more than 700 beds at the mental hospital. Payments for family allowances totalled in 1955 more than \$1,000,000 per month, 173,395 children having received \$1,039,521 in November. There were 886 children added to the list that month. During 1955 a total of 15,693 old-age pensioners received \$7,082,969. Mothers' and dependents' allowances for fiscal year 1954-55 amounted to \$2,300,000; child welfare, \$250,000; blind persons' allowances, \$158,000; old-age assistance, \$1,825,000; disabled persons, \$336,000; home for aged and infirm, \$151,500; orphanage grants, \$60,000.

Transportation and Communication.—The main transportation service is Canadian National railways, spanning the island with a 547-mi. narrow-gauge line. In 1954 the total tonnage of freight carried was 123,698. In 1954 there were 6,288 mi. of roads, all classes. For the year ending Oct. 30, 1955, there were 26,150 automobiles, 11,016 commercial vehicles and 43,326 drivers. There were 50,100 radio sets and 6,000 television sets. The first TV commercial station opened in Sept. 1955 at St. John's.

Banking and Finance.—Bank clearings of the 48 banks during the 1954-55 fiscal year totalled \$326,813,394. In the 1955-56 fiscal year revenue was \$39,340,000 and expenditure \$39,338,000; for 1956-57 estimated revenue and expenditure were \$42,755,000 and \$42,574,000, respectively. The funded debt in 1953-54 was \$15,000,000, less sinking fund assets of \$1,374,216.

Agriculture, Fisheries, Furs and Forests.—Farm population constitutes only about 6% of total population, and agricultural income is calculated at less than 4% of total income, according to the royal commission on agriculture.

There were 626,357,540 lb. of various types of fish landed in 1954, valued at \$15,111,791. In 1955 there were 17 filleting and freezing plants.

The multimillion-dollar mink industry expected to produce 25,000 mink in 1955 and 50,000 in 1956. The seal fisheries yielded 55,561 sealskins or pelts in 1955. There was not much activity in fur trapping. Sawmills produced 61,000,000 bd.ft. in 1955, much of which was low-grade lumber. Exports of newsprint in 1953 were valued at \$59,145,874; exports of sulphite pulp \$5,500,000. A total of 8,000 men earned a little more than \$22,000,000 in 1953 in woods operations.

Mining.—Mineral production in Newfoundland and Labrador in 1954 was valued at \$44,569,000. The leading mineral products were zinc, iron, lead and copper. Fluorspar, lime and gypsum were also exploited.

(Ec. A. S.)

New Guinea: see NETHERLANDS NEW GUINEA; PAPUA-NEW GUINEA; TRUST TERRITORIES.

New Hampshire. One of the New England states of the United States and one of the original 13. New Hampshire is popularly known as the "Granite state." Area: 9,304 sq.mi., including 287 sq.mi. of inland water. Estimated population, July 1, 1956, was 560,000; (1950 census) 533,242. As of the 1950 census, 306,806 persons, or 57.5%, resided in urban territory and 226,436, or 42.5%, in rural territory. There were 532,275 whites (of whom 58,134 were foreign-born) and 967 nonwhites in 1950. Capital: Concord, with pop. (1950) of 27,988. Other cities: Manchester 82,732; Nashua 34,669; Portsmouth 18,830; Berlin 16,615; Dover 15,874; and Keene 15,638.

History.—Town meetings were held on March 13, 1956. On the same day a preferential presidential primary election was held, the first in the nation in 1956. Pres. Dwight D. Eisenhower received 56,464 Republican votes and Vice-Pres. Richard M. Nixon received 22,936 write-in votes, a surprising showing which materially aided his vice-presidential candidacy later in the year. Sen. Estes Kefauver received 21,707 Democratic ballots for the presidential nomination. Also on March 13 delegates were elected to the 1956 constitutional convention, authorized by the state legislature in 1955. There were 456 members chosen, including 66 women. The constitutional convention convened on May 15 and adjourned on June 13. It was hoped that the convention

would recommend to the electorate amendments to broaden the basis of state taxation, to reduce the size of the state legislature and modify or define further the powers of the governor of the state. The convention was utterly unable to agree upon a measure of tax reduction or a proposal to reduce the size of the legislature. In the end, three proposed amendments of a minor nature were submitted to the electorate at the general election on Nov. 6, all of which received the required two-thirds vote. Thus the perennial problem of an adequate state revenue was left unsolved. The biennial state primary election was held on Sept. 12.

In the general election of Nov. 6, the state's presidential vote was for Eisenhower, about 176,000; for Stevenson, about 90,000. For governor of New Hampshire Lane Dwinell (Republican); the incumbent, received more than 141,000 votes; John Shaw (Democrat) about 117,000.

On June 8 the state supreme court upheld the constitutionality of the act passed by the general court in 1953 providing for the investigation of subversive activities in New Hampshire. Attorney General Louis C. Wyman continued with his investigation during the year, though he took occasion to deplore the decision of the U.S. supreme court which ruled that state sedition laws had been superseded by federal legislation.

State officers in 1956 were: governor, Lane Dwinell, elected in Nov. 1954 and re-elected in 1956; secretary of state, Enoch D. Fuller; state treasurer, Alfred S. Cloues; adjutant general, Col. John Jacobson, Jr., succeeded on Oct. 1 by Col. Francis B. McSwiney; commissioner of education, Austin J. McCaffrey; commissioner of agriculture, Perley I. Fitts.

Education.—In 1953-54 there were an estimated 82,711 pupils enrolled in 546 public schools in the state, of which 63,459 were from kindergarten through eighth grade and 19,252 in grades 9 through 12. There were 39 rural schools, 414 elementary schools, 11 approved junior high schools, 61 senior high schools and 21 junior-senior high schools. There were 3,365 teachers, including 2,088 elementary and 1,277 high school teachers. Total payments covering expenditures of school districts for the year 1953-54 were \$23,257,931. District receipts for 1953-54 included \$732,879 from federal aid, \$956,303 from state aid, \$18,506,749 from local taxation and \$3,815,340 from other sources. In 1949-50 Catholic parochial elementary schools had a total registration of 19,306, while other private elementary schools had a registration of 683. The total number of students enrolled in approved public academies, accredited secondary schools and other private secondary schools in the same year was 6,440. As of Aug. 1956 New Hampshire schools were reported facing the most acute shortage of teachers in their history, inadequate salaries being at the heart of the problem.

Other state educational institutions were the University of New Hampshire at Durham; Keene Teachers college at Keene; and Plymouth Teachers college at Plymouth.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of Aug. 1956 the numbers and categories of cases receiving direct relief and public assistance under the Social Security act were as follows: direct relief, 2,056 cases with expenditures of \$107,209; old-age assistance (including aliens) for the month, 5,822, with expenditures of \$381,536; aid to dependent children, 916 families representing 2,536 children, with expenditures of \$124,684; aid to needy blind, 260 cases, with expenditures of \$18,416; aid to permanently and totally disabled, 294 cases, with expenditures of \$26,845. Total expenditures for public assistance and total obligations for direct relief were \$658,690 for Aug. 1956, compared with \$674,974 for Aug. 1955 and \$766,806 for April 1956. In the fiscal year 1955 New Hampshire received \$3,455,000 in federal grants for public assistance, while in the same year payments by the state to recipients of public assistance amounted to \$7,210,000. The sum of \$6,546,000 was collected in contributions for unemployment insurance in 1955, and \$5,235,000 was paid in benefits. Funds available for benefits as of Dec. 1955 amounted to \$21,831,000.

The net appropriation for the operation of the state prison at Concord for the fiscal year ending June 30, 1956, was \$321,743; and for the Industrial School for Committed Minors at Manchester, \$318,190. As of Dec. 31, 1954, there were 169 persons in New Hampshire prisons and reformatories.

Communications.—At the end of 1954 there were 12,386 mi. of rural roads in New Hampshire, including highways under state, local and federal control. Disbursements from state highway funds for 1954 amounted to \$25,459,000. In 1954 there were 870 mi. of railways in the state compared with 936 in 1950. At the close of 1954 there were approximately 42,000 business and 116,000 residential telephones in operation.

Banking and Finance.—As of Dec. 31, 1955, there were in New Hampshire 52 national banks with deposits of \$243,476,000 and assets of \$270,894,000, compared with 52 banks with deposits and assets respectively on Oct. 7, 1954, of \$223,598,000 and \$249,503,000. Fifty-eight state-chartered banks had on June 30, 1956, deposits of \$462,984,222 (not including commercial deposits, Christmas clubs and school savings) and assets of \$559,285,541, compared with 58 institutions reporting deposits and assets, respectively, of \$452,041,126 and \$547,155,782 on June 30, 1955. There were 21 state-chartered building and loan associations with assets of \$47,124,921 compared with 21 institutions with assets of \$41,072,626 for the year 1955. Two federal savings and loan associations re-

orted combined assets of \$51,467,235 as of June 30, 1956. On June 30, 1956, deposits in savings institutions were \$489,652,846, an increase of \$7,611,720 or 8.3% over the previous year.

Cash receipts of the state treasury department for the fiscal year ending June 30, 1956, were \$115,904,356; cash disbursements \$111,972,491. Cash balance on June 30, 1956, was \$12,386,689, as compared with a cash balance on June 30, 1955, of \$8,454,825. The bonded indebtedness on June 30, 1956, was \$53,912,000.

Agriculture.—The estimated acreage from which crops were harvested in 1954 was 246,583 as compared with 290,199 in 1949. Cash receipts

Table I.—Principal Crops of New Hampshire

Crop	Indicated 1956	1955	Average, 1945-54

time year was \$427,126,000. The principal categories of manufactures are textiles, lumber products, paper, leather and leather goods and machinery. There continued to be an attitude of concern in regard to the future of the textile industries in the state. In March 1956 there were an estimated 176,230 persons employed in nonagricultural labour compared with 173,560 in March 1955. (W. E. Ss.)

Mineral Production.—New Hampshire produces only three minerals whose value annually exceeds \$100,000. These are shown for 1953 and 1954 in Table III. In 1954 New Hampshire was second among the states in field-

output, third in mica sold or used and stood 46th in the value of mineral output, with 0.02% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*New Hampshire* (1955); *North-eastern States*, 2nd. ed. (1955).

New Hebrides. This Anglo-French condominium, the British element of which is within the jurisdiction of the western Pacific high commissioner (see PACIFIC ISLANDS, BRITISH), consists of a group of about 30 islands and many islets, about 500 mi. W. of Fiji. Area: 5,700 sq.mi. Pop. (1955 est.): native 48,800, mainly Melanesians; non-native 120, including 501 British or under British jurisdiction and 519 French or under French jurisdiction. Religion: mainly Roman. Capital, Vila (pop., est. 4,000), on Efate Island. Resident commissioners in 1956: British, J. S. Rennie; French, Pierre Anthonioz.

History.—During 1956 the fisheries research vessel of the Institut Français de l'Océanie carried out research into plankton and fish species to assess the possibilities of economic development. Japanese interests investigated tuna fishing prospects. The 10th anniversary of the establishment of the Anglo-French condominium was celebrated in October by the visit of a French

cruiser and the opening of a cultural centre at Vila.

(D. W. F.)

Education.—Schools (1954): British government and aided 2; French government and aided 5; several British mission schools; French mission 2; secondary (mission) 1, pupils 25; pupils (all schools, 1952) 5,464. Teachers in training (British, 1952) 204.

Finance and Trade.—Currency: Australian pound and New Hebridean franc (£A1.25=£1 sterling=U.S. \$2.80; £1=178 fr. N.H.; U.S. \$1=63.6 fr. N.H.; £A1=142.40 fr. N.H.). Condominium budget (1955 est.): revenue £278,000; expenditure £302,000. British administration budget (1954-55 revised est.): revenue £A9,698; expenditure £A71,625. French administration budget (1954 actual): revenue 27,667,000 fr. N.H.; expenditure 27,667,000 fr. N.H.

Foreign Trade.—(1954) Imports £1,143,841, including £672,242 from Australia, £151,041 from France, £189,078 from the U.K. Exports £1,660,558, including £1,574,840 to France, £67,477 to Australia (copra 543 tons; cocoa 735 tons; coffee 162 tons; trochus shell 98 tons).

New Jersey. New Jersey, the "Garden state," is one of the northeastern states of the United States bordering the Atlantic ocean. It was the third state to enter the union, approving the constitution on Dec. 18, 1787. It has an area of 7,836 sq.mi. of which 314 sq.mi. are inland water. The population in 1950 was 4,835,329, of which 86.6% was urban and 94.3% was white. Official provisional estimates placed the July 1, 1956, population at 5,403,000. The capital is Trenton, which had a population of 128,009 in 1950. Other large cities were Newark 438,776; Jersey City 299,017; Paterson 139,336; Camden 124,555; and Elizabeth 112,817.

History.—Some of the more important measures approved by the legislature and the governor in 1956 were a measure designated the "Rutgers, the State University Act of 1956," which authorized and implemented a specified plan for the reorganization of the administration of Rutgers university and clarified the relation between the state and university; a measure authorizing and directing the Commissioner of Conservation and Economic Development to acquire such part of Round valley, Hunterdon county, as was necessary for the future establishment of a water supply system, the source of which should be solely from the Delaware river, and appropriating \$3,000,000 out of excess funds in the Veterans Loan Guaranty and Insurance fund for the above purpose; a measure which increased the rate of tax on the sole use of cigarettes within the state from 3 cents to 5 cents per package for financing local school construction; a measure designated the school building aid act, which established for each school district for the school year 1956-57 and each school year thereafter a capital foundation program, a local share and an annual building aid allowance and designated \$12,000,000 for appropriation during the 1956-57 fiscal year; a measure authorizing the Port of New York authority to construct a bridge across the Narrows between Staten Island and Long Island; a measure increasing generally the weekly payments accruing to employees under the Workmen's Compensation law; a measure requiring the boards of trustees of public libraries serving more than 10,000 population to employ in professional library positions only persons holding state certificates.

In the general election held Nov. 6, 1956, Pres. Dwight D. Eisenhower received about 1,600,000 as compared with about 850,000 votes for Adlai E. Stevenson. New Jersey's delegation to the U.S. house of representatives would consist of 10 Republicans and 4 Democrats.

Two proposed amendments to the state constitution, an increase in the term of office of county sheriff from three to five years, and permitting the legislature to authorize municipalities to establish a proportion of the standard of value for the assessment of real property, were defeated.

The chief officers during 1956 were Robert B. Meyner, governor; Edward J. Patten, secretary of state; Grover C. Richmond, Jr., attorney general; Archibald S. Alexander, state treasurer; Charles R. Howell, commissioner of banking and insurance; Joseph E. McLean, commissioner of conservation and

economic development; and Arthur T. Vanderbilt, chief justice.

Education.—Public day school enrolment totalled 656,934 for kindergarten through eighth grade in June 1956; enrolment for grades 9 to 12 (including grades 7 and 8, junior high schools) was 226,047, and for special classes 9,683. The 4 universities, 10 liberal arts colleges, 8 professional and technical colleges and 10 junior colleges had a combined enrolment of 25,356 full-time and 21,623 part-time students in 1956. The 6 state teachers colleges had a total enrolment (full- and part-time students in 1956) of 8,898, while the 27 professional and technical institutes had 1,061 full-time and 1,083 part-time students in 1956. The public day school expenditures (excluding capital expenditures) for fiscal 1954-55 were \$255,870,957. The commissioner of education was Frederick M. Raubinger.

Social Insurance and Assistance, Public Welfare and Related Programs.—In June 1956 the state's welfare system cared for 14,495 patients in institutions for the mentally ill, while the county hospitals cared for an additional 6,612. The state institutions for the mentally deficient contained 5,246 patients; tuberculosis sanatoriums had 2,135 patients; 675 students were in training schools for juvenile delinquents and 213 veterans were in soldiers' homes. Old-age recipients numbered 19,639 in July 1956. The number of children assisted by the board of child welfare totalled 24,010; 939 received blind assistance and the number of general assistance recipients was 16,818. The state prison, three prison farms and three reformatories for adult offenders contained 3,904 inmates. Benefit payments to jobless totalled \$7,876,941 during July, 1956.

Communications.—The total highway mileage of New Jersey on Jan. 1, 1954, was 28,987, of which 6,000 mi. were unimproved. State and federal funds disbursed for roads totalled \$67,558,028 during the fiscal year 1955-56. Motor vehicle registrations totalled 2,096,152 in 1955. The 23 railroads operating within the state had a track mileage of 5,317.90 and a line mileage of 1,970.85 on Dec. 31, 1954. Civil, commercial and municipal airports numbered 68 as of July 1, 1956.

Banking and Finance.—Deposits of the 129 institutions under the supervision of the state department of banking and insurance amounted to \$3,686,276,000 on June 30, 1956, an increase of \$168,028,000 over the previous June 30. The deposits of 106 commercial institutions were \$2,634,100,000, an increase of 3.7%, while the deposits in 23 saving banks showed \$1,052,176,000, an increase of 7.6%. The number of national banks in New Jersey numbered 188 on Dec. 31, 1955, with total assets of \$3,439,085,000. The 448 building and loan and savings and loan associations had assets of \$1,384,418,286 on Dec. 31, 1955. State general treasury fund receipts for fiscal 1955-56 were \$475,002,931 and disbursements totalled \$497,679,080; the state's bonded debt was \$105,270,000 as of June 30, 1956.

Agriculture.—Combined harvested acreage of all New Jersey crops in 1955 was 815,000 ac. Cash income from crops amounted to \$95,941,000, from livestock \$222,877,000 and from government payments \$655,000. Total value for staple crops amounted to \$42,547,000; the value of commercial vegetable crops (excluding potatoes but including strawberries) totalled \$39,836,000; the value of fruit crops totalled \$13,558,000.

and was fifth in asphalt sales. It ranked 34th in the value of its mineral output with 0.34% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Northeastern States*, 2nd ed. (1955).

New Mexico. A state in southwestern United States, popularly known as the "Sunshine state." New Mexico was admitted to the union in 1912. Area: 121,666 sq.mi. (121,511 sq.mi. land, 155 sq.mi. water); pop.: (July 1, 1956, provisional est.) 815,000; (1950 census) 681,187, including rural 339,298; urban 341,889; white 630,211; nonwhite 50,976. Capital: Santa Fe (1950 pop.) 27,998. Other cities: Albuquerque 96,815; Roswell 25,738; Carlsbad 17,975; Clovis 17,318; Hobbs 13,875; Las Cruces 12,325.

History.—The state elective administration, legislature and congressional representation were Democratic during 1956. The chief officers of the state were: governor, John F. Simms, Jr.; lieutenant governor, Joseph M. Montoya; secretary of state, Natalie Smith Buck; auditor, J. D. Hannah; treasurer, Joseph B. Grant; attorney general, Richard H. Robinson; superintendent of public instruction, Mrs. Georgia L. Lusk.

In the Nov. 1956 elections, the Republican candidate, Edwin L. Mechem, was elected governor for the two-year term 1957-58. Otherwise the state administration remained Democratic, as above, except that Fred M. Stanley became attorney general in place of Richard H. Robinson. The state legislature would have a Democratic majority for the next two years.

The representation in the U.S. congress also remained Democratic. However, Congressman Antonio M. Fernandez died on Nov. 7, 1956.

In the presidential voting, more than 146,000 ballots were cast in New Mexico for Pres. Dwight D. Eisenhower as against about 106,000 for Adlai E. Stevenson.

Education.—For the school year 1954-55, 5,578 teachers served in municipal schools at an average salary of \$4,221.50; pupils numbered 155,370. In rural schools 1,044 teachers earned an average salary of \$3,962; pupils numbered 24,416. Total expenditures for municipal and rural schools were \$43,928,807.91.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the fiscal year ending June 30, 1956, \$4,580,350.50 was expended for old-age assistance; \$5,154,008.50 for dependent children; \$182,236 for needy blind; \$749,686.50 for the disabled; \$114,852.77 for general assistance; \$890,853.69 for medical care; \$272,982.91 for child welfare services; \$176,092.11 for crippled children; and \$41,114.98 for services to the blind. A total of \$2,864,127 was paid for unemployment compensation; \$507,348 for veterans' unemployment compensation and \$211,012 for federal employees. For the same fiscal year, an estimated \$11,621,000 was paid for old-age and survivors' insurance.

The penitentiary appropriation was \$1,020,564 for 768 inmates; state hospital, \$1,375,000 for 975 patients; Los Lunas mental hospital, \$143,610 for 153 inmates; girls' welfare home, \$248,000 for 160 inmates; industrial school for boys, \$261,134 for 121 inmates (all as of Sept. 1).

Communications.—New Mexico had an estimated 55,096.6 mi. of "unpaved" highways and 7,739 mi. of "paved" as of Jan. 1, 1956. For the fiscal year ending June 30, 1956, the state highway department expended \$31,122,625.17. Steam railway companies operated 2,536 mi. of main track (1954). There were 3 scheduled air carriers, 97 airports and airfields (June 1); 1,490 mi. of controlled coloured airways and 2,555 mi. of very-high-frequency omnidirectional range airways. There were about 192,000 telephones.

Banking and Finance.—On Dec. 31, 1955, there were 26 national banks with total deposits of \$374,834,370.09; loans \$135,341,241.93; investments \$149,014,146.58. The 26 state banks had deposits of \$146,071,821.99; loans \$55,676,301.09; investments \$61,695,606.48.

Total resources of 14 building and loan associations in 1955 were \$30,885,780.44 and of 7 federal savings and loan associations, \$57,402,461.51; 100 small loan licensees had total loans outstanding of \$15,594,356.

Source: U.S. Bureau of Mines.

The total of all state receipts for the fiscal year ended June 30, 1956, was \$133,050,513.51; total disbursements \$119,151,804.48. The total undebted was \$30,168,000.

Agriculture.—The total value of agricultural production in 1955 was estimated at \$87,432,000; acreage harvested 1,441,000. Livestock was estimated at \$109,069,000 (Jan. 1, 1956).

Manufacturing.—Estimates on manufacturing for 1955 were: hired work-17,630 (monthly average); wages \$81,300,000; sales \$260,000,000. (F. D. R.)

Mineral Production.—New Mexico mines a variety of metals and minerals. Table II shows the tonnage and value of those produced in 1953 and 1954. The value exceeded \$100,000. In 1954 New Mexico was the principal producer of beryllium, was first among the states in output of potash with 1/3 of the U.S. total, second in output of columbium-tantalum and pumice, fourth in copper and fifth in natural gas; and ranked ninth in the value of its mineral output, with 2.68% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*New Mexico* (1955); *Southwestern States*, 2nd ed. (1954).

Newspapers and Magazines. U.S. Newspapers.—

The story of the year 1956 for U.S. newspapers. Few dailies had much as a month's supply at any time, and rationing of advertising became a common practice, even during the Christmas rush of 1955. Consumption of newsprint reached an all-time high, estimated at 6,800,000 tons during 1956, at a cost of \$27,000,000 more than in any previous year. Late in 1956 the situation improved somewhat with production up 6.7% and consumption up only 3.7% over 1955. During Dec. 1955 newsprint prices were raised \$3 to \$5 a ton, with various mills charging \$130 to \$132 a ton. To seek a solution of the newsprint problem, 387 newspapers and several manufacturers contributed \$40,000 to finance a survey conducted by Inland Daily Press association and the University of Wisconsin, Madison.

The paper shortage resulted mainly from the larger editions pressed by the great increase in advertising, which continued to break all records. Media Records gave the totals for 1955 as 43,394,974 lines of advertising, 10.2% more than in 1954; total income from advertising totalled \$695,000,000, an increase of \$100,000,000 or 17% above 1954. Totals continued to rise in 1956, with some drop during spring and summer months because of a 20% decline in automobile advertising. The increase during the first six months averaged 4.5% above 1955. At least 487 newspapers had increased their advertising rates an average of 11.4% in Aug. 1956. A survey of liquor advertising showed that,

"MEET THE PRESS," a 1956 cartoon by Fischetti of NEA Service, Inc.

although 217 newspapers were "totally dry" and 142 others carried only beer advertising, liquor advertising brought \$41,055,000 a year to the newspapers that carried it. Because of use of narrower paper rolls to save newsprint, page makeup had become so chaotic in 1956 that advertising agencies clamoured for a standard-width column.

Paper shortage also resulted from record-breaking newspaper circulation. *Editor and Publisher* summed up 1955 by announcing that the 1,760 English-language daily newspapers were circulating 56,147,359 copies a day, an increase of 1,074,879 copies or 1.9% above 1954; morning newspapers led with a 2.2% increase. The totals continued to rise during 1956, reaching a daily increase of 1.51% by April. Copy prices were universally increased, averaging 5 cents in most cases and reaching 20 cents a copy for Sunday papers even in the smaller cities. But, although newspaper income increased greatly, costs rose so much faster that profits were down. One survey showed an average 50,000-copy daily making a profit of only 4.75% and larger newspapers made less.

The year 1956 was rather quiet on the labour front. The most important strike was in Detroit, Mich., where the three daily newspapers, *News*, *Free Press* and *Times*, were suspended for 47 days, from Dec. 1, 1955, to Jan. 16, 1956; the strike was started by 116 stereotypers but was continued by 5,000 union printers as a jurisdictional fight, not for wages, but for contract fringe benefits. In Aug. 1956 union printers struck two newspapers, the *Grand Junction Sentinel* (Colo.) and the *Dover State News* (Del.) for short periods. Printers of the *Brooklyn Eagle* (N.Y.), whose strike from January 28 to March 17, 1955, was responsible for the suspension of the newspaper, petitioned in 1956 for suspension pay but were refused. A survey by Inland Daily Press showed that newspaper wages had gone up 41% since 1948.

The largest newspaper sale was the purchase in Dec. 1955 of the *Birmingham News* (Ala.), the *Huntsville Times* (Ala.), three radio stations and one television station for \$18,700,000 by Samuel I. Newhouse, who owned 13 other newspapers in nine cities. The Stauffer Publications Inc., which owned the *Topeka State Journal* (Kan.), 10 other dailies and three radio stations, purchased in Sept. 1956 for more than \$7,000,000 the Capper Publications, which included the *Topeka Daily Capital* (Kan.), the *Kansas City Kansan* (Kan.), two magazines, five state farm

papers, *Copper's Weekly*, two radio stations and one television station. The Ridder Publications, Inc., which owned 12 other newspapers, purchased in March 1956 the *Pasadena Star-News* (Calif.) and the *Pasadena Independent* for more than \$4,000,000. The E. W. Scripps company on April 26, 1956, bought for \$4,059,000 the *Cincinnati Enquirer* (O.), which had been conducted as employee-owned for three years but developed internal conflict. Arthur H. Sulzberger, publisher of the *New York Times*, took over in Nov. 1955 the *Chattanooga Times* (Tenn.). The 125-year-old *Boston Post* (Mass.) fell into financial difficulties and was suspended Aug. 16, 1956, was refinanced and revived on Aug. 25, and suspended again in October. The 50-year-old Negro weekly newspaper, the *Chicago Defender* (Ill.), became a tabloid daily on Feb. 6, the second Negro daily in the country. The *Brooklyn Eagle*, which had been suspended on March 17, 1955, was bought and revived as a tabloid daily in Jan. 1956 by Robert W. Farrell. The *New York Herald Tribune* on Sept. 9, 1956, launched a new Sunday magazine supplement, *Today's Living*.

Extensive new newspaper plants were started during the year. The *Chicago Sun-Times* (Ill.) broke ground for a \$15,000,000 plant. The *Boston Globe* (Mass.) began a \$12,000,000 building. The *Miami News* (Fla.) started a \$5,000,000 plant. The *Gary Post-Tribune* (Ind.) announced a \$3,000,000 building project. The *New York Times* announced plans for a new \$40,000,000 plant. The *Cleveland Plain Dealer* (O.) on Aug. 18 moved all its machinery in a week-end operation into the expanded plant of the *Cleveland News*. The new plant of the *Philadelphia Bulletin* (Pa.) was seriously damaged on March 28, 1956, by the explosion of a granary across the street.

As 1956 was a presidential election year, political campaign material bulked large. Newspapers and press services sent large staffs which filed 10,000,000 words from the Democratic convention in Chicago, Ill., Aug. 13 and 7,100,000 words from the Republican convention in San Francisco, Calif., Aug. 20, 1956.

The American Association of Advertising Agencies and the American Newspaper Publishers association in April 1956 obtained a consent decree ending the antitrust suit brought against them in 1955. The office of the Communist *New York Daily Worker* was seized by internal revenue officers in March for back income taxes totalling \$46,070, but the matter was settled by payment in June. As a result of an investigation by the senate (Eastland) security committee into a "Communitistic ring" in New York newspaper staffs in recent years, six news workers were discharged by three newspapers in Jan. 1956. A newspaper protest resulted in June from a news "scoop" (an antitrust suit against General Motors) that was given to the public by U.S. Attorney General Herbert Brownell in a television program.

Victor Riesel (*q.v.*), labour columnist attacking labour racketeers, was blinded by acid thrown in his face in a New York street on April 5, 1956, but continued his campaign. The U.S. state department in August refused visas to United States newspapermen who wished to visit Red China. A reporter of the *Chicago Daily News* (George Thiem) unearthed in July the story of the more than \$1,000,000 defalcation by Orville E. Hodge, state auditor of Illinois.

Magazines.—Among U.S. magazines, the year 1956 broke many records. Advertising pages and revenue were up 9% to 15% over 1955; the grand total was 3,342 pages or \$650,000,000 in 100 magazines, about \$56,000,000 over any previous year, in spite of a drop in automobile advertising. Advertising rates were raised materially, but profits were low, averaging 2.8% in 35 leading magazines because of high paper costs, which rose 5% to 17% to well over \$200 a ton. The Audit Bureau of Circulations gave its first audited magazine report, in which *Reader's Digest* led with 11,900,000 domestic sales plus 8,000,000 in 28

foreign editions; *Life* was next with 5,655,000; *Saturday Evening Post* had 4,638,000; *Look*, 4,076,000; *Collier's*, 3,372,000; *Ladies Home Journal*, 4,817,000; *Better Homes and Gardens*, 4,133,042. The total of all Audit Bureau of Circulations magazines was 166,000,000, up 26% in the last eight years.

Magazine publishers not only stopped worrying about television competition, but many bought television and radio stations to "diversify." Much change in newsstand sales resulted from an antitrust battle between Union News and the parent American News company, resulting in at least 17 magazines leaving Union News and setting up a new distributing organization, Select Magazines, Inc., which included *Life*, *Look*, *Time* and *Sports Illustrated*. Meanwhile, a new wave of magazine selling through 25,000 supermarkets and 35,000 drug stores involved new devices for store display and relieved magazines from competition with comics and pocket books. *Town Journal* led in sales in 5,000 stores; *Family Circle* and *Woman's Day* sold 4,000,000 each in chain stores; *Coronet* sold 400,000 in supermarkets. Canada in August put a 20% tax on "Canadian editions" of American magazines published outside Canada. A rash of about 40 "off-colour" and "borderline" men's magazines—including *Nuggett*, *Modern Man*, *Playboy*, *Rogue* and *Cabaret*—aroused a vigorous campaign of censorship by legislative groups, women's clubs and church, educational and other groups. *Confidential*, leader among the exposé keyhole magazines, selling 3,600,000 copies, was barred from the mail at least once during 1956. It launched a British edition. The U.S. supreme court annulled a ban on two nudist magazines—*Sunshine and Health* and *Solaire Universelle Nudism*.

The 50-year-old *Blue Book* and the 80-year-old *American Magazine* were suspended in 1956; Curtis' *Bride-to-Be* was suspended after three issues; and in December, Crowell-Collier Publishing company announced the discontinuance of *Collier's* and *Woman's Home Companion*, each with circulation of more than 4,000,000, because of insufficient advertising revenues. *House and Home* in April 1956 published the largest issue on record—414 pages. In October a new quarterly, *Fashion*, was launched. (G. M. Hy.)

Canada.—Counting morning and evening papers as one, Canadian daily newspapers numbered 95 in 1956, with circulation reported by the Canadian Daily Newspaper Publishers association as 3,912,478. Membership in the Canadian Press was 97, highest since 1932. D. B. Rogers, editor of the *Regina Leader-Post*, was elected president for two years. The Canadian wire-photo network, made permanent Feb. 1, 1956, served 14 members in eight eastern cities day and night.

National newspaper awards in 1956 were as follows: editorial writing, C. M. Fellman, *North Bay Nugget*; spot news reporting, Dick Snell, *Calgary Herald*; feature writing, Frank Lowe, *Montreal Star*; staff correspondence, I. Norman Smith, *Ottawa Journal*; spot news photography, Roger St. Jean, *Montreal La Presse*; feature news photography, Jack Marshall, *Toronto Star*; cartooning, Merle Tingley, *London Free Press*. Bowater journalism prizes went to Allan Kent, *Toronto Telegram*, and Frank Flaherty, free-lance writer, Ottawa. The Canadian aviation award for newspaper stories and articles was won by James Hornick, *Toronto Globe and Mail*.

The Canadian Weekly Newspaper awards for best all-round papers in their respective population groups went to the *Aurora Banner* (Ont.); *Lacombe Globe* (Alta.), and *Altona Red River Valley Echo* (Man.). T. F. E. Claridge, 80, publisher of the *Free Press and Economist*, Shelburne, Ont., was named Mr. Weekly Newspaperman of 1956. The Canadian Weekly Newspaper association approved the 20% tax imposed by parliament on advertising content of Canadian editions of United States magazines. Daily newspapers had almost unanimously opposed it editorially.

The American Newspaper guild held its 1956 convention in Toronto, Ont., with 250 delegates from 53 locals in the U.S. and Canada. The human rights committee, reporting that only 38 Negroes were employed on non-Negro newspapers, pointed to the need for an educational program on human rights.

(W. E. Et.)

Great Britain.—In 1955 the whole national press of London had been stopped by a dispute; in 1956 it was the turn of the provincial newspapers and the periodicals to suffer disorganization and, in many cases, complete cessation of production. The trouble began in January when compositors, machine minders and proof correctors, both in the provinces and in London (except in national and evening newspaper offices, where there were separate agreements), rejected a wage increase. The employers dismissed about 8,000 craftsmen for restricting output. After the sitting of two courts of inquiry, normal working was resumed in London toward the end of March and an agreement was obtained in May.

One hundred publications were unable to print at all and others appeared in unfamiliar type and sizes. A small number were printed abroad: the *Economist* was printed in Belgium one week, in Germany the next, and then in a Swiss monastery. The *Radio Times*, printed in France, appeared in four pages of standard newspaper size.

Government hopes that newspapers would be freed from statutory controls over the delivery of newsprint and the size of

newspapers by March 1956 were not realized.

Circulations of national morning newspapers, with a few exceptions, showed no great changes. Exceptions included the *News Chronicle* and the *Daily Sketch*. The newly merged Sunday paper, *Empire News and Sunday Chronicle*, gained 500,000 on the old circulation of the *Empire News*; the *Sunday Observer*, which had doubled its circulation since World War II, showed an increase of 37,000 in 12 months; figures for the *Sunday News of the World* dropped by nearly 500,000 in the same period.

There were continued increases in the sales of women's magazines at the expense of the general and mass-appeal weeklies. Among new periodicals were *Mirabelle*, a weekly for women; *Onward*, a Tory weekly; *Industrial Scotland*; *Catholic Education*; the *Veteran* and *Vintage Magazine*, for car and motorcycle connoisseurs; and *Nuclear Engineering*.

The 1956 edition of the *Newspaper Press Directory* listed 164 daily and Sunday newspapers, 1,362 weekly newspapers and 3,908 periodicals of all types.

Commonwealth.—Australia now had 55 daily newspapers with a combined circulation of nearly 4,000,000. The *Sydney Morning Herald* (1831) was converted into a public company, after being owned by the Fairfax family for 115 years.

The Indian government introduced a bill to establish a press council to maintain "journalistic control" and to watch against monopoly of newspaper control. The five-year-old Press (Objectionable Matters) act was allowed to lapse by the government.

International.—For the first time the number of radio receiving sets in use (257,000,000) throughout the world exceeded the global daily newspaper circulation rates (255,000,000). The publication *World Communications* of the United Nations Educational, Scientific and Cultural Organization (UNESCO) reported that Great Britain still had the highest newspaper readership rate, 609 copies of daily newspapers being sold for every 1,000 of population. The International Press institute, an organization of newspaper editors, after examining the situation of the press in 40 nontotalitarian countries, concluded in their survey *Government Pressures on the Press*, that in most of these countries the press was restricted by the government in some way or another. The survey gave a relatively clean record to Great Britain, the United States and the Scandinavian countries.

Europe.—Politically independent newspapers in Austria published certified sales figures for the first time. Circulations had declined (291 buyers of a daily newspaper in 1947 and 143 in 1956). There were printers' strikes in Den-

(F. L. Mt.)

mark, Finland and Norway. The last-named country, with 3,250,000 inhabitants, had 98 daily newspapers and 134 appearing from four times a week to once a fortnight, and no Sunday newspapers.

France suffered a newsprint shortage and the 11-week-old *Le Temps du Paris* succumbed. *L'Express*, a daily since Oct. 1955, reverted to weekly form. A bill was adopted in the national assembly giving a new charter offering some degree of independence to the state-aided French Press agency (Agence France Presse). Communist papers continued to decline. *France-Illustration* (originally *L'Illustration*, founded in 1843) was absorbed into the magazine *Nouveau-Fémina*.

One of Germany's oldest newspapers, the *Magdeburgische Zeitung* (1626), ceased publication. The editor and publisher of a neo-Nazi paper in south Bavaria were fined for libels against the federal chancellor and his minister of finance. Throughout Italy labour troubles affected newspaper production in May. Daily newspaper prices were increased by five lire. A new popular daily, *Il Giorno*, appeared in Milan.

In Turkey amendments to the press law included some forbidding publication of official *in camera* meetings and information calculated to spread economic unrest. Misgivings on these amendments were expressed both in Turkey and abroad.

Figures published on Press day (May 5) showed that 7,246 newspapers were being published in the U.S.S.R., with a daily circulation of more than 48,700,000 copies. The English-language *Moscow News* reappeared after six years, and *Amerika*, a Russian-language picture magazine sponsored by the U.S. Information agency, began distribution in the U.S.S.R. A new daily *Sovietskaya Rossiya*, published by the Communist party, was launched in July.

(See also ADVERTISING.)

(D. HN.)

New York. New York, one of the original 13 states of the United States, is known as the "Empire state." Northernmost of the middle Atlantic states, it covers an area of 49,576 sq.mi. of which 1,647 sq.mi. are water. Population: (July 1, 1956, est.) 16,195,000; (1950 census) 14,830,192. The largest cities and their 1950 populations are: New York 7,891,957; Buffalo 580,132; Rochester 332,488; Syracuse 220,583; Yonkers 152,798; Albany (state capital) 134,995; Utica 101,531; Schenectady 91,785; Niagara Falls 90,872; Binghamton 80,674.

History.—The elected officers of the state government during 1956 (chosen in Nov. 1954) were: governor, Averell Harriman (Dem.); lieutenant governor, George B. De Luca (Dem.); comptroller, Arthur Levitt (Dem.); attorney general, Jacob K. Javits (Rep.).

In the Nov. 1956 elections, New York state voters cast about 4,340,000 votes for Dwight D. Eisenhower for president, as against about 2,750,000 votes for Adlai E. Stevenson. The latter's total included about 280,000 Liberal party votes. Attorney General Jacob K. Javits was elected to the U.S. senate, defeating his Democratic opponent, Mayor Robert F. Wagner of New York city, by about 400,000 votes.

Twenty-six Republicans were elected to the U.S. house of representatives from New York state, and 17 Democrats and Democrat-Liberals.

During its 1956 session the legislature authorized a \$500,000,000 bond issue to finance highway construction.

This was approved in the general election. Governor Harriman also approved a \$126,000,000 highway program to make full use of available state and federal highway funds. Assisted by the new federal highway bill, the state planned to boost its annual highway construction program still further to \$300,000,000 to \$350,000,000 a year. Another significant measure approved

by the legislature was a bill making it compulsory for automobile owners to hold at least \$10,000–\$20,000 personal liability insurance and \$5,000 property damage, or proof of financial responsibility, before they could obtain 1957 registration plates.

The governor and legislature also approved abatements in the state tax on personal incomes, New York's largest single revenue source. Taxpayers were allowed to deduct 15% of the first \$100 of tax to be paid and 10% of the next \$200, to a maximum of \$35.

New York state, which spends a third of its budget for education, substantially increased state education aid to communities. Such payments would total approximately \$504,000,000 during the 1957–58 fiscal year, or about \$83,000,000 more than in 1956–57. Teachers were granted a higher minimum state-wide salary schedule. Another measure allotted \$100,000 to the state education department to set up experimental programs in closed-circuit educational television.

To assist in the construction of middle income housing, the legislature authorized a \$100,000,000 bond issue, which, however, was defeated in the 1956 general election.

The sugar maple tree (*Acer saccharum*) was declared the official state tree by act of the legislature.

Work on the St. Lawrence seaway and power projects in northern New York continued. Completion of the seaway, expected in 1959, would open a new coast line for ocean commerce along the St. Lawrence river and the Great Lakes. Power delivery was expected in 1958. The state power authority contracted to sell 108,000 kw. of St. Lawrence river power to the state of Vermont, 33,000 kw. to Plattsburg, N.Y., and 11,000 kw. to the U.S. air force base at Plattsburg.

The U.S. Atomic Energy commission licensed the Consolidated Edison company of New York to construct one of the nation's largest power reactors. The \$55,000,000 power station, to be built at Indian Point on the Hudson river, 24 mi. N. of New York city, would develop 236,000 kw. of power.

Rock slides at Niagara falls on June 7 demolished the Schoellkopf station of the Niagara Mohawk corporation, largest power plant in the Niagara river gorge. The slides were attributed to seepage of water from points above the falls into rock crevices.

The United States Merchant Marine academy at Kings Point, L.I., was made a permanent federal institution after two decades of operation.

Congress changed the name of Bedloe's Island in New York harbour to Liberty Island in tribute to its famous occupant, the Statue of Liberty.

Education.—New York educational institutions held classes for approximately 3,430,000 students in the 1954–55 school year. Public schools accommodated a total of 2,400,000, enrolling 1,500,000 children through grade 6 and 900,000 in grades 7 through 12. Private and parochial schools enrolled approximately 604,000 elementary pupils and 101,000 secondary school students. Enrolment in universities, colleges and other institutions of higher learning in the state in the fall of 1955 totalled 325,370.

The State University of New York, established in 1948, has administrative jurisdiction over 26 state-supported institutions of higher education. Special state schools include 11 community colleges, 141 schools of nursing, 3 institutes for the blind and 7 for the deaf.

Social Insurance and Assistance, Public Welfare and Related Programs.—Approximately 1,300,000 persons were given assistance, care or service at public expense in New York state during 1955. Expenditures for public charges during the year were \$516,000,000, of which the federal share was \$112,000,000, the state share \$154,000,000 and the local share \$250,000,000. In addition, about 2,600,000 persons received assistance or care from private institutions or agencies (such as Community Chests, etc.) under the supervision of the state department of social welfare.

In the fiscal year April 1, 1955, to March 31, 1956, the average yearly population of the state's 17 correctional institutions was approximately 19,000, and the estimated average cost of care and maintenance per person was \$1,746.77.

The state maintains 27 institutions to provide care and treatment of the mentally ill, mental defectives and epileptics. Facilities include 18 hospitals, six schools for mental defectives, a colony for epileptics, the New York State Psychiatric institute for research and teaching and the Syracuse Psychopathic hospital for observation and temporary treatment of mental patients. Care and treatment of these patients in 1956–57 was estimated to cost \$116,400,000. The state also operates four "after-care" clinics where patients can be treated after being released from hospitals.

Communications.—The final link in the New York State Thruway was

completed in Aug. 1956. The Thruway now extends 427 mi. from New York to Buffalo. The state's network of highways included more than 103,000 mi. of improved roads in 1956. Of these, approximately 1,200 mi. were in the interstate system, 14,000 mi. in the state system, 18,000 mi. in county systems, 54,000 mi. in town systems and 16,000 mi. in cities and villages.

Thirty-six railroads operate a total of 7,500 mi. of single track within the state. Motor vehicles registered in the state in 1955 totalled 4,807,747, including 3,895,841 passenger cars, 489,140 trucks, 209,185 suburban vehicles, 18,204 buses, 24,583 taxis and 136,867 trailers.

New York state had 272 landing facilities, including 224 airports, 38 plane bases and 10 heliports, in 1956. The airports included 45 municipally owned, 168 privately owned and 11 military bases.

During 1955 the four New York city metropolitan airports—New York International at Idlewild (largest airport in the world), LaGuardia, Newburgh and Teterboro—handled a total of 10,852,914 air passengers. The four airports also handled 302,365,500 lb. of air cargo and 86,456,300 lb. of mail.

Banking and Finance.—At the end of 1955, 641 banks with total resources of \$61,660,274,000 and deposits of \$55,069,816,000 were operating in New York state. In addition, there were 235 savings and loan associations with about \$2,900,000,000 total assets and \$2,499,791,000 due private reholders.

State income during the fiscal year ended March 31, 1956, for the general and capital construction funds totalled \$1,368,600,000. Total outgo in these funds was \$1,314,600,000. The excess of income over outgo, \$54,000,000, was transferred to the capital construction fund, which thus had a usable balance of \$163,400,000. Fifty-seven per cent of the state's general fund expenditures was allocated to local units of government in the form of aid for schools, welfare, highways, health and other operations. The remaining 43% paid for the operations of the 19 state departments, the commissions and agencies, 60 state correctional and health institutions and 29 state colleges, as well as the legislature, courts and highway maintenance. Tax stabilization reserve funds aggregated \$145,700,000 on March 31, 1956, while the state debt totalled \$675,600,000.

Agriculture.—Cash receipts from farm marketings of agricultural products in 1955 were \$806,043,000. The 1954 total was \$811,320,000. In addition, government payments to farmers in 1955 were \$4,486,000, compared with \$3,753,000 the previous year. Cattle sold for meat were valued \$52,242,000, and sale of milk and other dairy products in 1955 amounted to \$386,896,000. The total acreage of principal crops harvested in 1955, including orchards and vineyards, was 5,476,000.

The value of livestock and poultry on farms as of Jan. 1, 1956, was \$4,671,000. There were 2,288,000 head of cattle in the state, 12,085,000 chickens, 62,000 horses and mules, 157,000 hogs and 156,000 sheep. Turkeys raised totalled 848,000.

Table I.—Principal Crops of New York

Crop	Indicated 1956	1955	Average 1945-55
Wheat, bu.	33,408,000	34,105,000	27,688,000

The U.S. census of agriculture in 1955 placed the number of farms in New York state at 105,714. The estimated average value of land and buildings per farm was \$15,179.

Manufacturing.—In 1954 the state's manufacturing firms added \$14,149,000 in value to the raw and semifinished materials they purchased for processing, compared with \$9,655,859,000 in 1947, according to the U.S. Bureau of the census. The state has 430 of the 453 separate industrial categories recognized by the U.S. Bureau of the census.

In terms of value (1953 figures), New York state produces approximately 67% of the country's total output of women's dresses, coats and suits, 94% of women's furs and 41% of men's and boys' tailored clothes. The state leads all others in the apparel, printing and publishing, paper

and paper products and furniture industries. It produces 67% of the value of photographic equipment manufactured in the nation. The state is also noted as a producer of food products, chemicals, leather goods, optical instruments and lenses, millinery, children's wear, scientific instruments, dolls, costume jewelry and office machines.

As of June 1955, 571,900 business firms were operating in New York state. There were 5,907,000 persons employed in the state in 1955, exclusive of agricultural workers, proprietors, domestics and personnel of the armed forces, a gain of about 1,700,000 since 1939.

During 1955 the state of New York certified unemployment insurance claims totalling \$222,394,827. On Dec. 31, 1955, the New York state unemployment insurance trust fund had a balance of \$1,273,105,385.

(E. M. De.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in New York in 1953 and 1954 whose values exceeded \$100,000. In 1954 New York was first among the states in output of ilmenite and in output of muscovite block and film mica, second in cement shipments and petroleum asphalt sales and in salt output (17% of the national total of salt), third in sand and gravel and in slate, fourth in iron ore output. The state rated 18th in the value of its mineral output, with 1.38% of the U.S. total.

New York City. The mid-1956 estimate of the population of New York city was 8,074,000 (1950 census, 7,891,957). This figure represented a small decline from a year previously, which may have been accounted for by a corresponding increase in neighbouring suburban communities. The area of the city is 315.1 sq.mi.

Recognizing the fact that the metropolitan area had grown to include towns, villages and cities as far away as 50 mi., whose residents travel to New York to work, to shop or for recreation, the New York city administration of Mayor Robert F. Wagner instituted a metropolitan regional conference. This association of officials of all the affected localities was formed to consider problems, such as water supply, air pollution, traffic and transportation, common to the entire metropolitan area and to work together to effect their solution.

The expense budget for the 1956-57 fiscal year continued to rise, setting a new high at \$1,853,795,103. Among the expenditures was the appropriation of \$4,012,962 for the New York city youth board to expand its program for combating juvenile delinquency. The board co-ordinates the activities of private and governmental agencies and sends trained workers into neighbourhoods that show a high incidence of juvenile crime to direct the energies of these young persons into productive channels. In areas where the youth board activities were intensified, the incidence of juvenile delinquency during the year rose only 3%, less than half the rise in other areas.

The first commercial heliport of New York city was opened, and plans were formulated for a regional network of such facilities. Initially, flights would carry mail and cargo to and from the three airports serving the city, with passenger flights to follow.

By way of strengthening the city's position as the commercial and financial centre of the nation, New York saw the opening of two buildings devoted entirely to industry promotion. They were the Trade Show building and the Coliseum, which during

the year accommodated 76 conventions, expositions and trade shows.

Two historic landmarks underwent changes. The name of Bedloe's Island, in the harbour of New York, was changed by act of congress to Liberty Island, considered a more appropriate name for the site of the Statue of Liberty; and City hall, after two years of renovation at a cost of more than \$2,000,000, was rededicated with ceremonies reminiscent of the years 1803-12, when the building was first erected.

For a while Broadway seemed to be losing its distinction as the city's centre of the lively arts. A repertory group performed Shakespeare under the stars in an amphitheatre overlooking the East river. Classical and popular concerts could be heard in several parks. Opera, the classics and new works of little-known authors flourished in Greenwich Village, along Second avenue and in other outlying districts. But Broadway offered the most distinguished array of new plays in many years, the best of which was *My Fair Lady*, a musical adaptation of George Bernard Shaw's *Pygmalion*.

In baseball, a "subway" series was played between the New York Yankees and the Brooklyn Dodgers, from which the New York Yankees emerged as world champions. (W. R. PR.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Arteries of New York City* (1952); *New York City* (1955); *Northeastern States*, 2nd ed. (1955); *Story of a City: New York* (1955).

New Zealand. A realm of the Commonwealth of Nations in the South Pacific, New Zealand proper comprises the large North and South Islands, and Stewart, Chatham and other minor islands. Dependencies: (1) island territories (Tokelau Islands and Cook and associated islands); (2) Ross (antarctic) dependency; (3) Western Samoa (trust territory). Area: New Zealand proper 103,740 sq.mi.; island territories 19 sq.mi.; Ross dependency about 175,000 sq.mi.; Western Samoa 1,131 sq.mi. Pop. (1951 census): New Zealand proper 1,939,472, including 115,676 Maoris; island territories 21,205 (including 15,079 in Cook Islands); Western Samoa (1954 est.) 94,128. Pop. of New Zealand proper (1956 prelim. census): 2,172,350 (including 135,015 Maoris); island territories (1955 est.) 23,000. Language: English; Maori (a Polynesian language). Religion: Christian (Anglican 37.5%, Presbyterian 23%, Roman Catholic 13.6%, Methodist 8%, Baptist 1.7%). Chief cities (1951 census, 1953 est. in parentheses): Wellington (cap.) 120,072 (126,500); Auckland 127,406 (131,400); Christchurch 123,548 (126,600); Dunedin 69,829 (71,000); Hutt 44,474 (46,600). Queen, Elizabeth II; governor general in 1956, Lieut. Gen. Sir Willoughby Norrie; prime minister, Sidney George Holland.

History.—New Zealand's economy continued to expand with a steady growth of population and employment during 1956. Both production and trade increased considerably but inflationary pressures continued to cause balance of payment problems.

Factory production rose by 10.4% in volume. Total farm production increased by 2%, largely because of extra productivity as the result of aerial top-dressing of pastures with fertilizers. Increased production was accompanied by an increase of exports. Total receipts for the year ended June 30 were the highest on record at £319,600,000. The export value of wool was £94,100,000, butter and cheese, £75,100,000, meat £71,600,000. The United Kingdom was again the biggest customer for these products but there was a noticeable increase in exports to European countries, mainly France and Germany.

In the financial field the gross capital investment totalled £257,000,000. Prices were reasonably stable, the year's increase being 3.1%. The demand for private imports totalled £238,600,000 for the year 1955-56. The primary problem of the economy was the excess demand for the available resources of labour

and materials. The government met the situation by monetary and fiscal measures reinforced by physical controls on imports, instalment buying, as well as by raising loans and encouraging savings, viz., by an internal conversion loan of £50,000,000 and a £10,000,000 loan on the London market. A question of some concern to the export market was the disposal of U.S. surplus farm products and strong representations were made from time to time at the highest government levels. The monetary commission's report was issued in April. It concluded that no radical reform was needed in the financial structure of the country but did recommend a number of ways in which the administration of monetary, banking and credit systems could be improved.

The budget recommended no major changes; for the year ended June 30 it showed an over-all deficit of £5,200,000 in the country's overseas transactions. The government capital program for the year ending March 1957 was estimated at £78,700,000. The Consolidated fund showed estimated receipts of £204,100,000, and expenditure of £200,400,000.

In external relations the Sudan was formally recognized, as were Tunisia and Morocco later. Emphasizing the growing importance of Pacific affairs to New Zealand, a commissioner for southeast Asia was appointed in April and also accredited to Thailand. The minister of external affairs, T. N. Macdonald, attended a meeting of the Southeast Asia Treaty organization at Karachi in March. The prime minister, S. G. Holland, visited Australia in February, when trade and defense problems were discussed. He also visited Japan, the United States and Canada on the way to the meeting of commonwealth prime ministers in London in June. When the Suez canal crisis occurred New Zealand was represented at the London conference by T. N. Macdonald. When Britain and France intervened in Egypt full confidence was expressed by the prime minister in the intention of the United Kingdom in moving forces into the canal zone. The United Nations' proposal for a police force was welcomed and New Zealand was among the first to offer a contribution. During the year the "Royalist," one of the world's most modern and powerful cruisers, was added to the New Zealand navy.

One of the main items in legislation was reciprocity in social security with the United Kingdom. Other items of interest were a search for oil on the east coast of the North Island, and the start made with the building of the Auckland harbour bridge, the culmination of 20 years' effort. (A. T. CL.)

Education.—Schools (1953): primary (including Maori, private, district high and intermediate schools or departments) 2,373, pupils 359,537, teachers 10,685; secondary (including secondary departments of district high and combined secondary-technical schools, and 30 technical schools) 285, pupils 67,478, teachers 3,357; vocational 33, pupils 20,106; part-time vocational centres 157, students 30,637; pupils in correspondence schools (for isolated areas) primary 1,645, secondary 482, technical 1,757. Teacher-training colleges (1953) 5, students 2,354. University of New Zealand (4 constituent colleges and 2 associated agricultural colleges), students (Oct. 1955) 4,823.

Finance and Banking.—Monetary unit: New Zealand pound, at par with the pound sterling (=2.80 U.S. dollars). Budget (consolidated fund, 1955-56 actual): revenue £N.Z. 197,433,000, expenditure £N.Z. 193,282,000; (1956-57 est.) revenue £N.Z. 204,100,000, expenditure £N.Z. 198,316,000. Social security fund (1955-56; 1956-57 est. in parentheses): revenue £N.Z. 74,111,000 (£N.Z. 76,500,000), expenditure £N.Z. 72,883,000 (£N.Z. 75,431,000). Total public debt (March 31, 1955) £N.Z. 730,084,000, of which £N.Z. 99,880,000 domiciled in London. Currency circulation (Feb. 1955) £N.Z. 64,000,000, (Feb. 1956) £N.Z. 65,400,000. Deposit money (Feb. 1955) £N.Z. 251,400,000, (Feb. 1956) £N.Z. 252,900,000. Gold and foreign exchange (reserve bank March 1955) U.S. \$225,000,000, (March 1956) U.S. \$192,000,000.

Foreign Trade.—(1955) Imports £N.Z. 287,100,000, exports £N.Z. 258,600,000. Main sources of imports: U.K. 55%; Australia 12%; other sterling area 7%; U.S. and Canada 12%; continental European Payments Union countries. Main destinations of exports: U.K. 7%; continental E.P.U. 11%; Australia and other sterling area 6%; U.S. and Canada 9%. Main exports: wool 36%; butter 20%; lamb 17%.

Transport and Communications.—Roads (March 1953): 124,000 km., of which 88,740 km. formed roads. Licensed motor vehicles (Sept. 1955): passenger 373,817, commercial 107,784. Railways (1954): 5,700 km.; freight, ton-km. (April 1955-56) 1,872,000,000. Shipping: merchant vessels of 100 gross tons and more (July 1955) 160; total tonnage 239,879. Air transport (1954): passenger-km. 238,752,000; cargo, ton-km. 7,388,400. Telephones (March 1955) 496,293. Licensed radio receivers (March 1956) 516,800.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 79,000 (112,000); barley 43,000 (45,000); oats 31,000 (29,000). Miscellaneous production (metric tons, 1954; 1953 in parentheses): potatoes 154,000 (168,000); dry peas 24,000 (26,000); tobacco 2,400 (1,900). Livestock (Sept. 1955): cattle 5,924,000; sheep 39,500,000; pigs 160,000; pigs 689,000. Food production (metric tons, 1954): beef 14,800; mutton and lamb 364,800; pork 39,600; (1955) butter 196,800; cheese 96,000; milk (1952-53) 5,342,000. Wool production, clean basis (1955) 144,000 (138,000 metric tons in 1954).

Industry.—Fuel and power (1955): coal 804,000 metric tons; lignite 776,000 metric tons; manufactured gas 147,600,000 cu.m.; electricity (excluding industrial generation) 4,032,000,000 kw.hr. Production (metric tons, 1954): tungsten ore 18; superphosphates (April 1953-54) 727,000; food pulp (mechanical) 54,000; (chemical) 21,000; sawn softwood 140,000 cu.m.; cement (1955) 410,400.

Nicaragua. A Central American republic. Nicaragua is situated between Honduras on the north and Costa Rica on the south. Area: 57,143 sq.mi., of which 3,475 sq.mi. is water. Pop.: (1950 census) 1,057,023; (1955 est.) 1,261,000. Capital: Managua, pop. (1950 census) 109,352. Other large cities: Chinandega, 13,146; Granada, 21,035; León, 30,544; Masaya, 19,743; and Matagalpa, 10,323. Language: Spanish. Religion: Roman Catholic. President in 1956: Gen. Anastasio Somoza; acting chief of state from Sept. 29, Luis Somoza Debayle.

History.—In Feb. 1956, Pres. Anastasio Somoza declared his ineligibility for renomination as the Liberal party candidate for president during the 1957-1963 term. The constitution had been revised earlier to sanction re-election. In March the president began an earnest campaign; in April he promised free elections; in May some political prisoners were released; and in June the Congress acted favourably on his proposal for liberalized regulations governing libel and other press difficulties.

Two plots to kill the president were uncovered during the first half of the year. In May two youths were intercepted as they returned to Nicaragua from Mexico. In June arrests involved three men, most important of whom was Hernán Robleto, director of Managua's *La Flecha*.

The Liberal party convened on Sept. 20 at León to select the president once more as standard bearer. The candidate, while circulating among his adherents at a celebration on the following night, was shot four times by a youth. The assassin was killed immediately by guards. Efforts to save the president's life were resisted by Pres. Dwight D. Eisenhower, who ordered U.S. army surgeons to Nicaragua. They sent Somoza by air to the Panama Canal Zone Gorgas hospital, but he died on Sept. 29, thus ending his 20-year rule over Nicaragua.

Following the shooting a state of siege was declared. Luis Somoza Debayle, the older son and first designate took over the duties of chief of state. He assumed responsibility without incident. The national guard, under West Point graduate Anastasio Somoza Jr., jailed a considerable number of suspected Somoza enemies but was faced with no organized opposition. Apparently the assassin had acted independently. The heir apparent, Luis, was nominated in October to be the Liberal party presidential candidate in the election set for Feb. 1957.

The Nicaraguan Institute of Social Security was faced with numerous complaints from both employers and employees that the contributions schedule was too high. The agency, created in Dec. 1955, was 25% state supported. Other funds came from an assessment upon employers of 8% of total wages. Employees paid 5% of their wages. The employers' contribution was to provide the job accident insurance; the workers paid for other disability, funeral and survivor benefits coverage. No unemployment insurance was provided for. The International Bank for Reconstruction and Development lent \$3,200,000 to improve the port of Corinto. The loan raised to \$21,400,000 the agency's support to Nicaraguan economic development.

(See also ORGANIZATION of AMERICAN STATES.) (R. HN.)

Education.—In 1953 there were 1,765 state elementary schools, 6 normal schools, 39 secondary schools, 6 professional schools, 1,727 mixed (urban and rural) schools, 49 other schools and 1 university (León) with a total of 14,899 teachers and 123,832 pupils. About 65% of the population is

illiterate.

Finance.—The monetary unit is the córdoba, valued during 1956 at 14.18 cents U.S. currency, official rate, and on June 30, 1956, at 12.9 cents, curb rate. The national budget for the fiscal year 1956-57 (July 1-June 30) totalled 264,754,497 córdobas. The public debt (Dec. 31, 1955) was 51,497,260 córdobas, of which 33,842,779 córdobas was external. Currency in circulation (May 31, 1956) totalled 115,500,000 córdobas; demand deposits, 152,700,000 córdobas. The retail food price index (Managua) stood at 121 in April 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled \$80,022,000; imports, \$69,646,000. Leading exports were cotton (39%), coffee (35%), gold (10%), timber (4%) and cottonseed (4%); leading imports, machinery and apparatus (16%), vehicles and parts (14%), chemicals and drugs (13%) and food products (8%). Leading customers were the U.S. (37%), Germany (16%), Japan (13%), the Netherlands (13%) and the U.K. (8%); leading suppliers, the U.S. (65%), Germany (6%), the Netherlands Antilles (6%), the U.K. (3%) and Panamá (3%).

In 1953 there were 235 mi. of main line railway and (1950) 445 mi. of surfaced highways. On Jan. 1, 1955, there were 4,078 automobiles, 2,302 trucks and 302 buses. Telephones (Jan. 1, 1955) numbered about 3,600, none of which was automatic. Radios numbered about 16,000 in 1952.

Agriculture.—Exports in 1955 included cotton 48,465 short tons, coffee 310,000 bags of 132 lb. each, bananas 469,919 stems, cottonseed 70,760 short tons, sesame 11,055,000 lb., ipecacuanha 33,624 lb., live cattle 20,775 head, timber 37,347,000 bd.ft. Preliminary production estimates for 1955-56 included cotton 160,000 bales of 500 lb. gross weight, coffee 476,000 bags, rice 75,000,000 lb. Cattle (1954) numbered 1,200,000.

Minerals.—In 1955, 229,601 troy oz. of gold were exported.

(J. W. Mw.)

Nickel. World production of nickel, given in Table I, increased in 1955 chiefly because of expansion in the Canadian industry. Tables I and II are based on U.S. bureau of mines data.

Table I.—World Mine Production of Nickel

	(In short tons)				
	1951	1952	1953	1954	1955
Canada	137,903	140,559	143,693	161,279	174,581
Cuba	8,924	13,844	14,545	15,138
Finland	?	65	309	89	134
New Caledonia	4,600	9,900	13,100	13,000	19,500
South Africa	1,254	1,444	1,891	2,112	2,598
United States	756	633	602	831	3,807
Total (excl. U.S.S.R.)	145,000	162,000	174,000	192,000	216,000

United States.—Production of nickel greatly increased when the new plant at Riddle, Ore., began producing in Jan. 1955. In 1956, 54,035 tons was consumed in the first eight months.

Table II.—Nickel Supply in the United States

	(In short tons)				
	1951	1952	1953	1954	1955
Production	756	633	602	2,006	3,807
Secondary recovery	8,602	7,749	8,352	8,600	11,500
Imports*†	101,620	118,372	131,685	144,100	143,696
Nickel content	93,116	108,850	118,737	131,784	142,598
Exports*†	4,622	6,941	15,168	14,245	20,596
Consumption	86,416	101,397	105,681	94,733	101,929

*Includes gross weight (not nickel content) of ore, matte, oxide, alloys and scrap.

†Due to changes in classification, 1952-54 data are not strictly comparable to earlier years.

Canada.—About 15 mines supply nickel ore to five companies which refine it and provide the principal part of the world's nickel production. About two-thirds of Canada's nickel output in exported to the United States.

Cuba.—Methods were improved for beneficiating the ore used at the U.S. government-owned nickel plant at Nicaro. In 1955 the output was 593 tons more than in 1954.

Philippine Republic.—Nickel-bearing ore reserves on Nonoc Island, estimated at 29,000,000 tons of ferruginous laterite and serpentine containing 1.38% nickel, received special attention in 1955. (F. E. H.; B. B. M.)

Niger: see FRENCH UNION; FRENCH WEST AFRICA.

Nigeria. This British dependent country in West Africa is bounded west, north and east by French African territories and south by the Atlantic ocean. Historically, it comprises a coastal colony (1,381 sq.mi.), a protectorate (337,788 sq.mi.) and Cameroons under United Kingdom trusteeship (34,081 sq.mi.), the northwest part of former German Kamerun; but it is administered as a federation of three semiautonomous regions, a quasi-federal territory (Southern Cameroons) and the federal capital territory of Lagos. Areas and populations are as follows:

	Area (sq. mi.)	Pop. (mid-1955 est.)	Governor	Premier
Nigeria	373,250	32,780,000	Sir James Robertson*	—
Western region	45,376	6,400,000	Sir John Rankine	O. Awolowo
Northern region	281,782†	17,800,000	Sir Bryan Sharwood-Smith	Sardauna of Sokoto
Eastern region	29,484	7,500,000	R. D. S. Stapledon	N. Azikiwe
Southern Cameroons	16,581	780,000	E. J. Gibbons‡	—
Lagos, fed. cap	27	300,000		

*Governor general, Federation of Nigeria. †Including Northern part of Cameroons trust. ‡Commissioner.

Tribal groups (1952-53 census): Hausa (17.8%) and Hausa-speaking Fulani (9.8%), mainly in the Northern region; Ibo (17.5%), mainly in the Eastern region and Southern Cameroons; Yoruba (16.2%), mainly in the Western region. Religion: Moslem (north); pagan (south); Christianity widespread among the educated. Capitals (pop., 1952-53 census): Lagos (federal) 267,407; Ibadan (Western region) 459,196; Kaduna (Northern region) 38,794; Enugu (Eastern region) 62,764; Buea (Southern Cameroons) 3,009. Chief towns (pop., 1952-53 census): Ogbomoshosho 139,535; Kano 130,173; Oshogbo 122,728; Ife 110,790; Iwo 100,006.

History.—The visit of Queen Elizabeth II and the duke of Edinburgh (Jan. 28-Feb. 17, 1956) was hailed throughout Nigeria with unprecedented scenes of enthusiasm.

In Dec. 1955 the federal government received a grant of £1,500,000 made available under the Colonial Development and Welfare act, for improving the federal trunk road system, and in April 1956 announced proposals for a federal naval force. In May it placed contracts in Great Britain worth £4,200,000 for the supply of telephone and telecommunication equipment.

NIGERIAN NATIVES welcoming Queen Elizabeth II and the duke of Edinburgh during their visit to the British colony in 1956

Western Region—In Dec.

1955 the house of assembly adopted a resolution demanding full regional self-government in 1956. In April 1956 two ministers resigned their

portfolios and membership of the Action group following disagreement with the premier, Chief O. Awolowo, whom they accused of dictatorship. In May the premier announced the dissolution of the house of assembly, and elections took place on May 26 when the Action group was returned with a reduced majority.

Eastern Region.—On July 17 the premier, N. Azikiwe, announced that he contemplated resigning as a result of a disagreement with the governor, Sir Bryan Sharwood-Smith, over the alleged investment of funds in the African Continental bank that he had founded, and on July 24 the secretary of state for the colonies, A. T. Lennox-Boyd, announced that he would appoint a tribunal of inquiry under the chairmanship of Sir Stafford Foster-Sutton, chief justice of the federation, to investigate the dispute. The crisis thus induced resulted in the postponement of the constitutional conference scheduled to open in London in mid-September. It was hoped it would be held in Jan. 1957. Announcements were made that grants totalling £2,283,900 from Colonial Development and Welfare funds had been received for rural water supplies, regional roads and bridges, and that in pursuance of the Nigerianization policy there were more Nigerians than expatriates in senior service posts.

Northern Region.—It was announced in Dec. 1955 that the Nigerian Railway corporation was to extend rail facilities to link Maiduguri, Bauchi and Lafia at a cost of £18,000,000. A grant of £3,450,000 was made from Colonial Development and Welfare funds for class B trunk roads to supplement the main trunk system, and a similar grant of £1,300,000 was received toward a £1,950,000 scheme for rural water supplies. In May the Northern Peoples Congress party (the government party) declared it would ask for regional self-government by 1959 at the London conference. Elections to the enlarged house of assembly in November resulted in the return of the N.P.C. party with an overwhelming majority. (W. H. Is.)

Education.—Schools (1955): primary school pupils, approximately 1,500,000; secondary schools 84. Institutions of higher education four, including University college of Ibadan with 405 students.

Finance and Trade.—Monetary unit: West African pound (£W.A.1=£1 sterling=U.S. \$2.80). Budget (1954-55): revenue £54,272,000, expenditure £52,419,000. Foreign trade (1955): imports £135,800,000, exports £132,000,000. Main exports: peanuts, cocoa, hides, palm oil and kernels cotton, timber, bananas.

Nixon, Richard Milhous

(1913-), U.S. vice-president, was born on Jan. 9 at Yorba Linda, Calif., near Los Angeles. He was educated at Whittier college, Whittier, Calif., and at Duke university, Durham, N.C., and practiced law for five years at Whittier. After a few months in Washington, D.C., as attorney for the Office of Emergency Management (Jan.-Aug. 1942), Nixon was commissioned a lieutenant, junior grade, in the U.S. navy. He saw service in the South Pacific and by the time of his discharge in 1946 had been promoted to lieutenant commander. In Nov. 1946 he was elected to the U.S. house of representatives as a Republican from the 12th California district and was re-elected in 1948 for a second term. In the house he was appointed to the un-American activities committee and figured prominently in the investigations that led to the Alger Hiss trial. In Nov. 1950 he was elected U.S. senator from California.

In 1952 Nixon was selected vice-presidential candidate to run on the Republican ticket with Dwight D. Eisenhower, and they won a decisive victory at the polls. Nixon was sworn into office as the 36th U.S. vice-president on Jan. 20, 1953, at Washington

VICE-PRESIDENT NIXON napping aboard his plane between speaking engagements during the pre-election campaign of 1956

Shortly before President Eisenhower's inauguration. He became one of the administration's most active and trusted "trouble shooters," not only in domestic political matters but in foreign affairs, and was repeatedly commended by President Eisenhower. Shortly after the president's decision to run for a second term in 1956 he declared on March 7: "I have no criticism of Vice-President Nixon to make, either as a man, associate, or as my running mate. . . ." Nevertheless a group of Republicans led by Harold E. Stassen planned to "dump" Nixon. Soon after the Herter returned from a tour through the far east, Stassen announced on July 23, 1956, that he would support Christian A. Herter (*q.v.*) as a "stronger" vice-presidential nominee. Stassen's anti-Nixon campaign collapsed, however, when Herter himself withdrew it and said that he would present Nixon for nomination at the Republican convention. Nixon was renominated without opposition on the first ballot. (A Nebraska delegate who had originally passed to vote for a mythical "Joe Smith" made the vote unanimous after the roll call.)

Nixon, singled out by the Democrats as "leader of the reactionary wing" of the Republican party, conducted an intensive campaign prior to the national election on Nov. 6, at which President Eisenhower and he were re-elected by landslide proportions.

NLRB: see NATIONAL LABOR RELATIONS BOARD.

Nobel Prizes. The Nobel prizes for literature, physics, chemistry, medicine and peace, first awarded in 1901, were established by the Swedish industrialist, Alfred Bernhard Nobel (1833-96). Each award consists of a gold medal and a sum of money which varies with the income from the \$9,000,000 fund set up by Nobel's will. In 1956 it amounted to \$38,000, for each award, nearly \$2,000 more than in the previous year which had been a record high.

The Nobel peace prize committee announced that it could find no one worthy of its award for 1955 or 1956. The 1955 prize of \$720 was available for belated award in 1956, but since no winner was chosen it would never be awarded. The 1956 award money would be awarded in 1957 if the committee should find a suitable candidate.

Juan Ramón Jiménez, a 74-year-old Spanish-born poet living in Puerto Rico, received the prize in literature for "his lyrical poetry, which in the Spanish language constitutes an example of high spirit and artistical purity."

The 1956 prize in medicine was awarded jointly to two Americans and a German for their work in evolving a simple method of charting the interior of the human heart. The winners were André F. Cournand and Dickinson W. Richards, both of Columbia University, and Werner Forssmann of Bad Kreuznach, German Federal Republic (west Germany).

The chemistry prize was shared by Sir Cyril Hinshelwood, an Oxford University professor, and Nikolai N. Semyonov, director of the Institute of Physics at Moscow, "for their researches into the mechanism of chemical reaction." They were cited as having contributed about equally in showing a quarter of a century ago that molecules, like people, may congregate peaceably or explode in violent chain reactions, depending on their environment and provocation.

Three U.S. physicists divided the year's physics prize, Walter H. Brattain, William B. Shockley and John Bardeen, for their work in inventing and developing a transistor, a tiny and highly efficient substitute for the vacuum tube in electronics. They did their work as research scientists of the Bell Telephone laboratories of Murray Hill, N.J.

The formal presentation of the 1956 prizes was made at the traditional Nobel ceremonies in Stockholm on Dec. 10, the anniversary of Nobel's death.

(See separate article on each recipient.)

(A. J. RR.)

Norstad, Lauris (1907-), U.S. general, was appointed supreme commander of Allied forces in Europe on April 13, 1956, by the North Atlantic (NATO) council at Paris, Fr., succeeding Gen. Alfred M. Gruenther. Previously Norstad had been deputy air commander for NATO, since 1953; commander of Allied air forces in central Europe (1951-53); and commander of U.S. air forces in Europe (1950-51).

Born at Minneapolis, Minn., on March 24, Norstad graduated from the United States Military Academy at West Point, N.Y., in 1930 as a second lieutenant of cavalry but transferred to the army air corps late the following year. After a series of assignments in Hawaii and the United States he was transferred to Washington, D.C., in 1942 as a member of the officers' advisory group of Gen. Henry H. (Hap) Arnold, commanding general of the U.S. army air force. By Dec. 1943 Norstad was operations director of Allied air forces in the Mediterranean, with the rank of brigadier general. He was then recalled to Washington as deputy chief of the air staff to help plan the latter stages of B-29 saturation bombing on a world-wide scale. As chief of staff of the 20th air force he directed the strategy of the devastating air attacks on Japan in the final months of World War II, including the atomic raids on Hiroshima and Nagasaki. Following the war Norstad became director of plans and operations of the war department's general staff and one of the two army representatives in the negotiations leading to unification of the U.S. armed forces. He was advanced to full general in 1952.

North Atlantic Treaty Organization. The North Atlantic Treaty organization, or NATO, established in 1949, had by 1956 proved its usefulness for the consolidation of the free western world and for the preservation of peace and democracy. Yet in the history of NATO the year 1956 could be characterized as a year of indecision and hesitation.

Problems Faced by NATO.—NATO was established in the period between the Communist coup in Czechoslovakia and the Berlin air lift on the one hand and the Korean war on the other. It was a time of great strain, when military actions by the U.S.S.R. in various parts of the world were expected. NATO was primarily designed to meet this immediate military threat. During 1956 Communist policy appeared to shift from military

"HO-HUM!" a 1956 cartoon by Hesse of the *St. Louis Globe-Democrat* (Mo.)

threats and military aggression to a system of "peaceful" coexistence and economic, political and cultural competition. NATO policy had not yet found time to adapt itself to the new situation. Another factor demanding a readjustment of NATO policy was the increased emphasis on nuclear weapons rather than on conventional weapons. This emphasis seemed to allow a reduction in the number of available trained men put at the immediate disposal of the NATO high command, SHAPE (Supreme Headquarters, Allied powers in Europe). By the end of 1956 the 12 German divisions which had been anticipated for three years had not yet come into existence, and the United States and Great Britain envisaged a reduction of the number of their forces stationed on the continent of Europe.

In addition, many of the French troops under NATO command were transferred to Algeria in an effort to suppress the nationalist uprising there.

Broadening of the NATO Concept.—The deterioration in the general situation of NATO led to a reappraisal of its fundamental policy. The smaller countries within NATO had long desired to have a voice in its diplomatic and military policy, which so far had been shaped largely by decisions taken by the United States, Great Britain and France. The spokesmen for the smaller nations had pointed out that in such decisions the fate of all member nations was inextricably linked and that they must all create policy together, in order to prevent war or to be better prepared for it if it should come. It was not enough, these spokesmen maintained, to work together militarily; it was equally if not more important to show a real solidarity in the political and economic fields. They felt that NATO should be transformed from a mainly military alliance into a new experiment in international relations, in which nations sharing a common heritage of civilization would concert their actions for peaceful development as well as for military contingencies.

The Dec. 1955 Council Meeting.—As a result of these demands for closer co-operation among the members of NATO as envisaged in article 2 of the treaty, the North Atlantic council, meeting in Paris, Fr., on Dec. 15 and 16, 1955, decided to instruct

the permanent council to examine and implement all measures conducive to this end. An initial step, though still confined to the military field, was taken at the council meeting itself, when it was decided to call a special conference for Feb. 1956 at which for the first time the three major nations forming the military standing group of the alliance—the United States, Great Britain and France—would meet with the military and civilian leaders of the other member nations to discuss with them the implications of the "new look" that western strategy was to acquire as a result of new nuclear weapons and guided missiles. The United States government evolved a program which would put its NATO allies on an equal footing in regard to guided missiles, supersonic fighter planes and radar systems, a step equally essential to their military effectiveness and to their morale.

The United States and Europe.—The dissatisfaction of most of the European countries with the restricted scope of NATO activities was expressed by many spokesmen of the smaller European nations. Pres. Giovanni Gronchi of Italy at the time of his visit to North America at the end of Feb. 1956 declared that "unification of the western viewpoint is the indispensable premise for any action in order to confer upon joint policies a dynamic and flexible character to counteract the forces which lately have so ably demonstrated their flexibility."

As a response to this challenge, which emanated from many European members of NATO, the U.S. secretary of state, John Foster Dulles, in an address before the Associated Press on April 23, 1956, espoused for the first time the development of NATO from a military defense alliance into a co-operative enterprise for the political, economic and cultural advancement of its members. But Dulles remained vague in regard to the means and the scope of this extension of NATO functions, and no concrete leadership was given by the United States to put these general observations into the realm of reality. Yet Dulles stressed that this was "the greatest single task" of statesmanship which the western world had faced since the end of World War II.

Hopes were therefore aroused in Europe that NATO could now take on new life and functions and develop into an instrument of a collective western policy, to meet not only the apparently diminishing military dangers but also the growing political and economic threat of Communism. It was hoped that the United States would take the initiative for a common western policy of economic aid to underdeveloped countries, a policy which could develop a similar vigour as the European Recovery program had in saving western Europe from chaos and Communism in the years immediately following World War II.

The Committee of Three.—Conforming to this new trend, the North Atlantic council at its May 1956 meeting appointed a committee of three, consisting of Halvard M. Lange, foreign minister of Norway; Gaetano Martino, foreign minister of Italy; and Lester B. Pearson, Canadian secretary of state for external affairs, for finding ways to ensure western unity and to implement the nonmilitary aspects of the North Atlantic alliance. This committee of three met in June 1956 and again in Sept. 1956 in closed sessions in order to find ways and means to arrange for a more active and much closer consultation among the 15 member nations.

Such closer consultation was made necessary not only by the general international situation but also by two events which concerned NATO directly. One was the announced retirement of Gen. Alfred M. Gruenther, the supreme Allied commander, and his replacement by Gen. Lauris Norstad, U.S.A.F., air deputy to General Gruenther. General Gruenther was widely regarded as one of the strong cohesive forces in the NATO organization, and his departure from SHAPE was deeply regretted. The other

vent had to do with the situation in Iceland.

Iceland and NATO.—How much such closer co-operation outside the purely military field was needed was shown when the parliament of Iceland by a vote of 38 to 18 called for the withdrawal of the U.S. defense forces, stationed, on behalf of NATO, at the Keflavik air base in Iceland, and for the transfer of the base to the care and protection of the Icelanders themselves, who maintained no military establishment. The same resolution of the Icelandic parliament reaffirmed, however, the country's adherence to NATO, of which it was a founder member. On June 22, 1956, Iceland requested the North Atlantic council to survey the situation. The view of the council, transmitted to Iceland and the United States on July 26, stressed the fact that the present international situation "has not improved to such an extent that the defense forces are no longer required in Iceland. Under present circumstances, the withdrawal of United States forces, now in Iceland on behalf of the alliance as a whole, would leave the country completely undefended. A major deterrent to aggression in the North Atlantic area would no longer exist and a gap would be opened in the chain of defense which maintains our security. It is the tangible and visible evidence of forces and installations in being, in place and ready, which constitutes an effective deterrent against aggression. An effective deterrent is our greatest safeguard against the outbreak of war."

U.S. Representation.—On May 9, 1956, Pres. Dwight D. Eisenhower appointed Sen. Walter F. George as U.S. representative with reference to the development of the North Atlantic Community. This appointment was made with the intention to help to explore ways and means by which the North Atlantic Community might more fully realize its potential for the achievement of peace and for the preservation of the great values inherent in western civilization.

Nonmilitary NATO Activities.—The organization of NATO parliamentarians, which started in Paris in 1955, made progress during 1956. The Paris conference in July 1955 had unanimously decided that similar conferences should be held each year, thereby constituting itself a permanent institution. A continuing committee, consisting of one member from each NATO parliament, was set up with a secretariat in London. This committee met and made careful preparations for the 1956 conference to be held in Paris at the end of Nov. 1956, so as to allow the fullest participation of United States parliamentarians. It was agreed that the conference should be broad in its scope and should consider the common problems of the NATO Community in all fields, and the potentialities of NATO, not merely its existing machinery.

The North Atlantic council committee on information and cultural relations called the first conference of cultural experts to a meeting in Paris in July 1956. The meeting was attended by senior officials primarily concerned with government-sponsored cultural activities in the member countries of the Atlantic alliance. They adopted a number of specific recommendations for intensifying cultural exchanges among the countries of the North Atlantic Community.

As a first step NATO established a number of Atlantic fellowships and scholarships.

North Borneo: see BRITISH BORNEO.

North Carolina. A south Atlantic coast state, popularly known as the "Old North state" or the "Tar Heel state," North Carolina is one of the original 13 states in the union. Area: 52,712 sq.mi. (49,097 sq.mi. land, 3,615 sq.mi. water). Pop. (provisional est., July 1, 1956) 4,423,000;

(1950 census) 4,061,929, of which 1,368,101 (33.7%) were urban, 2,693,828 (66.3%) rural and 1,096,720 (27%) nonwhite. Capital: Raleigh, with pop. (1950) 65,679. Other cities: Charlotte (134,042); Winston-Salem (87,811); Greensboro (74,389); Durham (71,311); Asheville (53,000).

History.—In 1956, North Carolina, like other southern states, faced problems growing out of the 1954 United States supreme court decision declaring the segregation of the races in the public schools unconstitutional. Gov. Luther H. Hodges called the state legislature into special session on July 23 to consider the recommendations of an advisory committee on education under the chairmanship of Thomas J. Pearsall for a constitutional amendment dealing with the public school system. After a brief session, the legislature passed with only a few dissenting votes a proposed constitutional amendment which would (1) permit state and local funds to be spent for private school tuition grants for children whose parents object to their attending integrated public schools; and (2) allow local school units to close public schools by a majority vote if conditions become "intolerable." In a special election held on Sept. 8, the voters in all the state's 100 counties favoured the public school amendment by a total majority of more than four to one, and also approved constitutional amendments changing the meeting date of the legislature from January to February and raising the compensation of legislators.

Thus far there had been no integration of the races in the state's public schools. However, in Sept. 1956 Negroes were admitted to the undergraduate schools of State college in Raleigh and the Woman's college in Greensboro of the University of North Carolina, thereby opening all three institutions of the university to the admission of Negroes (the university at Chapel Hill admitted three undergraduate Negroes in 1955).

Politically, the most significant events were the overwhelming majorities received by Gov. Luther H. Hodges and United States Sen. Samuel J. Ervin, Jr., in the Democratic primary, tantamount to election in strongly Democratic North Carolina. Governor Hodges, who had succeeded to the governorship upon the death of Gov. William B. Umstead in 1954, defeated three opponents, and Senator Ervin, making his first bid for election since his appointment to the senate in 1954, won an easy victory over one opponent.

The new campus of Wake Forest college at Winston-Salem was dedicated on Oct. 12, 1956, thereby consummating the removal of this institution from the town of Wake Forest, where it had been since 1838.

Traditionally Democratic North Carolina cast its 14 electoral votes for Adlai E. Stevenson and Estes Kefauver (although by sharply reduced popular majority), and all Democratic candidates for national and state offices were elected except in the tenth congressional district where incumbent Rep. Charles R. Jonas (Rep.) was returned to office.

The principal state officers in 1956 were Luther H. Hodges, governor; Thad Eure, secretary of state; Henry L. Bridges, auditor; Edwin Gill, treasurer; Charles F. Carroll, superintendent of public instruction; George Patton, attorney general; Wallace Winborne, chief justice; L. Y. Ballentine, commissioner of agriculture; Frank Crane, commissioner of labour; Charles F. Gold, insurance commissioner.

Education.—In 1954-55 there were 2,217 public elementary schools with 24,929 teachers, principals and supervisors, and 785,005 enrolled pupils and 933 high schools with 9,279 teachers, principals and supervisors, and 215,070 enrolled pupils. These schools were operated at a cost of approximately \$155,077,268, including \$7,051,801 of federal funds, \$122,998,428 of state funds and \$24,000,000 of local funds. The average daily attendance in the public schools was 904,029; the number of inhabitants of school age (6-20) was about 1,200,000. The average salary for elementary school teachers was \$3,224 and for high school teachers \$3,397.

Social Insurance and Assistance, Public Welfare and Related Programs.—In June 1956, public grants amounting to \$1,645,348 were made to 51,750 persons for old-age assistance; \$1,237,670 to 19,954 families for aid to dependent children; \$491,378 to 13,094 persons for aid to the permanently

and totally disabled; \$203,524 to 4,932 blind persons; and \$54,761 to 2,493 persons for general relief. For hospitalization of assistance recipients and other indigent persons the total amount expended for June was \$259,932. During the year ending June 1956, the total amount of public relief funds distributed was \$45,743,373, and unemployment benefits amounted to \$22,946,535.

In 1956 the state maintained 18 charitable institutions with 14,600 inmates on June 30 (including 5 correctional institutions); and the state prison system with 10,699 prisoners on July 1, 1956.

Communications.—In 1956 the state highway and public works commission maintained 10,968 mi. of state highways, of which 10,844 mi. were hard-surfaced; 56,053 mi. of rural roads, of which 22,074 mi. were hard-surfaced; and 2,571 mi. of city streets, making a total mileage maintained of 69,592. There were 4,514 mi. of railroads, 870 mi. of city bus routes and 11,912 mi. of passenger bus routes in 1955. There were 114 airports and 6 commercial air lines serving the state. There were 830,000 telephones in use in the state on June 30, 1956.

Banking and Finance.—On June 30, 1956, there were 107 national banks and branches with assets of \$676,169,000 and 446 state banks and branches with deposits of \$1,632,254,000 and assets of \$1,838,836,000. On Jan. 1, 1956, there were 148 building and loan associations operating under state charters with 276,736 members and total assets of \$450,289,911, and 32 federal savings and loan associations with total assets of \$289,849,538. In 1955-56 state receipts were \$1,080,208,512.37; disbursements \$1,074,476,747.08. On June 30, 1956, the state gross bonded debt was \$276,846,000, less bonds invested in sinking funds, \$54,342,659; net bonded debt \$222,503,341. The assessed value of property was \$5,943,198,630 in 1955. In the state and general fund there was a cash balance of approximately \$38,485,550 at the end of the 1956 fiscal year.

Agriculture.—The cash income of North Carolina farmers in 1955 was \$712,502,000 from crops; \$222,963,000 from livestock and livestock prod-

North Dakota. A west north central state of the United States, North Dakota was admitted to the union Nov. 2, 1889; popular name, "Flickertail state." Area: 70,665 sq.mi., including 608 sq.mi. of water. Pop.: (1950) 619,636; (July 1, 1955, est.) 641,000; (July 1, 1956, provisional est.) 657,000. Urban pop. (1950) 26.6%. Capital (1950 pop., with 1955 est. in parentheses), Bismarck, 18,640 (23,300). Chief cities: Fargo, 38,256 (43,700); Grand Forks, 26,836 (30,500); Minot, 22,032.

History.—State officers in 1956 were: governor, Norman Brunsdale; lieutenant governor, C. P. Dahl; secretary of state, Ben Meier; auditor, Berta E. Baker; treasurer, Albert Jacobson; attorney general, Leslie Burgum; commissioner of insurance, A. J. Jensen; commissioner of agriculture and labour, Math Dahl; superintendent of public instruction, M. F. Peterson; tax commissioner, J. Arthur Engen; public service commissioners, Martin Vaaler, Ernest D. Nelson and Anson J. Anderson.

On March 29-30, 1956, the North Dakota Nonpartisan league, for 40 years a faction in the Republican party, moved into the Democratic party and endorsed a slate of candidates and a platform later accepted by the Democratic state convention. The 56,906 Democratic votes in the June 26 primary was the largest primary vote in the party's history, the 103,445 Republican votes the smallest primary vote since 1918. In the primary the voters approved a \$9,000,000 bond issue for Korean veterans, and rejected a \$54,000,000 bond issue for highways.

In spite of a vigorous Nonpartisan League-Democratic campaign, the North Dakota voters on Nov. 6 gave large majorities to Pres. Dwight D. Eisenhower, Sen. Milton R. Young, Representatives Usher L. Burdick and Otto Krueger, Governor-elect John E. Davis, and all Republican candidates for state office except incumbent tax commissioner, J. Arthur Engen. The voters chose a state senate of 34 Republicans, 12 Democrats and 3 undeclared; a house of 94 Republicans and 19 Democrats. They approved a \$1,000,000 loan fund for college students and disapproved a 1955 law prohibiting trading stamps.

Federal funds and projects stimulated the economy of the state. In 1956 construction began on U.S. air force bases at Grand Forks and Minot with appropriations of \$19,752,000 and \$20,181,000. The Garrison dam project was brought to 86% of completion; three 80,000-kw. generators were placed in service; by Oct. 1, 1956, \$252,153,800 had been expended on the project. In 1955 soil conservation districts planted 6,119,000 trees and shrubs, making North Dakota the leader among the Great Plains states. The Tongue river watershed protection program built four dams in 1956.

Education.—Public school teaching positions for the year ending June 30, 1955, were 6,859; public school enrolment 124,608 (elementary 94,832; high school 29,776); schools in session 2,964; average cost per pupil enrolled \$277; average salary of teachers, including city superintendents, \$2,912; total expenditures for public elementary and high schools \$33,423,671. Enrolment in 12 institutions of higher learning with 687 in the faculties totalled 10,666 full-time and 524 part-time students in Oct. 1956. A survey in 1955 showed 18.5% of North Dakotans of age 18-21 enrolled in institutions of higher learning in the state.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ending June 30, 1956, public assistance totalled \$10,856,834 (federal 41.7%, state 43.2%, county 15.1%). Old-age assistance cost \$6,751,145 (8,056 persons); aid to dependent children \$2,499,849 (5,062 children); aid to the blind \$83,680 (113 persons); aid to the permanently and totally disabled \$860,050 (934 persons); general assistance \$641,095 (761 cases); administrative expense \$1,036,901. Total expenditures for three charitable and three correctional institutions for fiscal 1956 amounted to \$5,921,206. Number of inmates in Sept. 1956: feeble-minded 1,151; insane 1,853; tubercular 85; penitentiary 213; training school 129; state farm 40.

Communications.—As of Dec. 31, 1954, the highway mileage was: state highways 6,605 mi.; local roads 70,375; prairie trails 39,501. In 1955 the state highway department let contracts for \$15,240,288 of construction. Motor vehicle registration in 1956 to Aug. 31: passenger cars 201,885; trucks 95,469. Six railroads operated 5,259 mi. of track.

Banking and Finance.—On June 30, 1956, the Bank of North Dakota and 115 state banks had resources of \$370,848,277 and deposits of \$337,121,872. Resources of 38 national banks were \$287,259,500, and deposits were \$262,816,500. State treasury collections for the year ending June 30, 1956, were \$90,925,317; disbursements were \$90,361,991. Total bonded indebtedness was \$13,979,250.

Table I.—Production Principal Crops of North Carolina

Crop	Indicated, 1956	1955	Average, 1945-54
Tobacco, lb.	926,825,000	978,775,000	952,680,000
Cotton (500-lb. bales)	340,000	351,000	457,000
Corn, bu.	80,729,000	70,482,000	62,535,000
Hay, all, tons	1,257,000	1,267,000	1,262,000
Peanuts, lb.	303,800,000	204,250,000	286,900,000
Wheat, bu.	9,027,000	6,858,000	7,028,000
Potatoes, sweet, cwt.	2,640,000	2,400,000	2,739,000
Potatoes, Irish, cwt.	2,466,000	3,034,000	3,713,000
Oats, bu.	19,120,000	15,180,000	10,964,000
Soybeans, for beans, bu.	8,316,000	5,068,000	4,049,000
Peaches, bu.	840,000	—	1,559,000
Apples, commercial crop, bu.	1,500,000	40,000	1,239,000
Pecans, lb.	2,600,000	350,000	2,254,000

Table II.—Value of Products Manufactured by Leading Industries in North Carolina

Product	1955	1954	1953
Textiles	\$2,675,000,000	\$2,430,000,000	\$2,819,000,000
Tobacco	1,623,000,000	1,580,000,000	1,661,000,000
Food	439,000,000	590,000,000	496,000,000
Furniture	326,000,000	295,000,000	332,000,000
Lumber	262,000,000	254,000,000	271,000,000
Chemicals	191,000,000	192,000,000	197,000,000
Paper	175,000,000	192,000,000	194,000,000
Electrical machinery	192,000,000	148,000,000	162,000,000

ucts; and \$7,292,000 from government payments. The average per farm value of the lands and buildings on the 267,906 farms in 1955 was \$8,105, with the average value per acre being about \$128.

Manufacturing.—North Carolina leads the southeast in industrial production and is the nation's largest producer of textile and tobacco products. In recent years chemical, paper manufacturing and electrical machinery have experienced notable growth. In 1955 industrial establishments numbering 7,300 employed 470,000 wage earners at wages of more than \$1,000,000,000. Estimated industrial production in 1955 was more than \$6,482,000,000 and electric power production was 16,791,000,000 kw.hr.

(Jo. C. S.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in North Carolina in 1953 and 1954 whose value exceeded \$100,000. In 1954 North Carolina was first among the states in output of feldspar and in mica sold or used by producers, second in asbestos,
